> The single metaphysical problem 'What is Beauty?' thus resolves itself into a number of practical questions which may be stated in some such form as this: 'How and why do we as human beings become affected by, and pass judgement on the quality of, works of art?'.

He had already loaded his argument by assuming that metaphysics should be resolvable into practical, as opposed to theoretical, questions. He explained:

> It would serve no purpose to attempt to summarise here even the chief theories of the metaphysicians. From Socrates, Plato and Aristotle to Plotinus and the Neoplatonists in Greece, from Leibniz to Lessing, Baumgarten, Kant, Hegel and Schopenhauer in Germany; from Descartes and Diderot to modern time in France; from Bacon to Bosanquet in England, we are met by an endless stream of conflicting dogmatism. Few people pretend to understand (and most people doubt the ability of anyone to understand) what the majority of the above writers really want to say, and to those to whom metaphysics is not an end in itself the whole output of human thought in this field seems to be distressingly dreary and sterile. For the metaphysicians write – and possibly it is proper that metaphysicians should write – as if they had never once allowed themselves to be thrilled by any manifestation of Beauty. It is therefore permissible to say that no student of music will love his art one whit the less for giving a wide berth to all that the metaphysicians have written.

Buck turned to the 'psychologist [who] approaches the subject from an entirely different standpoint', and who deals with an experience that is 'always two-sided, being a reaction to a stimulus'. He did not particularly mention music again, finding his points applicable to the fine arts in general. Yet he did hint at fairly standard answers to what are still the predominant questions of a musical aesthetics with a predilection for psychology: What is Beauty? is it objective? law-like? does beauty reside in the object, the work of art, or in the hearer's response? what is the nature of an emotional response? what is the relation between the work of art (the stimulus) and the response? how, more generally, should one describe the relation between music and human nature, between music's 'psychic energy' or formal movement and the movement of our 'inner lives', or between how music moves and why we feel moved when we listen to music? What is surprising about Buck's answers was the implication that they were free of metaphysical assumption and carried solely by mere commonsense. At best, they were carried by that 18th-century British tradition of philosophical psychology that devised a theoretical ideal of commonsense – a shared faculty of sense – to guide its inquiries.

According to Buck, beauty resides in the response to a particular stimulus, in our feelings stirred by this particular object; yet not every feeling so stirred results in an aesthetic judgment. We judge aesthetically only when we take an interest in how artists have objectified their feelings, because art is the presentation of an idea through a medium; we find a work of art beautiful when our response is akin to the feeling in the artist that originated it. Much 'barren [i.e. philosophical] discussion', he wrote, could be avoided if we understood that a work's appeal lies not in the immediacy of our feeling-response but in how that response is mediated through the intellect, because the intellect contributes the knowledge of how the work is arranged. The intellect gives credence and shape to the emotion, the feeling of pleasure or displeasure, approbation or disapprobation, on the basis of which we judge. However, our judgment is not merely a reflection of our personal tastes; if it were, we could not guarantee objectivity in our practice of criticism. Criticism, rather, is the application of aesthetic principles derived on the basis of an acquired expertise about the technical and stylistic properties of art. Buck did not name these principles; he remarked only that they were conventional, not law-like; he then simply grounded their purported objectivity in 'sincerity'. One 'ultimate and eternal question', he wrote, governs the entire enterprise of aesthetic judgment and criticism: 'Is the artwork genuine? Was it born because the catharsis of its author compelled him to create?'. If critics who ask this question are sincere, their answers and judgments will be, and in their sincerity, he concluded, they will have engaged with the problems of aesthetics.

Music's expression, its embodiment of the emotions and its capacity to prompt catharsis (purification of feeling) in listeners are incontrovertible topics of musical

aesthetics, although some would argue the topics, prompting as they do the central issue of the source and objectivity of expression, taste, judgment, criticism. Do musical works express or embody the composers' feelings, ideas or intentions? Do works express or mean something through their own form and content as linguistic sentences or utterances mean something independently of the particular persons who utter them? Are expressive or emotive predicates attributable to works themselves: may we say of the music itself that it is sad? Are the judgments and evaluations of musical works based on listeners' responses; if so, under what conditions of feeling and intellect? or are such judgments based on the emotive content we find in the form and content of the works themselves?

These classic questions of objectivity and subjectivity lie behind Robert Donington's entry, still under the rubric 'Aesthetics', in *Grove5* (1954). Noting first the Greek origin of the term *aisthanesthai* ('to perceive'), Donington observed that the term had come more broadly to refer to the 'theory of artistic experience'. He did not say more but remarked on how rewarding aesthetics was for those with speculative talent, although he warned against untrained dabbling. He noticed how much 'unrivalled confusion' the subject has promoted, even among 'the trained', and then stated that the philosophical aspect was beyond the scope of the dictionary.

In the earlier editions of *Grove's Dictionary*, a discussion of aesthetics was included without any presumption that the dictionary was offering philosophical coverage. In the first (1877–89), when the editors specifically excluded certain topics and modes of inquiry from their concerns, philosophy was not mentioned among them. Its absence is further confirmed by the noticeable omission of entries on philosophers who contributed to music in that capacity. Although Rousseau was entered in the first edition, he was not recognized for his philosophical views on music (though they were mentioned) but for his compositions and music theory (specifically his debate with Rameau). Schopenhauer, now widely regarded as 'the musician's philosopher', entered *Grove* only in the fifth edition, as briefly did Nietzsche (the entry mostly concerned his relationship to Wagner). Further, when it was considered, aesthetics was not specifically connected to philosophy; it was not even treated with special reference to music, as Donington confirmed when, in referring his readers to an aesthetician he admired, he mentioned Benedetto Croce (1902), not usually known for his remarks on music despite his influential work on language and expression.

Unlike Buck, Donington did not promote a preferred method. Though he granted that psychology has much to contribute to aesthetics, he remarked that it had not yet been very successful in its contributions. He granted that critics had written much that was useful, but again warned against an attempt at philosophical explanation. He praised Wagner for his inspired and voluminous intuitions and developments of opera and myth, but chided him for attempting philosophical explanation. Although he regarded philosophy as beyond his scope, he showed an awareness of when his themes called for philosophical account: 'The question of the principles on which a work of art can be judged good of its kind is one on which both psychologists and critics can throw much light', he wrote, 'but only a philosopher can (with their assistance) frame a really accurate answer'. Without claiming any such accuracy, he offered guidelines as to how the question might be approached.

Donington first observed that music may be described according to its emotional or physical aspects, noting that its physical aspects were treated elsewhere (under 'Acoustics'). We need only to know for aesthetics that certain vibrations and combinations of sounds give rise to certain reactions, perhaps of monotony or distress. The emotional aspects are then dealt with by psychology, by theories that show how auditory experiences vary conventionally and habitually in all sorts of ways against the background of shared human faculties. He continued more speculatively: although aesthetic pleasures include natural beauties, 'works of art are unique in putting us in touch with another mind'. A basic feature of artistic experience is communication by artists through works of art. Artists communicate their intentions to give pleasurable or satisfying feelings to listeners through the medium of music. To achieve this, composers tend to use contrasts: harshness raises a desire for sweetness, and resolution is felt when sweetness is offered. Discord finds resolution in concordance: when it does not, we speak of composers as 'ahead of their time', although this does not necessarily mark progress. He finally suggested that the impact of music might depend upon primordial associations that are worked out unconsciously, but offered no more detail. He concluded that, even had his thoughts not been accurate, he hoped he had been asking the right questions.

That Donington was approaching some of the right questions is not in doubt; that his answers were not entirely convincing is beside the point. What matters is this: in how many more editions would *Grove* assign the writing of an entry on aesthetics to theorists who felt the need, either because of disinclination, modesty or inadequacy, to disavow the contribution of philosophy in an encyclopedic coverage of 'music and musicians'?

The position changed in *Grove6* (1980). The entry's headword was now 'Aesthetics of music', and subtitled as 'the philosophy of the meaning and value of music'. It was extended considerably and was written by the Canadian philosopher Francis Sparshott. Aware of the difficulties of adequate representation of so large a topic, he began by delimiting its scope:

> The term 'aesthetics of music' normally designates attempts to explain what music means: the difference between what is and what is not music, the place of music in human life and its relevance to an understanding of human nature and history, the fundamental principles of the interpretation and appreciation of music, the nature and ground of excellence and greatness in music, the relation of music to the rest of the fine arts and to other related practices, and the place or places of music in the system of reality.

Here are captured most of the central questions pertinent to the philosophical discussion of music in its history and in the present day: the ontological questions of being and classification, the epistemological questions of experience, knowing and meaning and the normative questions of criticism, appreciation, judgment and value, and the functional questions of music's role in education and entertainment, culture and society. Sparshott went on to delimit the scope of the enterprise in terms of the modern disciplines from which it is differentiated:

> aesthetics is to be distinguished from the psychology and sociology of musical composition, performance and listening; from the history of musical practice; from the physics of sound and the physiology of the ear; from the analysis and description of all particular works and

traditions in music; and from all other kinds of empirical inquiry, even though fruitful discussions in aesthetics may in practice be inseparable from some such inquiries.

While acknowledging that 'aesthetics' had sometimes been used to include some or all of the modes of inquiry he had just put aside, Sparshott then added, against this, that aesthetics had also maintained a much narrower use, to refer only to those attempts to establish a rational basis for enjoyment and evaluation. He did not favour either side: the first was too broad, the second too narrow. Instead, he stated his intention simply to record 'what has been thought and said' by philosophers and philosopher-musicians 'about music in the tradition of Western Civilisation', although suggestions were added about how this tradition 'might be enriched by contributions from elsewhere', specifically from the long traditions of aesthetics, philosophy and the arts in China and India. He mentioned the concept of 'rasa' in Indian poetics, a sort of 'relish', that might have served Western aesthetics better than that of expression, and China's great system of equipoises, a cosmological system (social and aesthetic) that allows 'the theory of music and ceremonies', as Yueh Chih wrote, to embrace 'the whole nature of man'.

Sparshott's reasons for some of the inadequacies he saw in the aesthetics of music provide a new perspective on the scepticism that still concerns us. The field, he suggested, has received a noticeable lack of attention because (*a*) not all writers who would like to philosophize about music have the requisite knowledge of the technical complexities of music's production and notation; (*b*) there has been a strong prejudice that musical value does not extend past its notes or forms into extra-musical areas of human experience and value; and (*c*) that the humanities have long assigned music a low place, as merely an emotional or ornamental art of entertainment, of insignificant use in serious matters of culture. 'At least the first of these reasons remains operative', he noted, concluding that 'modern theorizing about music rises above the arcane and the nugatory less often than does comparable writing about the visual arts'.

His own discussion tried to alleviate that impression to the extent that he offered a chronology of what had best been said and by whom in Western philosophy about Western music, from antiquity until the late 20th century (see §2 below for his account from antiquity to 1750). His account highlighted precisely the kinds of judgment, choice and prejudice that have historically been at stake in the topic. Unlike Buck and Donington, Sparshott showed how far music itself has been an essentially contested concept and the Western philosophy of music an essentially contested field. His account suggested that, if scepticism is to be retained, it should be of the constructive kind that allows essentially contested fields and concepts to be admitted to the contest. Denying that a given mode of inquiry is genuine or worthwhile might at times be a valuable, even a necessary, position to take within a field, but it should not be taken, as one might read the early *Grove* entries, as externally representing the field as a whole.

Sparshott's entry was published under the headword 'Aesthetics of music', although he knew that the title referred to a discipline and set of concerns that came into their own only in the mid-18th century. That was the time when music achieved (or so it is argued) its emancipated status as a fine art, when it acquired sufficient autonomy for its focus to move away from its external functional and occasional extra-musical functions in church and court to the secular and bourgeois concert-hall aesthetic of works, performances and reception (see §3). Sparshott associated the paradigm change of this period, as many theorists do, with the beginnings of modern theorizing about music, a type of theorizing that gave modern meanings to the theoretical terms of the previous sentence. It was also a type of theorizing that helped sustain the three kinds of concerns Sparshott identified as sometimes detrimental to the modern aesthetics of music: the new analytical focus on technical matters of composition and form; the formalist separation of specifically or purely musical value from extra-musical association, and the 'bourgeois' relegation of music to the sphere of leisure or mere, albeit fine, entertainment. These tendencies, however, constitute only a small part of the modern aesthetics of music, an aesthetics often reckoned as marking the period in which the relations between philosophy and music received more explicit attention in theory and practice than ever before.

The modern period saw musicians engaging in philosophy and philosophers engaging in music. It heard that music, under its condition of freedom and emancipation, was infinite expression, absolutely philosophical, the last true religion, the pure expression of the world's Will, the supreme carrier of the Dionysian spirit of tragedy in the modern age. It saw the plastic arts aspiring to the non-discursive, abstract and supremely expressive Romantic condition of absolute or purely instrumental music. It witnessed music, in the form of the symphony, opera or song, disclosing utopian and revolutionary dreams or prophesies for the future of humanity. It saw music, operatic and instrumental, being so feared for its power over the public that it was sometimes strictly censored.

Yet it was also a period of radical distrust of music's metaphysical and political imports, a period in which evolutionary science, psychology, history and sociology gave independent, empirical credence to, and justification for, the development of new musical genres. It was a period in which the discipline of music developed internally motivated forms of analysis and criticism that attended to the specifically musical, technical and expressive aspects of musical composition, notation, form and performance.

All these tendencies – the Romantic, the formalist, the speculative, analytical, positivistic and empirical, the psychological, political and sociological – are part of the modern aesthetics of music. They are also the tendencies of modern philosophy *per se*. Some may reasonably find the 'arcane and nugatory' in the most extreme manifestations of any of these tendencies, in the worst excesses of metaphysical speculation, in the worst excesses of formalism and positivism, and so on. More pertinent is the treatment here of the period before the establishment of the modern aesthetics of music: the views and approaches just mentioned can be found in more or less similar forms before 1750 (as, more or less, Sparshott's chronology shows). Yet this approach also shows a tendency to treat this history before the modern aesthetics of music as a pre-history, as if all the issues and concerns of philosophers writing about music, and musicians engaging in philosophy, were leading up to and resulting in these modern concerns (especially with the autonomy of music). Perhaps this tendency encourages the acceptance of the title 'aesthetics of music' as appropriate to the entire field.

It is common among modern aestheticians and modern philosophers to read the history of Western philosophy and music in terms of standardized periods, such as Antiquity, the Middle Ages, Renaissance, Enlightenment, Romanticism, Modernism; it is usual, furthermore, to suggest the development of themes from one period to another, a development that need not follow a straight, progressivist or unified line. Many theorists show how, in each of these periods, contemporary writers often justified their particular claims by showing their origin and authority in antiquity (or another early period) as a way to assert a difference from, and rejection of, their immediate predecessors' claims. Such is the repeated pattern in the arts behind the quarrels between 'the old and new', 'the conservative and progressive' and 'the ancients and moderns'. Although, as a general point, this way of writing history has some justification, its sometimes severe limitations need to be acknowledged.

One alternative is to confine 'the aesthetics of music' to the modern Western period, to acknowledge the paradigm shift of the mid-18th century without underestimating the obvious continuities that also transcend the shift: this is the approach of the present entry. It offers (in §3) a discrete discussion of the aesthetics of music, surveying the dominant concerns of the modern field. This discussion tracks the concerns predominantly associated with what is normally called 'continental' philosophy, a literature mostly written in German. It puts aside the Anglo-American contribution (discussed in §4) as well as certain other distinct issues, thereby reflecting contemporary disciplinary divisions and allegiances which, despite some recent erosion, institutionally at least still hold sway. In the entire entry the influence of non-Western thought shows itself noticeably underdeveloped in the contemporary philosophical field.

This separation of the Anglo-American contribution is especially pertinent because it reflects a tendency among modern philosophers to distinguish musical aesthetics from the philosophy of music, or aesthetics from the philosophy of the arts (a distinction originally made by Hegel). Many want to avoid the assumption that philosophical (for example ontological) problems prompted by the world of the arts are automatically to be associated with the traditional concerns of aesthetics (about judgment, beauty, nature etc.), or that the concerns of aesthetics are exhaustively treated by reference to the arts (for example judgments of natural beauty). Now, as before, the naming of our enterprise carries assumption and significance and, at best, encourages lively contest. Such contest becomes evident within and between the ensuing surveys, in which judgments, qualifications, prejudices and preferences are left more or less explicit. It is appropriate and timely that this entry should be self-reflectively concerned not only about its topic but also about its status as a dictionary entry: for usually such entries presuppose solutions to the problems about objectivity and representation that occupy philosophers as precisely the problems still in need of solution.

II. Historical survey, antiquity–1750

1. Hellenic and Hellenistic thought. 2. Early Christian thought. 3. Medieval thought. 4. Renaissance thought. 5. Baroque thought. 6 Rationalism. 7. Enlightenment.

1. Hellenic and Hellenistic thought. The commonest positions in the aesthetics of music are borrowed and developed from classical antiquity. Greek musical practice being inaccessible, the theories related to it have been freely adapted to the practice of whatever day it might be – a licence less available to those who similarly exploited classical writings on less fugitive arts. The language of musical aesthetics has thus often suggested a certain remoteness from what was actually going on.

Although 'music' (mousikē) is a Greek word, classical Greece did not use it to mean what we call music. It had no word for that. Etymologically, the word means 'the business of the Muses', who were goddesses of poetic inspiration. As a body of practice, the 'music' of classical Greece extended to cover all imaginative uses of language and dance, and as an object of theoretical study 'music' was largely the study of scale-construction and tuning systems. But this divergence between Greek conceptualization and our own dwindled in Hellenistic times.

Among the debris of ancient thought we may distinguish at least six views about the nature and significance of music. The first view is assigned to the thinkers, mostly anonymous, associated with the name of Pythagoras (6th century BCE), traditionally the first to take note of the relevance of certain small-number ratios to the intervals recognized as consonant and invariant in the music of the day. By the 5th century BCE the Pythagoreans were speculating that similar ratios should be discoverable everywhere in the world. That music embodies numerical principles and somehow answers to the laws of nature seems already to have been accepted everywhere, from China to Babylon; the Pythagorean contribution was to make this hitherto mysterious relationship amenable to rational inquiry. The ratios found in musical intervals were sought in the distances of planets, in the compositions of stuffs, in the souls of good men and in everything that contributed to cosmic order. Musical structures should thus have analogues in the human mind and in the world at large, and their felt but ineffable meaningfulness should be explicable by those analogies. Music was important as the only field in which these ratios had been discovered rather than merely postulated. But the mathematicians of the 4th century BCE borrowed the name 'music' for the branch of their study devoted to the theory of proportions, and the specifically audible varieties and manifestations of such proportions became theoretically accidental. The doctrine that music was or ought to be an 'abstract' system of relationships stateable in a set of equations has haunted musical aesthetics ever since, although the habit of linking music to astronomy by a supposed 'music of the spheres' died with Kepler (1619).

The second Greek view of music adapted the Pythagorean ideas to fit the notion, popular then as now, that national music expressed national character or *ethos*. Damon of Athens seems to have done the adapting in the middle of the 5th century BCE (see Lasserre, 1954). National styles or 'modes' were construed as essentially scale systems, whose intervals are generated by ratios characteristic of the personality types and behaviour patterns of their users, Dorians, Phrygians and the like. Damon thought of music as primarily a means of moral indoctrination. Plato, from whom these ideas descend to modern times, cut them loose from their mathematical underpinnings: his *Republic* (*c*380 BCE) merely postulates a series of causal connections, as follows. The specific mental characteristics that assign a person to a given sort find expression in corresponding patterns of thinking; these patterns achieve utterance in characteristic forms of

poetical speech, and such formal speech evokes a fitting melodic and rhythmical accompaniment. To hear, and especially to perform, the resulting music will tend to re-create the originating mental characteristics, so that the student performer becomes the same sort of person as his composer-teacher. The charms of music are thus the same as those exerted by an attractive personality, except that music is expressive through and through whereas the excellence of a man may require him to be inexpressively reticent. In this Platonic version of the *ethos* theory, the expressiveness of music reflects that of an actual or possible poetic text. This answers to the Greek practice of teaching gentlemen to accompany themselves on plucked strings, leaving wind instruments and bravura generally to low-born professionals. The verbalizing version of *ethos* theory has the advantage over the mathematicizing version that it calls for no cosmological commitments; on the other hand, this modesty leaves it with no hidden resources to counter empirical rebuttals.

A third view of music, which has also proved perennial, is implicit in the histories of music that survive from the first centuries of our era. Like the analogous histories of other arts, these sources take a technical view of music: its history is the progressive mastery of more and more elaborate instruments, performing techniques and sound patterns. Music is seen as exploring the possibilities of a self-contained world of sound. However, this view of cultural history is modified by an assumption derived from Aristotle's cosmology and reinforced by cultural nostalgia for the classical age of Greece. The world of sound, like the world at large, is not infinite; the possibilities to be explored are not endless; and the fruitful development of the art of music was completed long ago at a period defined by that completion as classical. This complication of the progressivist view of music has also been revived from time to time, with the idealized classical age suitably updated; but its revivers are mostly musical revolutionaries who modify the theory by claiming that new worlds of music can be substituted for the old, so that new explorations can proceed – even if, as conservatives will protest, the new worlds cannot sustain human life. In its extreme form, this last modification becomes the claim that every serious musical work is or should be a self-contained musical universe.

The ancient progressivist theories of music history, whether or not they held that progress must end somewhere, ran counter to a deep-seated belief in social degeneration, which assigned the 'golden age' to a technically primitive past. When these tendencies collide, we have a view of music history in which musicians continually press for innovations which statesmen and moralists untiringly resist. Plato, writing as a moralist, reinterpreted the conflict between reactionary and progressive musicians as one between two kinds of music: one, the true music, rationally based and logically developed, exemplifies the structural principles of all reality, including the human mind; the other music, impressionistic and fantasticated, merely imitates the sounds of nature and the passing show of temporary feelings. Variants of this contrast, which despite its incoherence is deeply rooted in Plato's general metaphysic, keep reappearing in the history of aesthetics, most recently in Adorno's pitting of the severities of dodecaphony against the confectionery of the culture industry. The contrast has been strikingly reflected in recent decades in debates over the proprieties of interpretation: a music whose vocation is subtly to mould the perceptible surface of sound is a performer's art for which composers merely provide the material, but if music is to unfold profound tonal structures it must be elaborated in the study and its performer must reveal only such treasures as the composer has buried for him.

The reason why the underlying view of music history whose vicissitudes we have traced gives rise to such continued controversy is that it starts by equating the progress of music with the elaboration of its means rather than with the exploration of deep structures. Even the intonational researches whereby the Greek theorists finally excogitated a unified system, within which the originally incommensurable tribal modes could each appear as a possible variant, were represented as a mere development of new possibilities of modulation rather than as an investigation of the nature of modality as such.

A less tendentious account of the division within music that the ancient histories of music sought to explicate is adumbrated in Aristotle's *Politics* (*c*330 BCE): there are two musics because there are two uses for music. Rituals and festivals call for an exciting and ecstatic music, demanding virtuosity of its performers and moving its audience to a salubrious frenzy. A gentleman needs a different sort of music to play for his recreation, as one of the amenities of everyday life. 'What passion cannot Music raise and quell?', Dryden was to ask. But not all music has the raising and quelling of passion as its function.

A fourth view of music was sketched by Aristoxenus (*c*300 BCE), a student of Aristotle. He refuted the Pythagorean numerology and the *ethos* theory that was built on it by pointing out that the ratios generating harmonies are inaudible, and music is concerned with the audible. What can be heard is sounds in relation. The ear certainly needs the aid of memory and mind, but the contribution of memory is to make protracted structures perceptible, and the intellect is called on, not to intuit any underlying reality, whether cosmic or psychic, but to grasp the mutual relations of notes within the system of a scale. Music is thus a self-contained phenomenological system, and the significant form of any work is not derived from its relation to any other reality but is identical with the principle of its own organization. Why men should make such things and delight in them Aristoxenus does not say, but no Aristotelian need ask: any refined exercise of mind and senses is inherently delightful, for man is by nature hungry for information. Aristoxenus concedes that such audible constructions may acquire by association an ethical significance, but that is adventitious.

Aristoxenus's embryonic formalism strikes a responsive chord today, but was little noted in antiquity. To Ptolemy in the 2nd century CE, he was only the bellwether of one of the two extremist schools of musical theory, the latter-day Pythagoreans being the other. Ear and reason are judges of harmony, says Ptolemy, the ear establishing the facts and the reason divining their explanation. Musical theorists, like astronomers, must lay bare the design that unifies the phenomena, thus showing that the real is not irrational. He complained that the Aristoxenians trust the ear alone and forgo theoretical explanation, while the Pythagoreans trust reason at the cost of observational accuracy. The philosophy of music is thus shown to

involve difficulties of principle that are still central in 20th-century philosophy of science.

A fifth view of music was current among the followers of Epicurus, represented by Lucretius in the 1st century BCE, for whom music was nothing but a source of innocent pleasure, natural in the sense that it represents a complex use of man's natural endowments: 'Every creature has a sense of the purposes for which he can use his own powers'. Such elaborations, discovered by accident and developed by experience, afford relaxation, distraction in distress and an outlet for excess energy. No further explanation of musical delight is possible or necessary, and the pretensions of highfalutin theories are merely absurd. The Epicurean tradition did not survive the triumph of Christianity, but such Philistine mutterings remain a permanent possibility for aesthetics, one that is congenial to most of us some of the time and to some of us most of the time.

A sixth, sceptical view goes beyond the Epicureans by agreeing that music is a diversion but denying that it is natural. Musical practice is conventional through and through: it may have effects on the character, but only because it is believed to have them. In fact, the Sceptics denied that music could be an object of knowledge, since it is constituted by the relations between notes, which themselves have no reality; and what is unreal cannot be known. This ontological scepticism, known to us from the work of Sextus Empiricus (3rd century CE), was to find, when less crudely stated, a permanent place in musical aesthetics.

The last four of these ancient traditions, the ones that flourished after the Greek cities lost their independence, allow music no social or civic significance. When an art claims autonomy, it may be a sign that it accepts a peripheral place in the culture of its day.

2. Early Christian thought. The Stoics had slighted music as irrelevant to the life of reason, and the Church Fathers followed them in finding it irrelevant to salvation. Yet music played an important part in the liturgy. This generated some tension. In fact, we find St Augustine (4th century) torn between three attitudes to music: exaltation of musical principles as embodying principles of cosmic order; ascetic aversion from music-making as carnal; and a recognition of jubilation and congregational song as respectively expressing inexpressible ecstasy and promoting congregational brotherhood. Being a rhetorician and not a musician by training, he thought of the numerical side of music as embodied in poetic metres rather than in music proper, but the other two attitudes left him agonizing: it is as if a man were seduced by worship.

Medieval musical aesthetics, while preserving the Augustinian attitudes, resembles medieval philosophy of culture generally in basing itself on the attempt by Boethius (6th century) to consolidate the consensus of classical philosophy, whose three-tiered metaphysical and epistemic structures readily adapted themselves to the notion of a triune God. Boethius thought of music as a branch of mathematics, unlike other branches in that its proper manifestations are perceptible and affective as well as intelligible. There are three musics: *musica mundana*, cosmic music, the 'harmony' or order of the universe; *musica humana*, human music, the order of the virtuous and healthy soul and body; and *musica instrumentalis*, music in use, the audible music men make. This framework haunted musical thought for a millennium. Its significance lies in its Neoplatonic and Christian implications. Man, according to Neoplatonism, can and should associate himself with the higher, intelligible level of reality, but turns in his weakness to the lower, sensuous level. Now, the human voice is not an artefact, but a direct embodiment of intelligence: in a sense, it belongs to *musica humana*. Stoics such as Epictetus had taught that man attunes himself with the eternal Mind by an intellectual 'song' of praise: that is, by philosophy. Christian writers – using, like St John Chrysostom (*c*400), the homely analogy of work songs that ease men's necessary toil – had adapted this rhetoric to a literal advocacy of psalmody, audible praise facilitating mental praise of a personal God. This complex of thought now gives rise to a new version of the old dichotomy between two musics: a low, sensual, instrumental, secular music is contrasted with an exalted, intellectual, vocal, sacred music. This dichotomy is reinforced by another Boethian doctrine, that the artist, in this case the music theorist who understands practice, is better than the mere practitioner, in this case the player or singer who uncomprehendingly follows the guidance of his training or his instrument: 'it is the definition of a beast, that he does what he does not understand', as Guido of Arezzo (*c*1030) unkindly remarked of singers.

3. Medieval thought. Boethius, by treating music as a mathematical science, gave it a high place in the life of the mind (higher than rhetoric, for instance), but cut it off from secular song and dance. This sealed the fate of musical aesthetics in the early Middle Ages. The art of music became a rational mystery underlying practice, and medieval theorists tended to be preoccupied with ways of calculating and representing musical ratios. Since these ratios are exemplified everywhere in the cosmic economy, allegorical interpretations of all sorts abound, without any one of them being much developed or emphasized. However, in the 9th century the philosopher Eriugena used the fact that the cosmic order is one of simultaneous complexity to explain the peculiar value of polyphony. For the first time, musical harmony was equated with the internal relationships of an audible object.

The drive towards polyphony and polyrhythm was one of the factors that led to the development of a graphic, mensural notation, without which such complex music could scarcely be learnt and certainly could not be transmitted throughout the newly cosmopolitan and bookish culture of the 11th century and after. The introduction of such a notation, as systematized by Franco of Cologne around 1216, was not itself a contribution to aesthetics but transformed aesthetics by radically changing the nature of the art. It facilitated complexities of a wholly new order; it liberated musical time immediately from the tyranny of the syllable, and ultimately from any expressiveness based on words; it enabled the composer to be an intellectual working at his desk, rather than a performing musician; and finally, as Nelson Goodman and Thurston Dart have stressed in different ways, it lent emphasis and authority to those aspects of music that it recorded, so that a composition came to be defined by its score. Thus the abandonment of conventional notation by the advanced composers of our day left some musicians feeling as if the solid ground of their art had vanished from under their feet.

The notation that evolved for the sacred music of the Middle Ages had not only to record musical facts but also

to disclose them as rational. Hence abstruse controversies arose about the nature of perfect and imperfect numbers, and the metaphysical superiority of triple (trinitarian) over duple (manichean) relations. But by the early 14th century a more sophisticated and subtle logic led in aesthetics, as in philosophy at large, to a rejection of the equation between rationality and structural simplicity. The new mood appeared in a passing remark of Johannes de Muris (1319): 'What can be sung can be written down'. The reactionary Jacques de Liège (*c*1330) attacked the 'new art' as lascivious, incoherent and above all irrational: if three is admittedly the perfect number, why admit imperfections? But he was too late.

Medieval aesthetics in general rests on the ancient theory of beauty, as that which gives immediate pleasure when perceived, rather than on any theory of art. Allegorical explanations are introduced only when the literal level is exhausted: it may be true that polyphony mirrors the universe, but beauty must be experienced before it is explained, and the fundamental fact is that counterpoint sounds well. This position allows of little theoretical development; but Roger Bacon, among others, drew the conclusion that the most beautiful work would be one that pleased all the senses at once, and in which music formed only one component (De Bruyne, 1947).

4. Renaissance thought. A versatile mathematical intelligence does not demand simple forms but adapts itself to the complexities of the real. The advances of late medieval logic thus prepare the way for the conclusion that mathematical considerations have no essential bearing on music. In the later 15th century, the view of music as the branch of mathematics that pertains to sounds tends to give way to a humanist view of music as a sonorous art, to which mathematics is relevant only as calculating or explaining means to musical ends otherwise determined. Johannes de Grocheo had already made the essential point around 1300, urging that the mathematical *science* of music was not the same as the *art* of music, which was the application of such theory to singing. This art was not a branch of mathematics, and neither *musica mundana* nor *musica humana* had any place in it. His cool Aristotelian pragmatism made little headway in that age of numerological hermeticism. But Tinctoris in the late 15th century, and yet more clearly Glarean in 1547, remodelled the theory of music on the basis of its actual history, practice and effects. They thought of music primarily as a form of human activity rather than as a closed science or a model of the cosmos; and the conventional ethical associations of old and new modes received less attention than the actual effects that genius and discipline may achieve. Tinctoris (*c*1473–4), enumerating and classifying the effects claimed for music, was content to cite authorities; but a century later writers such as John Case (1586) put flesh on his bones. Such humanism comes the more readily because no myth claims divine origin for polyphony. God may have taught Adam to sing his praise, and Jubal to play upon instruments, as J.A. Scheibe still maintained in 1754; but counterpoint was invented by men in historical times.

Glarean already sensed a crisis in music, a tension between polyphonic skill and melodic feeling, between art and nature. Zarlino, in 1558, attempted a synthesis involving a subtle humanization of the ancient *ethos* theory. Of all musical effects, he says, the ear is judge. But the ear finds a fundamental contrast between the feeling-tone of joyful major and mournful minor triads. Instead of finding metaphysical reasons why each mode should reflect a different type of character or feeling, he appeals to experience to testify to a correlation of harmonies with feeling within a single harmonic scheme. Then, instead of saying (with Plato) that the harmony and rhythm of a piece should be determined by those actually inherent in the accompanied words and their meanings, he demands that harmony and rhythm be those perceived as suiting the general feeling-tone of the subject matter of the words.

While thus adapting ancient proprieties to a modernized and humanized form in which they have remained so familiar as to seem obvious, Zarlino introduced another fateful concept of a quite different tendency. Just as a poem may have a subject, such as the fall of Troy, so does a musical composition have a subject but this is a musical subject, a theme, a series of sounds. Music is about music. It is thus at once autonomous, through its melodic organization, and heteronomous, through its harmonic and rhythmic affectivity.

Zarlino's professional Venetian compromise between ancient theory and modern practice was soon challenged by the mainly amateur circle formed at Florence around Giovanni de' Bardi, whose chief theorist was Zarlino's pupil Vincenzo Galilei (1581). They pointed out that Greek humanism, now the acknowledged ideal, had rested on the practice of a monodic and heteronomous music in which a singing line traced and induced a flow of emotion: the gentleman troubadour, long ignored or disparaged by theorists, came into his own now that gentlemen were writing the books. Polyphonic music cannot raise and quell passions, because the effects of simultaneous melodies must cancel out. To emulate the fabled effects of Greek music at Alexandrian feasts, arcane and autonomous pattern-making must be replaced by the expressive voice of a natural man. And what is expressed is merely sentiment and speech, not (as in Plato's fantasy) character and thought. Significantly, this polemic is launched in the name of Boethius's second level against his third; the revival of Neoplatonism might have encouraged the opposition to take the yet higher ground of Boethius's first level, but the unfashionableness of logic and mathematics seems to have discouraged them from doing so.

Zarlino (1588) found the obvious reply to the Florentine arguments: music is music, it is not rhetoric. But that was the point at issue: rhetoric was the cornerstone of a courtly education, musicians' music was work for monks and lackeys. The debate continued and, *sotto voce*, continues yet; but, as the 17th century saw, it was rather unnecessary, since the Venetians had in mind a public and ceremonious music, and the Florentines envisaged a music for a more private use.

5. Baroque thought. Towards 1700, the controversies between old and new musics settled down to a squabble of gentlemen over their amusements. The favoured contrast was that between stiff French correctness and supple Italian invention. The divergent styles found different rationales. Le Cerf de la Viéville (1704–6) claimed for the French party that the accepted rules formulated the established requirements of good taste and stood for reason and method as against the vagaries of fancy and passion. Raguenet (1702) maintained that the Italians, trained to music from the cradle, could dispense with rules because their underlying principles

had become second nature. If they took risks, it was because they had developed a sense for when something risky would come off. The arguments on both sides are closely analogous to those used at the time in controversies over painting and literature. Both parties occupy the lowest ground of sentimental humanism: hedonism and a courtly ambience are assumed, and the rules appealed to turn out to be no more than recipes for a rational enjoyment.

If humanistic thought can find for music a deeper significance than that of mere amusement, it must be through its working on human passion. Here an issue had been left unsettled between Venice and Florence: how does music most fitly express feeling? Through the 17th century and after, three modes were mooted. Music may follow the inflections of a voice speaking in passion – a device practically abandoned at Florence soon after it was first tried, but still theoretically entertained by Grétry 200 years later; it may echo the sense of a text word by word, as a man who gestures while he speaks – Rosseter (1601) thought it vulgar to do so, Morley (1597) thought it absurd to do otherwise; or it may convey the general tone of its text. All three modes were defended around 1600, and confused (as by Richard Hooker in 1617) with the very different doctrine of *ethos* according to which music mirrors not passion but character. But what if there is no text to accompany? The rise of a purely instrumental music that is more than an accompaniment for dancing seems to call for compositional principles that are purely structural, but how can these be used without sacrificing humanistic meaning? 'Sonata, what do you want of me?', asked Fontenelle (Rousseau, 1753).

Answers to this newly pressing problem were sought from the art of rhetoric. There were three good reasons for this. First, it afforded the only actual model for the articulation of temporally extended forms on a large scale; secondly, it formed the basis of genteel education; and thirdly, of most direct relevance, the ancient treatises on rhetoric had as their avowed aim the systematic analysis of the passions and the means of working on them – so that J.J. Quantz (1752) could say that 'The orator and the musician have, at bottom, the same aim'.

Rhetoric was actually used in two ways. First, theorists of the Baroque age tried to describe musical forms and figures by making various figurative uses of terminology derived from the articulations and ornamentations of discourse. These systems, never stabilized, died out as our special vocabulary for describing musical forms gradually made its way. And second, musical theorists tried to adapt directly to music the programme for a scientific rhetoric first enunciated in Plato's *Phaedrus* (*c*375 BCE): an analysis of human passions and the ways to arouse them. These attempts leaned heavily on Descartes' treatise on the passions (1649), which argued that the most complex emotions could be shown to result from the mechanical combination of a few simple psychological components by a strict causal necessity. Such writers as Mattheson (1739) offer elaborate analyses of the emotions along these lines, with detailed specifications of the corresponding musical devices. The resulting emotive packages are mediated by dance forms, since in a dance a complete musical complex, often with ethnic and hence ethical connotations, is already wedded to gesture and thus as it were integrated into a way of life. On examination, the mediation proves somewhat programmatic: the musical specifications could be at best sketchily correlated with the analyses of the passions, since only a few simple musical variables had an emotive significance that could be specified. In theory, that would not detract from a Cartesian analysis, which actually called for the reduction of complexities to combinations of a few simple forms; but in practice the Cartesian programme has rather limited application, and the more elaborate versions of the 'theory of affections' were eventually abandoned (*see* AFFECT, THEORY OF THE).

Such theories of emotive meaning admit an important ambiguity: are the feelings in question to be worked on or only to be symbolized? The more sophisticated authors write as if the primary function of the emotive meaning were to make the music intelligible. A work of art has to be unified as well as articulated, and Mattheson's requirement that each piece confine itself to a single emotion suggests that at least part of what is at stake is the use of a consistent manner as a unifying principle. But the question was not clearly posed, and evocation of the represented passion was not ruled out. What was excluded was the demand that the composer be imbued with the feeling he expresses or imparts. This exclusion showed that music was being assimilated to rhetoric and not to poetry: traditionally, the poet is inspired by the feeling he arouses, while the orator must keep cool to control his audience.

To the extent that the doctrine of affections pertains to the meaning rather than to the effects of music, its intellectual affinities are not with the Cartesian 'hydraulics of the animal spirits' already alluded to, but with the later contention of such Enlightenment sages as Holbach and Hume that it is the function of reason to articulate and thus to civilize the passions.

We have noted the demand that each piece be dominated by a single mood. Such a demand envisages the composer as master of various styles. The notion of style is imported into musical theory in the 17th century from its original home in rhetoric, which required of the orator the ability to speak in diverse literary manners and to suit diverse occasions. The Baroque age found this notion useful when coping with the survival of contrapuntal church music alongside a basically monodic secular music. No longer are there rival musics: the accomplished musician knows how to write church music, theatre music or chamber music, in a diversity of national manners.

6. RATIONALISM. It was not only through the doctrine of affections that Descartes left his mark on the aesthetics of music. He (1649) and his friend Mersenne (1636–7) both attempted once more the impossible task of rationalizing the mathematical basis of harmony. More important was Rameau's (1722) successful interpretation of harmony itself as a system on the Cartesian plan, reducing the bewildering variety of possible chords to the simple system of triads and their inversions. The modern notion of harmony, already implicit in Zarlino, thus suddenly acquires an intelligible basis and occupies the centre of musical thought. As the notion of the 'position' of a chord suggests, music comes to be envisaged as occupying a 'space' with vertical (chordal) and horizontal (cadential) dimensions. The Baroque vocabulary borrowed from rhetoric does not fit this way of thinking about music, and it becomes easier to think of it in formal, even in architectural, terms.

Rameau himself pointed out the more immediate significance of his theories. The squabbles of italophile and francophile cliques and cabals over operatic styles and persons, which through most of the 18th century retained the interest of the lay public, mostly concerned the style of vocal writing. They were therefore trivial in comparison with the issue of principle between the theories and practices that put melody first and those that put harmony first. Melody tends to be interpreted heteronomously, in terms of what it expresses; in giving harmony priority over melody Rameau laid new foundations for the autonomy of music, at the same time making it easier for instrumental music to take up a central position that it had never before occupied and from which it has yet to be evicted.

Rameau's revolutionary move coincided with, and purported to incorporate, a more fundamental discovery. This was Joseph Sauveur's almost single-handed development of the science of acoustics, making sounds into objects susceptible of systematic investigation and description. The scepticism of Sextus Empiricus was finally refuted, and from then on music could be slowly, subtly and profoundly transformed into an art of sound (*see* PHYSICS OF MUSIC). Meanwhile, Rameau fastened on the overtone series, already identified by Mersenne but now explicated by Sauveur, as affording a natural basis for the harmonic relations he was expounding. Musical structures were thus founded on nature – not the nature of the heavens, or of the soul, or of the eternal objects of mathematics, but the nature of sound itself.

In seeking a basis in nature for the structures he explored, Rameau was typical of his age. The reference to 'nature', which might be most variously conceived, is one aspect of a convergence between the criticism of music and that of the other arts that continued throughout the 18th century. The notion of the 'fine arts' had been conceived when palaces became museums in the 16th century; its gradual emergence reflects the dominance of monarchic courts, making symbolic use of acquisition and display. Like other cultural movements of the epoch, this conceptual unification of the fine arts had to be validated by an appeal to classical antiquity, and the only rationalization to be found there was the concept of 'arts of imitation' implicit in Plato's *Republic* and explicit in his *Epinomis* (*c*350 BCE).

Music, then, like other arts, must imitate what is not art; and what is not art is nature. But the nature of what? The growing separation of composer and performer from their public meant that the honorific answer of the ancient *ethos* theory, that music directly shows and moulds character, would no longer do; and the difficulty of finding any other laudatory answer threatened to relegate music to the last place in the pecking order of the arts. Among the early systematizers of the arts, Dubos (1719) held that music imitated the voice, and gave pleasure through the style of that imitation. Batteux (1746), arguing that all the arts exist to portray an idealized nature, seems to have been the first to think of music as a language of the heart that is natural because it precedes all conventions.

Rameau's breathtaking proposal of a Cartesian science of music did not fit into these systematizations of the arts, and seemed politically objectionable at a time when progressive thinkers were exalting the natural voice of the natural man (see Diderot, 1823). Its impact, though in the long run decisive, was therefore delayed.

7. ENLIGHTENMENT. Batteux's description of music as the language of the heart, itself a sentimental blurring of the contemporary doctrine of affections, was developed by Rousseau (1781) into a popular and durable theory about the origin and nature of language. The first human speech must have been a chant that expressed thought and feeling together; developed languages confine themselves to communicating thought, leaving to music, in its original form of song, the task of expressing feeling. Such expression was indeed the true function of all art. And since Rousseau equated nature with human nature, and this with the naively passionate side of man as opposed to the artificial 'rationality' his schooling imposed on him, music 'imitated nature' more than any other art did. But only melody is thus vindicated. Harmony and counterpoint, gothic and barbarous inventions designed merely to produce a volume of agreeable sound, fall altogether below the level of art.

The compilers of the *Encyclopédie*, the foundation of progressive thought in the later 18th century, followed Rousseau in deriving beauty from 'nature' interpreted as simplicity and truth but did not agree on the consequences for music. D'Alembert (1751) disparaged music in a way that had become traditional, for the poverty of its representational resources. Diderot (1751), however, set music highest among the arts; not for Rousseau's reasons, but because musical relationships are perceived directly and not mediated through interpretation of content, so that music gives imagination more freedom.

Diderot's appeal to imagination invokes an alternative tradition in aesthetics, according to which the fine arts were not exercises in imitation that call for rationalized skill but sources of 'pleasures of the imagination' open to the free play of creative genius. To this school, dominant in British aesthetics throughout the 18th century, not the poem but the landscape garden, in which artifice merges with the infinite, was the paradigm of art. It is this view of art and music that Romanticism was to develop. Meanwhile Kant (1790), systematizer of the Enlightenment and synthesizer of British and German aesthetics, acknowledged both conflicting evaluations of music: of all arts it is the least rational and the most delightful, a language of feeling that contrives to be universal in scope only by forswearing all cognitive meaning, so that it can never be integrated into the truly human life of reason.

Such odious comparisons between the arts were not universal. G.E. Lessing (1766) pointed out that different arts used such heterogeneous means that it was pointless to compare them. Music, deployed through time, must relate to other realms of experience than do those arts whose works are extended in space and presented all at once; how can they be thought to compete? And J.G. Herder (1800) denounced all attempts to set up hierarchies of the arts, especially that of Kant.

III. Aesthetics, 1750–2000

1. THE RISE OF AESTHETICS. The theoretical reflections on the status of music as an art and as a form of

meaningful articulation, which constitute what is now termed the 'aesthetics of music', are often seen as merely a continuation of philosophical reflection upon music of the kind that began with the Greeks. However, the aesthetics of music cannot be said to have existed before the second half of the 18th century in Europe. The word 'aesthetics' derives from the Greek *aisthanesthai*, 'perceive sensuously', but perception became a decisive issue for philosophy only in the empiricism of Locke and Hume.

Given the increasing success of the natural sciences, rationalist philosophers of the 17th century had argued that the mathematical intelligibility of the world was proof that its true structure can be explained independently of the vagaries of sensuous perception. Leibniz summed up the implications of the rationalist view for music in the dictum that music was 'the unconscious counting of a mind which is unaware of its own numeracy'. Against the rationalist view, the empiricists maintained that our access to the world's intelligibility lies in the impressions made by the world on the senses, which constitute the prior basis of scientific knowledge. In his *Aesthetica* (1750), Alexander Baumgarten, himself schooled in the Leibnizian tradition, prepared the ground for the new subject of 'aesthetics' by focussing attention on the value of what appears as sensuously true in everyday life even if it has no claims to scientific status, such as a successful painting of a particular object. J.G. Hamann, in his *Aesthetica in nuce* (1762) and in other work, linked insistence on the senses as the prior means of access to the truth to the claim that this access also requires natural languages that cannot be reduced to a 'general philosophical language'. He saw languages primarily as celebratory expressions of the divine harmony of creation, rather than as the means of representing an objective world. This led him to the claim that the oldest language was music and to his giving a prominent philosophical role to literature.

Hamann's understanding of language is echoed by Herder, Rousseau and others during the second half of the 18th century, but they dispute the divine origin of language, seeing language instead as connected to the natural expressivity that is the basis of music. Herder, for example, claims that all natural sound is music, and that music is the language of emotion. Language thus ceases to be thought of as descending from divine naming and gains a new freedom from theology. This freedom is crucial to the emergence of music aesthetics, because it also changes the status of music, by questioning the idea that music, as itself a kind of language, could be seen in Pythagorean terms as part of a divinely ordered nature. The aesthetics of music emerges, therefore, at the moment when it is no longer self-evident what either language or music really is.

2. Subjectivity, language and music. The new conceptions of language in the 18th century come to be linked to the 'world-making' capacity of the post-feudal individual subject. When language is no longer understood as just re-presenting a 'ready-made' world, it can become a means of revealing what otherwise remains inarticulate. In the same way, aesthetics becomes a distinct philosophical topic when reflection on art becomes concerned with what art can articulate that theology, philosophy and science cannot. The new aesthetic approach to the arts is accompanied and influenced by changes in the status of instrumental music in the second half of the 18th century. These changes are linked to the move of the most important theories of art away from the idea of art as 'mimesis': instead of art imitating or representing an extra-aesthetic order of truth, it becomes significant for its own sake. It is therefore not fortuitous that the least representational form of art, wordless instrumental music, should come to be seen by many as the highest form of art.

The emergence of 'absolute music' corresponds to changes in the conception of the human subject which begin in the 17th century and dominate philosophy in early modernity. The first theorist to think of music primarily in terms of the listener was Descartes, whose grounding of knowledge in the thinking subject's certainty of its own existence became the most significant moment in the origin of modern philosophy. In 1618, Descartes claimed that music requires imaginative activity on the part of the listener if the differing bars of a piece are to be made into a discernable unity. This theoretical claim is accompanied by a related change in music praxis: from the 17th century onwards, European music increasingly becomes more a spectacle, rather than just a ritual or a collective participatory activity. The listener's role therefore becomes more individualized, and more attention is paid to music's subjective effects. However, a prophetic tension already becomes apparent with regard to the subject who listens to music. Rationalists like Descartes think musical effects are calculable in terms of a scientific theory, but the suspicion that music might resist such a theory will later lead to specifically aesthetic views, for which music is a manifestation of the freedom of the subject and therefore immune to scientific explanation.

The interrelated social and conceptual changes of this period are accompanied by moves away from polyphonic music, which is understood as reflecting a fixed divine order, towards a harmonically based music, in which the composer's melody plays a new, 'expressive' role. Especially in Italy, this new conception of the role of music goes hand in hand with the rise of opera and with accompanying theoretical debates about the relative status of music and language. The move away from the dominance of polyphony is also regarded as a rejection of the idea that the essence of music is mathematics: Mattheson maintained, for example, that 'the art of notes draws its water from the well of nature and not from the puddles of arithmetic' (1739, p.16).

However, the nature in question is still a nature conceived of in rationalist terms, which composers depict with the intention of arousing moral sentiments in their listeners; they do not attempt to make the listeners undergo the emotions depicted in the music. The move from music being understood as expressing something to a *listener* who is its 'object', to C.F.D. Schubart's idea in the 1780s of expressing oneself as a subject in *music* as one's object, is another of the essential changes that lead to the founding of aesthetics proper. A vital factor here is the increased importance of the notion of the musical work as an autonomous, rather than a functional, entity. These changes also highlight tensions that result between positions that consider music from the point of view of the composer, of the listener, of the performer or of the music itself.

The aesthetics of music results, then, from debates about the relative importance of language and music in the 17th and 18th centuries, from the rise of modern

individualism and from the importance of art in a culture increasingly secularized by the scientific and social achievements of the Enlightenment. From Saint-Evremond's declaration in 1678 that 'The Musick must be made for the Words, rather than the Words for the Musick' (1705; Eng. trans., 1930, p.210), one moves by the end of the 18th century to Wilhelm Heinse's remark in 1776–7 that 'Instrumental music . . . expresses such a particular spiritual life in man that it is untranslatable for every other language' (1795–6, iii, 83), to W.H. Wackenroder's claim in 1797 that music 'speaks a language which we do not recognize in our everyday life' (1910, edn, p.167), and to J.N. Forkel's assertion in 1778 that music 'begins . . . where other languages can no longer reach' (p.66). When the Enlightenment assumption that truth can be represented only in semantically determinate language is questioned, the role of music in philosophical thinking becomes vital. Before this time theorists regarded the feelings aroused by music as wholly able to be articulated via the objective ways of naming them, a conception captured in Fontenelle's famous question: 'Sonata, what do you want of me?'. This question was soon to become very outmoded.

3. KANT: JUDGMENT, IMAGINATION AND MUSIC. The most influential philosophical moves away from Enlightenment assumptions about music are indirectly occasioned in the 1780s and 90s by Immanuel Kant. Kant himself had no great knowledge of music, and maintained that, as merely a beautiful play of sensations, music was the lowest form of art. His initial importance for the aesthetics of music actually derives from his theory of knowledge (1781). His revolutionary claim is that objective knowledge can be understood only as a product of the cognitive acts of a subject. If the intelligibility of objects in the world can be brought about only via synthesizing acts of the mind, the mind can no longer be just the imitator of pre-existing objects. Descartes' idea that the activity of the imagination is necessary for the constitution of music is extended by Kant into the idea that all knowledge of the world depends on the workings of the imagination.

If the imagination could be said to function in terms of fixed, ultimately mathematical rules like the rest of nature, rationalist assumptions about music's harmonious links to the rest of nature, of the kind shared by Descartes and composers such as Rameau, would still hold. However, while accepting that the imagination does partly function in terms of rules, Kant rejects claims about nature's inherent structure, arguing that we ourselves 'give the law' to nature as it appears to us, so that we cannot know nature as it is 'in itself'. The essence of nature 'in itself' for his contemporaries Diderot, Rousseau, Herder and the *Sturm und Drang* movement is manifest in dynamic conflicts of the kind also present in human passions and in living organisms, which cannot be explained solely by scientific laws. The relationship of the imagination – which is itself in some way part of nature – to truth and language therefore becomes a central issue in this period. Rousseau did not think of music as a reflection of a universal form of intelligibility accessible to all rational beings; instead, he links musical melodies to particular natural languages which 'grow' in specific cultures. His idea of nature as the source of art helps open the way for Kant's later notion of the 'genius'. In his *Critique of Judgment* (*Kritik der Urteilskraft*, 1790), Kant regards the nature-derived imaginative ability of the genius to *produce* new formal rules as the basis of art. Those aspects of art that cannot be wholly derived from existing rules, and which therefore depend on the spontaneity of the subject, play a vital role in Kantian and post-Kantian music aesthetics.

Kant also sought ways of resolving key problems that emerge from his epistemology via reflection on art. In order to suggest how the passive reception of data from the world can become the active rendering of that data into forms of knowledge, he had introduced (1781) the idea of 'schematism', the ability of the subject to apprehend something *as* something, rather than receive a mass of sensory data. The relationship of this ability to the freedom of the subject, which Kant regards as the condition for art to be possible at all, becomes crucial in his later work. A piece of music can be described in terms of laws of physics, that is, it can be categorized as sounds of different pitches and durations. If it is to be apprehended as music, however, the listener must be able to hear the sounds as notes, thus as significant in relation to other not immediately contiguous sounds. This ability cannot be rule-bound, because it is required every time a new series of sensory data is heard as music. Furthermore, the listener can relate the elements of music to each other in any number of different ways in aesthetic 'play'. Kant insists that the ability to apprehend something as a work of art is not wholly conceptual, even though it depends on the same activity of the subject that is the condition of possibility of conceptual knowledge.

Two questions arise here. The first concerns the status of a conceptual description of music in relation to what the music itself makes intelligible to the listener. The second concerns the boundary between musical and verbal articulation: if language cannot say all that is to be said about music, this boundary cannot be drawn by verbal language alone. Kant helps open up these questions in his notion of the 'aesthetic idea' – 'the representation of the imagination which gives much to think about, but without any . . . *concept* being able to be adequate to it, which consequently no language can completely attain and make comprehensible' (1790; 1974 edn, p.193). Post-Kantian Romantic music aesthetics explores in depth the idea of languages that would be adequate to the imagination's ability to make the world intelligible in ways that scientific laws cannot explain.

4. ROMANTICISM: PHILOSOPHY, MUSIC AND LITERATURE. Music's dependence on mathematically expressible proportions and connection to the imagination and feelings are linked in Romantic thought to the Kantian problem of the relationship between the deterministic world of the natural sciences and the ethical and aesthetic world of human freedom. Attempts to reconcile the conflict between these two aspects of existence form the basis of German Idealist and Romantic philosophy. These attempts are associated with the exploration at the end of the 18th century of the new possibilities inherent in the dynamic form of the sonata. The sonata offers a formal framework of implicit and explicit rules, and freedom for the imagination to develop this framework by the exploitation of contrast and contradiction. At the same time, it demands that the framework resolve in its conclusion the apparent contradictions it contains. In his *System des Transcendentalen Idealismus* (1800), F.W.J. Schelling gives a culminating role to art as that which

manifests a reconciliation of the contradictions between necessity and freedom, arguing that the freedom of the subject must itself actually be part of nature, and that nature therefore cannot be conceived of solely in deterministic terms. Beethoven seems to have been an admirer of Schelling, and Hegel's Schelling-influenced philosophical system has often been regarded as analogous to Beethoven's sonata movements.

The interplay between the musical and the philosophical is characteristic of early Romantic thought, for which there is no absolute difference between the forms in which the arts and the sciences are articulated and thus no final boundary between language and music. Friedrich Schlegel maintained in 1798 that music is 'the highest of all arts. It is the most general [art]. Every art has musical principles and when it is completed it becomes itself music. This is true even of philosophy' (*Literarische Notizen*, 1980 edn, p.151), and he asked whether, in instrumental music, 'the theme . . . is not as developed, confirmed, varied and contrasted as the object of meditation in a sequence of philosophical ideas?' (1988, p.155).

Schlegel exemplifies the Romantic idea that what is revealed in all forms of artistic and cognitive articulation, be it verbal language, painting or music, is understanding of both the inner and outer world. The Romantics attached no inherent priority to referential language, because we may come to understand an aspect of the world, such as temporality or emotions or even a landscape, more appropriately via music. There is also a musical aspect, most obviously manifest in poetry, to any use of language, and music itself can involve a 'referential' aspect, of the kind present in such works as Haydn's *The Seasons*. Schlegel also links music's resistance to determinate semantic meaning to his conception of Romantic 'irony', which puts in doubt the truth of what one says even as one says it. In 1798 his friend Novalis claimed that the world is an endless series of changing relationships, which was best understood through music because music was not directed towards referentially fixing objects in the world. Novalis's loosening of the boundary between language and music is echoed in Herder's view in *Kalligone* (1800) that music is a temporalized 'energetic' art, not a finished product or work, and is valuable for precisely that reason.

The change in the status of wordless music also gives rise in Romanticism to the first methodologically elaborated conception of 'literature'. Schlegel and Novalis see musical forms as providing the model for the rhythmic and other attributes of verbal texts, which take them beyond both their pragmatic and referential functions and the limitations of rule-bound language, giving the texts a value for their own sake. Schlegel asserts that: 'the method of the novel is that of instrumental music' (1980, p.146), and he even talks of the 'musical' aspects of Kant's philosophy. The Enlightenment contrast between music's supposed failure to say anything important and the primacy of verbal language is therefore turned on its head in Romantic thought; this inversion is later epitomized by Walter Pater's assertion in 1877 that 'All art constantly aspires to the condition of music' (1961, p.129). Novalis also points the way both to the non-representational art characteristic of 20th-century Modernism and to the recent musical avant garde's use of elements of language as non-semantic elements of musical composition, when, linking them to music, he imagines 'Poems, just pleasant sounding and full of beautiful words, but also without any meaning or context . . . like fragments of the most diverse things' (1978, p.769). The Romantics initiate far-seeing reflections on the historical interplay between language and music, content and form, and these reflections do not give the one an inherent superiority over the other.

In his *Philosophie der Kunst* (1802–3), Schelling characterizes music in the terms he uses to reconcile the Kantian division between the world in itself and the world as appearance, between the 'real' and the 'ideal' aspects of the world and ourselves. Art works make the 'ideal' manifest in 'real' objects, revealing how productive freedom combines with the necessities dictated by the material of the work. Language is itself 'the complete work of art' (1859, i/5, p.358), and the other arts are seen as analogous to language. Schelling maintains that music is an inferior form of articulation, because its physical manifestation as sound (*Klang*) means that it is merely transitory. Music's dependence on temporal succession relates it to human self-consciousness, which also links together moments of time in meaningful succession, transcending temporality even as it depends upon it. Rhythm is therefore the principle both of music and of the self for Schelling: without a unification of differing moments, which both makes a succession into a rhythm and makes differing experiences into my experiences, there could be neither music nor a self. Rhythm, the 'music in music' (ibid., 322), is consequently the very condition of possibility of an intelligible world, in which successions of phenomena become meaningful by being unified into identifiable entities. Not only is rhythm therefore also the basis of melody and harmony, but music, as the interplay of difference and identity, can be said to be 'nothing but the heard rhythm and the harmony of the visible universe' (ibid., 329). Everything in the universe gains its identity from its endless relationships to other things, in the same way as each moment of a rhythmic sequence becomes determinate only by being apprehended as part of a whole.

In Romantic philosophy 'the Absolute', the whole that is necessary for finite things to have an identity, is revealed to us only via our sense of the limitations of what we know. This sense of limitation is manifested in concern with music's attempt to say the 'unsayable'. The Romantic philosopher K.W.F. Solger's dialogue *Erwin* (1815) makes some of the most emphatic claims concerning music's relationship to the Absolute: 'the effect of music consists in the fact that in the sensation of every present moment a whole eternity emerges in our mind. Music . . . therefore really achieves what is not achievable for the usual activity of the understanding. But it also does not achieve it for real objects, but only in the universal empty form of time' (Dahlhaus and Zimmermann, 1984, pp.146–7). In order to achieve the real unification of the finite and the infinite, music, Solger asserts, must link itself to other forms of art, a conception that Wagner would soon try to realize in his idea of the *Gesamtkunstwerk*, but which Solger saw as realized in the 'complete musical church service, in the singing of holy hymns before paintings of divine actions' in inspiring architectural surroundings.

5. Schopenhauer, Hegel and Schleiermacher. Schelling suggested in 1811 that 'because sound and note seem to arise only in [the] battle between spirituality and corporeality, music alone can be an image of . . . primeval

nature and its movement' (*Die Weltalter*, 1946 edn, p.43), and he relates music to Dionysus in a manner later echoed by Nietzsche. Much of Schelling's conception of this period was appropriated by Schopenhauer in *Die Welt als Wille und Vorstellung* (1819). However, unlike Schopenhauer and many who follow him, Schelling still thinks of music as linked to rationality, because music tries to come to terms with rationality's origins in what discursive rationality itself can never finally explain. For Schopenhauer, the world of the transient appearances ordered by science is the product of a single self-contradicting power, the 'Will', which is 'an endless striving' (1966, p.240). Any manifestation of the Will must sustain itself against other manifestations that will eventually destroy it. Awareness of the Will comes about through the constant imperative to appropriate other parts of the world in order to subdue the lack generated by our ever-present bodily and emotional needs. If we remain subjected to these needs there can be no possibility of contentment. Music is most closely analogous to the Will and is the most important form of art, because it least represents the world of appearance. Even though the Will cannot be represented as appearance, music is supposed to be an 'image/representation' (*Abbild*) of the Will, so that 'One could . . . just as well call the world embodied music as embodied Will' (ibid., 366). The tensions and resolutions in a melody and the temporality of music echo the self-consuming nature of the Will at the same time as offering an aesthetic escape from dependence on it. The point is not that we experience the emotions that music articulates – that would merely be a further form of subjection to the Will – but that music should turn them into aesthetically significant forms. Schopenhauer regards these forms as analogous to Platonic 'Ideas', and this is supposed to explain the connection of music to mathematical forms. The inconsistencies in Schopenhauer's position have often been pointed out, but he had a remarkable impact on the history of music, the aesthetics of music and the other arts: Wagner regarded reading Schopenhauer as a decisive moment in his intellectual and musical development.

In his *Ästhetik* (1835), Hegel, like Herder and Schelling, defines the arts through their mutual relationships in a historical and philosophical hierarchy, but claims that the 'science of art . . . is in our time much more necessary than in times when art for itself as art provided complete satisfaction' (1965, i, 21). Art, the 'sensuous appearing of the Idea' (p.117), is understood via an historical account of the developing relationships of thought to the object world. The final phase of art is 'Romantic' art, which moves away from 'classical' (Greek) art's concern with the sensuous beauty of the object towards the Christian realization that the highest truth lies in the mind's ability to transcend the (dis)appearing sensuous world. Music is therefore the 'key note' of Romanticism, because it does not represent external objects. Its 'principle' is 'subjective inwardness' (ii, 320), and it is the culmination of the aesthetic liberation of mind by the transformation of the merely sensuous (*sinnlich*) into 'meaning' (*Sinn*). However, instrumental music has no capacity for revealing anything about the external world of science, history and society. This leads Hegel to a version of musical formalism. The philosopher's ability to assert in conceptual language that music is a one-sided form of articulation is evidence for Hegel of why, in modernity, art is transcended by philosophy, whose task is to explicate the relationships between the principles of the sciences.

For Hegel, instrumental music's lack of semantic content is merely a deficiency on the part of music, which conceptual thought can overcome. Schopenhauer, on the other hand, gives all music the same 'meaning', because it is the means of temporarily escaping finitude via its *lack* of worldly meaning. A true description of music would be the 'true philosophy' for Schopenhauer: whereas Schopenhauer thinks that description is impossible, Hegel claims to provide it. This version of the paradigmatic opposition between music as a higher and a lower form of language reappears in many subsequent theorists: Kierkegaard (*Enten-eller*, 1843), for example, suspects music for its merely transient, if highly seductive effects, which contrast with the ethical seriousness of real communication. The question underlying the future of music aesthetics now becomes a hermeneutic question: should music be interpreted in its own terms, or in terms of something else, like philosophy, psychology or physics? The answers to this question will link music aesthetics to major philosophical and ideological battles in the modern world.

F.D.E. Schleiermacher's too often neglected aesthetics is based on his theory of hermeneutics, the 'art of interpretation'. Interpretation is an 'art', because there can be no prior rules for dealing with texts or utterances that make new sense even though they violate existing rules. Instead of isolating music in the manner of formalism, which thinks that music must be understood solely via its own criteria, Schleiermacher regards those criteria as themselves inextricably linked to other forms of articulation. He relates music to gesture and mime, because both are non-verbal, and maintains that 'the mobility of self-consciousness' – which he regards as vital to all art – is evident in both. The idea of the mobility of self-consciousness leads him to develop Kant's notion of schematism in relation to music. Sounds in nature are not music, and music is possible only through new syntheses of sounds, which depend on the subject, as composer, performer or listener, to constitute them as music. Verbal language can have either a closer or a more distant relationship to music: the specifically aesthetic issue is the 'transition to music' from the pre-musical. This transition depends upon 'free productivity', which forms sounds into new significant configurations. Free productivity must play a role, in differing degrees, not just in the composer or the performer but also in the listener.

The essential aspect is therefore the acknowledgement, through interpretative activity, of the other person's freedom to articulate and thereby give pleasure and new insight. Because the relevant aspects of the context of any interpretation must be chosen from an indefinite number of possibilities, there can be no definitive rules for this choice. Most crucially, verbal language is itself never completely semantically determinate: it always depends upon shifting contexts for its meaning. As such, 'even in the most strict kind of utterance the musical influence will not be absent' (1977, p.160), and the musical influence can play a role in how the utterance should be understood. Art, as in Kant, is 'free production of the same functions that also occur in the bound activity of mankind' (1974, p.375). Verbal languages differ from music because the referential and pragmatic 'bound' aspect tends to dominate. However, in metaphor this aspect is relativized: a

metaphor can make us notice new aspects of the world, even if we cannot say what the metaphor means beyond its literal meanings. This brings verbal language closer to the ways in which music brings to our attention what we may not be able to state in words. Music is therefore closest to poetry, in which the concern is not with the general referential aspect of language but with the articulation of a particular aspect of life in a particular form. The paraphrase of a metaphor or a poem, or the verbal description of music, cannot exhaust what is paraphrased or described. After Schleiermacher, theories that take in all dimensions of the understanding of music become increasingly rare.

6. FORMALISM. The enormous and continuing impact of Eduard Hanslick's *Vom Musikalisch-Schönen* (1854) should be understood in relation, first, to its intended refutation of the 'unscientific aesthetics of sentiment/feeling' (1990, p.21), and, secondly, to the music of Hanslick's time against which it was directed – the 'programme music' of Berlioz, Liszt, Wagner and others, which used literary and other verbal models to extend the range of musical expression. Hanslick argued that Schumann's claim that 'the aesthetics of one art is that of the others, only the material is different' (p.23) ignored the fact that the beauty of an art is inseparable from its specific techniques. He therefore maintained that 'in aesthetic investigations the beautiful object and not the feeling subject should first be investigated' (p.22), and that aesthetics should strive for the rigour of a natural science.

Hanslick successfully highlighted ways of looking at music as an 'autonomous' art: instead of describing the feelings evoked by hearing the music, the music critic analyses the specific harmonic, melodic and rhythmic characteristics of the music itself. The reasons for the shortcomings of Hanslick's approach had, though, already been suggested by the Romantics: the boundaries between the musical and the non-musical are not as absolute as he (sometimes) wished to make them. The incorporation into music of the previously non-musical is almost definitive of music history, and any attempt to interpret music solely in its own terms is inherently unrealizable. E.T.A. Hoffmann had already shown in his account of Beethoven's Fifth Symphony that it was possible to combine technical analysis of music with an – admittedly extravagant – metaphorical description of that music. Although technical analysis can generate 'verifiable' results, there is no reason to think that metaphorical interpretation cannot reveal just as much of the piece *qua* music. Hanslick fails to reflect sufficiently on the contested criteria that can be used to decide between the many ways of discussing a piece of music. There are no 'scientific' criteria for such hermeneutic decisions, and the criteria cannot be established merely from the side of the work itself.

Hanslick's core idea is that music's 'content and object' are 'sounding moved forms' (1990, p.75), and he takes instrumental music as his model. The musical material – harmony, rhythm and melody – expresses 'musical ideas', which are determinate in a way that subjective feelings can never be, and are 'their own purpose'. 'Music just wants to be grasped as music' (p.77), but music is also 'a language which we speak and understand but cannot *translate*' (p.78): 'in language the note is only the *means* to the expression of something which is completely alien to this means, while in music the note appears as its *own purpose*' (p.99). Hanslick relies, then, on an untenable conception of language, which makes the existence of literature incomprehensible, because it denies that language itself has a 'musical', non-pragmatic aspect. In order to stress music's distance from representation, Hanslick actually presupposes an aesthetics of representation for the other arts, thereby ignoring Romantic insights, themselves based on the understanding of music, which show that *any* form of art could not validly be said to be art if it were understood merely in terms of representation. Hanslick attempts to overcome the opposition between form and content by claiming that the content of music is in fact its forms, rather than what it might represent or make us feel. The claim that music's form is its content is not *a priori* implausible, but to assess its plausibility one needs to employ the resources of a contextual approach, in which the forms are located both aesthetically and historically. Hanslick's desire for a formalist understanding of music meant that he was not sufficiently prepared to historicize his conception. In this he will be followed by many subsequent approaches to music, particularly those that regard musical analysis as the only methodologically tenable approach to music.

7. DISINTEGRATION. Hanslick's account of the scope of aesthetics of music rules out neither the importance of music for emotional life nor the possible philosophical import of music. However, Hanslick does exemplify a new tendency for aesthetics to aim at the same kind of rigour as is assumed to be present in the natural sciences. This leads to the exclusion of many approaches as merely 'subjective' and unworthy of academic consideration. The discipline of aesthetics now also tends more and more towards schematic attempts – often, like that of Friedrich Theodor Vischer, modelled on Hegel – at thoroughgoing systematization. Such works lack the sense of philosophical discovery that characterizes early Romantic approaches to aesthetics, and the desire to complete the system too often results in a Procrustean treatment of the particular arts.

The writings of the composers of the era, such as Berlioz, Wagner and Liszt, on the other hand, contribute little to sustained philosophical insight into music, even though they are essential documents of the aesthetically crucial interplay – and frequent incongruity – between verbally formulated conceptions of music and actual musical production. The composers also testify to an interest in combining music with the other arts, as suggested by Solger, in the name of the achievement of a higher kind of art, an interest that culminates in Wagner's music dramas. Although many of the ideas the composers embrace derive from Romantic thought, the subtle differentiations of that thought are sometimes neglected, for instance in Wagner's unqualified declaration in *Oper und Drama* (1852) that 'the linguistic capability of the orchestra can clearly be described as the capacity to announce the *unsayable*', namely the 'feeling' that rational verbal language is incapable of expressing. Instead of proposing a complex interplay between language and music, Wagner – who elsewhere sometimes sustains a more differentiated view – here makes a rigid division between the two.

Unlike the best of Romantic music aesthetics and hermeneutics, which regards both the separation of subject and object and other absolute distinctions in

aesthetic theory as mistaken, the authors of the music aesthetics of the second half of the 19th century often concentrate exclusively either on music as an expression of subjective feeling or on the objectifiable aspects of music. The falling apart of the two sides is not just an issue for aesthetic theory: it also relates to a more general intellectual division between the arts and the sciences, which affects all later theorists. A symptomatic text of the era in this respect is Hermann von Helmholtz's *Die Lehre von den Tonempfindungen als physiologische Grundlage für die Theorie der Musik*, first published in 1863, a truly masterly account, based on the physics of sound, of the constitution of the harmonic relationships between notes and of their effect on human physiology. Helmholtz ends with a chapter on 'Relations to Aesthetics' in which he insists that the tonal systems he has examined are not an object of science as such, but 'a work of artistic invention' (1913 edn, p.587). The task of aesthetics, though, is to find the 'laws and rules' (p.588) of beauty, even though these are consciously present neither to the producer nor to the recipient of music. This leads Helmholtz, as many subsequent theorists will also be led, back to the issues that concerned Kant and the Romantics. He suggests, for example, that 'we understand pleasure in the beautiful . . . as a law-bound correspondence with the nature of our mind' (p.589), but this is only because, like Kant, he thinks we must assume a *sensus communis* in matters of taste. Once Helmholtz leaves the passive aspects of the realm of perception, where his account is exemplary, he is forced into what is really hermeneutic territory, which, as Schleiermacher had already shown, and as Hugo Riemann argued against Helmholtz, involves the active rather than just the receptive capacities of the subject. Helmholtz also underestimates the need for an awareness – of the kind his contemporary Willhelm Dilthey tried to reintroduce into academic discourse – of the inescapability of attention to context in all forms of understanding.

A further characteristic tendency of music aesthetics in the second half of the 19th century is the attempt to graft music on to a theory of human nature. Charles Darwin asserts in 1871 that 'musical tones and rhythm were used by our half-human ancestors, during the season of courtship', and that it would therefore be 'opposed to the principle of evolution' to think that 'articulate speech', as the 'latest ... [and] highest, of the arts acquired by man' (1972, p.284), was the source of humanity's musical capacities. Music is in fact the source of language, whose fundamental aspect is rhetorical, because it is based on the need to charm a sexual partner. Darwin thus adopts a familiar Romantic topos, as well as something akin to Schopenhauer's metaphysics of the Will, but he does not give any serious reasons why music should come to be an autonomous form of *art*.

Edmund Gurney (1880) attempts to add on a theory of musical autonomy to Darwin's theory that music is dependent upon emotional excitation (although he later moves away from Darwin's view). Gurney is left with a paradigmatic problem: if it is the case that musical works are, *qua* music, independent of any emotion from outside music (even though they also gave other forms of pleasure), all music would seem, as it did for Schopenhauer, to have essentially the same significance. The source of Gurney's problem is his rigid separation between a referential conception of verbal language and music: he assumes, mistakenly, that non-musical emotions are all namable and that musical feelings must be purely musical. Gurney's position exemplifies a central problem for any aesthetics that wishes to hold on to the autonomy of music at the same time as connecting music to the social and historical world.

Friedrich Nietzsche's account of music in *Die Geburt der Tragödie* (1872) mixes Schelling's link of music to Dionysus with Schopenhauer's metaphysics of music and the Will, while connecting Wagner's music dramas to Greek tragedy. Tragedy, as music was for Schopenhauer, is closest to the Will (Dionysus), because it transforms the destructive and chaotic aspects of human existence into the form of art. By 1878, though, Nietzsche already asserts, in the light of his engagement, after writing *Die Geburt der Tragödie*, with materialist conceptions of science of his day, that 'In itself no music is deep and significant, it does not speak of the "Will"' (*Sämtliche Werke*, 1980, ii, 175), and that 'Music is precisely not a general, supra-temporal language' (p.450). The twists and turns in his conception of music and in his relationship to Wagner are underpinned by his antipathy to any art or any conception of art that echoes Christian redemptive metaphysics, which he regards as an obstacle to confronting the realities of human finitude. He also comes to attack Wagner, in the name of a formalist musical autonomy, for giving up 'all style in music, in order to make of it what he needed, a theatre-rhetoric, a means of expression . . . he increased the linguistic capacity of music into the unmeasurable' (vi, 30). At times, though, Nietzsche sees aesthetics as 'nothing but an applied physiology' (p.418), and, like Darwin, as 'bound to . . . biological preconditions' (p.50). At other times – like the early Romantics, and in a manner that will eventually influence deconstructive approaches to interpretation – he claims that music is the reminder that the world 'has once again become "infinite" for us: to the extent that we cannot reject the possibility that it contains infinite interpretations in itself' (iii, 627).

This conception, however, is often reduced to another version of Schopenhauer's metaphysics, when he claims that the 'will to power' 'interprets', by repressing one aspect of itself in favour of another. Nietzsche's influential rejection of the notion of truth as adequate representation of a ready-made world leads him to regard all forms of articulation as potentially deceptive, and thus as all ultimately 'aesthetic'. His assessments of music vary so much because he constantly undercuts the differing bases, from biology, to psychology, to metaphysics, upon which those assessments are built. Nietzsche points to a disintegration that takes place in aesthetics when hopes for the capacity of art to replace theological meaning by establishing harmonious new relationships between the human and the natural are undermined both by the advances of the natural sciences and by the failure of these advances to be accompanied by equivalent moral and aesthetic progress. The crisis of forms in post-Wagnerian music at the end of the 19th century clearly relates to these developments: once the harmonic tonal system comes to be seen as optional, the relationship of music to a meaningful natural order seems increasingly to be a 'merely human' projection. The problem for 20th-century music aesthetics lies in finding a response to this crisis that could both sustain a critical perspective and do justice to new forms of musical production.

8. THE 20TH CENTURY: ARTISTS. In 20th century 'classical' music the tension between the post-traditional sense of liberation from established forms, and the fear that a 'merely human' order might turn out to be no meaningful order at all, was brought to a head by what Schoenberg terms the 'emancipation of dissonance', the renunciation of a tonal centre around which composition is organized.

An intriguing speculative interpretation of the emancipation of dissonance is to be found in Thomas Mann's novel *Doktor Faustus* (1947), which follows the life of the fictional German composer Adrian Leverkühn whose 'compositions' involve elements derived from descriptions of the work of Mahler, Schoenberg and others. Mann connects the fate of the avant-garde composer, who insists that 'even a silly order is better than none at all', to the fate of Germany as it descends into the barbarism of the Nazi period. *Doktor Faustus* is questionable in a variety of respects because establishing relationships between music, ethics, society and politics in the 20th century is fraught with difficulties. However, the most significant composers were themselves clearly convinced of the existence of such relationships, and the continuing rejection of much of their music by large parts of the listening public suggests the importance of that conviction. The vital aesthetic question here is how the move of the most innovative music away from the tastes of the majority of its audience is to be interpreted. Carl Dahlhaus suggests that, while the music aesthetics of the 19th century aimed to explicate the musical experience of the educated lay person, the music aesthetics of the 20th century becomes an aesthetics for experts which reflects on the legitimacy of the new compositional techniques (Dahlhaus, Zimmermann, 1984).

Writing in 1957, Pierre Boulez sees advances in the technology of sound production as making possible 'a category of works free at last from all constraint outside what is specific to themselves'. He regards this possibility as 'quite an abrupt transformation, when one considers that previously music was a collection of codified possibilities applicable to any work indifferently' (Thévenin, 1991, p.179). Boulez seems untroubled by the fact that the notional lack of any 'codified possibilities' must give rise to difficulties for those listening to the music in question: if there is nothing 'codified' about the music, what grounds does one have for terming it music at all? It is therefore no coincidence when, the following year, Milton Babbitt argues that advanced composition is increasingly becoming like research in physics and will become inaccessible to the general public.

John Cage is also among those composers who regard liberation from the forms of the past as an unquestioned improvement, but he does so from a perspective that aims beyond a supposedly restrictive conception of 'music'. He offers an alternative between the position common to Boulez and Babbitt – 'if [the composer] does not wish to give up his attempts to control sound, he may complicate his musical technique towards an approximation of the new possibilities and awareness' – and his own position: 'one may give up the desire to control sound, clear his mind of music, and set about discovering means to let sounds be themselves rather than vehicles for man-made theories or expressions of human sentiments' (1973, p.10). Cage proposes a series of not necessarily compatible conceptions: he concurs with Herder, in the idea that music is not limited to intentional human creations, and with Kant's view of art, in the idea that it is a 'purposeful purposelessness' (p.12); at the same time, he endorses a very radical version of what was adumbrated by the advocates of music's autonomy from extra-musical meaning. Cage does claim that 'the coming into being of something new does not by that fact deprive what was of its former place', but his anarchic optimism contrasts sharply with the worries of the composers who did the most to create the situation to which he responds so positively.

Stravinsky's writings on music aesthetics contain a number of observations on the interpretation and performance of music which prefigure the 'authenticity' movement, but the writings would not receive the attention they do if they were not by Stravinsky (it is not even clear to what extent they were all by him anyway). The lectures entitled *La poétique musicale* (1942) espouse a neo-classicism which, as it did for the later Nietzsche before him, involves favouring minor French talents – for Nietzsche it was Bizet, for Stravinsky, Gounod – over the 'bad musicians of modern Germany: the Liszts, the Wagners, the Schumanns'. The 'essential aim' of music should be 'to promote a communion, a union of man with his fellow-man and with the Supreme Being'. This union is being destroyed because 'Modern man is progressively losing his understanding of values and his sense of proportions', and this 'leads us infallibly to the violation of the fundamental laws of human equilibrium'. Like later conservative thinkers, such as Scruton (1997), Stravinsky interprets effects as causes, failing to see how the musical and other cultural symptoms which understandably disturb him have deep social and economic roots and cannot just be attributed to the misuse of freedom on the part of those he blames for the symptoms. His repeated appeals to the need for a 'foundation' that would reveal the hollowness of 'unrestricted freedom', and for an 'established order' to which one should submit as an artist and human being, are based in the last analysis on a dogmatic theology which completely fails to come to terms with the complex realities of the secularized modern world.

Schoenberg is profoundly aware of the problems created by his farewell to many of the established foundations of musical composition. His writings testify to a constant tension between the drive for authentic innovation and the desire to legitimate that innovation in terms of existing traditions. His account of his role in the 'emancipation of dissonance' raises important points with regard to his music's relationship to verbal language, describing how he only became able to use the new non-harmonically based style 'to construct larger forms by following a text or poem' (1975, p.217), the lack of recognizable chordal patterns having ruled out other ways of structuring a larger compostion. In his longer compositions before the development of his new method of 'composition with 12 tones', the 'differences in size and shape of [the text or poem's] parts and the change in character and mood were mirrored in the shape and size of the composition, in its dynamics and tempo, figuration and accentuation, instrumentation and orchestration. Thus the parts were differentiated as clearly as they had formerly been by the tonal and structural functions of harmony' (pp.217–8). However, in that case, the hard-won musical autonomy established in music at the end of the 18th century is now

renounced in favour of a renewed subordination to the text. Schoenberg's essential concern is that his music should embody an order of the kind possessed by harmonically based music. He suggests that the artist 'will wish to know consciously the laws and rules that he has conceived "as in a dream"' and that 'he must find, if not laws and rules, at least ways to justify the dissonant character of these harmonies and their successions' (p.218). In the search for specifically musical forms of order, Schoenberg arrives at a method which he claims to have 'esthetic and technical . . . support which advances it from a mere technical device to the rank and importance of a scientific theory' (p.220). He accordingly presents the method of 'composition with 12 tones', which he developed in the early 1920s, as the 'foundations for a new procedure in musical construction which seemed fitted to replace those structural differentiations provided formerly by tonal harmonies' (p.218).

Arguments over the significance of Schoenberg's new method continue to this day. Do listeners actually listen to such music with tonal ears, and is the method therefore, as Hindemith and others have claimed, still in fact reliant on a natural order of harmony based on the intervals between notes with less complex mathematical ratios? Or is the perception suggested by Hindemith's argument merely a habit that has developed in the West over the centuries? The more significant issue here, as Mann realized, lies in the consequences that could be drawn from adopting either of these assumptions. The tendency has been for many on the authoritarian and conservative side to insist that there is a natural order upon which music relies, which the avant garde senselessly transgresses, and for many on the left to insist that one cannot naturalize something that is inextricably connected to other developments in culture and society. Given the growing openness of the public to music from the most diverse cultures, this issue seems likely to be settled in favour of the relativity of music to historically based norms, but the underlying tension persists between the desire to naturalize and the desire to historicize because music has become ever more clearly linked to an awareness of the essentially contested nature of cultural norms.

9. THE 20TH CENTURY: THEORISTS. The most significant theoretical development in the music aesthetics of the 20th century is the emergence of sophisticated theories of music's connections to society and history, which extend the exploration of music's relationship to subjectivity to the ways in which individual subjectivity is at least in part consituted by socially generated structures and practices, including language, economics and music itself. Many of the other major theories of music, on the other hand, either are questionable elaborations of positions from previous music aesthetics, or fail to deal with the real aesthetic questions.

Large parts of the philosophical work on music in Britain and the USA from the 1920s onwards reflect the impact of the new 'analytical' philosophy of language of Frege, Russell and Carnap, which assumes that the philosophical explanation of thought can be achieved by the logical analysis of language. Until the later Wittgenstein – who will maintain, in line with Romantic hermeneutics, that 'Understanding a sentence in language is much more related to understanding a theme in music than one thinks' – such philosophy often stifles thinking about those aspects of language the Romantics regarded as inseparable from music, though it does offer invaluable insights into the logic of our understanding of the object-world. Analytical approaches to philosophy draw on powerful support from the natural sciences, which study the rule-bound subjective aspect of music in new forms of physiology and psychology, and study the objective aspect of music, in acoustics, information theory and other physically based disciplines. The aesthetics of music, though, is inherently at odds with philosophy which, like 'logical positivism', relegates statements about music as an art to 'meaninglessness', on the assumption that the meaning of a statement lies only in the ways in which it can be scientifically verified. Controversies over the relationship between verbal language and music now take on a new significance, which comes to be reflected in the divide between analytical and 'phenomenological', and hermeneutic approaches that still dominate contemporary philosophy. In certain respects this divide echoes the divide between positions that see music as a timeless category and positions that think it impossible to separate the understanding of music from its history.

Until recently much of analytical philosophy worked mainly on the objectifying assumption that meanings are phenomena to be explained in terms of the rules for the use of language. It also considers music in mainly objectifying terms, looking, for example, at notional laws governing the hearing of the musical object, or at whether the object has 'representational properties'. The advocates of phenomenology closest to its founder, Edmund Husserl, such as Roman Ingarden (1973; Eng. trans., 1986), are concerned to give exhaustive descriptions of the structures via which the world is 'given to us', and they often deal with ontological issues similar to those that concern analytical philosophers, such as the status of the musical work *qua* score and *qua* performance. Ingarden argues, for example, that the musical work is a 'purely intentional object', reducible neither to the score nor to a specific performance (or set of performances).

Susanne K. Langer (1942) incorporates music into a view, derived from Ernst Cassirer, of humankind as distinguished from the animal world by its ability to produce symbols. Langer's often exhilarating position remains, though, unhappily suspended between analytical assumptions about the 'fixed meanings' which refer to objects in the world in verbal language, and a Romantic awareness, based on Kant's notion of schematism, of the need to explore ways of making sense beyond discursive language. For Langer, music becomes the 'logical expression' of feelings, and has no 'literal meaning'. It has 'all the earmarks of a true symbolism, except one: the existence of an *assigned connotation*' (1942, p.240), and is an 'unconsummated symbol' of the form of feelings, rather than of feelings themselves, or of objects in the world. However, it is clear that living metaphors also have no 'assigned connotation', and that music cannot be limited to expressing just the *form* of feelings. The strict division Langer requires between music and language therefore not only fails to theorize language adequately but also fails to do justice to key aspects of music.

Hermeneutic and phenomenological approaches to language and art associated with the work of Martin Heidegger assume that humankind is inherently characterized by the need to understand its own facticity. This 'always already' present *existential* need is the inescapable basis of any subsequent *theoretical* attempt to understand

ourselves and the world. A hermeneutic aesthetics of music therefore does not see it as necessary to make definitive methodological divisions between the differing dimensions of language, or between language and music, because these divisions are constituted in continually changing practices of understanding. In his essay 'Grundfragen der Musikästhetik' (1926), Heidegger's pupil Heinrich Besseler announces that 'the real goal of all music theory and music history today should be termed hermeneutics' (p.78). Like Heidegger, Besseler wishes to get away from the idea that the truth about phenomena like music is a purely theoretical or scientific matter: 'Music originally becomes accessible to us as a manner/melody of human being'('Weise menschlichen Daseins', p.45). Music is part of human 'being in the world'. The task of aesthetics, as it was in the Romantic tradition, is to make us understand better what we are in relation to music and what music is in relation to us: these questions cannot be divorced. The questions are historical because there can, as the history both of music and of music aesthetics shows, be no final answer to them. Besseler confirms the significance of his approach in the notion of *Gebrauchsmusik* ('functional music' or 'music for use'), which reflects the new musical production of the early Hindemith, Eisler and others. He also challenges notions of musical autonomy, arguing that 'The everydayness away from which high art wishes to lead is the life-element of *Gebrauchsmusik*' (p.43), and asks 'What role does music play in the context of the particular existence and its everydayness?' (p.42). This position is itself a historical reaction to the failure of so much music theory at that time to come to terms with the new roles of music in a society which was in ideological, social, economic and political crisis.

The exploration of music's relationship to society exemplified by Besseler is unthinkable without the emergence of the sociological tradition of Marx, Dilthey and Max Weber. However, many Marxist sociological approaches to music aesthetics, such as those of Georg Lukács and Zofia Lissa, remain, despite the importance of their attempts to show how musical and socio-historical transformations are inextricably linked, trapped within a model of art as primarily a representation of historical reality and as merely a 'reflex' of its historical circumstances. Because it does not offer an adequate account of musical autonomy, let alone of the revolutionary utopian promise of reconciliation that music seems to offer its listeners suggested by Ernst Bloch (1918), this model often makes it incomprehensible that the same music can be highly valued, for differing reasons, in the most diverse modern societies. The challenge facing a sociologically orientated aesthetics of music is therefore to do justice to seemingly incommensurable realms. Analysis of historically specific social, economic and political constellations has to be combined with analysis of music which becomes aesthetically significant only because it transcends such constellations.

The strength of the work in music aesthetics of the philosopher, critic and composer T.W. Adorno, on whose theories Mann relied for parts of *Doktor Faustus*, lies in his combination of the refusal to ignore the continuing importance of the Western classical tradition of autonomous music with a critical stance which accepts that art may have become inadequate as a means of responding to the extremes of modern history. Adorno directs his aesthetics against the 'culture industry'. In capitalist societies where virtually anything can become a commodity to be bought and sold, art with an immediate popular appeal will tend to function as a compensation for existing injustices, and will therefore encourage uncritical acceptance of the *status quo*. The freedom of the subject is threatened when subjects become the passive objects of cultural products made to fit the artificially created demands of the market. The music of the heroic bourgeois period, particularly that of Beethoven, had seemed at times to offer symbolic indications of a reconciliation between the new freedom of the individual and the need to create new forms of collective social justice. It did so, Adorno argues, by being true to the specific, collectively generated, technical demands and possibilities of the art form itself, rather than by aiming to please its recipients or to be immediately comprehensible. The task of music aesthetics is to bring out the more general truth of the most significant music, at the same time as doing justice to the particularity of the musical work, which is, as it was for Kant, a value in itself. The problem is that music no longer can be regarded as true if it is beautiful in the manner of the tradition of Western classical music: that tradition's means of extending the ability of the modern subject to express itself have, particularly since Wagner, become clichéd and 'ideological'. The difficulties of composing modern music are thus incorporated into a wider theory of how music relates to the individual and of how the individual is subjected to the pressures of modern rationalized societies.

Despite his pessimistic assessment of modernity, Adorno tries to sustain both the autonomy of music and the notion that music still has a potential to keep alive the idea of a fulfilled human existence. This leads him to revise Romantic notions of the relationship between music and language: 'As language, music moves towards . . . the absolute unity of thing and sign, which is lost in its immediacy to all human knowledge' (1970; Eng. trans., 1984, p.154). Music 'makes a fool of the spectator by continually promising meanings – and even intermittently granting meanings – which are for it in fact only, in the truest sense of the word, means towards the death of meaning, and in which [meanings] it for that reason never exhausts itself' (pp.154–5). Like the Romantics, Adorno sustains an interplay between what can be stated in verbal language and what music may communicate through its unique historical configuration of material. Within Adorno's own context new music can only keep alive possibilities of meaning by refusing to be assimilated into the dominant ways of making sense of the modern world. The musical avant garde of Schoenberg, Berg and Webern, which resists interpretation in terms of straightforward enjoyment, is seen as the music that is true to the demands of philosophically serious music aesthetics. Adorno's position, particularly in *Philosophie der neuen Musik* (1949), where he stylizes the difference between Schoenberg and Stravinsky into a paradigm of the conflicts in modern music, is often unnecessarily dogmatic, and his moves from immanent analysis of works to their wider social meanings are sometimes questionable. However, his requirement that art, the sphere in which the most developed possibilities of human freedom can be explored, be subject to rigorous aesthetic and historical criticism rings increasingly true at a time when the culture industry and those who administer it threaten to obliterate

differentiated aesthetic judgment in so many areas of the contemporary world.

Adorno may well represent the end of a tradition of aesthetic theory which was certain of its ability to make substantial connections of Western music to a wider story about history and philosophy. Now, in an era of incommensurability between philosophical traditions and of 'decentred' artistic production, such enterprises are often seen as underestimating the complexity of the task of establishing large-scale links between the theorization of art and the writing of history. What, then, are the future tasks of music aesthetics if it renounces a 'grand narrative' (Lyotard) of Western art and if the very category 'work of art' is now threatened? Since its inception, aesthetics has always been a hybrid discipline. Its decline from the speculative heights of the early 19th century was in part a result of many of its concerns becoming the object of more specific disciplines, particularly in the natural sciences. However, the power of the early conceptions, beginning with Baumgarten, lay in their disturbing the boundaries between scientific and other conceptions of the world by showing that art poses questions that cannot be definitively answered from within any of these particular conceptions. When aesthetics competes with disciplines with their own rigorous methodological criteria it must in one sense fail: the aesthetics of music will not, for example, give us testable results of the kind offered by musical analysis. However, the inextricable links between aesthetics and hermeneutics are today again becoming important both for the study and the praxis of music, and for philosophy.

The notorious problems concerning the appropriate ways to carry out musical analysis relate to problems that have also bedevilled the analytical philosophy of language. The underlying dilemma is a circularity, in which the results of any investigation must depend on the initial decision as to what it is that is being analysed. This dilemma was already recognized by Kant when he introduced the notion of schematism in his theory of judgment, was developed by Schleiermacher and was made central to 20th-century philosophy by Heidegger and Wittgenstein. Criteria for judgment, be it in semantics or music analysis, cannot legitimate themselves, so there can be no definitive way of establishing a universally valid starting-point for any kind of analysis. The choice that music aesthetics now faces lies between the analytical development of Hanslick's formalism, and hermeneutic attempts, represented in recent years by Carl Dahlhaus, Hans Heinrich Eggebrecht, Roger Scruton and others, to keep alive interactions of music with other ways of understanding and experiencing the world and ourselves. Such interactions ensue of necessity from the fact that all understanding, be it of referential language or Beethoven's 'Eroica' Symphony, is possible only via the contexts in which what is to be understood is already pre-theoretically disclosed to us. When we understand, we do not understand sentences via the rules of language: instead we understand the world of which we are a part. If we did not have prior ways of understanding the world we would never even be able to learn rules for understanding utterances, because we could not get to the point of understanding what it is to learn a rule at all. In a phrase of the philosopher of language Donald Davidson, the hermeneutic conception erases 'the boundary between knowing a language and knowing our way around in the world generally'. Music can contribute to our knowing our way around the world, even as it reminds us in its own ways that the understanding of anything always also involves aspects that remain hidden to us. Recent developments in musicology and music aesthetics suggest that a hermeneutically orientated approach can assimilate the analytical insistence on the autonomy of music at the same time as showing how the idea that music is mere abstract form fails to explain why so many kinds of music matter so much, in so many different contexts, to so many people.

IV. Anglo-American philosophy of music, 1960–2000

1. Ontology. Ontology is the study of the manner, matter and form in which things exist; so the ontologist might ask: what kind of thing is a musical sound or a musical work? Few philosophers have recently addressed the first question (an exception being Scruton, 1997), but several discuss the second.

Although Goodman (1968) characterized the work as the set of its accurate performances, in fact he regarded it as a set of 'descriptions' encoded in and relative to a notational system. Anything that satisfied these descriptions was an instance of the given work. As a nominalist, Goodman avoided talk of abstract entities, but a person more inclined to realism might regard the work not as a set of descriptions but as an abstract object, in particular as a sound-structure. This Platonist view has a long history. Its entailments include the following: that musical works exist eternally and are discovered by their composers; that a single work could be discovered by different people; that composers, working independently and at a temporal and social distance from each other, would write the same work if they specified the same sound-structure.

The main alternative to Platonism is a contextualist ontology, which ties the work's identity to features that depend for their character on the socio-historical setting within which it is made. Accordingly, works are created, not discovered, and identical sound-structures specified in very different socio-musical contexts are likely to result in distinct works. Contextualism was developed mainly by Levinson (1990). Because he took the composer's identity to generate relational features of the work that are crucial to its identity, he thought that different composers spelling out the same sound-structure inevitably composed different works. Also, he regarded a work's instrumentation and the appropriate manner of sound production to be essential to its identity. On all these points he has been criticized from a Platonist perspective by Kivy (1993). Levinson focussed on works dating from the early 19th century. His proposals are less plausible for earlier times, because far less detail then was specified by the composer, both as regards what is to be sounded and the instruments to be used. One might respond to this (as Goehr, 1992, did) by concluding that the concept of the musical work, with its regulative function, did not emerge until 1800. Alternatively, one could hold that a thinner but still legitimate conception prevailed before 1800. Works can be thin or thick in constitutive properties; over the past six centuries they have tended to become thicker, with more detail specified and less freedom granted to the performer. A number of factors

lie behind this trend, such as the development of an increasingly complex notational system and the progressive standardization of instruments and orchestras.

On this last view, musical works are not of a uniform ontological type. A similar conclusion emerges when one considers differences across musical types at a given time. For instance, jazz pieces are ontologically much thinner, and purely electronic works are much thicker, than most classical ones. Works conveyed by notations addressed to performers are always ontologically thinner than the performances that instance them, because notations are silent on many matters that must be decided by the player. But the notations or model instances that are the basis of jazz improvisations are more skeletal than those specifying classical works, so the jazz musician has more freedom than his or her classical counterpart. Meanwhile, purely electronic compositions are for playback under standard conditions, not for performance. (The person who controls the settings of a hi-fi in playing a CD does not perform the works on it, whether these are Beethoven's or are purely electronic.) Accordingly, in the case of purely electronic pieces all the acoustic details that are reproduced under appropriate conditions characterize the work itself.

2. Performance. In the case of classical music, philosophers typically have focussed more on works and the listener's experience of them than on performances (exceptions include Mark, 1981; Thom, 1993; and Godlovitch, 1998). Some who write on jazz (Alperson, 1984; Brown, 1996) and on rock (Gracyk, 1996) have discussed improvisation and the manner in which live performances differ from those generated in the recording studio, but the philosophical literature on these musical kinds is as yet under-developed. Meanwhile, the performer's interpretative contribution is little discussed (but see Krausz, 1993).

However, one performance issue, that of authenticity, has been widely debated by philosophers in the last decade. An authentic performance is one that instances the work, which is done by faithfully executing those of the composer's instructions that are work-constitutive, whether or not it also duplicates some original performance (Davies, 1987). Because a work's specification always under-determines many details of its performance, many different performances can be equally faithful to it. There are huge practical difficulties in finding authoritative scores, in mastering the instruments and performing practices of former times and in interpreting the composer's prescriptions in light of the notational conventions and musical practices they presuppose. Moreover, there is some philosophical uncertainty, especially as regards works historically removed from the present, about which of the properties publicly indicated by the composer are to be counted as work-determinative. Yet authenticity would appear to be attainable in many cases, since performers often can comply with all the instructions and indications conveyed by the composer, thereby delivering a faithful instance of his work.

There are many kinds of authenticity in which music figures (Kivy, 1995), including that associated with the performer's personal autonomy. But if we are interested in musical works as the creations of their composers, the faithfulness with which the composer's work-determinative instructions are met must be central to the enterprise of performance. This is not to deny that a performance is evaluated also in terms of other qualities, but it is to say that authenticity normally should not be traded for the sake of heightening other performance values. If this last assertion does not appear to be a commonsense platitude, as it should, perhaps this is because of the inflated claims sometimes made on behalf of authentic performances. Of more philosophical relevance is the understandable doubt that modern listeners can experience the work as its composer's contemporaries did, in which case it can seem that authenticity must be pointless. Yet this need not be so, as long as we value performances for successfully instancing the works they are of, thereby acknowledging our musical heritage and all the subsequent works built on that foundation. Besides, such painstaking care is taken with the details of most works by their composers that it is reasonable to predict that authentic performances usually will be more revealing and rewarding than the alternatives for audiences who are receptive to works of the kind being performed.

3. Expressiveness. The traditional view, that emotions are purely inner sensations distinguished by their phenomenal structures, has been rejected in favour of one that recognizes as no less essential to an emotion's identity certain desires, attitudes, suppositions and beliefs about its object, along with appropriate behavioural expressions and causal conditions. In the 19th century, Hanslick anticipated the modern view and concluded that purely instrumental music could not express human emotions. In effect, he argued that music was incapable of conveying propositional attitudes or of picking out intentional objects (and neither was it sentient, of course). Although a few current authors have not regarded works as expressive of emotions – for instance, Raffman (1993) has suggested that expressiveness attaches to performances, not works – most reject Hanslick's conclusion. Indeed, accounting for music's expressiveness has been the major preoccupation of Anglo-American philosophers of music in recent decades.

Although Susanne Langer's theory (1942) remains touted by music educationists, it presupposes the crude, traditional view of emotions. Moreover, its account of music's expressive power – as depending on an opaque and indescribable connection between the form of emotions and of music – lacks explanatory power. (But for a recent defence of Langer, see Addis, 1999.) Similarly unsatisfactory is Goodman's analysis (1968) of art's expressiveness as involving metaphorical exemplification, for it is clear neither how music illustrates the literary device of metaphor nor how the notion of exemplification, by which the music provides a sample of an emotion in expressing that emotion, applies to it (see Beardsley, 1981). Meanwhile, the claim that we experience an irreducible analogy between music's movement and human expressive behaviour (Scruton, 1974, 1997) identifies without accounting for the phenomenon that is so puzzling.

One prominent analysis, sometimes known as the 'contour' theory, notes that expressive character is sometimes ascribable to a face or body without reference to felt-emotions or the intentional contexts they suppose (Kivy, 1989; Davies, 1994); for instance, the face of a St Bernard dog looks sad, without regard to the way the dog happens to be feeling. The expressiveness of instrumental music is similar, arising from a resemblance experienced between human appearances with an expressive character

and the dynamic contour and pattern of the music. In his version of the theory, Kivy denied both that music was about, and that it often moved listeners to echo, the emotions expressed in it. Neither of these positions is entailed by the contour theory and, without them, it is better placed to explain why we would attach importance to music's expressive character.

The contour theory cannot explain how music could express 'higher', more cognitive emotions, such as pride, hope, envy and patriotism, which lack distinctive outward appearances. Those who think that music is capable of expressing such emotions have argued that music is able to invoke or otherwise 'hook into' the cognitive aspects and attitudes that are distinctive to them (Levinson, 1990). Complementarily, some philosophers (see Robinson, 1994, and Levinson, 1996) and musicologists (cited in Robinson, 1997) have suggested that instrumental works should be heard as developing a narrative about a persona hypothesized by the auditor. This narrative provides both a human subject to whom emotions can be attributed and a context allowing for the expression of subtle, cognitively complex feelings. Whether this kind of imaginative engagement is required for the recognition and appreciation of the expressive properties of instrumental music, or, instead, if it leads to responses that are merely occasioned by the music, are topics that will continue to be debated.

A longstanding but frequently criticized theory holds that music's expressiveness can be analysed reductively as its power to awaken a response in a suitably prepared listener. The listener does not respond to the music's expressiveness; that is, the music's expressiveness does not precede the listener's response, either as its object or as its cause. Rather, the music is expressive in virtue of arousing the listener as it does. New and more refined versions of 'arousalism' continue to be advanced (see Ridley, 1995, and Matravers, 1998). The appeal of this theory no doubt stems from the recognition that we could not easily explain the interest of music were it not for its capacity to stimulate the listener's emotions.

4. UNDERSTANDING. It is frequently acknowledged that comprehending listeners must have a grasp of a work's style and type, so that they can distinguish the expected from the surprising and can synthesize the perceptual manifold in a fashion that reflects the music's telos or organizational principles. In this regard, Meyer's theory (1956) of the listening process is widely accepted (although his account of music's expressiveness as depending primarily on delays in the fulfilment of such expectations seems unduly narrow). According to Meyer, educated auditors bring to their listening expectations internalized from experiences of similar pieces and earlier parts of the current one, and these reflect the likelihood of various continuations from any moment in the work. More generally, the cognitive character of listeners' understandings, which must be informed by knowledge of the relevant idioms and conventions, is emphasized over alternative accounts that characterize the appeal of music as purely visceral.

However, this is not to accept the tradition according to which the appreciation of instrumental music depends on recognition of its formal structure and is fundamentally opposed to emotional responses other than those that delight in the work's formal unity and ingenuity. The intellectual and emotional are not exclusive and opposed; neither is the one always self conscious while the other is mindless. Appreciation may be revealed in the emotional response music calls from a person as much as in his or her verbal reports, and we might reasonably doubt that listeners comprehend music if they are never moved emotionally by it; but neither of these observations counts against the claim that music's comprehension is ineradicably cognitive. Many recent philosophers hold that a work's formal structure will usually be of interest to listeners who grasp it, but these philosophers are not narrow formalists. Listeners should be able to recognize prominent musical ideas (such as themes), to identify their repetitions, variants and recapitulations as such, and to describe the music's unfolding, but this need involve neither an internal commentary in terms of textbook models nor a knowledge of musical technicalities and the musicologist's vocabulary (Kivy, 1990; Davies, 1994). Moreover, so intimate often is the connection between a piece's formal structure and its expressive pattern that listeners' accounts of, or responses to, the latter are no less indicative of their appreciation than would be their descriptions of the former.

Though the above position is far from strict formalism, it is rejected by Levinson (1997), who follows the 19th-century author, Edmund Gurney, in arguing that almost all musical understanding and appreciation comes from tracking the music's progress moment by moment. Not only is it unnecessary for listeners to attend to overarching form, it is impossible for them to hear musical units that extend over more than about one minute. What is heard earlier can affect how later passages sound, but listeners need be aware only of the outcome, not of the connections that underlie it. The art of listening involves practical rather than intellectual knowledge – know-how rather than propositional awareness – and the understanding achieved may not be capable of articulation.

Levinson intends his account to defend the person who responds to the passing surface of music without reflecting on what he or she hears. If his claims are controversial, it is because he presents them as appropriate for the listener whose aim is to understand an extended classical work. The kind of listening he recommends might be thought to be more appropriate for other musical kinds or for the listener whose primary focus is not the work as such, and who yields to the music's subliminal effects without attending to what is actually heard.

5. EVALUATION. Music plays so central a role in the lives of many people that there can be no doubting how highly it is valued. As a primarily abstract art form, it cannot be important for the informational significance of its content. This has been seen as posing a problem for analyses of its profundity (Kivy, 1990), but it could be that the distinctness or separation of the musical realm from the actual world is crucial to music's value, not only for providing an enjoyable alternative to reality but also for intensifying the appeal of the formal and expressive relations that it explores (Sparshott, in Alperson, 2/1994; Goldman, 1995; Budd, 1996).

Although it is sometimes maintained that music is valuable mainly as a source of knowledge (through direct acquaintance with the emotions it expresses and arouses, say), or because of its humanizing and moralizing power, a more plausible view recognizes that musical works are valued for the pleasure that attends their appreciation. An interest in a sufficient number of works might, indeed,

yield the desirable side-effects mentioned, but individual works interest us for themselves and are valued according to the pleasurable experiences they provide. Not all works are enjoyable: some are revealed as trite and dull, and then are to be avoided, while others, though worthwhile, are harrowing and depressing. But, in general, musical works reward those who take the trouble to understand them, and this includes works in which the expression of negative emotions contributes to the creation of a whole the worth of which can be seen to depend on the part they play.

The pleasure provided by the listening experience is taken not only in purely sensuous elements but also in the complex relation between a work's content and the manner in which it unfolds (Levinson, 1996). Sometimes formal relations are important; at other times expressiveness is prominent; and most often it is the complex interdependence of these two, as well as other features salient to an experience of the music's progress, that is the object of appreciation. In order to hear the interplay between the music's content and form, the listener's perceptions must be informed (if only implicitly, as a result of repeated hearings of appropriately similar works) by a sense of the musical conventions, constraints and possibilities within and against which the composer operates.

Further kinds of musical value include a work's originality and its influence on later works. These values are derivative: unless the work in question provides an enjoyable experience, or leads to subsequent works that do so, its originality and impact are of no moment.

It should be apparent from the earlier discussion of performance that we esteem, as well as works, the performer's efforts, both as these succeed in delivering a faithful version of the work and also as they are creative in going beyond that which is supplied by the composer, so that what is sounded forth presents an interesting and satisfying interpretation. In addition, we admire the sheer skill of the virtuoso player (Mark, 1980; just as we admire the technical brilliance of the composer of complicated fugues), but, in general, we expect virtuosity to be at the service of the work rather than an end in itself (just as we expect composers to produce music that sounds interesting, whatever structural complexities are hidden within it). Good performance is valued for its own sake. This is apparent from the fact that improvised music is of interest, as are those kinds in which works are so ontologically minimal that the focus falls mainly on the player; and we do not condemn a performance if it reveals a poor work to be just that.

6. FUTURE DIRECTIONS. Our understanding of music and its relation to those who make and listen to it might be broadened by a fuller consideration by Western philosophers of the many musics of non-Western cultures and non-classical types of Western music. This should provide a new perspective on familiar issues as well as raising others hitherto undiscussed. Even in the discussion of Western classical music, the range of issues canvassed has been restricted or slanted: the focus has fallen more on works than on performances, on purely instrumental music than on other kinds, on expressiveness than on ontology, on what is common to listeners' responses than on what differs, and on music considered in isolation rather than on its connection to morality, personal identity and social relations more generally (for an exception see Higgins, 1991). Moreover, philosophers ignore the general implications of modern technology for our experience of music and, more particularly, differences between recordings and live performances.

V. Contemporary challenges

1. The ideological. 2. Cognitive science. 3. Technology and the experimental. 4. Popular music. 5. The present.

1. THE IDEOLOGICAL. Many challenges arise out of the remarkable surge of recent interest in the interactions of both music and philosophy with social and cultural theory, feminist criticism and theory, post-structuralism and postmodernism. These interactions tend to stress the connections between music and the world – with the ordinary conditions and experiences of men's and women's lives – to counter the more positivistic, alienated and abstracted discourse of formalism they take to have long dominated academia. These challenges often consist in replacing the dominant theoretical discourse with a preferred one. Theorists tend to articulate their positions by urging us to move away from the establishment discourse towards a preferred alternative:

(i) from the high, élite, fine tradition of classical or serious art towards the practices and rituals of popular, non-Western (non-European) music;

(ii) from the division between composer and performer, the commodified work-concept, the masterpiece, the fixed score (text) and the differentiated and fixed genres (sonata, symphony, concerto) towards performer-composer continuity, improvised performances, forms and contents, spontaneous music-making and interactive genres;

(iii) from the mentalistic, voyeuristic, intellectual, concert-hall form of passive or unbodily listening and watching towards active, participatory, dynamic, bodily and erotic acts of musical engagement;

(iv) from the élite and institutionalized concert hall towards public and open performance spaces;

(v) from the separation or remove of music from life towards its social context (say, its involvement in and contribution to social action);

(vi) from principles and ideals of unity, sameness and singularity towards plurality, difference and diversity, from the ideal of correct (*Werktreue*) or authentic interpretation towards that of multiple and diverse interpretations; and

(vii) from the pure music itself towards those who, in multiple and diverse ways, engage impurely (i.e. as real people) with music.

Some contemporary theorists seek to undermine the traditional (Western) discourse of bi-polarities (body/mind; sense/reason; feeling/thought; fact/norm), a discourse that has allowed theorists to disregard or exclude one side in favour of the other. They suspect this discourse because they take it to be the 'ideological machinery' for the sustained oppression of women (perhaps women composers and musicians, or women's music conceived in anti-essentialist terms), and of minority groups (composers, performers, musicians and their musics) (Kramer, 1990; McClary, 1990). Yet it often looks as if the dichotomous discourse is perpetuated when the challenge is articulated in terms of replacing the terms of one discourse with those of another. Mostly, that is a false impression. Some theorists assert their difference from, and rejection of, the concepts and claims of the traditional discourse as a necessary act of political separatism. Some see their

function to be essentially negative or critical, that is, to expose the dominant historical discourse for the prejudices it tries to conceal behind the mask, typically, of 'reason', 'purity' and 'humanity'. In either case, the point is to stress that the preferred discourse does not fall prey to the same hegemonic or ideological forms as the rejected one. In other words, a rejected discourse that claims, for example, to speak for all but obviously does not, would be replaced by one that explicitly stresses (say) diversity, range, locality and particularity precisely as a way to expose the former's pretence while trying to avoid the pretence itself.

As so described, these contemporary aims suggest an interesting paradox when applied to the history of Western music and philosophy. Recall the idea that, from the earliest times, established academicians sometimes liked to conceive of music as antithetical to philosophy. They attributed to music properties of the 'irrational', 'uncontrollable', 'emotional' and 'insignificant', properties they also often assigned to woman or the 'feminine'. Paradoxically, when they chose to value music, they stressed qualities (say) of form, reason and meaning that rendered music least, one might say, like music – least affective, least musical. That way, the academy could control what it most feared. Contrarily, when they chose not to value music, and saw it threatening society's established forms, they assigned to it all the 'negative' values that enabled music to remain most musical. Symbolic of the discarded feminine, so the counter-argument goes, music secretly carried all the values (of feeling, passion, of the body etc.) that the academy of oppressive society tried to conceal, by relegating them to the non-serious, the secular and the popular. Music thus named what the established society refused to name; it served as society's principle of resistance, of non-identity and, potentially, of the establishment's undoing (Leppert, 1993).

A relevant conclusion for the present discussion follows from this argument. Assuming that Western philosophy, or the philosophy 'of the academy', has reflected or, in its worst condition has tended to reflect society's oppressive tendencies, if it now stands any chance of producing a successful philosophy of music, it will do so the more it adopts values for itself that it has historically assigned to music. It is more likely to do this when it positively embraces music as music and no longer relegates it to a position of the incomprehensible 'other'. The problem is whether, under this condition, it will still be able to produce a 'philosophy of', if, that is to assume, thinking about philosophy as a 'philosophy of' inherently assumes a position of dominance and control.

2. Cognitive science. From the most contrary perspective, the engagement of philosophy with music has been challenged and reshaped by the increasing interest philosophers and theorists have taken in cognitive psychology and cognitive science. This engagement has tended music towards its being empirically well-grounded. Being so grounded – so that music may receive accurate and objective analysis – is a longstanding aspiration of the philosophical enterprise and, in many quarters, remains so.

Early developments in structural linguistics since the 1930s led to attempts to describe music as a 'language' or 'code', whose fundamental principles of organization were analogous to those of verbal language and other semiotic systems (*see* Semiotics). The central principle motivating this analogy was the Saussurean dualism of 'speech' (*parole*) and 'language' (*langue*). Speech consists of concrete verbal or musical utterances; language represents underlying rules and structural relations. Knowledge of the latter is necessary for receiving and producing the former. The rules (at the level of *langue*) that relate the sounds of speech to one another are conventional: they form a code shared by the speakers of a particular language. The stress on conventional codes or on the cultural relativity of musical languages recalls Langer's application to music of Cassirer's philosophy of language. It also recalls the work by the pioneers of structural linguistics (notably Jakobson, 1932). In the 1950s–70s theorists as diverse as Cooke (1959), Pagnini (1974) and Gasparov (1976) all explored the parameters of musical structure – acoustics, rhythm, harmony, form, scale – against the theoretical background of structural linguistics. Structural linguistics has also been significantly developed, and sometimes usurped, by semiotic or semiological theory. Taking music as a sign, the task has been either to show, formalistically, the way in which music refers to itself (here its meaning is specifically musical) or, anti-formalistically, how the sign refers to or mediates the 'extra-musical' cultural or ideological world (Nattiez, 1975). The challenge of semiotics has been to show simultaneously the extent to which music acts like a language, but achieves its meaning in a way other languages do not (Lévi-Strauss, 1964; Ruwet, 1972 and Faltin, 1978).

At the same time, theorists have been showing a renewed interest in universal structure, and in this regard may be distinguished from those who have focussed on convention or, by long extension, on cultural ideology. The shift towards universality has followed the advances of the theory of generative grammar whose proponents focus on the universal 'deep structure' that is purportedly common to all languages and supersedes each language's conventional 'surface structure'. Attempts to apply this sort of generative grammar to music can be found in Asch's theory of musical analysis (1974), Blacking's theory of innate musical comprehension (1973) and Arkad′yev's theory of a universal concept of rhythm (1992).

However, by far the most influential application of the generative approach to music is found in the collaborative work of Fred Lerdahl and Ray Jackendoff (1983). They offer a rule-based model that attempts to account for the musical intuitions of listeners acculturated to classical tonal music. The theory has two rhythmic components: grouping structure, which parses the musical surface into motifs, phrases and sections; and metrical structure, which assigns a grid of strong and weak beats. The theory also has two pitch-hierarchical components: time-span reduction, which assigns degrees of structural importance to events in relation to the rhythmic structure; and prolongational reduction, which assigns a hierarchy of tension and relaxation to events. The reductions are represented by tree diagrams which are different from syntactic trees in linguistic theory. The rules that assign these structures are of two types: well-formed rules, which characterize hierarchical structures within each component; and preference rules, which rank well-formed structures according to perceptual plausibility. Some of these rules, such as those based on Gestalt principles, are

hypothesized to be psychological universals, while others are taken to be style-specific.

Their work has given rise to many empirical predictions and experiments. It has also helped establish a strong connection between music theory and cognitive science. From a philosophical perspective, their model falls within the framework of modular theories of mental representation. Thus, Anglo-American philosophers engaged with cognitive theory, science or psychology have tended, when thinking about music, to focus on the mental act of listening. Their general concern (confirmed by Raffman, 1993) has been with mental representation, with the idea that perception, broadly defined, is an operation in which the mind represents the world to itself. This representation may be more or less abstract, ranging as it does from the most basic sensorial responses or sensations to the most complex, conscious thoughts. Theorists, Raffman writes, disagree on what governs the process of mental representation in the case of listening, but Lerdahl and Jackendoff have argued that it is governed by a musical grammar, by analytical and innate rules stored in the unconscious mind that allow us to represent what is given to us in hearing as a coherent or intelligible structure.

Though some contemporary cognitivists have gone on to use (more or less directly) Lerdahl and Jackendoff's model to stress music's non-conceptual or ineffable meaning (Raffman), others have used it to stress the strong cognitive and conceptual dimension of listening (DeBellis, 1995). Both uses have depended on establishing a connection between music's physical or formal features and the perceptual features of listening. These connections are established when listeners enter into intentional contexts, such that what we hear is more than the merely physical features of music. We hear pitch rather than mere acoustical frequency (Raffman), patterns of closure, say, rather than merely sequences of sounds (DeBellis). (Compare also Scruton's theory of metaphorical listening, 1997.) The theories generally differ given the extent to which they take the intentional contexts to be cognitively or theoretically laden. Some stress the unconscious operations governing mental operations; others, the impact on listening of, say, consciously knowing a music theory. DeBellis, for example, investigates the logical relationships between hearing and musical analysis, arguing that for some listeners and contexts, music perception is non-conceptual, for others, laden with music-theoretic concepts: 'Music-theoretical terms (closure, etc.) have a certain kind of explanatory status, and ... the value of hearing music in those terms sometimes derives from that status'. His intent is to bring explanation and interpretation into rapprochement. This intent has two advantages: first, it brings the philosophy of music in touch with music theory (thus perhaps countering Sparshott's objection that philosophers are insufficiently literate about music); secondly, it gives to the philosophy of music, with its interest in listening, interpretation and meaning, a scientific, empirical or theoretically sound foundation without reducing music to mere science.

3. Technology and the experimental. Many theorists have used the pervasive presence of recording, computers and other new forms of technology to challenge traditional ontological views about music, the musical work and performance. What, they have asked, is the status of a recording? How is it related ontologically to its performance, or to the work itself? Is the status of the recording or work altered if the composer dispenses with the medium of live performance, or if the composer composes directly into the technology, thereby dispensing with notation, traditional instruments and performance, and, hence, with the ontological differentiation between work and reproduction? Answers to these questions have partly depended on the type of the ontological theory supported (more or less Platonist, nominalist, contextual: see §IV, above) and partly on how much theorists have taken into account the diverse revolutions and experiments in compositional, notational and performing techniques of the 20th century. Up to now, the practice and theory of both John Cage and Glenn Gould seem to have proved the two most common reference points for Anglo-American philosophers.

More broadly, developments in electronic, acoustic, aleatory, spatial and minimalist musics have all forced transformations in music's traditional conceptual and ontological packaging. Often in line with 'alternative' discourses of the postmodern, some of these developments have symbolized the move away from fixed to open specification of musical features, especially when the compositional process has stressed indeterminacy, chance and randomness. In other cases, the shift has been in the opposite direction, making the determinate but interpretatively flexible qualities of traditional notation absolutely precise and absolutely fixed through computer techniques.

Musical packaging has also been affected, modified or utterly transformed as practitioners and theorists have moved away from tonal to sound organization, from sound to noise organization, from noise to temporal organization, from temporal to spatial organization. Part of what has conceptually, ontologically and politically been at stake here has been the upholding or breaking down of barriers, (*a*) between the different art forms (to what extent do we see or hear spatial music?), (*b*) between the different functions of 'classical' musicians (composers, performers, listeners), (*c*) between the so-called élite and popular forms of music-making, and (*d*) between the aesthetic domain and the ordinary and between art and nature. Some theorists have claimed that music (and they have produced music accordingly) can lead listeners (back) into nature, (back) into the ordinary world of sound. Some have rejected the idea that music represents in any sense at all: music is found in the world, and does not exist at an aesthetic or representational distance from it. Some have claimed that contemporary experiments of music reveal new and radical forms of expression, thus subverting with more or less success the increasingly heard, conservative, or at least backward-looking, assertion that tonal music (however broadly or narrowly defined) is the one true or natural musical language.

Other writers have suggested of the new musics (some or all) that they are experiments for the sake of such, that they have no ontological or aesthetic interest, and, if anything symbolizes the end of music (in Hegelian terms) at the end of the 20th century, it is the fact that the conceptual or philosophical interest of contemporary musical forms has so often surpassed their aesthetic or musical interest. The claim that these experiments have no musical interest tends to beg the question as to what music is, what it can be, and what it is for. And the claim that aesthetic interest remains the most, if not the only, relevant standard needs more support, especially if one holds that interests, including aesthetic ones, change as

languages, techniques and social forms change. The purportedly special preserves of both music and the aesthetic domain remain under negotiation. Two more sophisticated, though very different, critiques by philosophers of radical experiment have been offered (Adorno, 1958 and Cavell, 1969).

4. POPULAR MUSIC. Ontological, aesthetic and social claims have been challenged by theorists who have taken their primary examples from jazz, rock, rap and fusion (Brown, 1996). They have contributed to the philosophical debate by stressing, first, the many 'trans-' or 'intertextual' relations that hold between different instances of music, given current techniques of quotation, sampling and allusion, and secondly, the deep dependence and interaction of ontological models on and with social and cultural forms of production (Frith, 1981; Leppert and McClary, 1987; Middleton, 1990). When, and to the extent that, their theories have been read back into the 'élite' production of classical music, part of the intent has been to show that classical music is just one of many forms of music production in the world, and that, if philosophers are to address music, they should not automatically assume that the music should be classical music (and typically late 18th- and early 19th-century music). In other words, the stress on 'just one of the many' has been a political act of theory intended to undermine classical music's longstanding hegemony largely by revealing the contingency of classical music's underlying conceptual and aesthetic paradigms. The recent noticeable rise of interest in opera, a genre that offers all kinds of interactions between the classical, élite, popular, social and aesthetic, has also reflected the methodological shifts associated with these interactions (Abbate, 1991; McClary, 1992; Goehr, 1998).

Theorists of the popular have also wanted to show the value of different kinds of music or their broad and pervasive impact on all sorts (and classes) of persons in society. Here they have sustained a most provocative suggestion that, because those who listen to popular forms of music far outnumber (and the gap is growing) those who listen to classical forms, then if philosophers really want to understand how music moves, what it means and how it is social, they should look at the musics that do still move, do still mean and do still interact with the social at the end of the 20th century.

Conservative theorists of the classical have tended to respond more or less explicitly with an ardently-felt evaluative argument: the purpose of a philosophical theory is not merely to describe the musics that do move and mean, but the musics that (they believe) should move and mean. If society is benefited by its musics, then it matters to which musics it gives value, and popular music is not for the most part the music, they argue, that we should value (Scruton, 1997). Many of these theorists have sought psychologically, naturalistically, or tradition-based arguments to explain the value they find in their preferred exemplars of classical music.

Not all philosophers engaged with classical music believe their choice of examples is so ideologically or evaluatively loaded. Some merely write about what they know most about and most like. Some engage in traditional forms of speculation about music's being and meaning without any apparent regard for the political, social or historical: they believe they stand in a position of philosophical detachment. Yet other theorists continue to engage philosophically with classical music, fully realizing that their choice does not exclude others making alternative choices and contrary evaluations and, further, that fruitful and critical interactions can be achieved between different modes of philosophical inquiry, modes that might focus on different areas of musical production. One consequence at least of this more expansive or open approach has been to caution philosophers about the limitations of a monological or unilinear approach towards even the classical domain. When philosophers speak about music, what kinds of instances, and which instances, of music are they speaking specifically about? Why, for example, the usually overriding emphasis on purely instrumental music among certain groups of philosophers? Should we not be as concerned about the reference of 'music' as much as we are about the reference of 'philosophy'?

5. THE PRESENT. Perhaps the most significant challenge to the philosopher's engagement with classical music has come from the mere fact of the present. For most of the history of the discipline, philosophers who have thought about music have thought about the music of their own time. Of course, they have compared it with a more or less idealized past that sometimes they chose to favour but, on the whole, they were concerned with the contemporary and present. To a large extent, and most especially among the Anglo-Americans interested in classical music, the focus on the contemporary has become increasingly opaque or, in some cases, has disappeared altogether. Over a century ago, Dilthey (1985) called the modern age the 'age of historical consciousness', and what he noticed in that age was the extent to which 'we feel surrounded by our entire past'. Over a century later, the question is whether this feeling has become too great a burden. Despite the abundance of forms of modern or contemporary music, many philosophers seem much more comfortable focussing on examples produced in the past, usually in the 18th and 19th centuries. However, engaging philosophically with past examples produces a very distinctive kind of philosophy: sometimes a philosophy of ideal types, sometimes a philosophy of too fixed or rigidified a past. The question remains whether the idealization or fixity is justified and under what terms. What kind of philosophy is produced when it treats its subject or examples as ahistorical products that conform to static and general principles of classification? Under hermeneutical influence, some theorists suspect that the attitude we take towards our past, whether we idealize or reject it, always reveals more about the present than it does about the past. This suspicion also pervades much of contemporary musicology, especially the recent debate over authenticity (Kenyon, 1988).

Some theorists have suggested that our philosophical thinking about music always seems to trail behind our thinking about other artistic and cultural forms. Some think that this trailing positively symbolizes music's ability to resist the appropriative trends of competing, contemporary theories. Others see the trailing negatively to reflect the establishment's reluctance to subject music's purported mystery to commonplace or worldly account. Others think very little about any of these issues and continue to hold fast to the long established tradition of asking certain sorts of philosophical questions about music: What is it? Does it express? How does it mean? Is it like language or any other of the arts? Is its meaning

tied to our emotional lives? Is it connected to emotion? What is the relation between music and sound, music and tone? What is musicality and musicianship? Can music teach or instruct? What is its role in education? Can it tell the truth? What is listening? What kind of performance is musical performance? Is it mental, is it bodily? What human or social interests does music serve? Does it serve any interests uniquely? What is the role of technique and craft? What are the proper preserves of philosophy and its philosophy of music? What is the relation between music and language, symbolic form, and myth? What is music's relationship to dance?

To a great extent, philosophers continue to develop models of investigation – analytic, formal, hermeneutical, phenomenological, semiotic, post-structuralist, sociological, cultural – to treat the seemingly perpetual questions of their discipline. The choice of method often reflects the particular traditions of philosophy developed in different languages and countries (Russia, Hungary, Bulgaria, France, Italy, Japan, China, India and Scandinavia, to mention some of the countries not specifically considered above). To an equally great extent, philosophers have recently been noticeably preoccupied by the assumptions of the enterprise in which they engage. The most neutral conclusion to draw is that the struggle between the two enterprises – the positive offering of methods and claims and the sceptical self-reflection – continues to keep philosophy's engagement with music most animated, and the philosophy most philosophical.

Phinot [Finot, Finotto], **Dominique** [Dominico] (*b c*1510; *d c*1556). Franco-Flemish composer. He was described by Girolamo Cardano as 'Gallus'. He appears to have spent at least part of his career in Italy: in a document of May 1544, Duke Guidobaldo II of Urbino proposed that he be appointed *cantor* in the cathedral, while a further two documents, dated 26 March 1545 and 20 November 1555, indicate that 'Finotto musico' was employed in the court of Urbino. Though he is not known to have resided in Lyons, evidence of his close associations with the city are contained in four volumes of motets and chansons published there by Godefroy and Marcellin Beringen in 1547 and 1548. The dedicatees had Lyonese connections (for example, César Gros was a prominent citizen and patron), some of the chanson texts are by the local poets Maurice Scève and Charles Fontaine, and other texts deal with subjects of local interest. A passage in Cardano's *Theonoston* implies that Phinot was executed for homosexual practices.

The outstanding works in the Beringen volumes are the eight-voice double-choir sacred pieces *Iam non dicam*, *O sacrum convivium*, *Sancta trinitas*, *Tanto tempore* and *Incipit oratio Hieremiae*, which, as Carver observed, are the first mature examples of polychoral writing based on constant thematic interaction between alternating ensembles. These compositions were highly esteemed, especially in Germany, during the late 16th and early 17th centuries, and appear to have been known by Palestrina and Lassus.

Phinot was celebrated in his day for finely crafted five-voice motets such as *Non turbetur cor vestrum*, in which typically Netherlandish imitative counterpoint predominates. His chansons cover a variety of musical styles suited to topics ranging from mordant anti-clerical anecdotes to courtly poems and imitations of Ovid and Catullus. The animated homophony of *Si vous voulez* and supple polyphony of *Puisque mon coeur* are rooted in established styles of chanson composition. Among the more innovative pieces are *Vivons, m'amye*, *Qu'est-ce qu'amour?* and *Par un trait d'or*, in which polychoral dialogue and secular poetry are imaginatively aligned. Potent expressive devices, too, such as the triple suspensions underscoring 'meschamment' in *Je l'hay perdu* and E♭ harmony on the word 'mort' in *Mort et amour* and elsewhere recall similar musical metaphors in the early Italian madrigal, while the music of *Quand je pense au martire* is sensitively keyed both to Jean Martin's skilful translation of Bembo's *Quand'io penso al martire* and to Arcadelt's madrigal setting of the latter.

Writers such as Luis Venegas de Henestrosa, Cornelius Blockland and Pietro Pontio (*Ragionamento*, Parma, 1588) cited Phinot's work as being worthy of emulation. Hermann Finck (*Pratica musica*, 1556) ranked him with Gombert, Crecquillon and Clemens non Papa, while Pietro Cerone (*El melopeo y maestro*, Naples, 1613/*R*) claimed that Palestrina composed in Phinot's style.

WORKS

Edition: *Dominici Phinot opera omnia*, ed. J. Höfler and R. Jacob, CMM, lix (1972–) [H]

MASSES AND MAGNIFICAT SETTINGS

Missa 'Quam pulchra es', 4vv, 1544[5] (on Lupi's motet)
Missa 'Si bona suscepimus', 4vv, 1544[1] (on Sermisy's motet)
Pleni sunt coeli, 2vv, 1543[19]
Magnificat [1st tone], 4vv (Venice, 1554)
Magnificat [4th tone], 4vv (Venice, 1555)
Magnificat [8th tone], 4vv (Venice, 1555)

MOTETS

for 5 voices unless otherwise stated

Liber primus mutetarum quinque vocum (Lyons, 1547) [=H i]
Liber secundus mutetarum sex, septem et octo vocum (Lyons, 1548) [=H iv]
Liber secundus mutetarum quinque vocum (Pesaro, 1554) [=H ii]

Ad Dominum cum tribularer, H i; Angustiae mihi sunt undique, 4vv, 1549[9]; Apparens christus, H i; Ascendo ad patrem meum, H i; Aspice Domini, 1543[3]; Auribus percipe Domine, H i; Ave Maria gratia plena, H ii; Ave virgo gloriosa, 1543[3]; Beata es virgo Maria, H i; Beati omnes qui timent Dominum, H ii

Caecus sedebat secus viam, 1543[3]; Cerne meos ergo gemitus, 6vv, H iv; Cives apostolorum et domestici Dei, H ii; Clare sanctorum senatus apostolorum, H ii; Concede nobis Domine, H ii; Congregatae sunt gentes, 1543[3]; Descendit angelus Domini, H ii; Descendit de caelis, H ii; Deus in nomine tuo, 1543[3]; Dixit Jesus discipulis suis, H ii; Domine nonne bonum semen seminasti, H i; Domine non secundum peccata nostra, H ii

Ecce ego mitto vos, 6vv, H iv; Ecce sacerdos magnus, 10vv, H ii; Ecce tu pulcher es, H ii; Ego sum panis vitae, 1549[6]; Ego sum qui sum, H i; Emitte Domine sapientiam, H i; Exaudiat te Dominus, 6vv, H iv; Exaudi Domine deprecationem meam, 6vv, H iv; Exsurge, quare obdormis, 1538[4]; Fundata est domus Domini, H i; Gabriel angelus locutus est, H i

Hic est dies praeclarus, H ii; Hoc est praeceptum meum, H i; Homo quidam fecit cenam, H ii; Homo quidam fecit cenam, 5vv, 1541[3]; Iam non dicam vos servos, 8vv, H iv; Illuminare Hierusalem, 1549[6]; Illuxit nobis dies, 1543[3]; Incipit oratio Hieremiae, 8vv, H iv; Inclina Domine aurem tuam, H ii; In craticula te Deum, 6vv, H iv; In illo tempore dixit Jesus, H ii; Iste sanctus pro lege Dei sui, H ii; Istorum est enim regnum caelorum, H i

Laetatus sum, H ii; Martinus Abrahae sinu laetus, H ii; Memor fui nocte nominis tui, 3vv, 1549[14]; Missus est Gabriel angelus, H i; Ne derelinquas me, Domine, 1538[4]; Non turbetur cor vestrum, 1543[3]; Non turbetur cor vestrum, H i; O altitudo divitiarum, 4vv, 1538[5]; O martyr egregie doctor veritatis, H i; O quam gloriosum est regnum, H i; O sacrum convivium, 8vv, H iv; Osculetur me osculo oris sui, 4vv, 1538[5]; Osculetur me osculo oris sui, H i

Pacem meam do vobis, H i; Panis quem ego dabo, 1553[16]; Pater manifestavi nomen tuum, H i; Pater noster, H ii; Pater peccavi in caelum, 1538[4]; Prolongati sunt dies mei, H i; Quae est ista, 6vv, H iv; Quam pulchri sunt gressus tui, H i; Regina caeli laetare, H i; Repleti sunt omnes spiritu sancto, H i

Salve regina misericordiae, H ii; Sancta trinitas unus deus, 7vv, H ii; Sancta trinitas unus deus, 8vv, H iv; Sanctorum omnium gaudia inclyta, 7vv, H iv; Si bona suscepimus, H i; Sit nomen Domini benedictum, 6vv, H iv; Spiritus meus attenuabitur, 1538[4]; Stella ista sicut flamma, 6vv, H iv; Stetit angelus ad sepulchrum Domini, H ii; Surge propera amica mea, 6vv, H iv; Sustinuimus pacem, 6vv, H iv

Tanto tempore vobiscum sum, 4vv, 1549[9]; Tanto tempore vobiscum sum, H i; Tanto tempore vobiscum sum, 8vv, H iv; Te gloriosus apostolorum chorus, H i; Tua est potentia, H i; Usque modo non petistis quicquam, H i; Usque quo Domine oblivisceris me, H i; Valde honorandus est, 4vv, 1549[9]; Veni sponsa Christi, H ii; Videns dominus flentes, 1543[3]; Vidi speciosam, 4vv, 1549[9]; Vidi turbam magnam, H ii; Virga Jesse floruit, 4vv, 1539[13]; Virgo parens, 7vv, H iv; Zachee festinans descende, H ii

PSALMS

I sacri et santi salmi de David profeta, 4vv (Venice, 1554) [1554]

Beatus vir [2nd tone], 1554; Beatus vir [3rd tone], 1554; Confitebor tibi Domine [2nd tone], 1554; Confitebor tibi Domine [3rd tone], 1554; Dixit Dominus [1st tone], 1554; Dixit Dominus [1st tone], 1554; Donec ponam inimicos tuos [1st tone], 4vv, 1550[1]

Labores manuum tuarum [4th tone], 4vv, 1550[1]; Laetatus sum [1st tone], 1554; Lauda, Hierusalem, Dominum [3rd tone], 1554;

Laudate Dominum omnes gentes [2nd tone], 1554; Laudate Dominum omnes gentes [5th tone], 1554; Laudate pueri Dominum [4th tone], 1554; Laudate pueri Dominum [8th tone], 1554; Nisi Dominus aedificaverit [8th tone], 1554

CHANSONS

for 4 voices unless otherwise stated: all ed. in H iii

Premier livre contenant trente et sept chansons (Lyons, 1548)
Second livre contenant vingt et six chansons (Lyons, 1548)
Adieu, Loyse, 8vv; Amour et mort ont faict leur assemblée; Belle ne suis (response to Plus doulcement); Bouche de satin cramoysi (Forcadel); Catin, ma gentille brunette (C. Fontaine); Catin veult que souvent la voye (Fontaine); Ce corps tant droit; Comme en beauté
Dame Margot; D'estre amoureux n'ay plus intention (C. Marot); De ton amour; Doy-je espérer; En chascun lieu (M. d'Amboise); En feu ardant (Bembo/J. Martin); Frèrot un jour; Ha mes amys (Amboise); Hault le boys, m'amye Margot, 12vv (canonic); Ingrate suis (response to Quand je te voy); Je l'hay perdu bien meschamment (Fontaine)
Laissez cela, disoit une nonette; Las, pourquoy donc (Marot); L'eau qui distille (Bembo/Martin); Le coeur et l'oeil; Le concours discordant (canonic); L'esprit vouloit (M. Scève); Lynote (Marot); Madame ayant l'arc d'Amour (Scève); Maugré Saturne; Moins dure ou plus (M. de Saint-Gelais) (response to Si vous voulez); Mort et amour un soir se racontrèrent

Phoenicians, music of the. *See* JEWISH MUSIC, §II, 3.

Phon. A unit of LOUDNESS. *See also* SOUND, §4.

Phonikon. A baritone brass instrument invented by VÁCLAV FRANTIŠEK ČERVENÝ.

Phonofiddle. A one-string variant of the STROH VIOLIN.

Phonographic Performance Ltd [PPL]. *See* COPYRIGHT, §III, 16(iv).

Phonotype. Italian record company. It was founded in Naples in 1901 by Raffaele Esposito (1865–1945). The catalogue consisted of recordings by local popular artists and a few minor opera singers. In 1917 Fernando De Lucia (1860–1925) began a series of about 300 records for Phonotype, made over a period of four years. He recorded a wide range of opera and song, including *Il barbiere di Siviglia* and *Rigoletto*, with highly developed embellishment. During World War II the matrices were hidden; they have since been rediscovered and pressings made from them. Other Phonotype artists included Angeles Ottein and Benvenuto Franci.

ELIOT B. LEVIN

Phorbeia (Gk., also *phorbea*, *phorbaia*; Lat. *capistrum*). A mouthband shown in many illustrations of auletes playing the double aulos. The term also refers to a horse's halter, which bears a remarkable resemblance to the device shown in a particularly detailed view of an aulos player on a red-figure amphora (*c*480 BCE) attributed to the Kleophrades Painter and preserved in the British Museum (E 270; *see* AULOS, fig.2).

The *phorbeia* is mentioned by Plutarch (*On the Control of Anger*, 456b–c) and described by scholiasts and some of the lexicographers. The comments tend to be brief, and the function of the *phorbeia* remains unclear in the literary and iconographic sources. Plutarch observes that MARSYAS employed special devices – a *phorbeia* and *peristomios* – when he played the aulos. He explains these terms by quoting two lines now commonly attributed to Simonides: 'Marsyas, it seems, suppressed the violence of his breath with a *phorbeia* and *peristomios*, composed his countenance and concealed the distortion: "He fitted his forehead locks with gleaming gold and his blustering mouth with leather straps and bound behind"'. A *peristomios* is something that goes around a mouth. Plutarch is probably using the terms as synonyms, and the two of them together convey a reasonably clear sense of the appearance of the *phorbeia*. Moreover, the reference to Marsyas's 'blustering mouth' evokes the hissing and spitting sounds that emerge from a poorly sealed

embouchure, especially as the pressure of the performer's breath increases.

Hesychius's *Lexicon* defines the *phorbeia* as a skin placed around the mouth of the aulete to prevent his lips from parting. Experiment with reconstructions demonstrates the aptness of this definition. With two mouthpieces, the difficulty of maintaining a tight seal is considerable, especially over a long period. The *phorbeia* allows the performer to maintain a relaxed embouchure: by sealing the mouth and holding the lips together against the pressure of the breath, it prevents the reed from being choked by a tight embouchure – or stopped from beating altogether – and allows the lips to exercise sensitive adjustments in pressure on the reed. In addition, with the *phorbeia*, the mouthpiece itself can easily be withdrawn by increments from the mouth in order to shorten the reed; without the *phorbeia*, it is difficult to maintain a tight seal around the mouthpieces while moving them in and out of the mouth to adjust pitch and timbre. Contrary to common conjecture, the *phorbeia* does not provide special support for cheeks, enabling them to act like a bellows, except in the sense that it allows the facial muscles to relax because they do not need to maintain a sealed embouchure. There is no easy explanation for the fact that aulos players are often shown without the *phorbeia*, but experiment does indicate that short and simple phrases can be played on the auloi without greatly taxing the embouchure. Thus, it may be conjectured that the *phorbeia* was introduced to allow auletes to play the longer, more difficult compositions characteristic of the innovatory style of the auletic competitions. Players of the salpinx, too, often wore the *phorbeia*, which must have served the same purpose as it did for the aulos. In the illustration of Epiktetos (*c*520–490) for an eye kylix, a satyr wears the *phorbeia* while sounding the salpinx over his shoulder (London, British Museum, E 3).

The *phorbeia* is rarely shown without the aulos – or some other instrument – in the aulete's mouth, but one kylix (New York, Metropolitan Museum of Art, kylix 96.9.18) does show an aulete adjusting the *phorbeia* while holding both auloi in his left hand at his waist; the illustration clearly indicates that the *phorbeia* has a slit or hole for each mouthpiece (confirmed by a volute krater in Tarento, Museo Nazionale, IG 8263). As the aulete prepares to play, the mouthpieces must then be inserted through the holes into the mouth.

Phorminx. The term most commonly used for a string instrument in the *Iliad* and *Odyssey* (written between 850 and 750 BCE but preserving stories from oral tradition about events from the Mycenaean period, over 400 years earlier). The word is also found in Archaic period texts such as the Homeric hymns. It is still seen in early 5th-century literature, but in works from the end of that century it is seldom found.

The phorminx of the Mycenaean Greeks, as works of art attest, was a lyre (CHORDOPHONE) with a shallow wooden soundbox with a rounded base, similar in most details to the earlier lyre of Minoan Crete and, like it, having two arms that often curved in and out in an ornamental fashion, supporting a crossbar to which seven strings were fixed with leather strips (*kollopes*) for friction. The instrument was held upright, and played in the same manner as the later KITHARA.

The same shape and mode of playing are seen in the art of the Geometric period (*c*1100–800 BCE), although the arms are sometimes straight, and only a few strings are shown (for artistic reasons; the actual number probably did not change). Although other types of lyre begin to be found in works of art from about 800 BCE, the phorminx (with straight arms, its seven strings again visible) is still seen more often and in more locations than other lyres until the end of the 7th century.

Representations of the phorminx made between 600 and 525 BCE are much less common than those of the kithara or chelys lyra, and are from areas as distant as Greek Asia Minor, Rhodes, Egypt and Etruscan Italy as well as from Athens. But the phorminx appears in over 40 representations from the late 6th century and throughout the 5th, mostly on Athenian vase paintings.

From the 7th century, pairs of bosses or circles were often painted on the soundbox, and after 475 BCE these were sometimes turned into eyes; no other lyre has this apotropaic feature. The arms, early and late, were often decorated, though in ways that changed markedly.

Homer and the writers of the Archaic era described the phorminx as the instrument of Apollo, who sometimes played it to the singing of the Muses; in the early 5th century PINDAR spoke of it as owned by Apollo and the Muses. In fact the kithara had long since replaced the phorminx as Apollo's instrument, but the Muses inherited it: they play it in some half-dozen 5th-century vase paintings. Other female figures, mythological and mortal, also play the phorminx. Both Homer and the Archaic period writers mentioned it in connection with dancing; in the 5th century Bacchylides and Pindar also placed it in the context of dancing, as do scenes on a substantial group of vase paintings.

Phrase. A term adopted from linguistic syntax and used for short musical units of various lengths; a phrase is generally regarded as longer than a MOTIF but shorter than a PERIOD. It carries a melodic connotation, insofar as the term 'phrasing' is usually applied to the subdivision of a melodic line. As a formal unit, however, it must be considered in its polyphonic entirety, like 'period', 'sentence' and even 'theme'.

See also ANALYSIS; ARTICULATION AND PHRASING; RHYTHM, §§I, 4; II, 13.

Phrygian. The common name for the third of the eight church modes, the authentic mode on E. In the Middle Ages and Renaissance the Phrygian mode was described in two ways: as the diatonic octave species from *e* to *e′*, divided at *b* and composed of a second species of 5th (semitone–tone–tone–tone) plus a second species of 4th (semitone–tone–tone), thus *e–f–g–a–b* + *b–c′–d′–e′*; and as a mode whose FINAL was *e* and whose AMBITUS was *d–e′*. Most theorists pointed out that the division of the Phrygian octave species at the 5th, *b*, did not correspond with musical practice in 3rd-mode Gregorian chants, nor for that matter later in Renaissance polyphonic works whose principal and final degree was E. They observed that the sixth degree, *c′*, which is the tenor of the corresponding third psalm tone, was a much more prominent scale degree than *b* in compositions in the Phrygian mode. Tinctoris, however, in chapter 19 of *Liber de natura ... tonorum* (1476), which discusses appropriate beginning pitches for polyphonic compositions in each of the modes, implied that the fourth degree, *a*, could be regarded as the most important note in the Phrygian mode after the final *e* and its octave *e′*.

The expression 'Phrygian mode' is often used as a covering term for Renaissance and Baroque polyphonic compositions whose final sonority is an E major triad established by a Phrygian cadence and whose parts range more or less within the Phrygian or HYPOPHRYGIAN ambitus; their principal cadence degrees, other than the final, are A, C, G and occasionally D. This polyphonic application of the Phrygian mode is sometimes found transposed up a 4th in the *cantus mollis* (i.e. with a one-flat signature), so that the final becomes *a* and all other modal functions and relations are also a 4th higher in terms of their notated degrees.

'Phrygian mode', or 'Phrygian scale', is frequently used with reference to European folksongs and diatonic non-Western melodies whose final or apparent tonic is related to the scale type in a manner similar to that of the Phrygian church mode. The most characteristic feature of such melodies is the presence of a scale degree a semitone above the final or apparent tonic; this is sometimes called an 'upper leading note'.

For the early history of Greek-derived modal names *see* DORIAN. *See also* MODE.

HAROLD S. POWERS

Phrygian cadence. A CADENCE in which the lowest part descends to the final or tonic by a semitone.

Phrygian music. *See* ANATOLIA.

Phrynis of Mytilene [Mitylene] (*fl* Athens, *c*450–420 BCE). Greek kitharode and composer of *nomoi*. None of his works has survived. He went to Athens from Lesbos (*c*450 BCE) and had already become well known by 423; in that year Aristophanes (*Clouds*, 969–70 and scholium) deplored the difficult vocal writing that contemporary composers had learnt from him. About half a dozen years later, Timotheus boasted of a victory over Phrynis and called him *ton Iōnokamptan*, 'the Ionian [decadent] bender' (Edmonds, frag.20). As in Aristophanes' *dysko-lokamptous*, there is a reference to *kampai* (literally 'bends') in the melodic line; at times writers applied the term to metrical structure as well. After a century, however, Aristotle's pupil Phaenias of Eresus named Phrynis and Timotheus alike as examples of classical excellence (Athenaeus, xiv, 638b); and Aristotle himself, or a member of his school, said of the two poets that the one would not have been possible without the other (*Metaphysics*, i.1, 993b16; of disputed authorship).

According to Pseudo-Plutarch's *On Music* (1133b), Phrynis complicated kitharoedic techniques by varying the mode and metre. He was contemporary with the renowned Theban aulete PRONOMUS, supposedly the first to play all the modes on one and the same double aulos. The tradition that he had been a singer to the aulos before he learnt the kithara (scholiast on Aristophanes, above) may merit serious consideration. Proclus (*Useful Knowledge*, in Photius, *Bibliotheca*, 320a33), writing about 450 CE, stated that Phrynis had revolutionized the *nomos* by combining the hexameter with a free metre and using more than seven strings (*chordai*). According to Plutarch (*On Progress in Virtue*, 83e–84b; *Sayings of the Spartans*, 220c), Phrynis added two strings, but when he attempted to introduce his innovations to Sparta, Ekprepes the Ephor removed two of them, admonishing him not to 'murder music'. A similar story is told of Timotheus (*Ancient Customs of the Spartans*, 238c–d; Boethius, *De institutione musica*, i.1).

The strongest evidence comes from the *Cheiron*, a fragment of the Old Comedy of the later 5th century BCE; preserved in Pseudo-Plutarch's *On Music* (1141d–1142a), it is the lament of Music (*mousikē*), personified as a woman, who has suffered various outrages at the hands of modern composers (*see* PHERECRATES, MELANIPPIDES). Phrynis, she declares, inserted his own spinning-top (*strobilon*), bending and twisting her to total corruption with 12 *harmoniai* (*dōdech' harmonias*) in his five strings (*pentachordois*). The sexual imagery of the entire fragment is reasonably clear; *strobilos* must therefore have been a term both of sexual slang and of technical musical meaning. In the former context, it may refer to the *olisbos*, a leather phallus (see Anderson, p.132); no convincing hypothesis has yet been presented for its musical meaning. It is nevertheless evident that in the history of kitharoedic composition the Greeks ranked Phrynis second only to Timotheus as a revolutionary.

Phthora (Gk.). A sign in Byzantine music referring to a transition from one *ēchos* (mode) to the next (*see* ĒCHOS, §2). Each of the eight *ēchoi* has its own *phthora*, but in effect only six are used. There is an explanation of their functions in a treatise by MANUEL CHRYSAPHES.

Phylypps. Clerk at Winchester College, 1523–6, possibly identifiable with THOMAS PHELYPPIS.

Physharmonika. (1) The name given by Anton Haeckl of Vienna to a small REED ORGAN first made in 1821.
(2) An ORGAN STOP.

Physics of music. This article is concerned with the history of vibration theory as it relates to music. For further information *see* ACOUSTICS and SOUND.

1. To Mersenne. 2. From Huygens to Sauveur and Newton. 3. The age of Euler. 4. From Chladni to Ohm. 5. The age of Helmholtz. 6. 20th century.

1. TO MERSENNE. The basic ideas of the physics of music were first obtained in the 17th century. Acoustic science then consisted mainly in the study of musical sounds; in fact, music provided both questions and techniques for the study of vibration. Music gave experience in comparing the pitch and timbre of tones, and so the means for careful experiment on sound; musical instruments offered empirical information on the nature of vibration; and, rather remarkably, the Pythagorean ratios of traditional music theory provided frequency ratios.

Early in the 17th century it was realized that the sensation of pitch is appropriately quantified by vibrational frequency – that is, pitch 'corresponds' to frequency. This realization came as part of a preliminary understanding of consonance and dissonance. Once the correspondence had been made, it was possible to determine the relative vibrational frequencies of tones from the musical intervals they produced. When relative frequencies were known, there was the challenge of determining frequencies absolutely; and the first measurements were made during the century. The idea that pitch corresponds to frequency motivated efforts to understand overtones, since, during most of the 17th century, it seemed paradoxical that a single object could vibrate simultaneously at different frequencies. This paradox was resolved by the end of the century through an initial understanding of the 'principle of superposition'. Also by this time the connection between overtones and timbre was noticed, and beats were explained quantitatively. During most of the century, sound was described as a succession of pulses, its wave nature being understood qualitatively. But late in the century the first mathematical analysis of the propagation of sound waves was made.

At least since the time of the Pythagoreans, musical intervals had been characterized by the length ratios of similar and equally tense strings – 2:1 for the octave, and so on. In music theory these ratios, although based on string lengths, were usually understood in purely arithmetical terms. As Palisca (1961) has shown, scepticism about arithmetical dogmatism in music led to an interest in the physical determinants of pitch. Around 1590 Vincenzo Galilei showed that various ratios could be associated with an interval. For example, if the strings' tensions rather than their lengths were considered, the ratio for the octave would be 1:4 rather than 2:1. Also, Francis Bacon (1627) was dissatisfied with arithmetical analysis of musical sound and recommended that empirical information be obtained from instrument makers. Even Kepler (1619), who was inspired by the Pythagorean idea of a celestial harmony, criticized the Pythagoreans for overemphasizing arithmetical considerations when judging the consonance of musical intervals. But the validity of the traditional ratios remained apparent, so the emphasis shifted and there was interest in finding physical (rather than numerological) reasons for using them. Descartes (1650; written in 1618) suggested that the octave was the first consonance because it was the interval obtained most easily by overblowing flutes.

The ambiguity originally demonstrated by Vincenzo Galilei was resolved most clearly by his son Galileo (1564–1642). By considering the sound that reaches the ear rather than the vibrating object that produces it, Galileo came to realize that pitch corresponds to frequency and showed that musical intervals could be uniquely characterized by frequency ratios. To explain why some intervals are more consonant than others, one of the 'musical problems' that he proposed to solve, Galileo wrote, in 1638, that 'the length of strings is not the direct and immediate reason behind the forms [ratios] of musical intervals, nor is their tension, nor their thickness, but rather, the ratios of the numbers of vibrations and impacts of air waves that go to strike our eardrum' (see Drake, 1974). He asserted that the degree of consonance produced by a pair of tones is determined by the proportion of impacts from the higher tone that coincide with impacts from the lower. (Benedetti had realized by 1563 that pitch corresponded to frequency, but his idea had not become known. In the early 17th century Beeckman, Descartes and Mersenne made statements about this correspondence, but Galileo's presentation was the clearest.)

Mersenne, who specialized in the physics of music, experimented extensively to relate vibrational frequencies to other properties of sources of sound. According to Mersenne's Law, the (fundamental) frequency of a string of given material is proportional to $\sqrt{T}/l\sqrt{m}$, where l is the length, T the tension and m the mass per unit length. In his experiments to establish this, which he described (1636–7), Mersenne tuned pairs of strings that differed in one or two properties. The musical interval indicated the strings' relative frequencies, and the dependence of frequency on each variable was found separately. To a certain extent the law was known by others; for example, the explicit statement that the frequency is inversely proportional to the square root of the density is due to Galileo. Mersenne tried to find for the vibrating air column a relation similar to the one he had found for the string. Although there is no simple precise relation between the frequency of a pipe and its dimensions, Mersenne did observe various effects of length, width and blowing pressure on the pitches of organ pipes, and he noted the octave difference between open and closed pipes.

Assuming that Mersenne's Law holds even for a string so long that its vibrations can be counted visually, Mersenne estimated the frequency of a note, that is, he found experimentally the constant of proportionality in the law. Some decades later Robert Hooke may have made a direct measurement of frequency; in 1665 he wrote about estimating the frequency of a fly's wings' vibration from its buzz. In 1681 he demonstrated before the Royal Society a way of making musical sounds 'by the striking of the teeth of several Brass Wheels, proportionally cut as to their numbers, and turned very fast round, in which it was observable that the equal or proportional stroaks of the Teeth, that is 2 to 1, 4 to 3, etc., made the musical [intervals]'. Hooke's wheel (usually known as Savart's wheel), which demonstrates explicitly

that pitch corresponds to frequency, could have been used to make a rough measurement of frequencies.

Mersenne realized the importance of overtones, and urged his numerous correspondents to seek an explanation of them. In the case of an open string he identified at least four harmonic overtones, typically finding it paradoxical that a string should vibrate at different frequencies simultaneously. He also raised the problem of understanding instruments, such as the trumpet marine and the wind instruments, in which harmonics are produced separately.

2. FROM HUYGENS TO SAUVEUR AND NEWTON. Like Galileo, Christiaan Huygens was the son of a musician, played a number of instruments and was interested in consonance and dissonance. Around 1673, influenced by Mersenne, he gave a derivation (under simplifying assumptions) of Mersenne's Law for the vibrating string. Like Mersenne, he was interested in overtones. He estimated absolute frequency, and understood the relationship between wavelength and pipe length.

In 1677 the mathematician John Wallis published a report on experiments showing that the overtones of a vibrating string, which are harmonic, are associated with the existence of nodal points on the string; according to him the phenomenon had been known to the Oxford musicians for a number of years. In his experiments a string was made to vibrate in a higher mode by resonance with a string tuned so that either its fundamental or one of its harmonics was at the pitch of the mode. Paper riders showed the nodal points. Wallis suggested that a similar situation must exist for wind instruments. He observed that the tone of a string was 'rough' if the string was excited at a potential node. In 1692 Francis Robartes published a similar description of nodes and harmonics in connection with his study of the scales of the trumpet and the trumpet marine.

At the beginning of the 18th century Joseph Sauveur proposed the development of a science of sound, which would be called 'acoustique'. His own studies, which grew out of an interest in music and a background in mathematics, dealt with the physics of musical sound. He seems to have been the first to recognize that the frequency of the beats produced by a pair of notes is equal to their frequency difference, and was able to determine frequencies absolutely, probably to within a few per cent, by counting the beat frequency for two low-pitched organ pipes tuned a small semitone apart in just intonation (frequency ratio 25:24). Like Wallis and Robartes, but independently of them, he explained that nodes are present when a string vibrates in a higher mode. He introduced the terms 'son harmonique', 'noeud' and 'ventre'.

Sauveur noted that organ builders had intuitively discovered the harmonic pitches, which they mixed by means of stops to obtain various timbres. As Fontenelle, *secrétaire perpétuel* of the Paris Académie, reported: 'Nature [had] the strength to make musicians fall into the system of harmonic sounds, but they fell into it without knowing it, led only by their ear and their experience. Sauveur has given a very remarkable example of this'. Sauveur remarked that the organist mixes the stops 'almost the way the painters mix colours', and that 'by the mixture of its stops, the organ is only imitating the harmony that nature observes in sonorous objects'. Fontenelle referred essentially to the principle of superposition in his explanation of harmonics: 'each half, each third, each quarter of the string of an instrument makes its partial vibrations while the total vibration of the entire string continues'. In 1713 Sauveur ingeniously derived Mersenne's Law with a constant of proportionality for the ideal string that was correct but for a factor of $\sqrt{10}/\pi$. He did this by considering a horizontal string, hanging in a curve because of the gravitational field, which he treated as a compound pendulum. (In the same year Brook Taylor also gave a derivation. His style of analysis belongs to the 18th century, Sauveur's to the 17th.) The most important of Sauveur's ideas for later developments was the implicit theme of superposition, which appeared in his studies of beats, harmonics and timbre.

Newton first commented on musical sound in some of his early papers on optics. In a major achievement of the *Principia* (1687–1726) he analysed the propagation of sound mathematically. (His analysis was correct except for his use of Boyle's Law for the relation between pressure and volume rather than the adiabatic law, which was not known until the beginning of the 19th century.) Recognizing that the velocity of sound equals the product of wavelength and frequency, and using Mersenne's and Sauveur's determinations of the frequencies of organ pipes, Newton was able to conjecture 'that the wavelengths, in the sounds of all open pipes, are equal to twice the lengths of the pipes'.

3. THE AGE OF EULER. The audible overtones of taut strings and of other bodies used to make music are harmonious to the ear. In the 18th century it was popularly believed that the overtones of all natural bodies were harmonious (see for example *BurneyH*, i, 164), and some readers claimed that Rameau had founded his system of harmony upon this idea; in fact Rameau's extensive passages on acoustics are confused and often misrepresented the knowledge in his time.

The dominant acoustic problem of the 18th century was to calculate the fundamental and the overtones of a given sonorous body. In 1713 Taylor attempted to determine the motion of the monochord on the basis of Newton's rational mechanics. His pioneer approach was fruitful for later work, but he himself could not carry it through without restricting the shape of the string to be a single sine wave. He confirmed Mersenne's Law and showed that its constant of proportionality is $\frac{1}{2}$. In 1727 Johann Bernoulli proposed a model of the string as a set of n little balls connected by massless cords and calculated the fundamental frequency for a few small values of n. Both Taylor and Bernoulli had equations from which they could have calculated the frequencies and nodes of the overtones, but neither of them did so. Bernoulli's discrete model, which had been proposed in the previous century, was to be studied in increasing detail, but it contributed nothing to acoustics.

In 1727, too, Euler published his *Dissertatio physica de sono*, a clear, short pamphlet that at once became a classic and guided acoustical research for about 75 years. Euler divided sounds into three kinds: the tremblings of solid bodies, such as the reeds of wind instruments, strings, chimes and drumskins; the sudden release of compressed or rarefied air, as by clapping the hands; and the oscillations of air, either free or confined by a chamber, such as the tube of a flute, an organ pipe or a trumpet. The first two kinds refer to the production of sound, the third also to its transmission to the ear.

Euler recalled Newton's determination of the speed of sound in air. Although the ideas upon which that determination rested seemed to be correct, the numerical result was far too small to agree with measured values. The problem of correcting Newton's analysis was to dog theorists for the whole century and to remain unsolved until 1868; however, the early theorists gradually came to see that mechanical principles could give correct ratios of frequencies, even if the pitch of the fundamental was incorrect, and they often reported their results in terms of such ratios. Fortunately for the earlier theories of music, it is the ratios that determine musical intervals. Similarly, pitches of all instruments were only uniformly incorrect; two instruments predicted to be consonant would be so indeed. Thus musical acoustics could make spectacular advances in the 18th century despite the standstill on what would seem to be the basic and central problem of physical acoustics.

In his next significant work on acoustics, *Tentamen novae theoriae musicae* (1739), Euler presented a developed theory of consonance, based upon an explicit, mathematical rule for determining the 'simplicity' of a set of frequencies such as those making up a chord. He derived his rule from ideas of the ancients, Ptolemy in particular. It could not take account of difference tones and summation tones, for they had not yet been reported, but it permitted Euler to determine by routine calculations the most complete systems of scales or modes ever published. The last chapter sketches a theory of modulation. Euler thus began to construct a mathematical theory of the consonance of a progression of chords.

The 7th and the combination of the 6th and the 5th have high measures of dissonance yet were often used by musicians of the 18th century. To explain this fact, Euler many years later suggested that 'we must distinguish carefully the ratios that our ears really perceive from those that the sounds expressed as numbers include' ('Conjecture', 1764). In the equally tempered scale there are no exact consonances, yet the ear seems to hear the ratio 2:3 when its irrational, equal-tempered substitute $1:2^{0.583}$ is sounded. The ear tends to simplify the ratio perceived, especially if the dissonant tones follow after a harmonious progression; for example, 36–45–54–64 is indistinguishable from 36–45–54–63, which is the same set of ratios as 4–5–6–7. The paper closes with the suggestion that the music of the day had already replaced Leibniz's basic numbers 2, 3 and 5, beyond which 'music had not yet learned to count', by 2, 3, 5 and 7. Apparently Euler was not familiar with Tartini's beats, though by the time he wrote this work they had been demonstrated. In the succeeding paper on the 'true character of modern music' (1764), Euler reasserted the position he took in his treatise: consonances and dissonances are not essentially different but just sounds that are more 'simple' or less so, according to the value of his numerical measure. The ancients admitted a smaller range of consonances than do the moderns; both the ancient and the modern practices perfectly obey the principles of harmony, but the modern composers have achieved 'a very considerable extension of the limits of ancient music'. Euler recommended that the musical scale of 12 notes based on the numbers 2, 3 and 5 be augmented by 12 more, based on the numbers 2, 3, 5 and 7; all of these 'foreign notes' are obtained by multiplying one of the usual notes by 7. A harpsichord with 24 keys per octave should be constructed so as to try out this extended scale. Presumably Euler did not know of Vito Trasuntino's celebrated *arcicembalo* of 1606 (now in the Civico Museo of Bologna), which has 31 keys per octave. These works on the theory of harmony are exceptional in Euler's research on acoustics, the rest of which concern strictly physical problems.

It is now known that a body in undergoing a free vibration at a single frequency must assume a shape proportional to some particular one. The amplitude of vibration is arbitrary, but both the proper frequency of the vibration and the generating shape, which is the normal mode that corresponds to it, are determined uniquely. The several normal modes correspond to the several pure tones that a free sonorous body may emit simultaneously; the sound of such a body is thus a mixture of its normal mode frequencies. What this mixture is depends upon the amplitudes given to the several normal modes, and therefore on the way in which the body is set into vibration. This idea, of central and indispensable importance in acoustics, is due to Daniel Bernoulli. One of the few scientists of the 18th century who produced important experiments as well as important theory, he formed it gradually upon the basis of accumulated musical experience, simple theoretical assumptions and calculations, and experimental checks. He was not only the first to conceive of vibratory motions in this way but also the first to calculate the complete set of proper frequencies and normal modes for a particular vibrating body. He chose to consider first a heavy cord hung up from one end, but he saw and stated that his ideas were general and would apply to musical bodies (see his papers of 1732–3 and 1734–5). His results showed that the partials of the hanging cord were incommensurable and not harmonious; he showed also that a normal mode of higher frequency had a greater number of nodes than did one of lower frequency.

Euler and Bernoulli in friendly competition poured out a torrent of research on the small vibrations of bodies. Of course the long-awaited explanation of the tones and frequencies of the monochord fell into their hands at once. All the modal shapes were found to be sine waves, as Taylor could have shown but did not; and their frequencies follow the series 1–2–3–4 .... The transverse vibrations of elastic bars or chimes, variously supported at their ends, confirmed abundantly the facts suggested by Bernoulli's work on heavy cords (see Bernoulli, 1741–3, and Euler, 1734–5, 1744 and 1772). Only for exceptional bodies or conditions are the modal shapes sinusoidal; most of the partials are strikingly dissonant. The theory showed Bernoulli where to expect the nodes; by supporting a chime 'with the tips of two fingers' at the predicted nodes and then striking it he could easily induce a vibration in the corresponding pure mode. He recorded the tones 'by observing, as best as I was able, the consonant sound on my harpsichord'. The idea that harmony could be founded upon the 'naturalness' of the progression of partials was destroyed. Rather, as it appeared, bodies fit for making music are most unusual ones, having been selected precisely because their series of partials are harmonious to the ear. Of course the traditional idea that 'simplicity' made a chord harmonious, which had been rendered precise by Euler, was not affected. Nature had been shown not to be simple in this regard. The idea, then commonly attributed to Rameau, that simplicity was harmonious because favoured by

nature, was thereby destroyed. Euler (1739) also explained the long-known phenomenon of resonance by showing that if an (undamped) harmonic oscillator is driven at its natural frequency the amplitude of its vibration increases without limit.

The methods used to calculate the modal forms and frequencies of bodies were special; the motions considered, likewise, were special. Daniel Bernoulli had claimed that any free vibration of a sounding body could be regarded as a superposition of its simple modes with various amplitudes, but there were no general principles upon which proof of such a statement could be attempted. At the mid-century, the Newtonian framework of mechanics was vastly expanded by Euler and Jean Lerond d'Alembert to make possible a concise mathematical description, in principle, of all motions of a body. These statements came later to be called 'differential equations of motion'; for bodies having infinitely many degrees of freedom, such as a bar or drumhead or chamber full of air, they are 'field equations', for they govern the local motion at each place in the body. On the basis of these equations, supplemented by suitable additional conditions on the boundary of the body, it is possible to ask whether Bernoulli's principle of superposed simple oscillations is valid. The mathematical tools developed in the 18th century were insufficient to answer the question, but in the 19th century mathematicians were to justify application of Bernoulli's idea to a multitude of vibrating bodies, and it forms an indispensable part of acoustics today.

A great controversy on this and related matters began in 1749, when d'Alembert published his discovery of the field equation for a taut cord; the other disputants were Euler, Bernoulli and, later, Joseph Louis Lagrange. From the very beginning the solutions of d'Alembert's equation indicated that every possible form of string could be generated by suitable waves travelling both to the right and to the left with the same speed, namely, $\sqrt{T/m}$. Euler based all of his discussion of the matter on this fact alone; d'Alembert contended that only particular 'equations' were amenable to mathematics; Bernoulli claimed that use of a sufficient number of simple modes would explain everything with any accuracy desired. The dispute was of a technical nature, unresolvable with the mathematics then known, and in the 18th century it bore no direct fruit for acoustics. However, both Bernoulli and Euler pursued the subject in the constructive spirit that characterized all their work; each showed that his approach could produce new and valuable information about sounding bodies.

Bernoulli (1753 and 1762), proceeding by analogy to his concept of transverse vibrations in strings and bars, formed a special theory of longitudinal vibrations of air in wind instruments. He found that the partials of a closed pipe followed the progression 1–3–5–7 .... He analysed the tones of an organ pipe *à cheminée* and concluded that his results were in accord with his formula for determining the length of a consonant uniform pipe. He also calculated the series of partials of a conical horn.

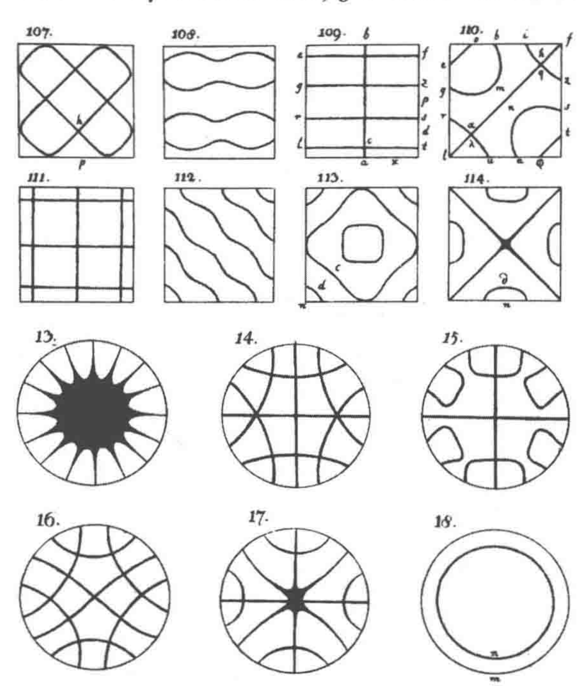
The year 1759 is decisive for acoustics, for in that year Euler derived the general field equations for vibrations of air in one, two or three dimensions. The modern theory of aerial acoustics rests upon these 'partial differential' equations or upon modifications of them so as to take account of internal friction and the conduction of heat. Euler's own research on them (1759) entered into only the simplest cases. He introduced the method of 'separation of variables', which is still the starting-point for solving many problems of aerial acoustics. He also determined the laws of propagation of cylindrical and spherical waves, calculating the diminution of their amplitudes as they spread out from a source. Euler had communicated some of his results to Lagrange during the weeks in which he discovered them. Lagrange applied them at once (1760–61) and extended the analysis in various directions. He obtained the field equations for longitudinal vibration of air in a tube of general cross-section; this equation was rediscovered over a century later, called the 'Webster horn equation', and put to extensive use in the design of loudspeakers.

One simple phenomenon remained ill-comprehended. If, as the theory asserts, sonic motion consists of waves running both ways continually, how can part of a string remain long at rest, and how can an echo be heard successively? In 1765 Euler easily showed how the opposing waves may simply annul each other for periods of time. He did so by explaining the general solution of the one-dimensional equation in terms of pulses which obey definite rules of reflection upon reaching a terminus such as the end of a wire, the vent or stopper of a pipe, or the face of a cliff. For example, he exhibited (1772) the complete solution for motion of a monochord plucked to triangular form and then released, thus settling the old problem of Beeckman, Mersenne and Taylor.

On the basis of this formulation of the transverse vibrations of a straight elastic bar in terms of a single partial differential equation, Euler in 1772 and 1774 calculated the frequencies and nodal forms of the modes corresponding to all six possible kinds of support. In 1782 Riccati published still more accurate calculations concerning the first six modes of a bar free at both ends, along with a detailed verification by experiments on chimes of brass and steel. The theory has been universally accepted ever since and is usually called 'the Bernoulli-Euler theory'.

In the second half of the 18th century theories for vibrating bodies of more complicated kinds were proposed, but the only success lay in Euler's field equations ('De motu vibratorio tympanorum', 1764) for a perfectly flexible drumhead, discovered in 1759. Euler obtained some particular solutions, but mathematical analysis was too primitive then to do much more. An epoch of acoustics closed with Euler's death in 1783. That the great achievements of the 18th century were only imperfectly recognized and in some cases had to be rediscovered in the 19th may be due partly to the lack of a textbook or even a treatise for specialists. The nearest to the latter is Euler's 'Sectio quarta de motu aëris in tubis' (1771), which is the last section of his treatise on fluid mechanics; the final chapters are devoted to the hyperbolic horn and the conical flute.

4. From Chladni to Ohm. The research of the 18th century produced mainly theory such as to consolidate and extend understanding already formed by musical experience and by known experiments. It was nearly always presumed tacitly that music was first produced and then transmitted to the ear, which registered exactly the sound that fell upon it. There were occasional remarks about the nature of the ear, but little more than that. Rameau (1737) wrote: 'What has been said of sonorous bodies should be applied equally to the fibres which carpet



1. Ernst Chladni demonstrating his experiment for determining nodal patterns; drawing (1800) by an unknown artist in the Deutsches Museum, Munich

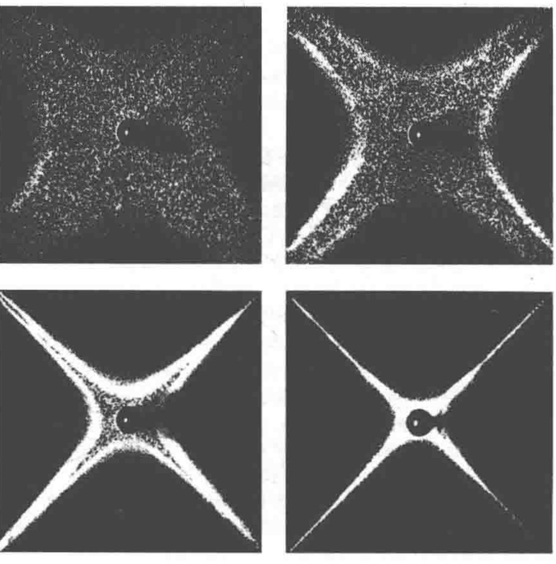
the bottom of the ear; these fibres are so many sonorous bodies, to which the air transmits its vibration, and from which the perception of sounds and harmony is carried to the soul'. Riccati suggested (1767) that the auditory nerve was 'a bundle of nerves which by the smallest degrees pass from the lowest tone to the highest, and the one of these that corresponds to unison with a sounding body is set a-trembling'. Such an ear, if its fibres were tuned at intervals of one tenth of a comma, would smooth over small differences of frequency but otherwise would be a perfect receiver.

In 1787 appeared a pamphlet by Ernst Chladni, *Entdeckungen über die Theorie des Klanges*, which opened a new period in physical acoustics. Mathematics had dominated the subject for a century; now, for the first time, a master experimentist who understood and knew how to use existing theory broke new ground with experiments which at once suggested and demanded a theory of a new kind. To Chladni the idea of partials with their nodes corresponding to various kinds of support was second nature. He chose to determine them by experiment for thin, springy plates, and did so by scattering fine sand over the surface, supporting the plate at points conjectured to be nodal, and stroking the free edge with a violin bow (fig.1). He used this technique first to confirm the Bernoulli-Euler theory of straight rods; then he turned his attention to thin elastic surfaces, mainly circular discs but also square plates.

The enormous variety of nodal patterns Chladni obtained may be illustrated by the samples in fig.2. He recorded the frequencies in terms of musical pitches. His results reveal the intricacy of response that must be expected in the most idealized sounding-board of a musical instrument. To explain his figures by a theory that would correlate the nodal patterns with the frequencies has remained a major open problem of acoustic

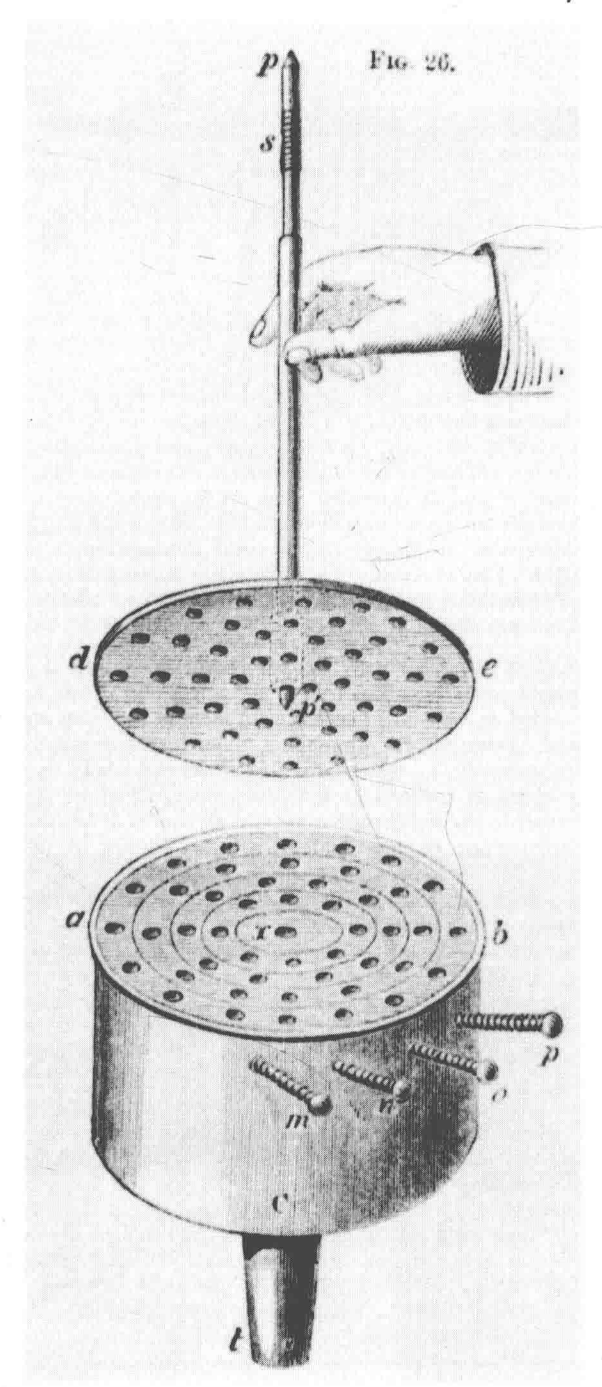
2. *Examples of some nodal patterns obtained by Chladni, from his 'Die Akustik' (1802)*

theory; it has been a continuing stimulus to search of principle, and cannot be regarded as solved.



The publication of Chladni's classic work *Die Akustik* (1802) gave a clear indication of change. In the new century the physics of music was to emphasize observation. By the end of that century, observation was to reveal that some of the problems of musical acoustics were more complex than they had seemed. The timbre and acoustical nuances of interest to the performing artist sometimes arose from effects too complicated to be included in the developing physical theories. For example, while the wolf note of the cello may be readily understood as an unavoidable problem of a resonant chamber of specified dimensions, the degree and type of orthotropy or directionally orientated elasticity in the cane of an oboe reed – possibly related in some way to the silicon content which makes cane from one particular region preferable to that from another – is a complicated problem far beyond the mathematical simplifications necessary to describe the physics of music.

To explain Chladni's sand figures in the vibrating plate challenged several generations of experimentists and theorists. After a few initial mistaken steps, a theory of the vibrating plate with appropriate boundary conditions evolved in the 19th century, but further experiments by Savart, Faraday, Lord Rayleigh (J.W. Strutt) and many others revealed phenomena beyond its range. The dilemma remained until 1931, when Andrade and Smith showed that the sand did not rest along the stationary nodal curves but rather moved on the surface until it reached lines at which the maximum acceleration of the plate equalled the gravitational constant *g*. For oscillations of large amplitude such lines approach the nodal lines on either side, but in moderate motion they may be far from them (fig.3). Thus Chladni and others after him were not right in interpreting the lines of sand as nodal lines; perhaps the lines of sand as interpreted by Andrade could be determined by the theory, but so far they have not been. The status of the now standard theory of elastic plates remains neither supported nor controverted by Chladni's famous results. Andrade and Smith found, as had Rayleigh, that better consistency was obtained if the violin bow used by Chladni and those who followed him was replaced at a fixed location by a mechanical driver of constant frequency.



Experiments on the physics of music require precise determination of the absolute frequency of a sustained tone. Without such a determination it is not possible to analyse the frequencies of the various components of a musical note. Cagniard de Latour (1819) made a contribution to the measurement of absolute pitch (fig.4). He developed the siren in a form, later improved by Seebeck (1841) and Helmholtz (1863), and perfected by Koenig (1867, published 1881), which made absolute measurement possible. To a bellows chamber Cagniard affixed one plate with a series of holes; he rotated a second plate with identical holes so as to open and close the matching holes alternately. He therefore produced a tone of the desired loudness at a frequency determined by the speed of rotation. In the early 19th century it was difficult to maintain that speed constant, and many people throughout the rest of the century described their efforts to do so.

The most important tool for investigators in the 19th century was provided by Scheibler, a silk merchant who lived near Düsseldorf. In a pamphlet of 1834, in which he humbly acknowledged his limitations as a writer on science, he described his 'tonometer', which for the first time made it possible to determine absolute pitch precisely. His instrument was copied, improved and widely used for fundamental studies during the rest of the century. In fact, one of Scheibler's original instruments was still being used by Alexander J. Ellis, 50 years after its construction, to determine the pitches of 16th- to 19th-century organs and the tuning-forks of historically prominent musicians.

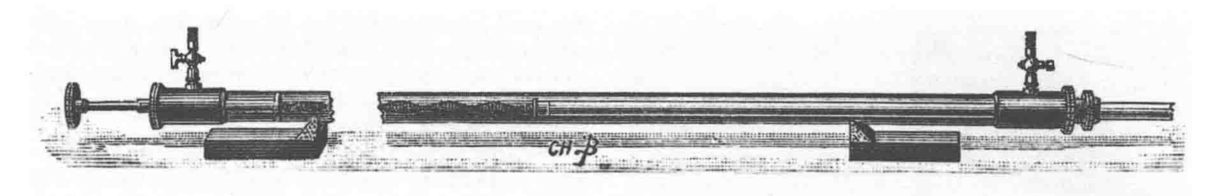
In his long summary of these measurements Ellis observed, for *a′*, frequencies ranging from 374 to 567 Hz

3. *Sand figures for increasing amplitude (from Andrade and Smith, 1931)*

4. *Cagniard de Latour's siren (1819) for measuring absolute pitch (from Tyndall, 'Sound', 1898)*

(cycles per second). Although the frequency generally increased from the 16th century to the 19th, there were wide fluctuations at any given time (*see* PITCH). In this context the study by van der Pol and Addink (1939) is interesting; their electronic arrangement permitted them to measure continuously, to an accuracy of 0·2 Hz, the pitch of an orchestra during a performance. In comparing 450 radio broadcasts of orchestras in England, France, Germany and the Netherlands, they found that, although the total average pitch was $a' = 440$ Hz, there were national differences. More important, there were variations of pitch during individual performances, depending upon the dominance of the various sections of the orchestra or upon the soloist.

The tonometer Scheibler described in 1834 was an array of 56 tuning-forks. One fork was tuned to $a' = 440$ Hz, the second to *a*, one octave below, and the rest at 4-Hz intervals in the octave. Through the careful counting of beats, the absolute frequency of an unknown tone in any 4-Hz interval could be established. At a congress of physicists in Stuttgart in the year he described his invention Scheibler introduced $a' = 440$ Hz and pressed for its selection; that value became known as the 'Stuttgart pitch'. Scheibler had made this choice not for some fundamental reason relating to scales, consonance or intonation, but because he had observed that 440 Hz was the mean of the frequencies of the *a′* on pianos in Vienna as they varied with temperature.



Scheibler's equally tempered scale, which he calculated to four decimal places, was a consequence of his choice of $a' = 440$ Hz rather than a preconceived notion. Among the many attempts to provide an absolute standard this 'Stuttgart pitch' was unique in that for the first time the proposed value had meaning; it could be measured with precision. Scheibler's tonometer, developed at the same time, provided the necessary tool.

One type of experiment in the 19th century was designed less as a part of the developing new ideas than as a confirmation of the conjecture of an earlier century. In the 18th century it had been relatively easy to perceive the nodes of transverse vibration of a string or a bar, but it was not until 1820 that Jean-Baptiste Biot, using polarized light through a transparent doubly refracting solid, demonstrated the existence of nodal patterns in the interior of a solid in longitudinal oscillation. This technique of photoelasticity had been discovered in a different context by Brewster (1816).

Kundt (1866), with a variation on Chladni's original experiment with the sand figures on plates, demonstrated the existence of nodal patterns in a column of air in a transparent glass tube by means of his 'dust figures' (fig.5). He observed the distribution into nodal patterns of a fine powder which he had sprinkled in the tube. His famous dust figures became the main method in the 19th century for determining the velocity of sound in various gases and, by means of an ingenious adaptation, the velocity of sound in solids.

Knowledge of the physics of music in the early 19th century had advanced sufficiently to provide an essential background for Helmholtz's experiments between 1854 and 1862. His work culminated in the penetrating study described in his great classic of 1863 *Die Lehre von den Tonempfindungen als physiologische Grundlage für die Theorie der Musik*.

The theorists of the 18th century had tried again and again to repair Newton's failure to calculate a value for the speed of aerial sound that squared with experiment. They had eliminated all sources of possible error but one: Newton's having taken the pressure in sonic motion to be proportional to the density, just as it is in air at rest. The mechanical theories had yielded correct ratios of frequencies and hence correct musical intervals, but they could account for the diminution of sound only through its spreading outwards as it progressed. According to them,

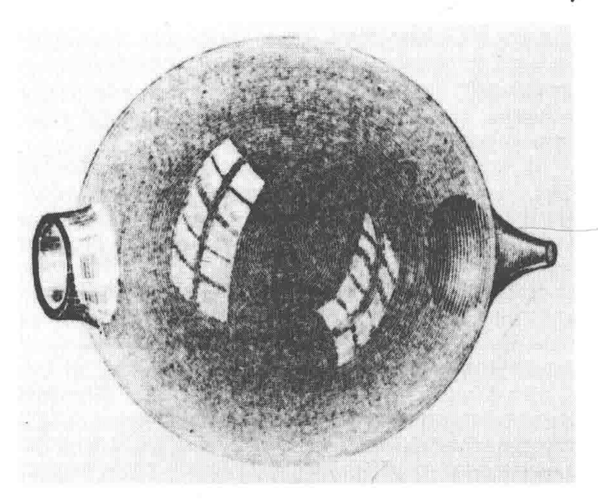
5. Kundt's glass tube from 'Catalogue des appareils d'acoustique construits par Rudolph Koenig' (1889)

air once set in motion to and fro between the plane walls of an elastic box would go on sounding for ever. Real sounds die out in time. Otherwise there could be no music. It is equally necessary that all audible sounds travel at sensibly the same speed. A complete theory of propagation must account for all these facts.

Pierre-Simon de Laplace suggested by degrees in the years 1816–22 that the sonic motion was too rapid to allow differences of temperature in the neighbouring parts of the air to equalize through conduction of heat. He showed that in a 'sudden compression', later called an 'adiabatic motion', the pressure of a gas was proportional not simply to the density, but to the density raised to the power of the ratio of specific heats. Substituting this relation into Euler's formula for the speed of sound in general, Laplace at once replaced Newton's numerical value by one that agreed well with measurements. It was still not clear just why the motion should be adiabatic. The matter was settled in a masterly research by Gustav Kirchhoff (1868). He began from the general field equations of motion which James Clerk Maxwell had obtained from his kinetic theory of gases just the year before; these, in turn, reflected the idea of internal friction due to George Gabriel Stokes, the conduction of heat as described by Fourier, the theory of interconvertibility of heat and work as elaborated by James Prescott Joule and Rudolf Julius Emmanuel Clausius, and the framework of continuum mechanics established by Augustin-Louis Cauchy. All the centuries of experience in rational mechanics were brought to bear on the problem of determining the behaviour of plane sound waves in a gas. Kirchhoff proved that for waves of low frequency the speed was given approximately by Laplace's formula, and that all such waves travelled at the same speed. However, for waves in the audible range the motion is not quite adiabatic, although it is more nearly so the slower (not the faster) is the oscillation. All sound waves are damped through the combined effects of viscosity and the conduction of heat, and sounds of higher pitch are damped out more quickly than are graver tones. 'Ultrasonic' waves, whose frequencies are very high, exhibit 'dispersion': the speed of propagation increases with frequency.

The velocity of sound in a solid had been measured first by Biot in 1808 in his experiments on waves propagating through nearly a kilometre of the newly constructed iron water pipes in Paris. Ingredients for Helmholtz's analysis were provided by the rapid, phenomenal development of the linear theory of elasticity in the 1820s by Claude-Louis Navier, Siméon-Denis Poisson and Cauchy.

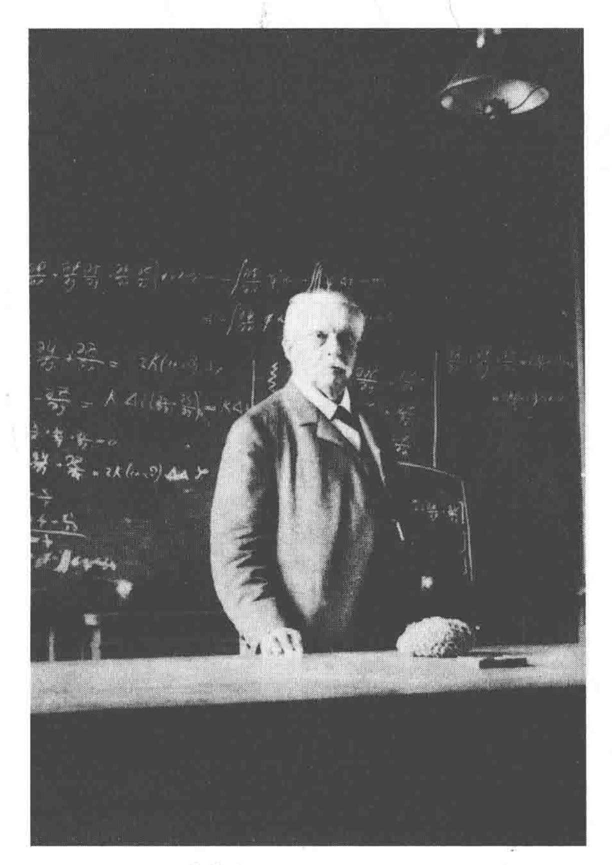
Meanwhile, in his work on the conduction of heat in the first decades of the 19th century Fourier had shown how to represent any curve by superposing sine waves corresponding to the frequencies 1, 2, 3 .... This theorem and generalizations or analogues of it not only substantiated Daniel Bernoulli's viewpoint on acoustics but also became the basis for countless analyses of the tones, overtones and dissonant beats of musical instruments as well as unmusical ones.



Finally, as a prelude to the contributions of Helmholtz, there was the statement of Georg Ohm, better known for his law in electricity, who in 1843 proposed what became known as Ohm's Law of Acoustics. Ohm suggested that musical sounds depended only on the distribution of energies among the harmonics and had no dependence on differences of phase. The physical demonstration of Ohm's Law of Acoustics was the major accomplishment of Helmholtz, and the theory remained without effective challenge until the middle of the 20th century.

5. The age of Helmholtz. Helmholtz provided a classic analysis of the role of overtones. To do so he needed an instrument sufficient to identify the existence and determine the strength of a suspected overtone. Furthermore, he was the first to understand fully that analysis of consonance and dissonance, let alone the existence of combination tones and the timbre of musical instruments, required more than the physics of the vibrating structure; analysis had to include the interaction of the sound from that source of vibration impinging upon another vibrating structure, the human ear. Helmholtz met the need for an instrument by developing his resonator. In its early crude form it was a spherical glass chamber with a hole at either end (fig.6), of size such that when exposed to a specific frequency the resonant cavity enabled him to identify that frequency when one aperture of the sphere was placed in the ear by means of a melted wax earpiece.

To achieve a proper analysis, Helmholtz applied to the detailed study of the human ear his great talents as one of the outstanding physiologists of the 19th century. Helmholtz, who is said to have been a competent pianist in addition to having exceptional talents as a universalist in physics and physiology, developed a two-manual harmonium to produce the overtones, difference tones and summation tones he wished to study. He systematically tested the applicability of Ohm's Law of Acoustics by using his metallic reeded harmonium, improved versions of the Cagniard de Latour siren and the Scheibler tonometer, and a greatly improved model of his own resonator, which Rudolph Koenig had perfected.

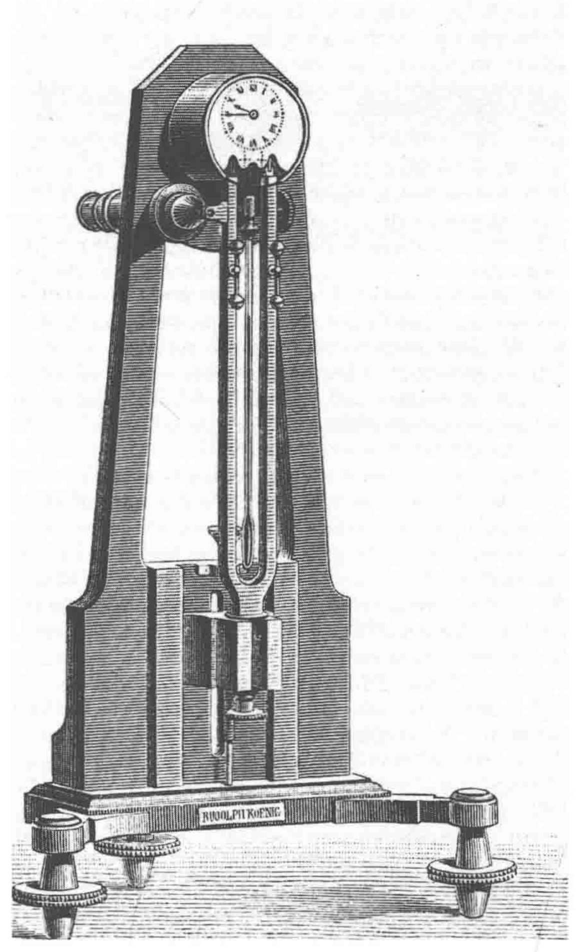


It is not possible here to give much detail of Helmholtz's discoveries beyond his demonstration of the general principles enunciated in Ohm's Law. He observed that the range of 30–40 Hz in the beating of high overtones produced the most unpleasant sensation. Some may contest this on aesthetic grounds, but Helmholtz's research shed light on the centuries of debate on the subject of consonance.

Of the many particulars of his work beyond the consideration of Ohm's Law, one must be mentioned

6. *Helmholtz resonator from 'Die Lehre von den Tonempfindungen' (1863; Eng. trans., 1875/R1954)*

because it set straight a previous misconception concerning the mystery of 'Tartini's beats': if two pure tones are sounded, and if the ear hears a tone the frequency of which is the difference of the two, the tone heard is called a 'difference tone'. Their discovery generally is credited to Tartini, who wrote of them in 1754. If date of publication is the criterion, however, the discovery must be credited to the German organist Georg Andreas Sorge, who published a description of the same phenomenon in



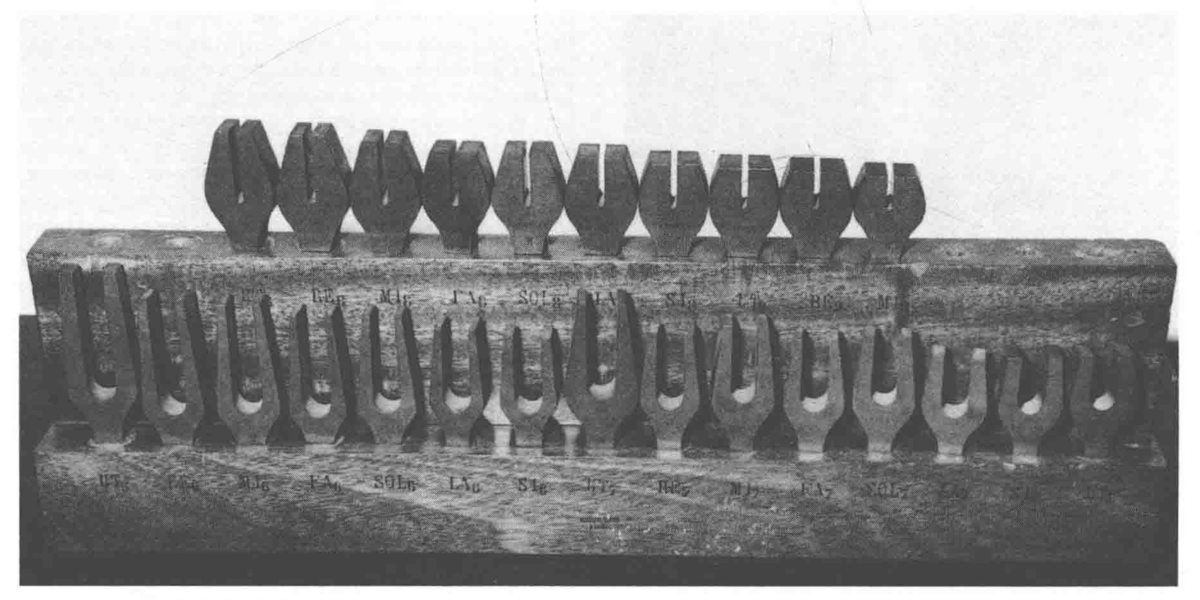
7. *Hermann von Helmholtz*

1745. Before Helmholtz the usual explanation for the difference tones is that stated by Thomas Young, among others. Such a tone, according to Young, was the beating of upper partials at a frequency high enough to provide a sound an octave below the lower of the two sounded notes. That this was a conjecture which led to absurdity was demonstrated by Helmholtz's discovery of higher combination tones, which he called 'summation tones'. The measured difference tone had a frequency which was the difference between two sounded notes, whereas the summation tone lay above the highest tone, with a frequency equivalent to the sum of the two sounding frequencies. Unlike the difference tone, which requires no special aural acuity to perceive, the summation tone is extremely difficult to hear. The discovery of its existence not only eliminated the conjectures of Young and others but also provided evidence for Helmholtz's theory of the non-linearity of the ear.

A receptor such as the ear, as would be expected from a knowledge of the mechanical behaviour of other portions of the human body, performs in a manner which is best represented by recourse to non-linear mechanics. The expected behaviour is entirely different from that in the world of linearized physics, with its focus restricted to the inaudible whisper and the invisible vibration, that is, to infinitesimal phenomena. In the linearly interpreted world, the sums of different solutions are still solutions, superposition prevails, and elementary harmonic analysis is possible. This corresponds to the general behaviour of the sources of sound in musical instruments. If non-linearity prevails, the sums of solutions are not generally solutions, superposition does not apply, and the resulting response contains elements produced by the non-linear receptor itself. Thus the human ear, first described in mathematically acceptable terms by Helmholtz, is capable of providing sounds not actually present in the musical instruments which supply the stimuli. The purely aural harmonics are in the form of sums and differences of the frequencies of the fundamental and the overtones of a given note, and in the amazing matrix of possible combinations of sums and differences when an interval or a chord is sounded. Hence the rudimentary physics of the vibration of musical instruments provides an indication of general behaviour but cannot explain the timbre.

Like many solemn pronouncements in science, Ohm's Law of Acoustics was more a summation of the accumulated wisdom of a preceding century than the sudden declaration of a newly conceived discovery. However, Helmholtz's years of experimentation in musical acoustics gave far more than mere substance to those conjectures; he provided in enormous detail and breadth the foundations for a century of further research.

The research of Helmholtz and Koenig, like that of other scholars of similar calibre, was not at once universally accepted. Mercadier (1872) criticized Helmholtz for having concentrated on the study of sustained tones rather than upon the melodious flow of the music. Koenig, too, was attacked. A sequence of correspondence in *Nature* indicates that although many of his contemporaries revered Koenig, as is affirmed by Thompson (1890–91) when describing Koenig's research and his visit to Koenig's remarkable workshop at the Quai d'Anjou on the Seine, he had some detractors, Ellis being one of them. It is difficult to see how Ellis, on the basis of what turned out to be his own flimsy measurements on a single,



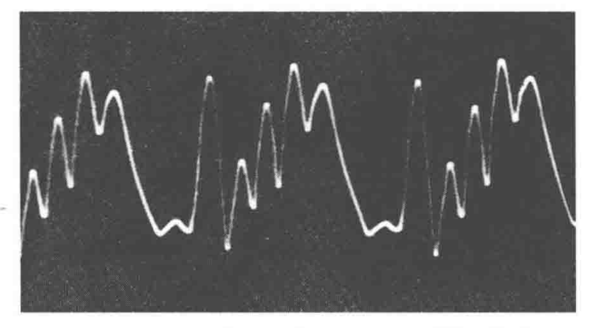
8. *Koenig's clock tuning-fork from 'Catalogue des appareils d'acoustique' (1889)*

questionable instrument, could claim that the tuning-forks of all Koenig's tonometers were seriously in error, particularly in view of the accuracy which Koenig had achieved with his 'clock tuning-fork', among other instruments (fig.8).

In Koenig's clock tuning-fork, the clock mechanism was driven by a 64-Hz tuning-fork which, with added weights, was adjustable between 62 and 68 Hz. It was possible to observe the motion of the opposite prong of the tuning-fork under the microscope in order to examine the Lissajous figures. Matching the clock tuning-fork to an unknown frequency, and observing the loss or gain of time of the fork-driven clock compared with a standard clock, provided the most precise measurement of frequency in the 19th century. Koenig had also developed the Scheibler tonometer to a remarkable instrument which would permit the determination of frequency over the entire audible range with what may be called 20th-century precision.

The accuracy of Koenig's tuning-forks (fig.9) became legendary. Each one was stamped with his own initials, to attest to his personal inspection of the validity of the stated frequency. Ellis, in his translator's notes accompanying Helmholtz's tome, described in detail the range of the tuning-forks and their prices in 1885 when they still were available from Koenig's own workshop. Nevertheless, Ellis was adversely critical of them. He used Appunn's reed tonometer, borrowed from the South Kensington Museum, and too rapidly concluded that Koenig's tuning-forks erred by 2 to 12 Hz from their stated frequencies. Koenig, questioning the accuracy of the instrument Ellis had used, stoutly defended the accuracy of his own tuning-forks and of his correction of the earlier measurements of Lissajous, who had been appointed by the Académie to set the standard for the French 'diapason normal' of $a' = 435$ Hz. (Lissajous had used a siren and had introduced the famous Lissajous figures in carrying out the commission.)

That was not the end of the discussion. Rayleigh entered the argument. He described a series of experiments which revealed that, when two reeds were vibrating in the



9. *Koenig's tuning-forks (US Military Academy at West Point, New York)*

immediate vicinity of one another, as in the instrument Ellis had used, the observed beats would be in error, for stated reasons, if they were compared with those for the same unknown frequency ascertained by means of separated tuning-forks, as in Koenig's instrument. Rayleigh's analysis and experiment supported Koenig's claim of precision. One could wish that in the final letter in this series Ellis had been as gracious to the craftsmanship of Koenig as he was to the ingenuity of Rayleigh.

6. 20TH CENTURY. The 18th century saw the laying of a firm theoretical foundation for the physics of music, and the mechanical ingenuity of the great 19th-century experimentalists succeeded in providing empirical support for many of the theoretical predictions concerning the nature of sound and the operation of musical instruments. 20th-century acoustics has been dominated by the electronic revolution, which placed in the hands of scientists an immensely improved set of tools for measurement and computation. The resulting increase in the precision of both experiment and calculation has revealed that classical linear acoustics is incapable of describing many important aspects of the physics of music. In the last decades of the 20th century it increasingly became recognized that non-linear dynamics must be used to describe the behaviour of continuously excited instruments such as woodwinds and bowed strings (see Hirschberg, Kergomard and Weinreich, eds., 1995).

One of the most important practical problems in acoustics which was solved by electronic techniques was that of obtaining an accurate graphical record of the waveform of a sound. In the 17th century Galileo had described the possibilities of interpreting displacement against time, using traces of scratches from a vibrating stylus drawn across a metallic surface. In 1849 Guillaume Wertheim, a notable experimental physicist in 19th-century solid mechanics, while studying the 'deep tone' longitudinal vibration of rods (see Bell, 1973), had recorded the detail of vibration by a method he attributed to Duhamel. A tiny needle attached to a vibrating rod produced a trace on a transversely moving glass plate coated with carbon. Such mechanical methods of determining waveforms, with their limitations of frequency and other problems, were improved throughout the second half of the 19th century. Before the development of the vacuum tube revolutionized such experiments, the 'phonodeik', devised by Dayton C. Miller (1909), gained much attention. The sensitive receiver of Miller's device was a diaphragm of thin glass at the end of a resonator. A tiny steel spindle mounted in jewel bearings attached to the diaphragm by a thin thread made possible the photographing of the trace of the sound produced by the many different musical instruments which Miller investigated (fig.10). The device still had limitations of frequency response which had characterized the previous methods of mechanical measurement in this area. Miller's photographs filled the literature and influenced attitudes on musical acoustics until the mid-20th century.

The essential problem of all mechanical devices for recording sound vibrations lay in the difficulty of achieving an adequately rapid response from the mechanically moving parts. In 1897, J.J. Thomson demonstrated that a beam of electrons (which he described as a 'cathode ray') could be accelerated across an evacuated glass tube to create a visible spot on a fluorescent screen. A deflection of the beam by an electronic voltage could be observed as a movement of the visible spot. Since the electron beam, the only moving part of this system, is almost without mass, it is in principle capable of extremely rapid response. By the middle of the 20th century the cathode ray oscilloscope had become the standard method of observing the waveforms of the electrical signals generated by microphones or other vibration transducers (*see* SOUND, §3).

10. Phonodeik trace for the tone of an oboe (from Miller, 1916)

Access to electronic amplification and filtering techniques made it much easier to determine the frequency and spectral content of sound. Frequency measurement systems based on tuning forks were replaced by electromechanical meters like the Stroboconn, and later by meters which used the piezoelectric effect in a quartz crystal to provide a highly stable frequency standard. In the last 30 years of the century the phenomenal development of computers and other microprocessor-based devices led to another revolution, in which analogue electrical techniques have largely been supplanted by digital techniques. The first stage in the investigation of a sound signal consists of a digital sampling, with the signal being stored in the computer memory as a set of numbers. Subsequently a variety of sophisticated signal processing techniques can be applied, and any portion of the recorded signal can be readily reconstructed for detailed study, modification or reproduction (*see* RECORDED SOUND, §II, and SIGNAL (ii)).

The impact of the age of electronics has been so great in terms of the variety and magnitude of measurement in musical acoustics, as well as in some other areas, that it would be impossible in a short history to do more than emphasize a few important points. In one sense, the successes of Helmholtz and of Koenig had led to a hiatus in which few advances were made until well into the 20th century, despite the continued interest in acoustics and musical acoustics of one of the great late 19th-century scientists, Rayleigh, who continued to experiment and write on the subject until his death in 1919. The most influential book ever published on acoustics is Rayleigh's *The Theory of Sound* (1877), which gives a fairly reliable account of the accepted theory and experiment of its period.

By the end of the 19th century a fair understanding of impulsively excited instruments, such as plucked strings or struck bars, had been reached. If the energy imparted to the instrument by the excitation was not too great, the problem could be treated as the free decay of the normal modes of the system; the nature of the excitation determined the initial mode amplitudes. The situation was less satsifactory for continuously excited instruments, such as wind and bowed string instruments. In the 1850s

Helmholtz, among others, had performed experiments to study the phenomenon of bowing, and had identified the idealised string behaviour now known as 'Helmholtz motion'. Further studies of this motion were reported by C.V. Raman in 1918. Helmholtz had also investigated the excitation mechanisms of reed woodwind and brass instruments. Several researchers, including Rayleigh and especially Strouhal (1878), had developed an understanding of the principle of edge tones, which were believed to be related to sound production in the flute. However, although theoretical models based on these researches appeared to encompass the basic physics of the instruments, such musically important issues as the variation of timbre with change of playing parameters were not explained.

The pioneering work of Helmholtz and Rayleigh did not take into account an aspect of the physics of continuously excited musical instruments which is now recognised to be of crucial importance. This is the strongly non-linear relationship which is usually at the heart of the excitation mechanism. In the case of a reed woodwind instrument, for example, the relationship between the pressure difference across the reed and the rate of air flow through it is much more complicated than a simple linear proportionality. Because of this non-linearity, a sinusoidal driving pressure in the air column of the instrument can generate an air flow into the air column with a rich mixture of frequency components. Henri Bouasse (1929–30) was the first to recognize the significance of the non-linear excitation mechanism in wind instruments; his work in this field was later taken up and greatly extended by Arthur Benade (1976). A non-linear dynamical treatment of the bowed string has also been presented by McIntyre, Schumacher and Woodhouse (1983).

The classical theory of sound wave propagation rests on an approximation proposed by Euler, which is appropriate to waves of small amplitude. The original, non-linear partial differential equations of acoustics are replaced by linear 'wave equations'. However, non-linear waves of air do occur in nature: they are an everyday occurrence in the flight of aeroplanes and also are easy to produce in the laboratory. A non-linear wave of condensation concentrates energy. If heard as a sound, such a wave seems to be louder after a short time. The linear acoustics, culminating in the work of Kirchhoff, cannot account for this 'reinforcement', for according to it, all parts of a wave travel at the same speed. Important research by Riemann (1858–9) and Hugoniot (1887, 1889) showed that Euler's original, non-linear partial differential equations of gas dynamics, if not simplified by assuming the motion to be small from the outset, did predict reinforcement. Unfortunately, however, Euler's theory predicts also that all plane waves will reinforce: every small condensation, not only those deliberately produced as music, would become audible. That is not surprising in a theory that allows sounds to continue unabated for ever because it neglects all internal causes of damping. Thus in the late 19th century two different theories, partly contradictory, were needed in order to explain the propagation of one and the same sound. This awkward artificiality persisted for a century. Finally Coleman and Gurtin (1965), working within a conceptual framework due in part to Walter Noll, succeeded in subsuming the two older theories as approximations to a master theory which displays the behaviour of plane waves of arbitrary amplitude in a body of dissipative material. They calculated a 'critical amplitude' determined by the conditions of the medium. Sounds feebler than that amplitude are damped from the start; sounds stronger than that are reinforced and hence are perceived as louder at first; of course they, too, are finally damped out by internal friction and the conduction of heat, according to Kirchhoff's theory.

The human ear is an extremely sensitive organ, and the pressure variation caused by even a painfully loud sound is typically less than 0·1% of the mean atmospheric pressure. The small-amplitude approximation proposed by Euler is thus more than adequate for the description of almost all audible sound waves. Inside the mouthpiece of a trombone, on the other hand, the pressure can vary by around 10% when a very loud note is being played. It has been shown by Hirschberg and others (1996) that in these circumstances non-linear wave propagation in the trombone air column is musically important. Shock waves reminiscent of those generated by the 'sonic boom' of a supersonic aircraft are generated in the air column, giving rise to the rasping blare which characterizes the timbre of a loudly blown brass instrument.

There was one part of musical acoustics in which dramatic advances were made in the early 20th century, namely room acoustics, of obvious importance not only for the audience but also for the performing musician (*see* ACOUSTICS, §I). Wertheim (1851), in a memoir on the vibration of sounds in air, had emphasized that although we spend our daily lives responding to sounds produced in rooms, cupboards, glasses, bottles and other receptacles of air, physicists in the mid-19th century were concerned solely with behaviour in infinite space and in cylindrical tubes with open ends. With his characteristic thoroughness in experiment, Wertheim proceeded to provide measurements to broaden this focus. His basic criticism of the experiments of his contemporaries, however, remained essentially valid until the contributions, between 1898 and 1917, of Wallace Clement Sabine.

Sabine's collected papers on room acoustics present the results of a nearly single-handed achievement of importance in the physics of music. He brought the problems of reverberations, reflections, resonance and absorption in an auditorium to such a state of understanding that for the first time it became possible to design such a structure successfully on rational grounds, in advance of its construction. An outstanding example of his work was the design of the Boston Music Hall, which from its formal opening on 15 October 1900 was acclaimed for its fine acoustics. Directly from Sabine's original ideas and experiments enormous development took place in the engineering and the physics of room acoustics, during the 20th century; by its close, sophisticated computer modelling techniques had made it possible for the acoustical consequences of architectural design choices to be explored and understood before the commencement of building.

Another important area which developed greatly in the 20th century was the study of the human response to particular types of sound. This field, in which physics, psychology and physiology overlap, is often described as psychophysics or psychoacoustics. Many of the findings of 19th-century acousticians were reports of their own perceptions, and were criticized by Mercadier and others for lack of objectivity. In the 20th century a careful

methodology was developed, involving suitably designed tests on large numbers of subjects. To a large extent these tests answered the criticisms by providing data on average perceptions which were in principle subject to verification.

Great care is necessary in designing the protocols and techniques used in psychoacoustic testing. In 1924 Wegel and Lane reported on tests carried out using a faint probe tone to investigate the generation of aural harmonics. These are distortion products introduced by the ear when presented with a purely sinusoidal sound wave. The finding of Wegel and Lane that many such aural harmonics were clearly audible was later shown to be due to a fault in the experimental technique (see Clack, Edreich and Knighton, 1972). It is now accepted that although such distortion products are generated by the inner ear, they are normally at such a low level as to be musically insignificant.

The ability to record, manipulate and synthesize musical sounds has made it possible to design and carry out systematic and reproducible psychoacoustic tests which have helped to answer some of the questions which intrigued the acousticians of previous centuries. Ohm's Law, stating that the human ear is insensitive to the relative phases of the partials in a complex sound, was conclusively disproved (see Plomp, 1976). In 1980 Carl Stumpf had suggested that the initial transient in the sound of a musical instrument was a crucial clue in identifying the instrument; this was verified by psychoacoustical studies carried out by Berger (1964) and by Grey and Moorer (1977).

At the end of the 20th century, the speed and memory capacity of computers continued to grow at a remarkable rate. As a consequence, it became possible to program into even a modest desktop computer a set of equations representing the theoretical behaviour of an instrument, and to obtain rapid predictions of the behaviour of the model. This proved to be of great value in testing theoretical predictions, since the equations are usually too complicated to be solved analytically. On the experimental side, laser-based vibration measuring equipment of very high accuracy has been added to the already impressive array of techniques being used to study both the detailed motion of musical instruments and the physiological responses of human and animal hearing systems.

Looking back over more than three centuries of sustained work on the physics of music, an acoustician at the end of the 20th century could not but marvel at the achievements of the past. Nevertheless, we are still a long way from being able to explain many of the features of musical sound and musical instruments which are of fundamental importance to musicians. To develop theoretical and experimental techniques to a level of accuracy that matches the sophistication of the musician's perception is the great challenge facing musical acoustics at the dawn of the 21st century.

SIGALIA DOSTROVSKY/MURRAY CAMPBELL (1–2), JAMES F. BELL, C. TRUESDELL/MURRAY CAMPBELL (3–6)

Piacenza. City in northern Italy. There is evidence of a local liturgy dating from the 4th century in a letter from St Jerome to the deacon of Piacenza, Presidius (384). A bull issued by Pope Innocent IV (6 February 1248) confirming the city's privilege of a *studium generale* (i.e. a university), with faculties of canon and civil law, philosophy, literature, the sciences and the liberal arts, recognizes the existence of schools of music attached to chapters and monasteries of the Benedictine, Cistercian, Dominican, Servite and Franciscan orders. This early liturgical and musical activity in Piacenza is also shown by the neumatic manuscripts in the two major archives. S Antonino, the first cathedral (begun in the 4th century), contains the famous Antiphoner Gradual (12th century) which still shows some traces of Ambrosian influence in Piacenza's long tradition of plainchant. The present cathedral (1122) has 22 music manuscripts from before the 11th century to the 16th, a fine collection of printed music (particularly rich in single extant copies) and precious 16th-century manuscript anthologies. A 12th-century codex, the *Liber Magistri* (*I-PCd* 65), contains rich illuminations of instruments (*tensibilia, inflatilia, percussionales*), an antiphoner, a gradual, a psalter, a sequentiary, a tonary, a compendium of musical theory and a troper with one of the rare examples of *Quem quaeritis*. Raimbaut de Vaqeiras, Jacopo da Bologna and Giovanni da Cascia were all probably active in or near Piacenza. Duke Galeazzo Maria Sforza, who was assassinated in 1476, intended but failed to establish *cappelle* in the principal cathedrals of the duchy, from Milan to Piacenza. Francesco Sforza employed the dancing-master Domenico da Piacenza (*c*1450), who taught another Piacentine, Antonio Cornazano. The links between the Sforza and Josquin Des Prez are reflected in the cathedral archive and in the marquetry-work in the choir of S Sisto, which represents music and musical instruments.

The *cappelle* of the major churches flourished during the 16th century: S Pietro, S Agostino, S Antonino, S Maria di Campagna (housing an imposing organ by Carlo Serassi, 1822), S Francesco, S Giovanni in Canale (1557–1732, the last *maestro di cappella* being Geminiano Giacomelli) and the cathedral. There music was encouraged by Bishop Claudio Rangoni (1596–1619); the most important *maestri di cappella* between about 1570 and about 1780 were the 'Frenchman' Luigi Roinci, G.C. Quintiani, Tiburtio Massaino, Michelangelo Serra, G.A. Grossi, Giuseppe Allevi, F.M. Bazzani, G.B. Benzoni and Giuseppe and Giacomo Carcani.

Academies flourished in the 16th century, including those of Guido della Porta, Alessandro Colombo and especially Annibale Malvicino. The latter was attended by Antonfrancesco Doni, also a member of the Accademia Ortolana. He dedicated to some influential men of Piacenza three parts of his *Dialogo della musica* (1544), in which appear such local musicians as P.J. Palazzo, Tommaso Bargonio, Claudio Veggio and Gerolamo Parabosco. The Farnese, dukes of Parma and Piacenza from 1545, provided patronage and employment. Under Ottavio Farnese (1556–86) and his wife Margaret of Austria, governor of the Low Countries, Flemish composers and singers flocked to the duchy. In spite of the harsh character of Ranuccio I (1586–1622) life at his court could be festive (Fabritio Caroso dedicated to him his *Il ballarino*, 1581). Odoardo (1625–46) was a patron of Monteverdi, whose ballet *La vittoria d'amore* was performed in the Cittadella (1641) for the birth of Ottavio, Odoardo's seventh son. Ranuccio II (1646–94) encouraged musical drama; his three marriages provided opportunities for musical festivities. Through Elisabetta Farnese, the consort of Philip V of Spain, the Farnese were succeeded by Bourbons; under them Piacenza lost importance relative to Parma. Notable musicians during the Farnese period included Giuseppe Villani and his sons Gasparo and Gabriele and, under the patronage of the Bourbons, Giuseppe and Giacomo Carcani. Other natives of Piacenza included Sebastiano Nasolini, Giuseppe Nicolini, Giuseppe Ferranti (1888–1937), highly regarded by Debussy and Toscanini, and Amilcare Zanella.

From 1644 to about 1720 operas were given sporadically in the Teatro di Palazzo Gotico (also called Teatro Nuovo), built by Cristoforo Rangoni (called Ficcarelli) with four rows of boxes; it was inaugurated with a performance of Francesco Sacrati's *La finta pazza* given by the Febiarmonici. Other first performances there included Olivo's *Ratto d'Elena* (1646) and Cavalli's *Coriolano* (1669), probably in the absence of the composer. More active, especially in the 18th century, were the Teatro delle Saline (1593–1804) and the Regio Ducal Teatro della Cittadella (first half of the 17th century to 1797). The former specialized in *opera buffa*; the latter gave performances of both *opera seria* (A. Ziani, Chelleri, T. Albinoni, Carcani, Jommelli, Sacchini) and later *opera buffa* (Galuppi, Gazzaniga, V. Fioravanti, Tritto, G. Nicolini, Paisiello, Cimarosa). The Cittadella theatre won esteem in the late 17th century with a team consisting of the composer Bernardo Sabadini, the impresario Giuseppe

Calvi and the designers Ferdinando and Francesco Galli-Bibiena. On 10 September 1804 the Teatro Comunitativo (now Teatro Municipale) opened with a performance of *Zamori, ossia L'eroe dell'Indie* by Simon Mayr. It is still one of the major provincial Italian opera houses (*teatri di tradizione*); it has five rows of boxes and seats about 1500. It was built by Lotario Tomba and important improvements were made between 1826 and 1830 by the designer Alessandro Sanquirico. Among the artists who performed there were Paganini (1812, 1818 in a contest with K.J. Lipiński, 1834) and Toscanini (1900, 1920). The 19th-century repertory in Piacenza was dominated by Rossini (15 operas performed between 1814 and 1838) and Verdi (almost all the major operas starting with *Nabucco* in 1843) and included works by Bellini, Donizetti, Puccini, Mascagni, Meyerbeer and Massenet. Wagner was introduced into the repertory with a performance of *Lohengrin* in 1889, and Mozart with *Così fan tutte* in 1961.

The Accademia dei Filarmonici, the Filarmonici di Trebbia and the Università di Filarmonici were founded in the mid-18th century. The Casino de' Virtuosi di Musica was associated with the Teatro della Cittadella, and the Società Filarmonica was active from the beginning of the 19th century. From 3 August 1822 the Accademia di Studio Musicale held regular weekly meetings throughout the 19th century to spread knowledge of both old and contemporary Italian vocal and instrumental music. The Scuola Musicale was founded in 1839 with the purpose of supplying members of the chorus and orchestra to the Teatro Municipale; it was named after Nicolini in 1914, recognized by the state in 1933 and became a conservatory in 1970. It has a fine concert hall; its library holds an interesting music collection. Directors of the Scuola Musicale have included Giuseppe Jona, Primo Bandini, Giovanni Spezzaferri, Marcello Abbado and Giuseppe Zanaboni. In 1953 Zanaboni founded the Gruppo Ciampi to promote Piacenza's musical heritage; Francesco Bussi's 1987 foundation of the Monumenti Musicali Piacentini e Farnesiani has a similar aim.

The province of Piacenza includes the monastery at Bobbio, founded by the Irish St Columba in 599, which is famous for its collection of manuscripts in the notation of St Gallen (it is likely that the *Planctus de obitu Caroli* was written at Bobbio); Monticelli d'Ongina, the residence of Franchinus Gaffurius between 1480 and 1483; and Castell'Arquato, where the archives of the Collegiata contain the only extant copy of Monteverdi's *Sacrae cantiunculae*.

Piacevole (It.: 'agreeable', 'pleasant'). A word that appears as a qualification to tempo designations. The finale of Beethoven's Violin Sonata in A op.12 no.2 and the opening of Elgar's Serenade op.20 are marked *allegro piacevole*.

□

Piaf [Gassion], **Edith (Giovanna)** (*b* Paris, 19 Dec 1915; *d* Plascassier, nr Grasse, 10 Oct 1963). French singer and actress. Her mother Anita Maillard was a singer and her father Louis-Alphonse Gassion was a fairground acrobat. Her early childhood was fraught with illness, she became temporarily blind through infection, and was passed from one lodging to another, eventually staying with her grandmother who worked in a bordello. At the age of nine she joined her father on tour and began to sing while he performed his routine. It was as a street singer that she was discovered in Paris by the proprietor of the nightclub Le Gerny's, Louis Leplée, who launched her as 'La môme Piaf' ('the little sparrow') in October 1935. She was an immediate success and was engaged to record and to sing on radio. At first her repertory drew on popular songs of the day, but very soon songwriters began to write material specially for her and she found in Marguerite Monnot, Michel Emer and Raymond Asso authors and composers who understood her style perfectly.

A film career began almost as soon as she had achieved her early fame, and during World War II she remained in France and continued to record and make films, as well as appearing in the play *Le bel indifférent* which Cocteau wrote for her. In 1945 she recorded the first of her world-wide successes, *Les trois cloches*, with the group Les Compagnons de la Chanson and the following year recorded *La vie en rose*, her most famous song. With these songs she had a huge success in New York in 1947 and for the next few years became a transatlantic star. Illness, drug addiction and alcoholism dogged her later years, and her reputation was increased with several well-publicized affairs and marriages. Her love affair with the champion boxer Marcel Cerdan, who was killed in an air crash, caught the public's imagination and seemed to be the subject of some of her love songs such as *L'orgue des*

amoureux (1949), *Hymne à l'amour* (1950) and *La belle histoire d'amour* (1960).

Piaf was the inheritor of a great tradition of Parisian chanson, the logical successor to such *chanteuses réalistes* of the 1920s as Yvonne George, Damia and Frehel. At the same time she was one of the singers who began to create a new, more international style of Parisian song, more readily exportable. Her early songs such as Monnot's *Mon légionnaire* (1937) and Emer's *L'accordeoniste* (1940) belong unmistakably to the old music-hall tradition. Although her voice was strong she soon developed a microphone technique and her later performances seem to belong to the world of international pop music rather than the Paris *café-concert*. Her later recordings, using larger orchestras, choirs and echo-chambers have none of the charm of her earlier performances and melodramatic effects detract from the simplicity of her singing. Her ability to invest the lyrics with pathos and, too seldom, humour, continued to be impressive. Among her later songs the most celebrated are *Milord* (1959) by Monnot and Georges Moustaki and *Non, je ne regrette rien* (1961) by Michel Vaucaire and Charles Dumont. Her last appearances were in Paris at the Bobino music hall in March 1963, her very final performance at the Opera house in Lille at the end of the same month. Despite, or perhaps because of, the sad personal life which she seemed to bring to her songs, Piaf's fame and popularity have remained in the decades since her death. All her recordings remain in print, and several plays and films about her have introduced her songs to later generations.

PATRICK O'CONNOR

Piaggio, Celestino (*b* Concordia, Entre Ríos, 20 Dec 1886; *d* Buenos Aires, 28 Oct 1931). Argentine composer and conductor. He studied in Buenos Aires with Aguirre, Andrés Gaos, Carlos Marchal and Alberto Williams. In 1908 he won the European Prize which took him to the Schola Cantorum in Paris, where he studied composition with D'Indy. He was in Romania when World War I began, and was forced to stay. Back in Paris in 1919, he took conducting lessons with Nikisch. He was later offered the directorship of the Bucharest Conservatory, but he turned it down in favour of returning to Argentina in 1921 where some of his compositions were already known. He became the conductor of the Colon Theatre orchestra and he was also a member of the Symphonic Association of Buenos Aires, an organization set up to promote Argentine music. Piaggio's music is indebted to French models, in particular *mélodie*. Though his output is small, its quality has assured its continued performance in Argentina.

WORKS

Inst (composed before 1910 unless otherwise stated): Andantino, str orch; 2 arabescos, pf; Gavota y danza, str orch; Hoja de álbum, vn, orch; Humorística, pf; Los días, pf; Miniature, str orch; Minuetto, pf; Página gris, pf; Tonada, pf; Ov., orch, 1914; Sonata en do sostenido menor, pf, 1916; Homenaje a Julián Aguirre, pf, 1925

Songs: 3 romanzas, *c*1903; 3 mélodies; Stella matutina; Ici-bas; Chanson du canard

JUAN MARÍA VENIARD

Piamor, John. *See* PYAMOUR, JOHN.

Pian, Rulan Chao (*b* Cambridge, MA, 20 April 1922). American ethnomusicologist. She was educated at Radcliffe College, Cambridge, MA, in Western music history and theory with A.T. Merritt (BA 1944, MA 1946), and gained the PhD at Harvard University (1960) with a dissertation on the Song dynasty, influenced by Yang Lien-sheng and in particular by John M. Ward. Her father, Yuen Ren Chao, a composer and linguist, has also had a significant influence upon her musical interests. She began teaching Chinese at Harvard University in 1947 while a part-time graduate student. In 1961 she also joined the music department, teaching Chinese music. She was made professor of east Asian languages and civilizations and professor of music in 1974, until her retirement, when she was made professor emeritus (1992). She was appointed fellow of the Academica Sinaica in Taiwan in 1994.

Her publications on Song dynasty (960–1279) musical sources, Peking opera, Peking drum songs and other historical and contemporary genres provide not only a wealth of musical data and analytical insights, but also illustrate diverse methods and issues in music studies. Her teaching at Harvard University, public lectures in China (Mainland China, Hong Kong and Taiwan) and informal discussions in her home in Cambridge, MA, a place where scholars often gathered, inspired generations of students of Chinese music. Since the late 1970s, Pian travelled to China regularly, bringing the latest Western ideas and publications there, and returning to America with a wealth of fieldwork data and audio-visual recordings, materials that preserve and illustrate Chinese music to American audiences. As a teacher of Chinese language she was also able to examine narrative singing and other oral and performing literature of China as expressions that are both verbal and musical.

Piana, Giovanni Antonio. *See* PIANI, GIOVANNI ANTONIO.

Pianelaio de Firençe, Jachopo (*fl* 1386–90). Italian composer, from Florence. He is documented as an artisan (a slipper manufacturer) from about 1386 to 1390 (see Di Bacco), and probably belonged to the Compagnia dei Laudesi di S Zenobi in Florence. Only one simple two-voice ballata by him survives, in *GB-Lbl* 29987 (f.47; ed. in CMM, viii/5, 1964, p.41, and in PMFC, x, 1977, p.91): *Come tradir pensasti*, the first lines of text of which are cited in documents from Bologna (1382) and Udine (1331) (see Fiori). The music of this ballata was also employed for a lauda, *Come se' da laudar*.

GIANLUCA D'AGOSTINO

Piani [Piana, Piano], **Giovanni Antonio** [Desplanes, Jean-Antoine] (*b* Naples, 1678; *d* ?Vienna, after 1759). Italian violinist and composer. One of the five sons of the Bolognese–Neapolitan trumpet player Pietro Giacomo Piana who became professional musicians, he was trained at the Conservatorio della Pietà dei Turchini under Vinciprova and Cailò. He arrived in Paris in 1704, and by 1712 he was leading violinist to Louis Alexandre de Bourbon, Count of Toulouse and Admiral of the French Fleet.

In 1721 he became a musician at the imperial court in Vienna, where he was the highest-paid instrumentalist. An article in the *Mercure de France* (June 1738) recounted that Piani was 'an excellent violinist, highly esteemed in Paris at the beginning of this century, to whom a really fatal catastrophe happened in Venice where he was accused of having forged several signatures and condemned to have his hand cut off'. This anecdote was repeated by Fétis and others, who failed to notice that the story was retracted by the editor as false in the August issue of the same periodical. Piani in fact remained at the imperial court at least until 1757, rising to the position of director of instrumental music; he served with Carlo Tomaso Piani, perhaps a relative. A violinist Piani or Piana, who worked at the court of Count Carl at Cassel from 1710 to 1725, was apparently no relation.

In 1712 in Paris he published his op.1, a collection of 12 sonatas, six for violin and continuo and six for flute or violin and continuo (ed. by Jackson). This work is of considerable historical importance: by means of an extended preface and unusually thorough markings in the music itself, Piani offered detailed information about dynamics, fingering, bowing, ornamentation and indications of tempo and character. The *privilège général* awarded Piani on 29 May 1712 mentions the publication of vocal works, but none are extant; an 'op.2', of six sonatas for flute and continuo, often cited in reference works, stems from an erroneous citation by Walther of six of the sonatas of op.1.

Pianino (It.: 'small piano'). (1) A common term in a number of European languages for a small upright piano. It is said to have been introduced by PLEYEL (ii) of Paris in 1815 to distinguish that firm's small upright instruments (designed by JEAN HENRI PAPE, based on a model of 1811 by Robert WORNUM (ii)) from the larger type of upright, or *piano droit*. By 1840 German and Austrian firms had begun to produce similar small uprights under the name pianino. The term 'cottage piano', introduced by Wornum, has also gained currency for small uprights (*see* PIANOFORTE, fig.25). Collard & Collard's smallest upright models were known as 'microchordons'.

(2) The name applied by CHAPPELL to a type of small GLASSCHORD produced during the first quarter of the 19th century with a keyboard of piano dimensions and a simple downstriking hammer action. The compass was 37 notes, c to c‴. An example of 1815 is in the Victoria and Albert Museum, London.

Pianissimo. *See* PIANO (i).

Piano (i) (It.: 'flat', 'low'). The standard dynamic mark for soft playing, abbreviated *Pia.*, *Pian.* and *P* in the 18th century, today customarily expressed by *p*. In the early 17th century the word 'echo' often served instead: both Domenico Mazzocchi (1638) and W.C. Printz (1668) equated the two. In the anonymous *A Short Explication* (London, 1724) *ecco* and *echus* were described as being signified by *dim* and *piano*. The superlative form *pianissimo*, abbreviated in the 18th century *pian^{mo}*, *pmo*, *pssmo*, is today normally abbreviated *pp*, but Brossard (*Dictionaire*, 1703) gave *pp* as meaning only *più piano* whereas *pianissimo* was represented by *ppp*, and several other 18th-century theorists agreed with him: Vivaldi often progressed from *p* to *pp* and then to *pian^{mo}*, so it is likely that he followed the same convention. The instruction *tocca pian piano* is found in the Capirola Lutebook of 1517 (*US-Cn*), and *tocchi pian piano* appears in Monteverdi's *Orfeo* (1607). Verdi used *ppppp* in his Requiem

and Tchaikovsky *pppppp* in his Sixth Symphony, but in a context where the results are inevitably more like *mp*.

Piano duet. Piano duets are of two kinds: those for two players at one instrument, and those in which each of the two pianists has an instrument to him- or herself. Although the one-piano duet has the larger repertory, it has come to be regarded as a modest, essentially domestic branch of music compared with the more glamorous two-piano duet. The reason probably lies in the fact that the comparatively cramped position of two players at one keyboard inhibits an element of virtuoso display possible to pianists with the complete range of the keyboard at their disposal. Schubert was the one great composer to write extensively for the medium, although many composers, from Mozart to Ligeti, have added important works and a wide range of entertaining pieces.

Both types of duet began a more or less continuous history in the mid-18th century, but each had some isolated precursors. The earliest duets at one keyboard instrument are English and date from the early 17th century. A three-hand piece, *A Battle, and No Battle* (MB, xix, no.108), has been ascribed to John Bull; there are pieces by Nicholas Carleton and Thomas Tomkins in a manuscript that once belonged to Tomkins (*GB-Lbl* Add.29996). The two composers were close friends and neighbours in Worcestershire and the pieces may well have been composed for them to play together. Tomkins's duet (MB, v, no.32) is a fancy, that by Carleton an extended and finely constructed In Nomine. The superscription to this piece, 'A Verse for two to play on one Virginal or Organ', suggests a domestic as well as a quasi-liturgical use.

The domestic character of the one-piano duet is also brought out in the famous Mozart family portrait of about 1780 by Johann Nepomuk de la Croce. It was obviously posed for in the Mozart home, for a portrait of their mother looks down from the wall on Wolfgang and Nannerl, who are playing a duet (and exhibiting a hand-crossing technique), and Leopold, who holds a violin. Mozart and his sister played duets in London in 1764–5 and the sonata K19*d* dates from that time. Leopold is alleged (by Nissen, *Biographie W.A. Mozarts*, 1828) to have claimed in a letter of 9 July 1765 that 'in London, little Wolfgang wrote his first piece for four hands. No-one has ever written a four-hand sonata before'. Einstein, however (*Mozart: his Character, his Work*, 1945), regarded the quotation as at least suspect.

The first duets to be printed were Charles Burney's four sonatas of 1777; he also wrote a *Sonate à trois mains* (1780). He had a six-octave piano made by Merlin expressly for duets, 'ladies at that time wearing hoops which kept them at too great a distance from each other' (Burney's article 'Ravalement' in *Rees's Cyclopaedia*). Burney also wrote of awkwardness and embarrassment likely to be caused initially by 'the near approach of the hands of the different persons'. Between 1778 and 1780 Johann Christian Bach published some duets among his op.15 and op.18 sets of sonatas which, with other and probably earlier sonatas that remained in manuscript, became prototypes for those of Clementi, three each in op.3 (1779) and op.14 (1786), and Mozart, K381/123*a* (1772), 358/186*c* (1774), 357/497*a* (unfinished), 497 (1786) and 521 (1787). A notable feature of the duet sonatas of Clementi and Mozart is their frequent recourse to quasi-orchestral textures (ex.1); this is not uncommon in solo music, but composers naturally took advantage of the fuller sonority available from four hands. Mozart's early K358 and 381 have affinities with his divertimentos, but his later works have all the richness of texture of his mature instrumental style. The expansive K497 has two symphonic movements and one concerto-like one and

Ex.1 Clementi: op.3 no.1

begins with a portentous slow introduction, and K521 is clearly in a concertante style.

The ability of four hands to cope with rich textures probably accounted for a spate of arrangements of symphonies and other orchestral works for piano duet. About 1798–1800 the London publisher Birchall brought out all Haydn's London symphonies in this form, and duet arrangements of these and of symphonies by Mozart, Beethoven and later composers remained the chief means whereby amateur musicians became familiar with the standard orchestral repertory until the arrival of the gramophone record in the 20th century. Anything and everything was so arranged. Liszt arranged his orchestral rhapsodies, all his symphonic poems and even *Via crucis*; and such intractable or seemingly intractable works as Bach's *St Matthew Passion*, Haydn's *The Creation*, Verdi's *Requiem*, all Strauss's tone poems and symphonies, as well as complete operas (e.g. Wagner's entire *Ring* cycle and *Tristan*, Gounod's *Faust*), appeared in duet form. It was at one time possible to buy almost the complete works of Saint-Saëns as duets.

Mozart composed a variation set and a fugue, and Clementi some rondos, for piano duet. Beethoven composed a lightweight sonata (op.6) and a few other works, but it was left to Schubert to exploit the medium to the full. His works, which range from the tiniest of waltzes to the vast Grand Duo (op.140, D812), and which occur throughout his output from his earliest surviving composition, the G major Fantasy (D1) written in 1810 when he was 13, to several duets composed in the last year of his life, constitute a body of duet music unparalleled by any other composer. Most important are the B♭ sonata (op.30, D617), the Grand Duo, which was once thought to be a reduction of a lost 'Gastein' symphony, the *Divertissement à la hongroise* (op.54, D818), the F minor Fantasy (op.103, D940) and the *Lebensstürme* duo (op.144, D947). Schubert also composed rondos, variations, sets of marches and groups of dances, including ländler and polonaises.

19th-century composers found sets of national or pseudo-national dances eminently suited to the duet medium. Schumann composed polonaises in imitation of Schubert, some of which he incorporated with his *Papillons* op.2. Brahms's Waltzes and Hungarian Dances are justly famous, as are the splendid Slavonic Dances of Dvořák and the Norwegian Dances of Grieg. Reger composed German dances and Moszkowski, with less native instinct, Spanish and Polish dances. Folk music lay at the root of Tchaikovsky's and Balakirev's arrangements of Russian folksongs, Busoni's more expansive *Finnländische Volksweisen* (op.27) and Arnold van Wyk's Improvisations on Dutch Folk Songs (1942).

Meanwhile, substantial works appeared from time to time. In the Classical era, sonatas were composed by Pleyel, Dussek, Türk, Hummel, Diabelli, Kuhlau and others, and works in sonata form were later composed by Mendelssohn (*Allegro brillante* op.92), Grieg (whose Symphonic Pieces op.14 were rescued from an abortive symphony), Moscheles, Rubinstein, Hindemith, Toch, Arnell, Poulenc, Berkeley, Persichetti and others. Other substantial works for piano duet include Chopin's early *Variations sur un air national de Moore* (cleverly reconstructed from a damaged manuscript by Jan Ekier), Brahms's Variations on a Theme by Schumann op.23, Nicodé's *Eine Ballscene* op.26, which owes a little to Weber and more to Schumann's *Papillons*, Koechlin's Suite op.19, Carse's Variations in A minor, Ladmirault's *Rhapsodie gaélique*, Starer's *Fantasia concertante* and Richard Rodney Bennett's *Capriccio*. Stravinsky's *The Rite of Spring* exists independently as a duet (but for ease of execution is sometimes played on two pianos) as performed by Stravinsky and Debussy together.

Weber set a new fashion with his *Six petites pièces faciles* op.3 in 1801, which he followed with two further sets of short and highly engaging pieces in 1809 (op.10) and 1819 (op.60). His lead was followed by innumerable composers in the 19th and 20th centuries and sets of short pieces proliferated. Among the most significant are Schumann's *Bilder aus Osten* op.66, Alkan's *Trois marches*, Rubinstein's *Bal costumé* (possibly the longest single work for piano duet), Dvořák's *Legends* op.59, Satie's *Trois morceaux en forme de poire*, Debussy's two suites (one from each end of his career), the early *Petite suite* (1889) and the more representative *Six épigraphes antiques* (1914), Milhaud's *Suite provençale*, Rawsthorne's *The Creel* (tiny but characteristic pieces inspired by Izaak Walton), and duets by Wallingford Riegger. Several French suites are delightfully evocative of childhood, notably Bizet's *Jeux d'enfants* op.38, Fauré's *Dolly* op.56, Ravel's *Ma mère l'oye* and Inghelbrecht's *La nursery*.

Duets have long been recognized as educationally valuable. Haydn's little variation set *Il maestro e lo scolare* is, as its title implies, one of many pieces for teacher and pupil. Others have been composed for young people with parts of equal difficulty. Czerny composed a *Practical Method for Playing in Correct Time* op.824, which was also the aim behind the *Pianoforte Method* of Annie Curwen, much used in England. Apart from specialists in the field, composers who have successfully simplified their styles in the service of education include Bruckner, Godowsky, Arensky, Rachmaninoff, Stravinsky, Milhaud, Dello Joio, Seiber, Walton and Thea Musgrave.

If we except an arrangement of a Crecquillon chanson for two keyboards (MME, ii, 158), duets for two instruments (as opposed to two players at one instrument) also began in England, with a small piece by Farnaby in the Fitzwilliam Virginal Book, and there are pre-Classical compositions for the medium by Couperin and by Bernardo Pasquini (whose 14 sonatas for two figured basses require simultaneous improvisation from the duettists). The modern history of the repertory may be said to begin with the two-keyboard works of the three Bach brothers, Wilhelm Friedemann, Carl Philipp Emanuel and Johann Christian. Clementi composed two sonatas and Mozart one (K448/375*a*) as well as a fugue (K426), and there are some works by Dussek. In the time of Beethoven and Schubert few were written, and it was not until the Romantic era that there was an enthusiastic resumption of two-piano writing. Liszt arranged Beethoven's Ninth Symphony as well as his own Faust and Dante symphonies, symphonic poems and both concertos. Piano concertos are normally published in two-piano form to facilitate practice. They are outside the scope of this article, though they outnumber original large-scale works for two pianos, many of which exist in more than one form. Schumann's Andante and Variations op.46 originally had parts for two cellos and horn; Brahms's Variations on a Theme of Haydn op.56*b* has its orchestral

counterpart, and his F minor sonata op.34*b* exists as a piano quintet. Reger's Variations and Fugue on a Theme of Mozart op.132*a* also appeared in orchestral form and as a one-piano duet, and Busoni's *Fantasia contrappuntistica* as a piano solo. These, together with two other big sets of variations by Reger, Saint-Saëns's Variations on a Theme of Beethoven op.35, Debussy's *En blanc et noir*, with its disturbing undertones of war, Stravinsky's Sonata, Bartók's Sonata for two pianos and percussion, Rachmaninoff's two suites, Hindemith's Sonata, Messiaen's *Visions de l'amen* and Henri Martelli's sonata are among the biggest works for the medium. Debussy's *Lindaraja* of 1901 is significant as being the first of his great Spanish pieces. Among popular repertory pieces are Chopin's posthumous Rondo op.72, Arensky's suites, Milhaud's *Scaramouche* and short pieces by Bax, Infante and others. Curiosities are Grieg's second piano parts to Mozart solo sonatas and Ives's Three Quarter-Tone Pieces for pianos tuned a quarter-tone apart. Notable modern works include sonatas by Genzmer and Cooke, variations by Mervyn Roberts and Geoffrey Bush, Louis Aubert's Suite op.6, Vaughan Williams's Introduction and Fugue and works by Martin, Hessenberg, Tailleferre, Britten, Berkeley and Jürg Wyttenbach. The avant garde is represented by works by Cage and Cardew. In this highly professional field there is little educational music (unless Bartók's arrangements of pieces from *Mikrokosmos* be considered such), though Gurlitt and others composed easy pieces. On a lighter level there was a vogue for brilliant arrangements of Johann Strauss waltzes and other light classics in the mid-20th century, dispensed with skill and urbanity by the Austrian pianists Rawicz and Landauer and other specialist teams.

Some modifications and multiplications of the duet medium have occurred, many of humorous intent. Close liaison is desirable for the gentleman and two ladies required for a proper performance of W.F.E. Bach's *Das Dreyblatt* for three players at one keyboard; it is inevitable in Chaminade's *Les noces d'argent* op.13, which squeezes four players together at one piano. Czerny composed works for three players at one piano and for four at four, Smetana for four at two, and there was an arrangement of Wagner's *Meistersinger* overture for six players at three pianos. Willem Coenen composed a *Caprice concertante* for 16 pianists at eight pianos. The English pianist Cyril Smith, after an illness which left him partly incapacitated, played with Phyllis Sellick arrangements for three hands at two pianos; several original works have been composed for this combination. 31 pianists at 16 pianos were assembled on one platform at the first of Gottschalk's 'monster concerts' in Rio de Janeiro on 5 October 1869.

FRANK DAWES

Piano éolien (Fr.: 'aeolian piano'). A keyboard instrument in which the strings were activated by jets of compressed air. *See* SOSTENENTE PIANO, §2.

Pianoforte [piano]. A keyboard instrument distinguished by the fact that its strings are struck by rebounding hammers rather than plucked (as in the harpsichord) or struck by tangents that remain in contact with the strings (as in the clavichord).

The present article treats the history and technique of the instrument; for discussion of the repertory *see* KEYBOARD MUSIC, §III. Additional information on the contributions of particular makers is given in their individual articles.

In the Hornbostel-Sachs classification of instruments the piano is reckoned as a box zither.

I. History of the instrument. II. Piano playing.

I. History of the instrument

1. Introduction. 2. Origins to 1750. 3. Germany and Austria, 1750–1800. 4. England and France to 1800. 5. The Viennese piano from 1800. 6. England and France, 1800–60. 7. Spain 1745–1850. 8. North America to 1860. 9. 1860–1915. 10. From 1915.

1. INTRODUCTION. The piano has occupied a central place in professional and domestic music-making since the third quarter of the 18th century. In addition to the great capacities inherent in the keyboard itself – the ability to sound simultaneously at least as many notes as one has fingers and therefore to be able to produce an approximation of any work in the entire literature of Western music – the piano's capability of playing notes at widely varying degrees of loudness in response to changes in the force with which the keys are struck, permitting crescendos and decrescendos and a natural dynamic shaping of a musical phrase, gave the instrument an enormous advantage over its predecessors, the clavichord and the harpsichord. (Although the clavichord was also capable of dynamic expression in response to changes in touch, its tone was too small to permit it to be used in ensemble music; the harpsichord, on the other hand, had a louder sound but was incapable of producing significant changes in loudness in response to changes in touch.) The capabilities later acquired of sustaining notes at will after the fingers had left the keys (by means of pedals) and of playing far more loudly than was possible on the harpsichord made this advantage even greater.

The instrument's modern name is a shortened form of that given in the first published description of it (1711) by Scipione Maffei where it is called 'gravecembalo col

piano, e forte' ('harpsichord with soft and loud'). 18th-century English sources used the terms 'pianaforte' and 'fortepiano' interchangeably with 'pianoforte'; some scholars reserve 'fortepiano' for the 18th- and early 19th-century instrument, but the cognate is used in Slavonic countries to refer to the modern piano as well. The German word 'Hammerklavier' might refer to the piano in general, or alternatively to the square piano as distinct from the grand piano ('Flügel').

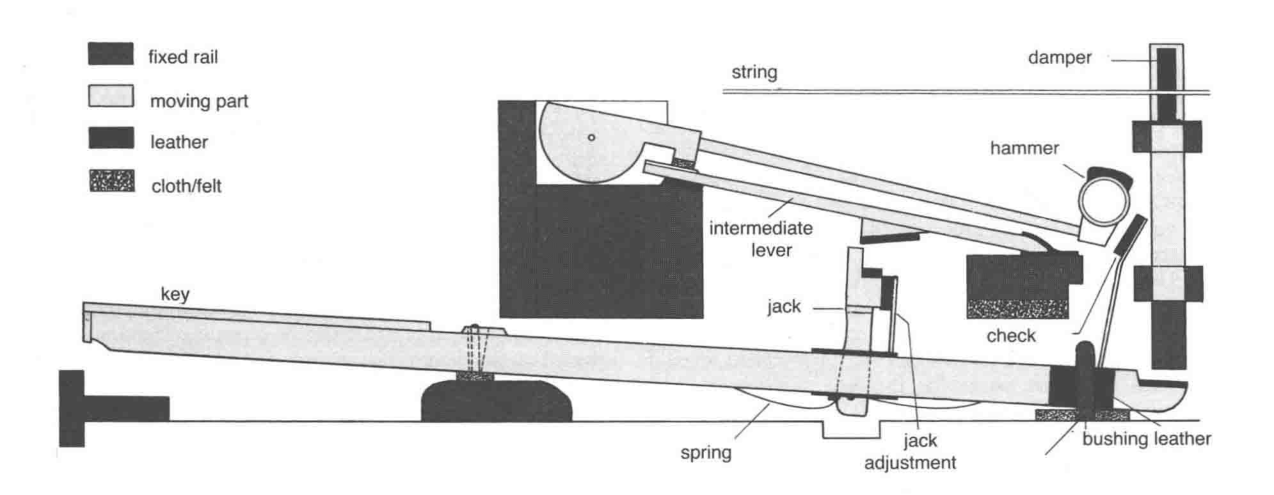
There is no continuity between the remote 15th-century precursors of the piano described by Henri Arnaut de Zwolle around 1440 (*see* DULCE MELOS) and the origins of the instrument as discussed in §2 below, though references made in letters dated 1598 from Hippolito Cricca of Ferrara to Duke Cesare d'Este in Modena suggest that an instrument with dynamic flexibility (perhaps equipped with a striking mechanism) was used in the d'Este court in Ferrara during the late 16th century. These letters make repeated reference to a special *instromento pian et forte, istromento piane e' forte, instromento pian e' forte* and *instromento piano et forte*. An octave spinet (now in the Metropolitan Museum of Art, New York) made in 1585 by Francesco Bonafinis may have been converted to a tangent piano in the 17th century, providing further evidence that there were isolated attempts to construct string keyboard instruments with striking mechanisms prior to Bartolomeo Cristofori's invention made around 1700 (see §2 below).

The modern piano consists of six major elements: the strings, the metal frames, the soundboard and bridges, the action, the wooden case and the pedals. There are three strings for each note in the treble, two for each note in the tenor, and one for each note in the bass. The massive metal frame supports the enormous tension that the strings impose (approximately 18 tons or 16,400 kg). The bridges communicate the vibrations of the strings to the soundboard which enables these vibrations to be efficiently converted into sound waves, thereby making the sound of the instrument audible. The action consists of the keys, the hammers, and the mechanism that impels the hammers towards the strings when the keys are depressed. The wooden case encloses all of the foregoing. The right pedal (the 'loud' or 'sustaining' pedal) acts to undamp all the strings enabling them to vibrate freely regardless of what keys are depressed. The left pedal (the 'soft pedal' or 'una corda') acts to reduce the volume of tone, either by moving the hammers sideways so that they strike only two of the three strings provided for each note in the treble and one of the two strings provided for each note in the tenor, or by bringing the hammers closer to the strings, thus shortening their stroke, or – on some upright pianos – by interposing a strip of cloth between the hammers and the strings to produce a muffled tone. The middle pedal, when present, acts to keep the dampers raised on only those notes being played at the moment the pedal is depressed.

Logically, the ideal form of the piano is the 'grand', the wing-shape of which is determined by the fact that the strings gradually lengthen from the treble at the right to the bass at the left. Theoretically, the length of the strings might be doubled for each octave of the instrument's range, but this would be impractical for an instrument having a range of over seven octaves, as the modern piano does, and even the earliest pianos with a range of only four octaves employed some shortening of the strings in the extreme bass. The rectangular 'square' piano, which like the grand has its strings in a horizontal plane, and which was popular in the 18th and 19th centuries, has been entirely superseded by various types of 'vertical' or 'upright' piano, which have their strings in a vertical plane; the fact that uprights take up less room outweighs the disadvantage imposed by the more complex action they must use.

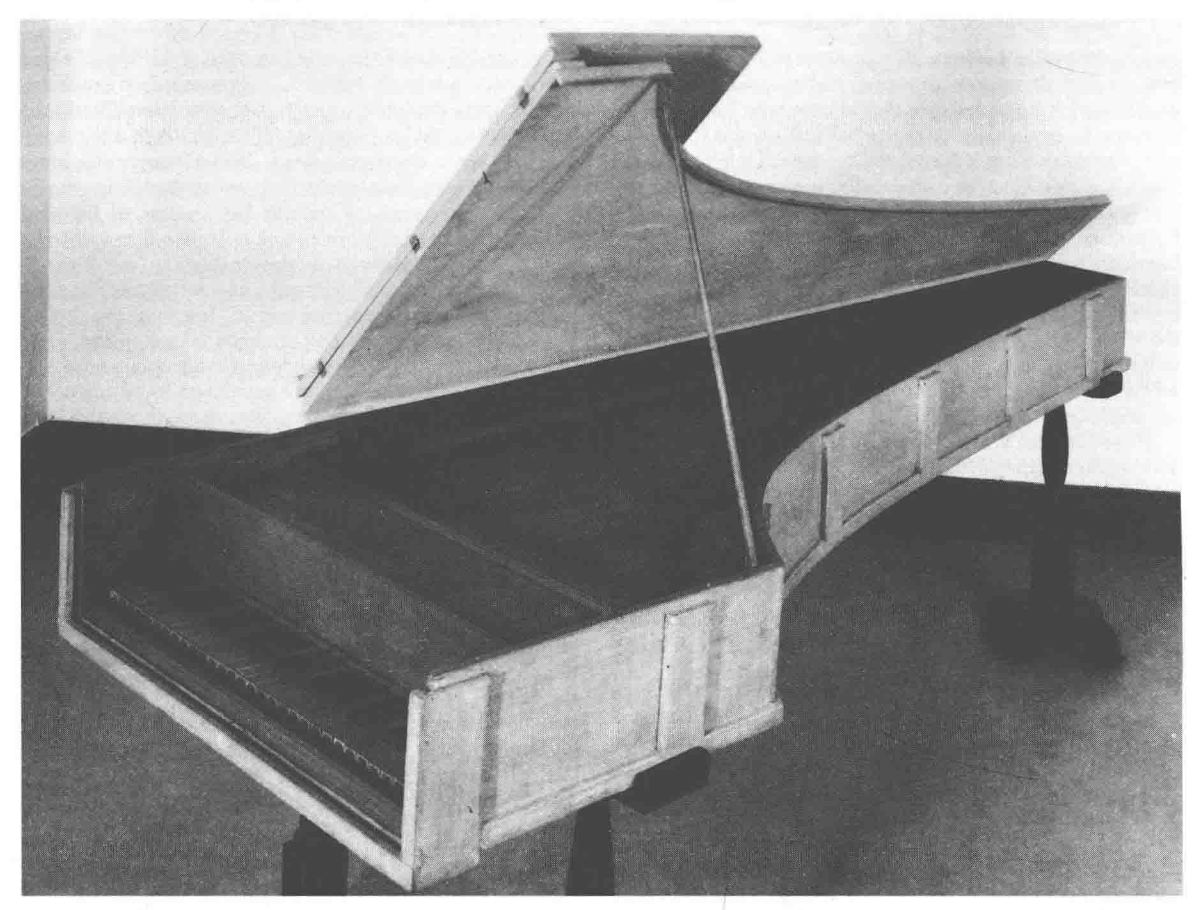
2. ORIGINS TO 1750. The musical advantages initially possessed by the piano were not generally recognized at the time of its invention even though the instrument made its first appearance in a highly developed form, the work of a single individual, BARTOLOMEO CRISTOFORI, keeper of instruments at the Medici court in Florence. Despite warmly argued claims on the part of such other men as Christoph Gottlieb Schröter and Jean Marius, there now seems to be no doubt that Cristofori had actually constructed a working piano before any other maker was even experimenting in this field. The detailed description of an 'arpicimbalo di nuova inventione' in an inventory of the Medici instruments for 1700 establishes that he had by that year already completed at least one instrument of this kind. A precise date is found in an inscription made by Federigo Meccoli (a court musician in Florence) in a copy of Gioseffo Zarlino's *Le istitutioni harmoniche*, which states that the 'arpi cimbalo del piano e' forte' was invented by Cristofori in 1700. Cristofori's accomplishment as seen in the three surviving pianos made by him, all of which date from the 1720s, would be difficult to exaggerate. His grasp of the essential problems involved in creating a keyboard instrument that sounded by means of strings struck by hammers was so complete that his action included features meeting every challenge that would be posed to designers of pianos for well over a century. Unfortunately, the very completeness of his design resulted in a complicated mechanism, which builders were apparently unwilling to duplicate if they could possibly devise anything that would work and at the same time be simpler to make. As a result, much of the history of the 18th-century piano is the history of the gradual reinvention or readoption of things that were an integral part of Cristofori's original conception; and it was only with the introduction in the 19th century of increasingly massive hammers that the principles discovered by Cristofori could no longer provide the basis for a completely satisfactory piano action, requiring the still more complicated mechanism known today.

The essential difficulty in creating a workable instrument in which the strings are to be struck by hammers is to provide a means whereby the hammers will strike the strings at high speed and immediately rebound, so that the hammers will not damp out the vibrations they initiate. In order to provide for immediate rebounding, the strings must not be lifted by the impact of the hammer and must therefore be thicker and at higher tension than those of a harpsichord, and the hammers must be tossed towards the strings and be allowed to fly freely for at least some small part of their travel. The smaller this distance of free flight is, the more control the pianist has over the speed with which the hammer will strike the string and accordingly over the loudness of the sound that it will produce. Unfortunately, the smaller this distance is, the more likely the hammer is to jam against the strings or bounce back and forth between the strings and whatever device impelled it upwards when the key was struck;



hence when the distance of free flight is made small to permit control of loudness, the hammer is likely to jam or bounce and damp out the tone. Cristofori solved this problem with a mechanism that enabled the hammer to be brought quite close to the string but caused it to fall quite far away from it even if the key was still held down. Devices of this kind are called escapements and they lie at the heart of all advanced piano actions. In addition, Cristofori provided a lever system that caused the hammers to move at a high speed, and a 'check' (or 'back check') which would catch the hammer after it fell so as to eliminate all chance of its bouncing back up to restrike the strings. Finally, his action provided for silencing the strings when the keys were not held down, using slips of wood resembling harpsichord jacks which carried dampers and rested on the ends of the keys.

These features are all visible in fig.1, which shows the action of the piano of 1726 (fig.2) in the Musikinstrumenten-Museum of Leipzig University. When the key is depressed, the pivoted jack mortised through it pushes upwards on a triangular block attached to the underside of the intermediate lever, which in turn bears on the hammer shank near its point of attachment, providing for a great velocity advantage. (Although the jack rises only about as fast as the front of the key is depressed, the free end of the intermediate lever rises approximately twice as fast and the hammer rises four times more rapidly still.) The escapement is provided by the pivoted jack, which tilts forward just before the hammer reaches the string so that, when the hammer rebounds, the block on the underside of the intermediate lever contacts the padded step at the back of the jack rather than the tip of the jack. As a result, even if the key is held down, the hammer falls to a point at least 1 cm below the strings. Adjustment of the point at which the jack tilts forward is achieved by bending the wire that supports the pad against which the jack is held by the spring. The further forward this pad is, the earlier the jack slips away from the block and the sooner escapement takes place.

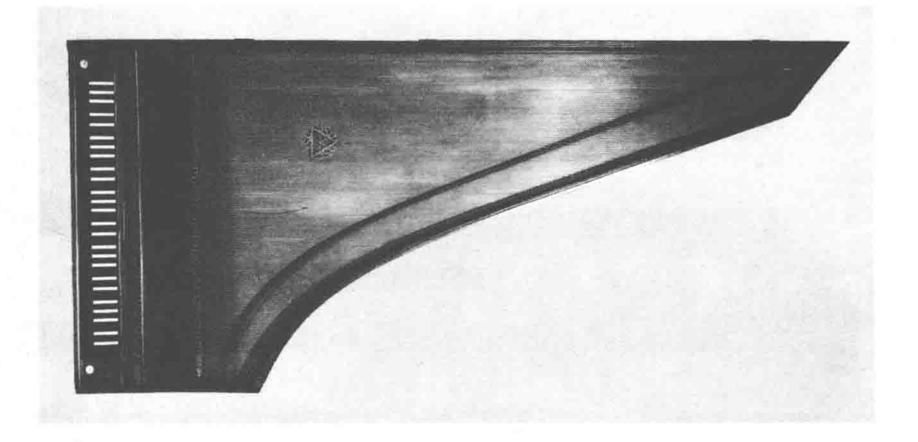


The construction of Cristofori's pianos is similar to that of an 18th-century Italian harpsichord of the thick-cased type, except that it employs a novel inner bentside that supports the soundboard. The inner bentside and soundboard are structurally isolated from the stress-bearing sections of the case, rendering the soundboard more resonant. Cristofori obviously recognized the necessity of using thicker strings at higher tension. Thus, the gap between the pinblock or wrest plank and the belly rail (the stout transverse brace that supports the front edge of the soundboard) through which the hammers rise to strike the strings is bridged by a series of wooden braces ('gap spacers') not found in Italian harpsichords. These braces contribute to preventing the wrest plank from twisting or bending into the gap at its centre and are therefore of vital importance in keeping the entire structure from twisting out of shape or collapsing. (The means of ensuring the straightness and integrity of the wrest plank and case structure continued to be one of the principal concerns of piano makers throughout the 18th century.)

Two of Cristofori's three surviving pianos have an inverted wrest plank in which the tuning-pins are driven completely through, with the strings attached to their lower ends after passing across a nut attached to the underside of the wrest plank. According to Maffei, this plan was adopted to provide more space for the action, but it provides at least two other advantages: since the strings bear upwards against the nut, the blow of the hammer, instead of tending to dislodge them, upsetting the tuning and adversely affecting the tone, seats them even more firmly; second, the inverted wrest plank permits placement of the strings close to the top of the action, so that the hammers need not be tall to reach the strings. They can therefore be quite light, an important factor, since Cristofori's lever system, providing for an acceleration of the hammer to eight times the velocity with which the key is depressed, automatically causes the player to feel (at the key) the weight of the hammer multiplied eightfold.

The sound of the surviving Cristofori pianos is very reminiscent of that of the harpsichord owing to the thinness of the strings compared with later instruments and the hardness of the hammers; but it is less brilliant and rather less loud than that of a firmly quilled Italian harpsichord of the time. These points are mentioned in Maffei's account as reasons for the lack of universal

1. Action of a piano by Bartolomeo Cristofori, 1726 (shown in fig.2)

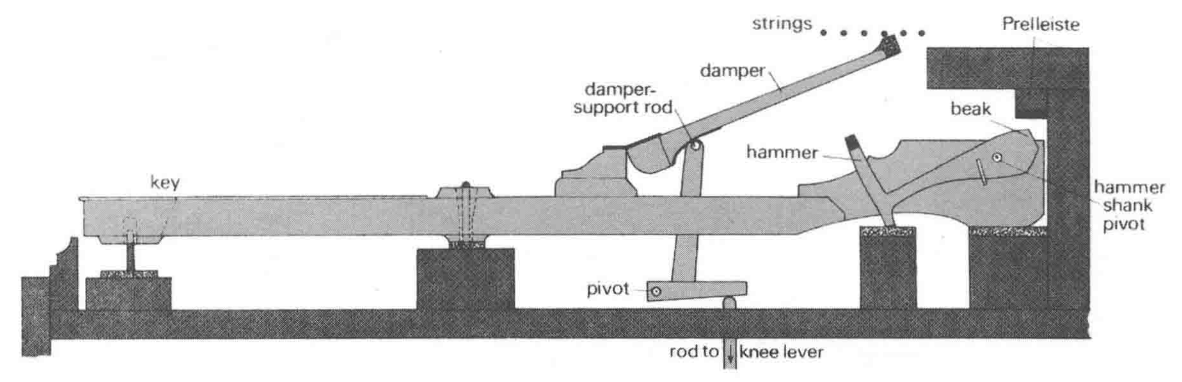


2. *Piano by Bartolomeo Cristofori, Florence, 1726 (Musikinstrumenten-Museum, University of Leipzig)*

praise for the instrument, as is the fact that contemporary keyboard players found the touch difficult to master (in Germany, where the clavichord was used as both a teaching and a practice instrument, no such objection seems to have been raised when the piano became known). On two of the surviving Cristofori pianos it is possible to slide the keyboard sideways so that the hammers strike only one of the two strings provided for each note. Possibly it was the desire to include such a device that caused Cristofori to space his strings widely rather than placing the unisons struck by each hammer close to one another with a wider space between. Apart from this *una corda* capability, Cristofori's pianos make no provision for alteration of the tone by stops or other such devices; however, one would not expect to find such a provision in view of the lack of any multiplicity of stops in Italian harpsichords.

There seems to have been little direct result in Italy of Cristofori's monumental achievement. Maffei, in his account, clearly recognized the important differences between Cristofori's pianos and the harpsichord (even if he had no better name for the new instrument than 'harpsichord with soft and loud'), and an interesting collection of 12 sonatas for the instrument that includes dynamic markings implying crescendos and decrescendos was published in 1732 (Lodovico Giustini's *Sonate da cimbalo di piano e forte*). But only a handful of other Italian instrument makers seem to have followed in Cristofori's footsteps, notably Giovanni Ferrini and Domenico del Mela. It was left primarily to German, Spanish and Portuguese builders and musicians to exploit his work in the years after his death in 1732.

A German translation of Maffei's account was published in Johann Mattheson's *Critica musica*, ii (1725) where it was presumably seen by Gottfried Silbermann, who is reported to have begun experimenting on pianos of his own in the 1730s. He is said to have offered one for Bach's inspection, and at the composer's adverse reaction to its heavy touch and weak treble to have gone on to further experiments resulting in improved instruments, a number of which were bought by Frederick the Great. These are reported to have met with Bach's complete approval when he visited Potsdam in 1747. The two Silbermann pianos owned by Frederick that have survived have actions identical with those in the surviving Cristofori instruments; it seems more than likely that by the time Silbermann made them he had seen an example, whereas his earlier attempts had failed as a result of having been based on the diagram accompanying Maffei's description – which Maffei admitted had been drawn from memory without the instrument before him. Silbermann retained Cristofori's inverted wrest plank and the equidistant spacing of the strings (fig.3) and he used the hollow hammers made of rolled paper found in the 1726 instrument which, together with the check replacing silk strands, evidently replaced the small blocks shown in

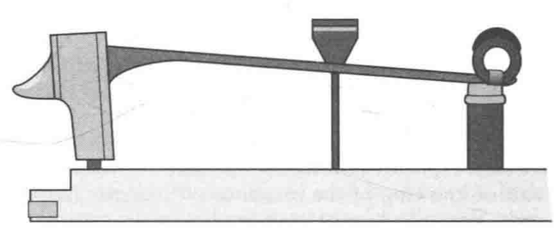


3. Piano by Johann Heinrich Silbermann, Strasbourg, 1775 (Staatliches Institut für Musikforschung [Preussischer Kulturbesitz], Berlin)

Maffei's diagram. As might be expected from a representative of the north European keyboard instrument building tradition, Silbermann included hand stops for raising the treble and bass dampers in addition to devices for sliding the keyboard sideways so that the hammers would strike only one of the two strings provided for each note. Thus, these two most characteristic means of modifying the piano's tone, integral to all modern pianos, were found together as early as the 1740s.

Although Gottfried Silbermann and his nephew Johann Heinrich Silbermann seem to have made direct copies of Cristofori's hammer action, virtually unchanged except for the addition of damper-lifting mechanisms, other German makers, some of whom may perhaps not even have been explicitly informed of Cristofori's work to the extent of knowing of the existence of 'hammer harpsichords', devised a host of less complicated actions, many adapted to the rectangular clavichord-shaped square pianos. In an early example, a hammer hinged to the back of the case is thrust upwards by a block at the end of the key, reducing Cristofori's mechanism to an absolute minimum. This type of action became known as the *Stossmechanik* and is the principle upon which the later English builders and their followers built their pianos (see §4 below). The great period of piano building in the German-speaking world is not, however, represented by these developments or even by Silbermann's work, which with the death of his son seems to have led to no direct line of Cristofori-inspired instrument building. Rather, a different approach evolved – using a type of action known as the *Prellmechanik* – which dominated German piano building for the next 75 years.

3. Germany and Austria, 1750–1800. Whereas Cristofori, the Silbermanns and the later piano makers of other schools sought to create a harpsichord capable of dynamic expression, the main thrust of German and Austrian piano building in the later part of the century



4. Prellmechanik action without escapement mechanism from an anonymous south German square piano, c1770 (Royal College of Music, London); to allow space for the hammer, the rear of the key is narrower than the front; the dampers are beneath the strings and disengage when the hinged end rises with the key; the knee lever lowers the damper-support rod to disengage all the dampers simultaneously

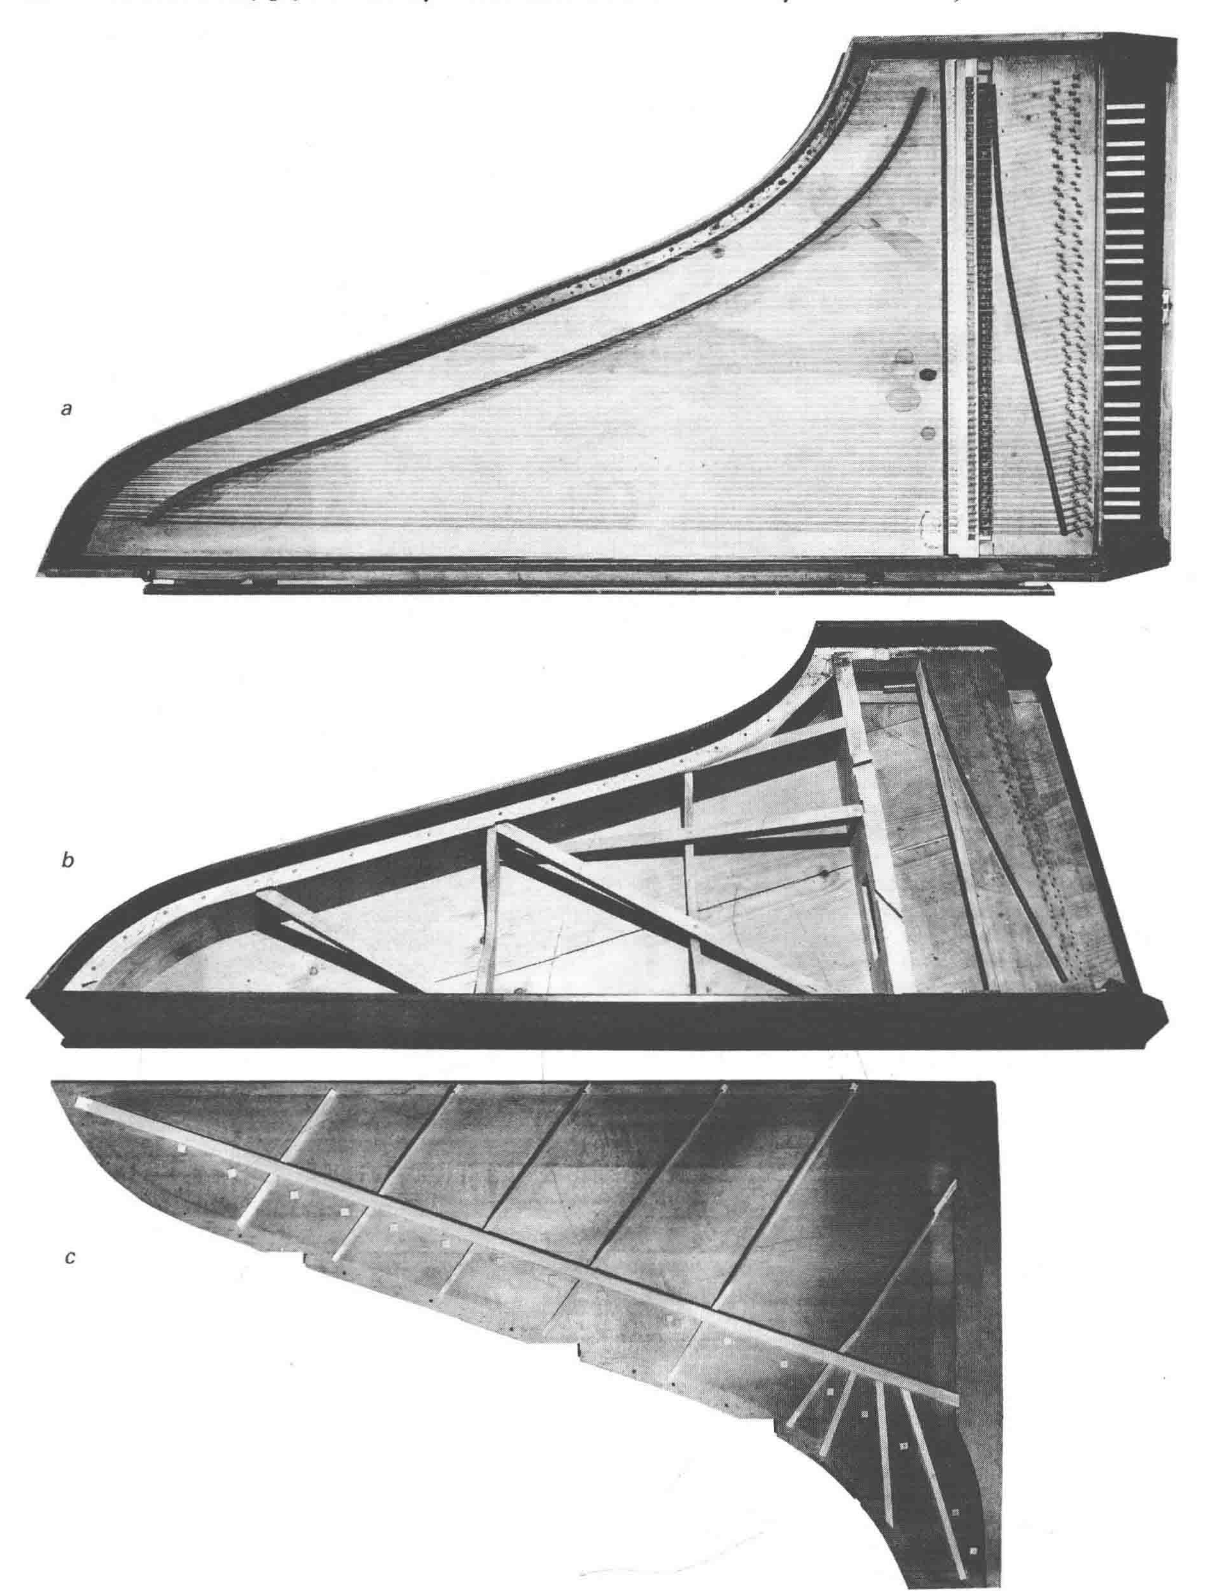
seems to have been towards creating an instrument that would be like a louder clavichord (Austria, Germany and Scandinavia being virtually the only countries in which the clavichord was still esteemed at this period). These German and Austrian pianos have a relatively clear singing tone and an extremely light touch (12–20 grams). The simplest of the so-called square models with the *Prellmechanik* show clearly the inspiration of their origin: all that separates them from the clavichord is the addition of a nut at the rear to determine the speaking length of the strings, and the replacement of the tangent by a hammer hinged to the back of the key. In the simple *Prellmechanik* most commonly (and apparently exclusively) used in square models, each of the hammer shanks is attached to its own key – either directly to the top or side (fig.4), or by a wooden or metal fork or block (the *Kapsel*) – with the hammer head towards the player. A point (the 'beak') on the opposite end of the hammer shank extends beyond the end of the key. This beak is stopped vertically either by the underside of the hitch-pin apron or by a fixed rail called the *Prelleiste*: as the back of the key rises, the hammer is thereby flipped upwards towards the string. As the distance from the tip of the beak to the hammer shank pivot is far shorter than the distance from the pivot to the hammer, the hammer ascends much more rapidly than does the back of the key. An adequate free-flight distance had to be left as there was no escapement mechanism to prevent the hammers from restriking the string or blocking and interrupting the tone. A significant number of these pianos had uncovered hammer heads, giving a harpsichord-like sound. Others had only a meagre covering of leather on the hammers.

The development of an individual escapement for the *Prellmechanik* is credited to Johann Andreas Stein (1728–92), a keyboard instrument maker in Augsburg. In some of Stein's instruments the labels are missing, altered or falsified, so there has been confusion in the dating of his earliest pianos. But some of the questionable instruments are also signed and dated with silver pencil on the underside of the soundboard (Latcham, D1998). The claviorgan, a combination of organ and piano made by Stein in 1781 (now in the Historiska Museum, Göteborg), is the oldest known dated piano with the *Prellmechanik* escapement. By 1777 a type of action with an escapement mechanism must have evolved sufficiently to satisfy Mozart when he visited Stein in Augsburg (Mozart complained of hammers jamming on other instruments). The harpsichord-piano of the same year, located now in the Museo Civico di Castelvecchio, Verona, has stationary mounted hammers while the individual escapement hoppers are hinged to the keys (*Zuggetriebe*; see Pfeiffer, C1948). The hammer heads are still uncovered.

In the developed *Prellmechanik* there is an individual hinged escapement hopper for each key instead of a stationary rail serving all keys. Each hopper has a notch into which the beak of the hammer shank fits, and each hopper has its own return spring (fig.5). As the key is depressed, the beak is caught by the top of the notch in the escapement hopper, lifting the hammer. The combined arcs traversed by the key and the hammer shank cause the beak to withdraw from the escapement hopper and slip free just before the hammer meets the string, after which it is free to fall back to its rest position. When the key is released, the beak slides down the face of the escapement hopper back into the notch.

An important feature in such pianos is the extremely small and light hammers (see fig.19 below); their thin leather covering (instead of felt) is vital to these instruments' clavichord-like delicacy of articulation and nuance. Typically, the Stein action has either round hollow hammers similar to those of the Silbermanns but made of barberrywood (see Koster and others, C1994), or short solid hammers usually made of pearwood (the *Kapseln* are also of felt-covered pearwood). Surviving Stein instruments from 1781 to 1783 all have the round hollow hammers, as do the instruments of J.D. Schiedmayer, who worked for Stein from 1778 to 1781. In Stein's instruments each key has a post supporting the hammer in a rest position above the level of the keys; this rest post is provided with a soft cloth which helps absorb the shock of the returning hammers thus preventing them from

5. Prellmechanik with escapement, believed to have been first used by Stein, from a Heilman piano of c1785 (private collection)



6. Piano by Johann Andreas Stein, Augsburg, 1788 (Germanisches Nationalmuseum, Nuremberg); see also fig.7

rebounding, a useful function in the absence of a true back check. To place the action in its proper position (behind the wrest plank in a grand) a 'sled' or drawer about 5 cm high is slipped under the action. The keyboard itself is generally of spruce or lime with ebony key slips for the naturals and with sharps of dyed pearwood topped with bone or ivory.

The individual dampers are fitted into a rack above the strings, which the player can raise by means of two joined knee levers under the keyboard; the claviorganum of 1781 has hand stops for this purpose. Some of Stein's instruments have hand levers for other stops, but these are probably not original. On the outside the Stein case (figs.6 and 7) has a double curved bentside. Inside, the liners for the soundboard are made of solid wood and reach down to the baseboard. The frame is braced by two or three members perpendicular to the spine (the straight side of the instrument) and two or three diagonal supports. The case is closed at the bottom by a thick baseboard with the grain running parallel to the straight part of the bentside, and is usually veneered in plain walnut or cherry with a band of moulding around the lower edge. The soundboards of Stein's instruments are of quarter-sawn spruce, graduated in thickness and with a system of ribbing glued to the underside. Typical of Stein's ribbing systems is the position of the long diagonal rib, glued very close to the bridge. The compass of all Stein's pianos is five octaves, *F'* to *f'''*. Some variations of detail and design in Stein's late instruments, e.g. the shape of the action parts and the use of gap spacers, wire-guided dampers, and slides to raise the action, were continued by his children until 1805.

It has not yet been discovered how knowledge of Cristofori's hammer action reached Vienna. The Viennese court account books of 1763 record a fee to Johann Baptist Schmidt 'for a concert on the fortipiano', the first documented usage of this term (this may have been a square piano): Quite a number of the oldest extant Viennese pianos have the *Stossmechanik* rather than Stein's *Prellmechanik* (Huber, D1991); Stein was probably not using his new mechanisms before 1780 (Latcham, D1993, D1998). A number of piano makers came to Austria from South Germany and Bohemia in the later 18th century, most notable among them Anton Walter (1752–1826). In about 1782 W.A. Mozart bought a piano from Walter (Rampe, D1995). Certain alterations to the action suggest that this piano and two other instruments of Walter's earliest creative period could originally have had a *Stossmechanik* action.

In the mid-1780s Walter developed the *Prellmechanik* further, departing significantly from Stein's model (Luithlein, F1954; Rück, D1955). The escapement hoppers are tilted forward with the effect that the hammers, which are longer and larger and rest close to the level of the key

7. Piano by Johann Andreas Stein, Augsburg, 1788 (Germanisches Nationalmuseum, Nuremberg): (a) plan view; (b) internal structure from above, with soundboard removed; (c) underside of soundboard

(there are no rest posts as such), decelerate as they rise, and their beaks gradually slip out from the notches in the hoppers. A movable rail adjusts the point at which the beak finally leaves the notch. There is a sprung back-check rail to prevent the hammers from rebounding. After about 1785 brass *Kapseln* were used in Vienna as well as the wooden felt-covered *Kapseln* of the Stein action (the two types continued in parallel use for some 20 years). The double-pointed iron axle of the hammer fits into two shallow sockets in a springy, U-shaped fork of brass. This invention, attributed to the Viennese piano maker Johann Jakob Seidel [Seydel] (1759–1806), allowed more precise and relatively frictionless movement of the hammer shank and greater efficiency of manufacture (for illustration of a later version of this action, see fig.18 below). Both Stein's and Walter's actions are capable of great expressivity and dynamic variation, but Walter's, with its check rail, could produce greater volume, suiting the fashion for virtuoso performance. In expressive power, subtlety and the production of swiftly repeated notes, if not in volume, the *Prellmechanik* with back check (described in the 19th century as the 'Viennese action'; see §5 below) was undoubtedly superior to the various *Stossmechanik* actions then being built.

The cases of these pianos at first resembled those of south German and Austrian harpsichords. The body was usually plain, made of native woods (walnut, cherry, oak, yew), sometimes solid wood and sometimes veneered. The naturals usually had ebony key slips and the sharps were dyed black, with slips of bone or ivory. From the mid-1790s some keyboards had ivory or bone slips on the naturals as well; the cases of these instruments were usually of mahogany, and in more expensive instruments were decorated with brass appliqué work, partly gilded. In some instruments (e.g. by Ignatz Kober, Johann Jakob Könnicke, L. Gress) the soundboard has a rose. The compass was usually *F′* to *f‴* or *g‴*; the treble register was extended only towards the turn of the century. Most pianos were double-strung in the bass and middle registers, with the treble triple-strung from about *a′* to *c″*, while most square pianos were double-strung throughout. Strings were usually of soft low-carbon phosphorous steel ('iron strings') with brass in the lowest octave. Many makers used 'copper' (red brass) for the lowest notes. The low notes of square pianos usually had overspun strings made of silvered, tinned or zinc-covered copper wire on a brass or iron core. Contemporary sources and significant differences in scaling, as well as several preserved claviorgans, provide evidence that pianos were built (or played) in different pitches: low chamber pitch (*a′* = *c*405–25), high chamber pitch (*a′* = *c*430–40), and choir pitch (*a′* = *c*450–65).

Both grand and square pianos usually had one or more devices to change tone colour, known as mutations or stops. Sometimes, especially in earlier instruments, they were divided into bass and treble areas. The *forte* stop raises all the dampers. The *piano* or mute stop (or *sourdine*) inserts a strip of cloth between strings and hammers, producing a slightly muted colour. The lute or harp stop (rarer) presses a leather or fabric-covered strip against the strings close to the bridge, the effect being a lute-like sound that quickly dies away. The stops could be operated by hand, as on an organ, or by knee levers (square pianos usually used hand levers). At the end of the 1790s the so-called bassoon stop (probably originating in Prague) became fashionable. It was a strip of wood supporting a roll of paper, silk or extremely thin parchment, pressed against the bass strings to give them a buzzing sound. The kind of sound expected by instrument makers, musicians and audiences was clearly not firmly established at first, and tone colours of different instruments might resemble those of the clavichord, harpsichord, dulcimer, harp or pantaleon. Many instruments of the period had hammer heads without leather covers, the result being a very bright, harpsichord-like sound. Until the end of the 18th century the central concern of piano makers was clearly to build an action which would be easy to operate, subtle and capable of swift repetition of notes, with a reliable damping system, and to balance a rounded bass with good tone colour against an expressive, not too weak treble. Volume and carrying power do not seem to have been a priority. Besides iconographical evidence, this is indicated by the fact that a great majority of preserved 18th-century south German and Austrian pianos originally had no sticks to hold their lids open. Grand pianos were usually played with the lid closed; or when performances were given on a larger scale the entire lid was removed (Huber, G1987). The distributed and importance of square pianos should not be underestimated; for average musicians and amateurs they were easier to acquire than the far more expensive grand pianos, which must have been largely reserved for the aristocracy until the last quarter of the 18th century.

At the end of the 18th century some 60 piano makers and organ builders were active in Vienna. Instruments made in the tradition of J.A. Stein should be regarded as the typical pianos of the early Viennese Classical period, in particular those made by his two children, Nannette Stein (later Streicher) and Matthäus Andreas Stein (known as André Stein), who moved their workshop from Augsburg to Vienna in 1794 (Frère & Soeur Stein à Vienne). German makers of note include Stein's pupil J.D. Schiedmayer in Erlangen; J.L. Dulcken (ii) in Munich; the brothers Johann Gottfried (1736–1808) and Johann Wilhelm Gräbner (1737–98) in Dresden; and C.F.W. Lemme (1747–1808) and J.J. Könnicke (1756–1811) in Brunswick (Könnicke moved to Vienna in 1790). J.E. Schmidt (1757–1804), who was appointed court organ builder in Salzburg in 1785 on the recommendation of Leopold Mozart, and Ferdinand Hofmann (1756–1829) also worked in the Stein tradition in Vienna. Notable among the followers of Anton Walter were his pupil Kaspar Katholnik (1763–1829) and Michael Rosenberger (1766–1832). There was a third Viennese tradition of piano making, its most important maker being Ignatz Kober (*c*1755–1813). Features of his instruments include very precisely made *Stossmechanik* actions and a rose on the soundboard. The oldest preserved signed and dated Viennese piano was made in 1787 (Kunsthistorisches Museum, Vienna) by Gottfried Mallek (1731–98).

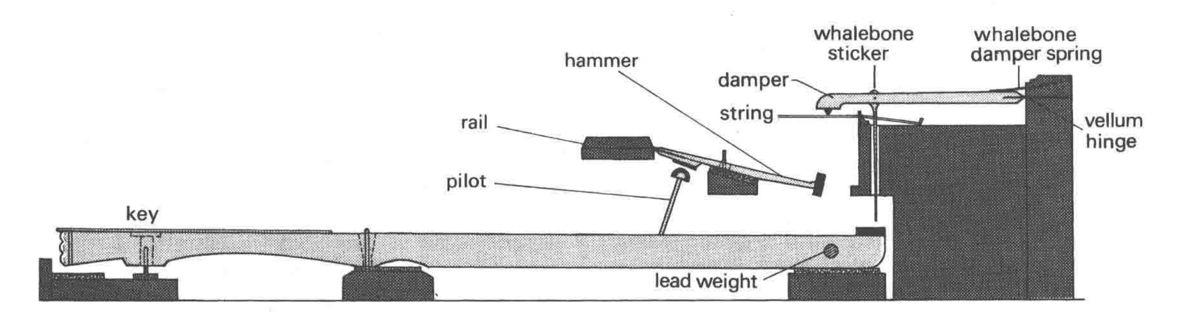
4. England and France to 1800. Before 1765 the pianoforte did not occupy a prominent position in France or Britain. Nevertheless, scattered documentary sources indicate that, as in northern Germany, some early examples were heard and admired during the 1730s and 40s. Writing to his brother James from London on 17 May 1740, Thomas Harris (1712–85) reported that

Handel had 'played finely on the Piano-forte' the day before (Dunhill, G1995). As he did not explain what this instrument was, we may conclude that both men had seen it previously. Charles Jennens, Handel's librettist for *Messiah*, owned a 'Piano-forte Harpsichord', sent from Florence as early as 1732, together with 'a book of Sonatas compos'd purposely for the Piano forte', presumably Giustini's. In about 1740 Samuel Crisp (1706–83) returned from Italy with a pianoforte made in Rome by an Englishman named Wood. In 1747 Charles Burney played it at the country home of his new patron Fulke Greville. Listeners were delighted by its tone, and its 'magnificent and new effect' of light and shade produced simply 'by the finger'. It was, however, severely limited by poor repetition. 'Nothing quick could be executed upon it', wrote Burney, but he perfected the performance of slow and solemn pieces, and some 'pathetic strains [from] Italian operas', exciting 'wonder and delight in the hearers'. Greville liked it so much that he prevailed on Crisp to sell it to him for 100 guineas – about double the price of a new harpsichord. Roger Plenius, a London harpsichord maker, made an improved version about 1750 but met with little encouragement; he was declared bankrupt in 1756. On 27 June 1755 the Rev. William Mason wrote from Hanover to the poet Thomas Gray: 'I bought at Hamburg such a Pianoforte, and so cheap! It is a Harpsichord too, of 2 Unisons, and the Jacks serve as Mutes when the Pianoforte is played by the cleverest Mechanism imaginable'. The maker's name is not known, but Friedrich Neubauer was advertising such combination instruments in Hamburg in 1754, as well as clavichords and harpsichords, and hammer-action instruments called *Pantelong*, evidently inspired by Hebenstreit's giant dulcimer (known as pantaleon). By 1758 Neubauer had moved to London where he advertised the same instruments, dropping the name 'Pantelong' in favour of 'Piano forte'. Thus hammer instruments of both German and Italian designs were seen in London before 1760. Nevertheless, in an environment dominated by the harpsichord, pianos were comparatively scarce and undeveloped, and had little influence on repertory or performance.

In Paris there was a similarly slow response. In 1716 Jean Marius presented plans to the Académie des Sciences for a *clavecin à maillets*. But the originality of his invention was successfully challenged in the courts and no such instrument is known to have been completed by Marius. In 1759 the academy saw another novel harpsichord, made by 'Weltman' (possibly the Dutch maker Andries Veltman), containing both conventional jacks and a hammer action; again there was no discernible response. After Gottfried Silbermann's death (Dresden, 1753) his pianoforte design was perpetuated by his nephew Johann Heinrich Silbermann in Strasbourg. The latter's instruments, described in Paris in *L'avant coureur* of 6 April 1761, were bichord grands of five octaves, with hand-operated stops to raise the dampers. The prodigious asking price – 1500 livres – would have deterred all but the wealthiest patrons; reportedly there were only four of these *piano e forte clavecins* in Paris. Schobert and Eckard probably played on such instruments when the opportunity arose. The preface of Eckard's Sonatas op.1 (1763) explains that dynamic markings appear so as to make the music 'equally useful to performers on the harpsichord, clavichord or pianoforte'.

The tardy acceptance of the piano was soon to be rapidly accelerated by events in London. In September 1761 Princess Charlotte of Mecklenburg-Strelitz became queen of England, aged 17. Her enthusiastic harpsichord playing and penchant for modern music led to the selection of J.C. Bach as her music master by 1763. Burney reported that after J.C. Bach's arrival in London to prepare works for the opera season of 1762–3, 'all the harpsichord makers tried their mechanical powers at piano-fortes, but their first attempts were always on the large size till Zumpé ... constructed small piano-fortes of the shape and size of the virginal'. Johannes Zumpe (1726–90) emigrated to London around 1750 and studied instrument making with Burkat Shudi. He set up his own workshop in 1761, at first supplying metal-strung English guitars, but then turned to pianos. His earliest surviving square pianos date from 1766.

In the same year, on the title page of J.C. Bach's six keyboard sonatas op.5, Bach first nominated the pianoforte as an alternative to the harpsichord. Zumpe's instruments were enthusiastically endorsed by Bach, Burney, Mason and, by association, the queen herself. For several decades this type of square piano was much the most popular form of pianoforte throughout Europe and North America. Burney attributed this to its sweet tone, good repetition, compact size and low price: the instruments sold at 16 to 18 guineas, about a third of the cost of a harpsichord.



Zumpe's standard keyboard (fig.8) has 58 playing notes (*G'*, *A'*–*f'''*) and a distinctive dummy sharp attached to the lowest note.The action, commonly called English single action, is shown in fig.9. Instead of the jack and intermediate lever of Cristofori's action, Zumpe used a wire (the pilot) mounted on a key with a leather-covered button at its upper extremity which acted directly on the hammer. There is no escapement or back check. A sprung damper-lever is hinged to the back of the piano case above the strings. The damper is raised by a thin wooden or whalebone rod (the sticker); the whalebone damper spring expedites its return once the key is released. Though the lack of escapement hinders subtlety of expression, it makes the mechanism almost indestructible and repetition very prompt. Zumpe's hammers are attached by flexible leather hinges (eliminating rattling sounds), and their tiny limewood heads are covered with one or two thin layers of smooth goatskin. An important innovation is that, compared with a clavichord, the strings are much thicker and at higher tensions. This combination of hammers and strings produces a remarkably pleasant tone. Initially, one hand stop was provided to raise the dampers, but, to counter objections that the lingering harmonies were too intrusive Zumpe changed to separate hand stops for bass and treblein 1767, enabling the player to damp the bass while employing the singing, undamped tone in the treble. From 1769 the buff stop was added; this pressed soft leather against the end of the strings so that, with the full damper lift, the sound resembled the gut-strung tones of Hebenstreit's dulcimer (though in Britain it was likened to the harp). Alternatively, with the buff stop on and the dampers engaged the sound resembled the pizzicato of violins.

Zumpe's design was never patented and, since demand far outstripped his ability to supply, a host of other makers soon began producing imitations. Between 1768 and 1775 these included, in London, Johannes Pohlman,

8. Square piano by Johannes Zumpe, London, 1767 (Victoria and Albert Museum, London)

Adam Beyer, Frederick Beck, George Fröschle, Christopher Ganer and Thomas Garbutt; in York, Thomas Haxby; and in Paris, Baltazar Péronard and Johann Kilian Mercken. In Paris some makers tried an alternative system using unleathered hammer heads and *Prellmechanik* (i.e. with hammers attached to keys), among them Adrien l'Epine in 1772, but tonally such designs were inferior to the 'English pianoforte', as Zumpe's invention was known. By 1784 pianos of the Zumpe type (fig.10) were widely used in France, North America, the Low Countries, Spain, Portugal, Italy, Germany and Austria. Makers included Krogmann (Hamburg), Steinbrück (Gotha), Hubert (Ansbach), Juan del Mármol (Seville), the Meyer brothers (Amsterdam), Henri van Casteel (Brussels), Sébastien Erard (Paris) and Wilhelm Zimmermann (Paris). Beyer and Ganer improved Zumpe's design, enlarging the soundboard, adding a swell that worked by raising part of the lid, and sometimes fitting pedals to work the stops. In 1774 Fröschle introduced a brass under-damper; other makers ignored this improvement until John Broadwood, who had manufactured square pianos from 1780, included it in his patent of 1783. A still better damper was invented by William Southwell of Dublin who also managed to extend the compass to c'''' without encroaching on the soundboard or increasing the size of the instrument.

In 1786 John Geib patented an escapement with an intermediate lever ('double action'), based on the Cristofori-Silbermann action (fig.11). Longman & Broderip, who bought rights to Geib's and Southwell's patents, sold square pianos that were delightful in their touch and tone, and deservedly popular. The Schoene brothers, who took over Zumpe's business in about 1783, appear to have introduced a variant form of Zumpe's action in 1786, using an intermediate lever without escapement; Erard and other French makers adopted it for square pianos until about 1820. Zumpe's single action continued in use until at least 1815 in pianos of inferior quality.

9. Zumpe-style single action from a 1775 square piano inscribed as by Jacob and Abraham Kirkman

In February 1771 Americus Backers announced an exhibition in London of his 'new-invented original Forte Piano' – the direct ancestor of the modern grand. An example dated 1772 with serial number 21 (at St Cecilia's Hall, Edinburgh) resembles a Kirkman harpsichord in appearance, but its many advanced design features suggest years of development. Backers's action dispenses with Cristofori's intermediate lever: the jack works directly on the hammer butt, having a forced escapement regulated by a set-off screw under the hammer rail. Its great advantage was that it could be easily adjusted by the owner with an ordinary tuning hammer. It has a true check as invented by Cristofori, so repetition is excellent. Two pedals attached to the front legs established the pattern for modern pianos: the left works an *una corda* and the right is the earliest known sustaining pedal, which allows a general raising of the dampers without taking a hand from the keys.

Backers pianos were used by J.C. Bach and his protégé Johann Samuel Schroeter for concerto performances in London and would certainly have been known by Clementi. After Backers's death his pioneering work was continued by Stodart and John Broadwood, who made the most significant advances in tone. An action from a Broadwood grand piano of 1799 is shown in fig.12. Backers and Stodart had placed the striking point at about one-twelfth of the sounding length but Broadwood moved it to between one-ninth and one-tenth. He also gave the bridge a rectangular cross-section, carved in a sawtooth pattern to give all three unison strings an equal sounding length and tension. Then, about 1790, he divided the bridge into two lengths (fig.13), separating the brass strings in the bass from the steel ones of the treble and tenor; by stretching the different metals to their optimum tensions he achieved a purer tone. It was allegedly to please Dussek that Broadwood made his first five-and-a-half octave grand, its compass extended to *c''''*, in about 1791. Haydn took a Longman & Broderip grand with this range to Vienna after his London visits. The first six-octave Broadwood (*C'*–*c''''*) is reported to have been made in 1794. Broadwood's innovations were swiftly copied by other English makers and then by Erard, but were not generally adopted in Vienna until about 1820 (see §5 below). By 1790 French makers were constructing grand pianos to various designs. Having established a good reputation for square pianos, the Erard firm began manufacturing concert pianos in the late 1790s after the return in 1794 of Sébastien Erard from a period in London. They used the English grand action and case construction, but added extra mutation pedals including a moderator and a harp or buff stop. Erard grand pianos quickly achieved international renown (see §6 below).

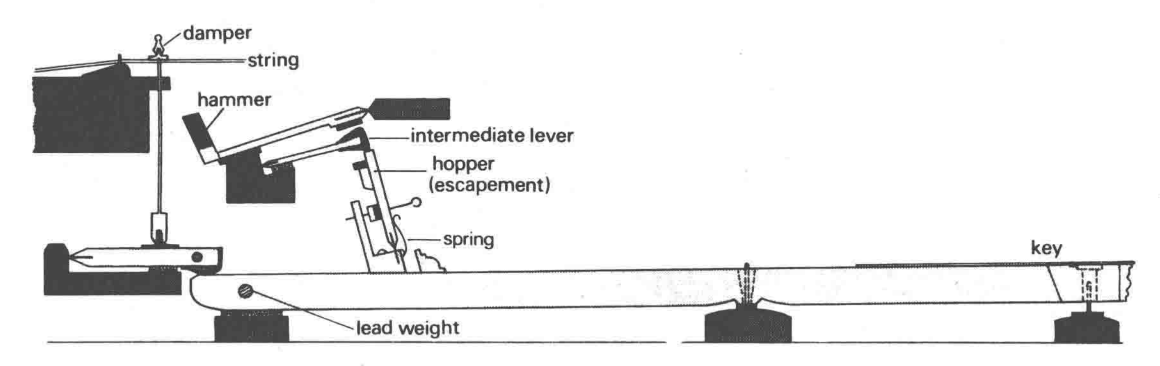
5. The Viennese piano from 1800. Of the 200 or so Viennese instrument makers listed in Haupt's study (D1960) for the period 1791–1815, at least 135 were keyboard instrument builders. Most prominent were: Anton Walter, who from about 1817 to 1824 was in partnership with his stepson Joseph Schöffstoss (1767–1824); Johann Schantz, who had taken over the workshop of his deceased brother Wenzl in 1791, and whose business was continued from 1831 by Joseph Angst (*c*1786–1842); and Nannette Streicher and her brother Matthäus Andreas Stein, who had their own separate firms after 1802. After 1823 Nannette Streicher was in partnership with her son Johann Baptist, who continued the business after her death in 1833; from the late 1850s he was in partnership with his son Emil Streicher, who took over in 1871 and dissolved the firm in 1896. Other noteworthy makers included Matthias Müller (1770–1844), the number and ingenuity of whose inventions rival those of J.A. Stein in the 18th century; Joseph Brodmann (*c*1771–1848), whose workshop was taken over by his pupil Ignaz Bösendorfer in 1828 and continued by his son Ludwig Bösendorfer from 1859; and Conrad Graf, who in 1804 married the widow of the piano builder Jacob Schelkle, and in 1811 moved his workshop to Vienna.

Several trends of the first half of the 19th century were already discernible by 1800. The five-octave range of the German and Viennese pianos was expanded, and the keyboards were changed from black naturals and white-topped sharps to white naturals and black sharps as on the modern keyboard. The number of tone-altering devices increased. The case structure was made heavier to accommodate the increasing size of the instruments and their heavier stringing.

Few Viennese pianos from the first years of the 19th century appear to have survived, but several extant instruments by Anton Walter with a range of *F'* to *g'''* may be from this period. An early instrument by Nannette Streicher (Germanisches Nationalmuseum, Nuremberg) with a range of five and a half octaves, *F'* to *c''''*, has most of the characteristics of a late J.A. Stein piano (see §3 above) including wooden *Kapseln*, but the naturals of the keyboard are ivory, and the grain of the bottom is parallel to the spine. Later surviving instruments by Nannette Streicher indicate that about 1805 she adopted the Walter action type with metal *Kapseln* and back checks.

The earliest known signed and dated Viennese action pianos with damper pedals instead of knee levers are by Nannette Streicher (1811; Germanisches Nationalmuseum, Nuremberg) and Joseph Brodmann (1812; Musikinstrumenten-Museum, Staatliches Institut für Musikforschung, Berlin). With one (early) exception the extant pianos by Conrad Graf all have pedals.

By the 1820s a typical Viennese grand piano was nearly 2·3 metres long and 1·25 metres wide, with a range of six or six and a half octaves and usually with two to six pedals. Certain types of space-saving and decorative upright instruments, such as the 'giraffe' (fig.15) and 'pyramid' pianos, were popular (*see* Upright pianoforte), as well as smaller versions of the square such as the *Nähtisch* ('sewing table'), the *Orphica* (a tiny portable harp-shaped piano; for illustration *see* Orphica) and the *Querflügel* ('cocked hat'). An invention of 1800 by Mathias Müller had special significance: his *Ditanaclasis*, made at first with two keyboards opposite each other and from 1803 with a single keyboard, is an ancestor of the modern pianino or cottage piano (Haupt, D1960), its strings running from near the level of the floor rather than from keyboard level. In the second quarter of the century larger squares with the Viennese action were also made.



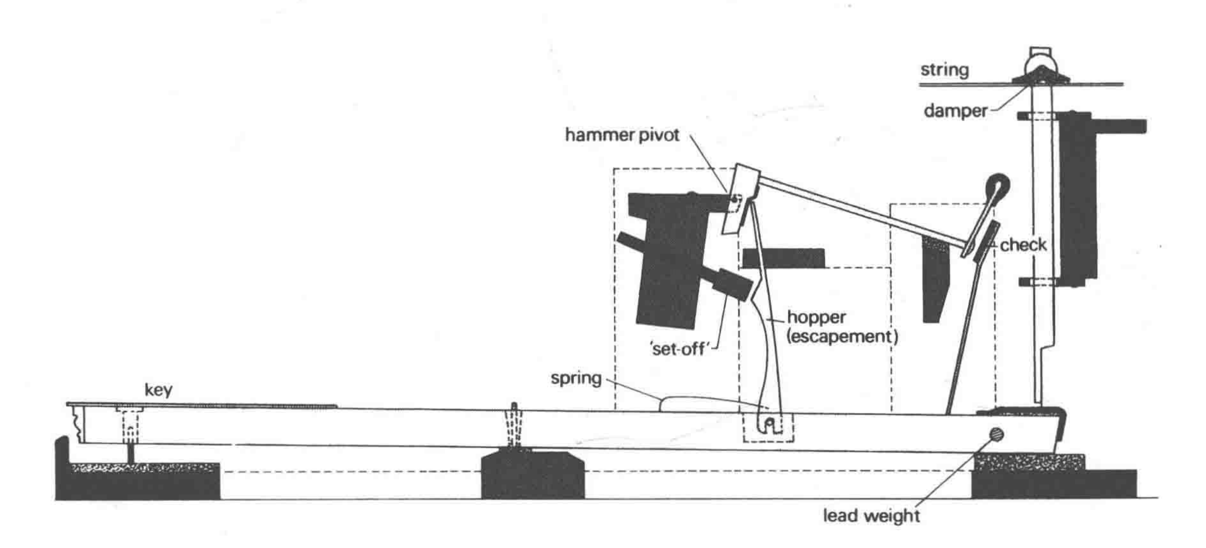
The 1820s and 30s were also a time of many inventions and improvements in the piano in Vienna. Soundboard structure, *Kapseln*, the keyboard and down-bearing devices for the nut and bridge seem to have received the most attention. In 1823 J.B. Streicher patented his down-striking action (Pfeiffer's *Zuggetriebe*; see §3 above), of which there are several surviving examples, and in 1831 he invented an 'Anglo-German' action in which the layout

10. Zumpe-style square piano, and a cello: painting, 'The Cowper and Gore Families' (1775) by Johann Zoffany (Yale Center for British Art, New Haven, CT)

of the traditional Viennese action is combined with the action principle of the English piano (fig.16; this type of action had also appeared in some English and German-Austrian pianos in the late 18th century, but was never widely adopted). Streicher used a system of iron bars in 1835, and Friedrich Hoxa is reputed to have been the first Austrian to use a full iron frame, in 1839; Friedrich Ehrbar (1827–1905) was one of the first in Vienna to use the iron frame (see §6 below). But these developments were behind their English counterparts by 15 or 20 years, and fortunately the basic design of the Viennese wooden instrument with its interlocking structure was more capable than that of the English of sustaining increased string tension. Graf, the most eminent Viennese builder from the early 1820s until his retirement in 1841, remained faithful to wooden framing (fig.17). The relative virtues of English- and Viennese-style pianos – their touch and timbre – were keenly debated on many occasions. Research indicates that German composers from Beethoven to Schumann and Brahms never wavered in their allegiance to the Viennese piano. But as the century progressed, the demands of musical taste elsewhere and the predominant playing technique of the period accentuated the disadvantages of the Viennese action, rendering it unable to compete in the international market. Joseph Fischhof, a juror at the Great Exhibition of 1851, complained bitterly in his *Versuch einer Geschichte des Clavierbaues* (1853) about the other judges' emphasis on volume alone, which discriminated against the already sparsely represented Viennese pianos built to satisfy the Austrian taste for fine nuances and expressive playing.

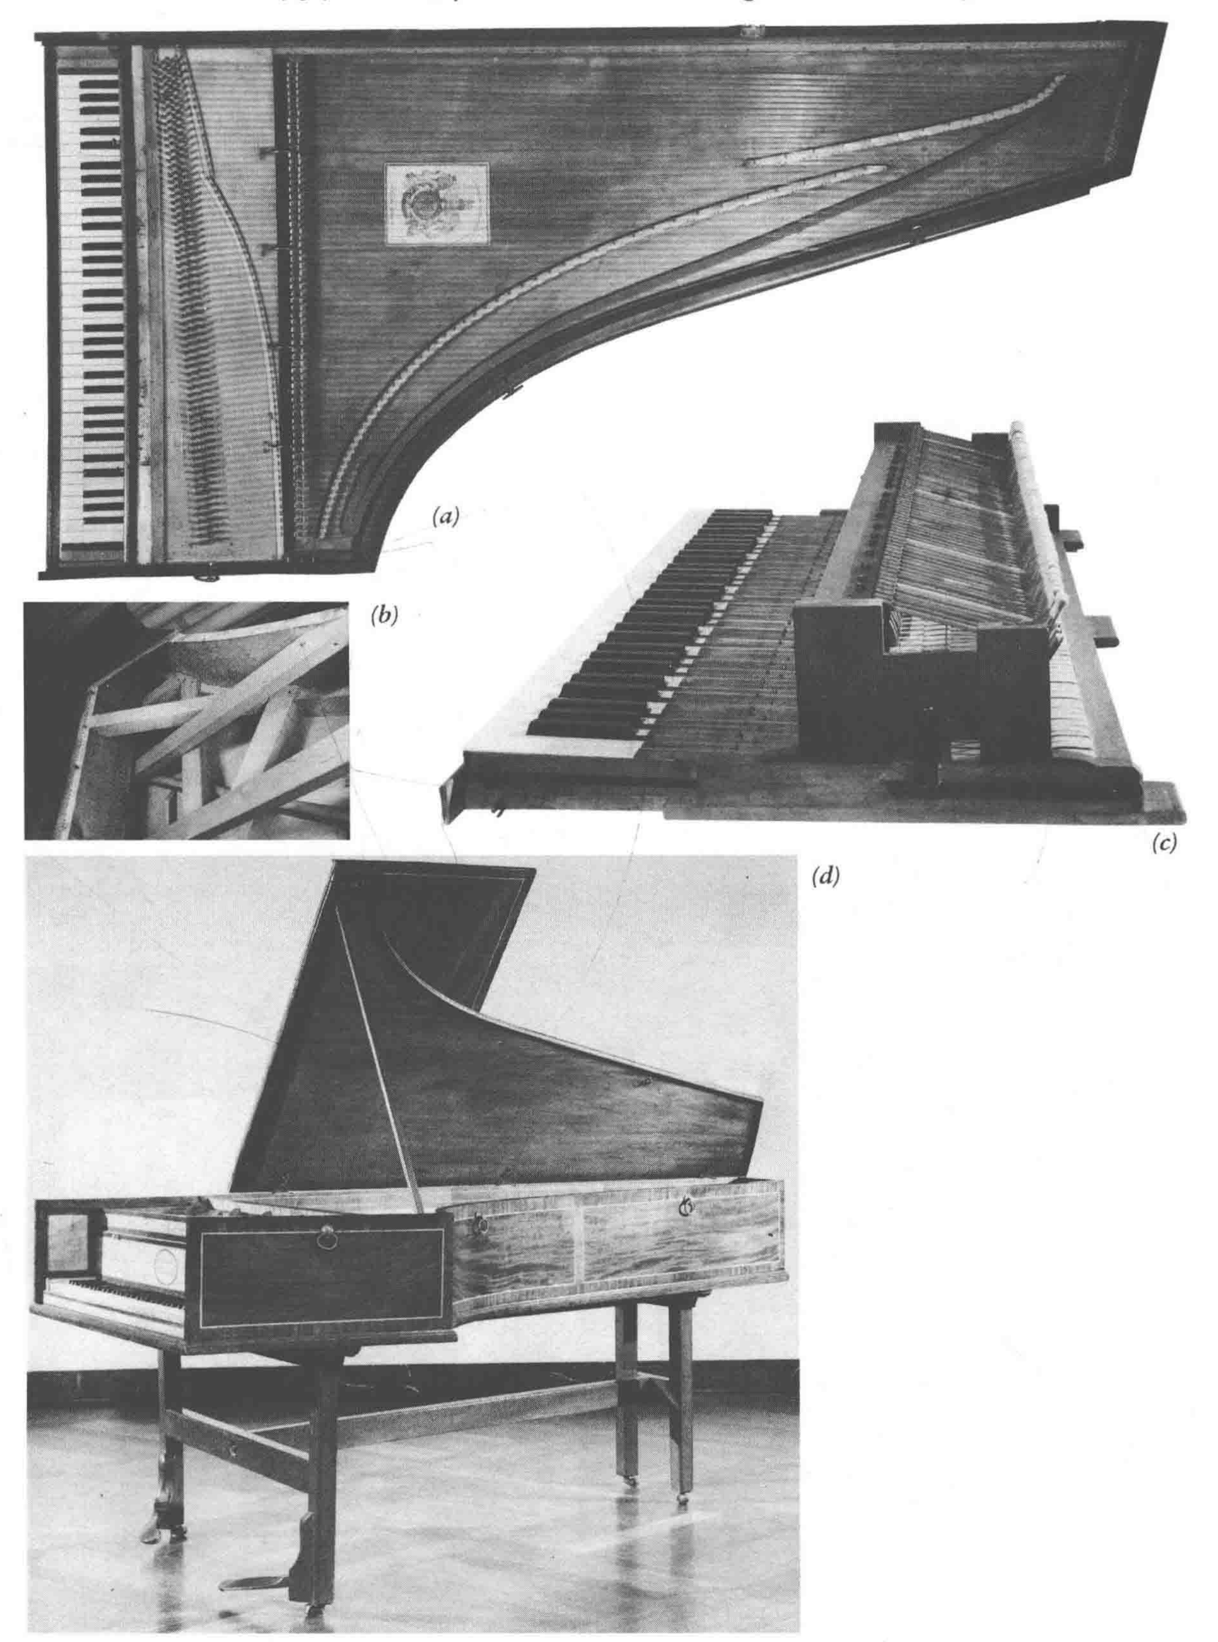
Just as the demand for more volume with a stronger fundamental tone and fewer overtones meant heavier stringing and consequently a thicker and stronger case structure, the hammers and dampers of the Viennese piano also became heavier (figs.18 and 19, below), although the simplicity of the action did not change and some Viennese makers retained until late in the century the thin layer of leather over the felt hammer-covering that had become common by the middle of the century. Inevitably, however, the heavier action destroyed that delicacy of touch and crispness of tone which had distinguished the earlier instruments. Pfeiffer suggested that pianists used to the English action were disturbed by

11. Geib-type double action from a piano of c1800 by Broderip & Wilkinson



the feeling of the hammer falling back to the rest position, which is not noticeable in an action where the hammers are not attached to the key. He also explained that the key-attached hammer had another disadvantage: the striking-point varies according to the depth of the key dip when the hammer hits the string; therefore, when the total key dip was increased as the Viennese action got heavier, this inconsistency was accentuated. However, Pfeiffer (C1948) considered that the allegedly poor capacity for repetition of the Viennese action was much exaggerated. On the same subject, Joseph Fischhof (C1853) had already commented that repetition was to be performed by the pianist, not the piano maker. Viennese pianos were still produced in the second half of the 19th century but were discontinued as a standard model by Bösendorfer in 1909; some were made to order by Bösendorfer during the next decade and a few makers of less expensive instruments in Vienna continued to use the developed *Prellmechanik* even later. In the end the decline of the Viennese action was due to changing aesthetic paradigms in playing as well as building pianos. Viennese pianos required both a sensitive, sympathetic pianist of the old school, and a piano maker who was a skilful technician and worked with intuitive feeling, since the action was much harder to adjust with precision than a modern action with its many adjusting screws.

The modern instrument, which has become more of a machine, is also better suited to modern piano playing, which calls for great volume and precision. In this connection it is worth noting that Viennese piano makers were particularly reluctant to expand their firms (Bösendorfer, F1898), so that there was hardly any industrial manufacturing of instruments on a large scale in Austria. Viennese piano-building stands for a traditional craftsmanlike approach, and 19th-century industrialization was foreign to it. However, several Viennese piano makers in the second half of the 19th century did endeavour to comply with the west European standard. The most important firms of this period were J.B. Streicher & Sohn, Ludwig Bösendorfer, J.M. Schweighofer's Söhne and Friedrich Ehrbar. As well as making the usual Viennese instruments, all these firms also built pianos with the English action, and even with a double repeating action. Innovations such as the cross-strung solid-cast frame, and the double scale deriving from the research of the physicist Helmholtz, were already being introduced in Vienna about 1875 (Schelle, B1873; *Die Pianoforte von Schweighofer*, 1892).



In the wake of the harpsichord revival of the 20th century there was from World War II a new interest in the early models of piano with *Prellmechanik* as proper instruments for the stylistic investigation and historically accurate performance of the Classical masters such as Haydn, Mozart and Beethoven. Replicas of pianos by Stein and his contemporaries have been produced by Hugh Gough and Adlam-Burnett (England), Philip Belt (USA), Martin Scholz (Switzerland), Rück and Neupert (Germany) and others, and these have promoted a widespread recognition of the virtues of the 18th-century Viennese piano for its own repertory. By the late 1970s progress in reconstructing contemporaneous orchestral instruments and their playing techniques made it feasible to perform a Mozart concerto with instruments resembling the originals.

In the early 1980s makers such as Robert Smith and Margaret Hood (USA) and Neupert began producing replicas of the larger Viennese pianos of Graf, Streicher and Dulcken. Since the early 1990s Christopher Clark (Cluny, France) and Paul McNully (Divišor, Czech Republic) have also become famous for the high standard of their instruments. Many such builders concentrate on using the same materials and techniques as the original makers. These instruments, as well as the restorations of E.M. Frederick, Edward Swenson (both USA), Gert Hecher and Albrecht Czernin (Austria) and others, provide an opportunity to extend keyboard performing practice to include the piano repertory of the 19th century.

6. England and France, 1800–60. During the first half of the 19th century English and French instrument makers transformed their low-tensioned, light-action fortepianos of five or five and a half octaves into massively powerful, seven-octave instruments closely resembling the modern piano. Prominent London manufacturers of the period included the firms of Broadwood, Clementi (later Collard & Collard), Kirkman and Stodart; in Paris, the

12. English grand piano action from a Broadwood piano of 1799 (Royal College of Music, London)

13. Grand piano by John Broadwood & Son, London, 1794 (Smithsonian Institution, Washington, DC); (a) plan view; (b) detail of internal bracing showing a rather heavier structure than that in fig.7; (c) action; (d) general view

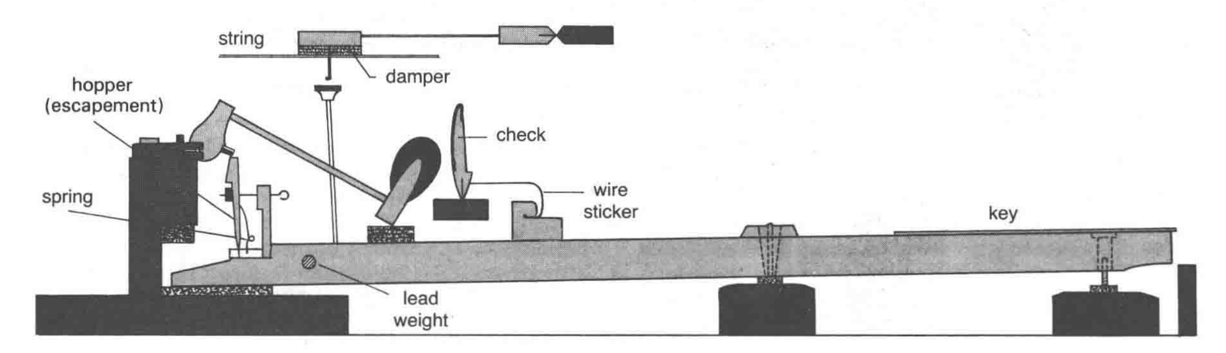
Erard and Pleyel firms were dominant. Erard, which also ran a successful London branch, was perhaps the single most important source of innovation among these makers.

In the quest for greater power and dynamic range, which was the driving force behind these changes, string diameters and tensions were progressively increased. On the grand pianos of John Broadwood about 1801, the iron wire used for the note *c″* is under a tension of about 10 kg per string – virtually the same as that used in Zumpe's square pianos 30 years earlier. But by 1815, thicker wire was used in both grands and squares, with a tension of about 15 kg per string for *c″*. Thereafter the increase was inexorable: 24 kg by 1825, 42 kg by 1850. Such high tensions were made possible only by using harder steel wire and ever-stronger forms of bracing in the case construction, progressing towards the full iron frame.

To match these heavier strings the weight of the hammers was more than doubled (fig.19). The more powerful, richer sonorities of the later pianos are directly related to energy input, which cannot be manufactured inside the instrument, but must come ultimately from the player's fingers. This has a profound effect on the touch, illustrated by comparing the minimum weight required to sound a note on instruments made 60 years apart. Typically, an English grand of around 1800 requires only 34 grams to sound *c″*, but on a piano of 1860 the same note requires 80 grams. To ease the burden on the player, piano makers were compelled to reduce the gearing ratio between the finger and the hammer head. Until about 1810 English piano keys had a touch depth of about 7.5 mm, but by 1845 this had increased to 9 mm and by 1860 to 10 mm. This depth of movement required taller sharps, while the natural key heads were lengthened from 40 mm to 50 mm, encouraging a more vigorous attack with extended fingers rather than the quiet hand and curved finger techniques of the 18th century.

The extra tensile strength obtained from hardened steel strings, together with the physical properties of much tauter wire, demanded softer and thicker hammer coverings to suppress the undesirable inharmonicities produced by prominent upper partials. Many materials were tried, including woven cloth or matted fur applied over the traditional layers of leather, but compressed felt gave the best results. This led to the production of specialist hammer felts and new arts of voicing (or 'toning') the hammers. The *fortissimo* became much more powerful than before, and the *pianissimo* quieter by contrast, but there was some loss in articulation, especially noticeable in the lower notes where the tone develops more slowly.

Sébastien ERARD and his nephew Pierre introduced many successful solutions to the problems created by the heavier and deeper touch, and their numerous patents of this period also chronicle the ways in which piano construction was modified so as to bear hugely augmented loads. As early as 1808 Sébastien Erard's patent drawings show a downward-sloping wrest plank with agraffes (metal staples, one for each note, secured to the wrest plank to provide a bearing for the strings which pass underneath and at the same time defining one end of the



14. Typical mid-19th-century south German square piano accompanying a violin and flute; painting, 'Family Concert in Basle' (1849), by Sebastian Gutzwiller in the Kunstmuseum, Basle

15. Giraffe piano by Ernst Rosenkranz, Dresden, c1815 (Neupert Collection, Germanisches Nationalmuseum, Nuremberg); the right-hand view shows the instrument with the fronts removed to reveal a layout resembling that of a grand piano (here a vertical adaptation of the Viennese action); the pedals (from left to right) are: sustaining pedal, bassoon stop (up to e♭′), full moderator (celeste), half-moderator, una corda, janissary stop

speaking-length of each string). In this arrangement the wrest plank is stronger and the hammer blow hits the strings against their bearing, which prevents their displacement and, together with the equalized unison string lengths introduced by Broadwood, helps to preserve the tuning. But the main focus of the 1808 patent was an entirely new action: Erard's *mécanisme à étrier*. In this the intermediate lever (omitted in English grand actions) was reintroduced, but adapted to operate a downward-pulling action on a rear extension of the hammer butt. After escapement the 'stirrup mechanism' quickly re-engages the hammer so that notes may be repeated with small motions of the key. This ability to repeat notes when the key was only partially returned became increasingly important as more massive hammers produced a heavier touch. English makers paid insufficient

16. Anglo-German action from a piano of c1845 by Johann Streicher of Vienna (private collection)

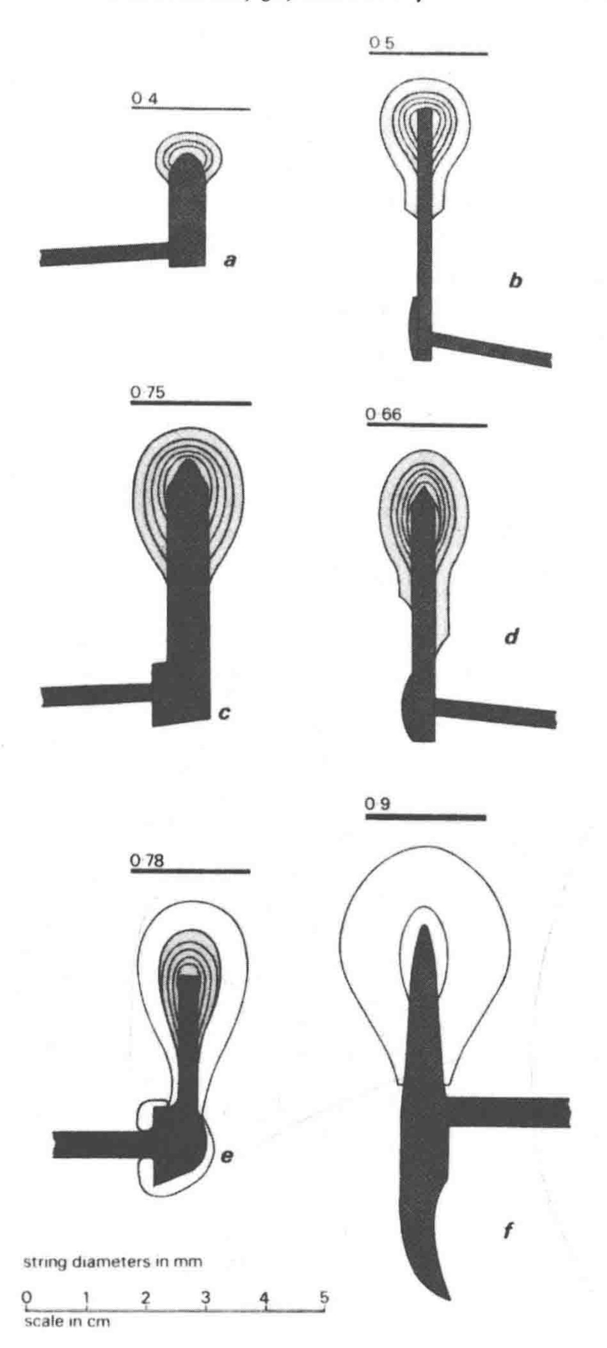
attention to these developments, most preferring the simplicity and reliability of the action invented by Backers. In December 1821, just months before the 1808 patent expired, Pierre Erard filed a patent for another repetition action (fig.20; the patent was approved the following year). This one, with only minor modifications, provides the basis of all modern grand piano actions. After escapement, the hammer falls away by only a short distance, about 10 mm below the strings, where it rests on a sprung repetition lever. As the finger releases the key the intervention of this lever allows the hopper to re-engage the hammer quickly; so that for repeated notes it is not necessary that the key return to its original position. One of the secondary results of higher string tensions can be seen in Erard's change to under-dampers which, aided by a spring, press firmly against the strings to quell their energetic vibrations.

The construction of an entirely wooden case that would resist the enormous aggregate forces of the string tension demanded ever more drastic buttressing. For this reason there was much interest in down-striking actions because these allowed the case to have bulky wooden struts passing right through the instrument behind the soundboard. However, the better reliability of up-striking actions was ultimately persuasive. Early six-octave English grands used five steel arches to bridge the gap between wrest plank and belly rail – as in Beethoven's Broadwood of 1817. That instrument may be seen as the end of the line for piano development without metal framing. In 1820 James Thom and William Allen jointly patented a 'compensation frame', in which brass and steel tubes were placed above the strings to connect the wrest plank to a metal hitch-pin plate along the bentside. Part of their idea was to allow for slight movements of the hitch-pin plate, and to use the expansion and contraction of the tubes under changing temperatures to push or pull the frame, so maintaining the original string tension. Their system was very effective in practice. Grands made under this patent by William Stodart were vastly more stable at high tension than any previous piano. Other makers responded with more modest schemes using three to five steel struts (fig.21). In most English square pianos after 1825 a metal hitch-pin plate on the right was braced against the wrest plank by a single strut. In Erard's 1825 patent the grand's wrest plank is reinforced with a steel plate fastened underneath, and struts bear against a metal plate at the bentside through adjustable screws.

Facility of repetition was of paramount importance to French makers, yet many of their square pianos from the early part of the 19th century feature a simple two-lever action without escapement. With this mechanism rapid reiteration was possible with practice, but as hammers increased in weight it became more difficult to prevent rebounds and double strikes. London makers, using the

18. Prellmechanik (Viennese action) from a piano of 1826 by Conrad Graf (private collection)



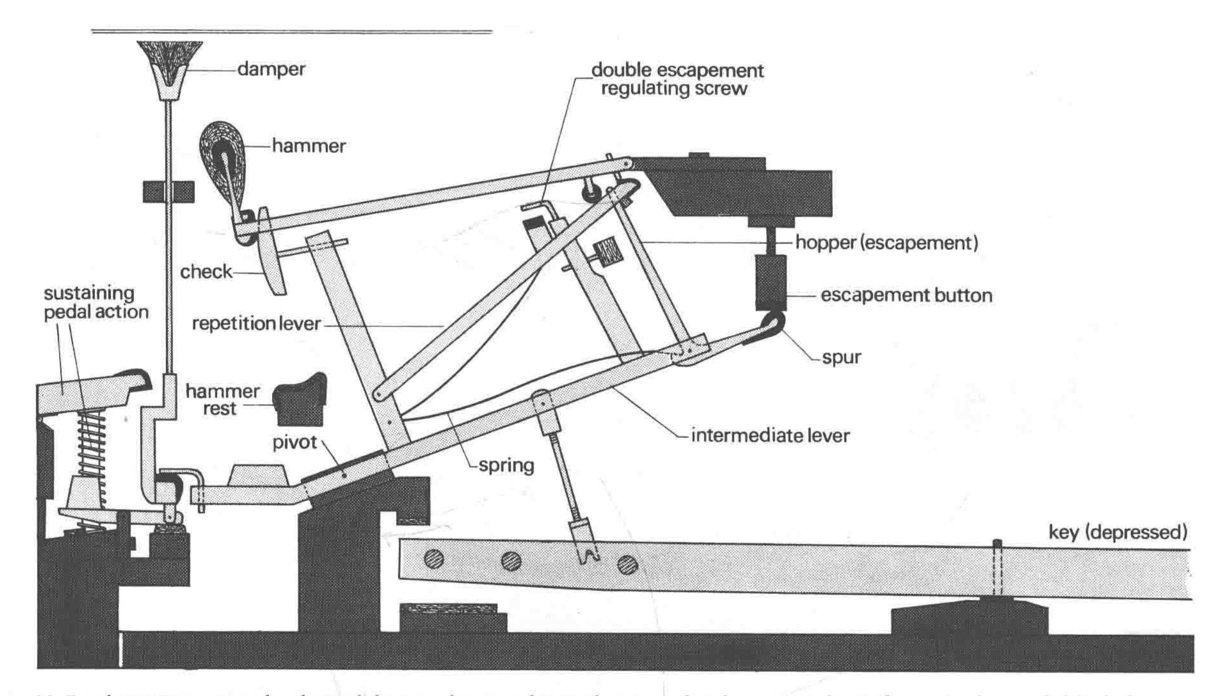
more subtle escapement action of fig.11, countered this problem by adding a wire-mounted check – before 1830 on expensive models. Erard likewise added a check; the firm designed and patented a succession of innovatory actions for square pianos between 1820 and 1840, but few of these found their way into regular production. Many French square pianos employed triple stringing rather than augmenting the tone with heavier bichords as favoured in England.

Once again, as the 14-year term for the grand repetition action expired, Erard applied for another, dated December 1835, effectively preventing British rivals from using a wide selection of useful innovations. In all this time Broadwood had taken out only three quite trivial patents. It was not until the Great Exhibition of 1851 in London, when the jury awarded its most prestigious medal to Erard, that Broadwood's complacency was exposed. As the world's largest and most commercially successful manufacturers they were aggrieved at the decision, though many friends rallied to defend them, claiming that Broadwood's tone was superior – a notoriously subjective matter. (A grand piano of 1855 by Erard is shown in fig.22.)

Among British manufacturers the square piano declined rapidly after 1840 as improved uprights won approval for domestic use. In 1810 more than 80% of pianos produced in London had been squares, but by 1850 this had dwindled to less than 7%. Part of the reason for the square's demise was its increasing size: as the compass increased from five-octaves to seven such instruments inevitably grew not only longer but proportionately wider and deeper, becoming massively cumbersome pieces of furniture. The upright instrument provided an alternative. Most uprights of the period had the soundboard and strings raised above the keys – chiefly for acoustical reasons. 'Upright grands' up to 8·5 feet (2·66 m) tall incorporated the structure and action of the horizontal grand with minimal modification, the hammers striking from the back. More compact forms were basically square pianos raised vertically, using diagonal stringing; for these William Southwell designed the 'sticker action'. The first cabinet uprights, in which the strings descend to within a small distance of the floor, were five-octave instruments patented in 1800 by JOHN ISAAC HAWKINS, an Englishman living in Philadelphia (*see also* UPRIGHT PIANOFORTE). Just over four feet high, his absurdly named 'Portable Grand Piano-forte' was in some technical respects far ahead of its time. But Hawkins was primarily an engineer, not a musical instrument maker; he paid little attention to the touch and the pianos were not a success. Southwell's sticker action (fig.23) proved useful in tall cabinet uprights (1820–50) which, like Hawkins's piano, had the wrest plank at the top. Even with an escapement such actions were not equal to *prestissimo* playing, but the structural stability of the cabinet form, in which the action could be placed entirely in front of the strings, was so superior that other forms were soon obsolete. The shortcomings of the upright action were addressed most successfully by Robert Wornum, who developed the 'tape-check' mechanism (fig.24). A light brass spring, connected to the hammer butt by a linen tape, acquires tension as the hammer approaches the strings and tweaks it away from the strings promptly, preventing rebounds or dwelling on the string. With minor modifications to improve reliability in the escapement, and with relocation of the dampers, Wornum's invention became the prototype for modern upright actions.

To reduce the height of these front-striking uprights to the absolute minimum a simple diagonal disposition of the strings was adopted, as advocated by Thomas Loud (1802) and seen in Wornum's early instruments. But in 1828 Jean Henri Pape in Paris devised the prophetic concept of overstringing, placing the bass strings on a separate bridge in the otherwise unused area of the soundboard at the bottom right beyond the tenor bridge. The bass strings passed over the tenor in a system that has since worked well in grands. In Pape's fashionable console pianos of around 1840 the top of the case was only slightly higher than the keys, an arrangement made possible by having the rear of the keys cranked downwards. However, the compactness of such designs was achieved at the cost of some loss in sonority and in the reliability of the action. From 1835 to 1860 the most popular form of domestic instrument was the dependable 'cottage piano', a cabinet piano of modest height (one of *c*1825 is shown in fig.25).

Changing perceptions on the use of the sustaining tone and mutation stops were partly conditioned by the



19. Comparison between six piano hammers and strings (all sounding the note f′), showing the gradual increase in mass of both as the instrument developed: a) South German Heilmann, c1785–c1790; b) English (Broadwood), c1806; c) Viennese (Graf), 1826; d) English (Broadwood), c1823; e) French (Erard), c1825; f) American (Steinway), c1970

increasing power of the piano throughout this period. Beethoven's Erard grand, presented to him by the maker in 1803, had four pedals typical of French instruments up to 1825. The harp pedal produced a pizzicato sound that could be used with or without sustaining effects. (When not sustained, the tone was usually called 'lute'.) The moderator produced a muffled tone by interposing cloth tabs between the hammers and strings. The *una corda*, which Louis Adam (1804) recommended in conjuction with the fourth, sustaining pedal as the *jeu céleste*, was commended by Beethoven to Viennese makers. Parisian square pianos often had a BASSOON STOP, operating only from middle C downwards, whose buzzing sound added rhythmic impulse to dance music. Pianos from London were usually equipped simply with two pedals, as found on modern instruments. On early 19th-century grands and uprights the left pedal provided a genuine *una corda* or *due corde* throughout the compass, but this was often compromised after 1830 when the tenor and bass were not always tricords. The right pedal lifted the dampers. The changing use of this pedal, in consequence of the stronger reverberation of more tautly strung pianos, caused many makers to seek ways of providing selective sustaining mechanisms. The simplest was Broadwoods' split pedal, which could lift the bass and treble dampers separately, while the most complicated and least copied was the SOSTENUTO PEDAL pioneered by Boisselot and exhibited in Paris in 1844. In spite of the plethora of other mechanical aids, when felt-covered hammers became the norm after 1830, most pianos were provided only with the keyboard-shifting 'soft' pedal and the damper-lifting SUSTAINING PEDAL.

7. SPAIN, 1745–1850. The earliest extant Spanish piano, dating from about 1745, was made in Seville by Francisco Pérez Mirabal. Whilst the action resembles Cristofori's 1720 model with a non-inverted wrest plank, the case has a double-curve bentside and other features of construction more typical of Sevillian harpsichord-making. Its compass 9is *G′–d‴*. Unusually, it possesses trichord stringing where one set of strings could be silenced with a hand-operated stop of leather pads. Two other, unsigned, Spanish pianos with a Florentine-style action are known: a *G′–g‴* instrument from the Pérez Mirabal workshop, and a *C–d‴* instrument with bichord stringing whose case suggests a different school of construction. The early presence of pianos in Seville may be related in some way to the marriage of the Portuguese infanta Maria Bárbara and the Spanish crown prince Fernando in 1729 and to the Spanish court's residence in Andalusia during the following four and a half years. Maria Bárbara brought her music teacher, Domenico Scarlatti, with her to Spain. It appears probable that both were familiar with the piano and during the early years of her marriage the princess may already have owned a Florentine instrument that could have inspired Pérez Mirabel to develop similar instruments. None of the grand pianos built by Mirabal's successor in Seville, Juan del Mármol, is known to have survived; however a number of his square pianos, made from the 1780s onwards in the English style, are extant. Some of his instruments were exported to Latin America and a Juan de Mármol (father or son) emigrated to Mexico at the end of the century, as did Adam Miller, a German who moved to Mexico after working in Madrid. Information on piano building in Madrid prior to 1780 is not available. As far as the royal harpsichord maker Diego Fernández is concerned, it is not clear whether he made such instruments himself or whether a few of his harpsichords were later converted into pianos.

Grand pianos (Sp. *pianos de cola*) were usually known as *clavicordios* (or *claves*) *de piano* or *de martillos* (i.e.

20. Erard repetition action after the English patent drawing of 1821; the intermediate lever, pivoted to its flange, simultaneously lifts the hopper and pulls down the damper; the action is shown with the key depressed, the hammer having fallen back to its check

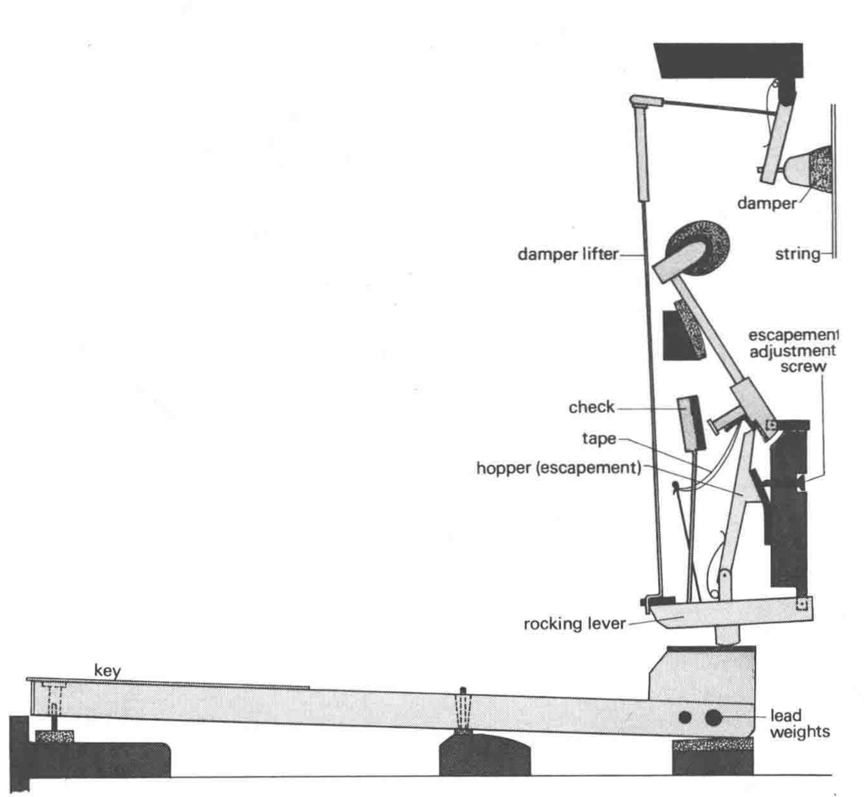
'piano- or hammer-harpsichords') during the 18th century. Square pianos were called *fortepianos* or *pianos fortes* (later known as *pianos cuadrilongos* and most recently as *pianos de mesa*). The term *fortepiano* seems to have been introduced together with the first such instruments from England during the 1770s. In the following decades the most up-to-date models were imported from England and Madrid makers advertised themselves as exponents of the English style. Foremost of these was Francisco Flórez, a court piano maker who became familiar with the work of English makers, including that of J.J. Merlin, during a year-long stay in England. His younger rival and successor in the royal favour, Francisco Fernández, at first followed the English style but later tried to found a Spanish school of construction using native woods, while at the same time following developments abroad, particularly in France. Other Madrid piano makers in the first half of the 19th century showed little originality. An exception was the immigrant Jan Hosseschrueders, a Dutch carpenter who founded a firm in Madrid in 1814, later known as Hazen and still in operation today. Hosseschrueders patented a transposing piano in about 1824.

Little research has been carried out on the piano in other regions of Spain. It appears, however, that at the beginning of the 19th century German influence was uppermost in Catalonia. Many Catalan square pianos are to be found incorporating knee levers and a *Prellmechanik* (see §§3 and 5) comprising a *Prelleiste*, hammers held in brass *Kapseln*, but no back checks. In 1848 the French firm of Boisselot opened a branch in Barcelona (later owned by the Spanish firm of Bernareggi). This was a symptom of the increasing popularity of French instruments in Spain. As the 19th century progressed few Spanish firms could compete directly with the large factories in other countries and many smaller Spanish firms came to rely on cheaper parts from abroad for assembly in Spain.



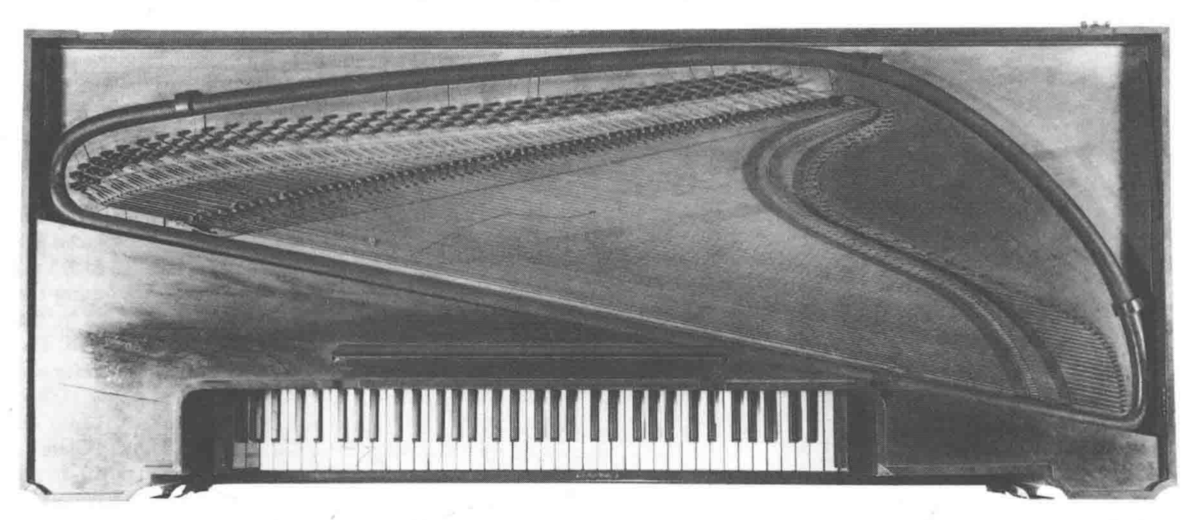
8. North America to 1860. Pianos were used and made in North America by the 1770s. The earliest known reference to a piano there is a notice in the *New-York Gazette and Weekly Mercury* of 17 September 1770 listing a 'fortepiano' for sale by the Englishman David Propert; in Boston, Propert advertised that he taught the piano and in 1771 performed 'some select pieces on the forte piano', at the Concert Hall. In the same year in Virginia Thomas Jefferson and Robert Carter bought pianos from London. In 1772 John Scheiuble [Sheybli] announced in New York that he made and repaired pianos, and in 1774 he advertised for sale 'one hammer spinnet', which he may have made himself. Another German craftsman, John [Johann] Behrent, usually credited with making the first piano manufactured in North

23. Sticker action typical of English cabinet pianos, c1810–60

America, advertised in Philadelphia in 1775 that he had made an instrument 'by the name of Piano Forte, of Mahogany, in the manner of an harpsichord, with hammers and several changes'. Although both manufacture and emigration diminished during the Revolutionary War, from the mid-1780s many builders emigrated from Europe to the USA, among them Thomas Dodds (active in New York from 1785), Charles Albrecht (Philadelphia, *c*1785), Charles Taws (New York, 1786; Philadelphia, 1787) and John Geib (New York, 1797), who claimed by 1800 to have built 4910 pianofortes. In Milton, Massachusetts, the American-born Benjamin Crehore was building pianos by the 1790s. The type most often played and owned by Americans was the square piano, which remained in favour until the 1880s. The typical early square had wooden framing, a range of five to five and a half octaves (*F′–c″″*), English action (although Albrecht made some with German action), and changes in registration activated by hand stops.

As early as 1792 Dodds & Claus noted the need to prepare their wood 'to stand the effect of our climate', a prime concern of American builders throughout most of the 19th century. JOHN ISAAC HAWKINS, an English civil engineer working in Philadelphia, included an iron frame and iron bracing rods in his ingenious 1800 patent for a small upright piano. Although his invention did not succeed musically, it represents one of the earliest attempts to use iron to withstand climatic changes. In 1825 Alpheus Babcock, a Boston maker who had worked with Crehore, was the first to be issued a patent (17 December 1825) for a one-piece metal frame, which he claimed would be 'stronger and more durable than a wooden frame or case' and, because the strings and metal frame would expand or contract equally, would prevent the instrument being 'put out of tune by any alteration in the temperature of the air'. He fitted this frame in a piano typical of the late 1820s, a mahogany square with decorative stencilling, two pedals and a compass of six octaves (*F′–f″″*); only

24. Wornum's tape-check action for upright pianos, patented in 1842; the tape assists the return of the hammer to check

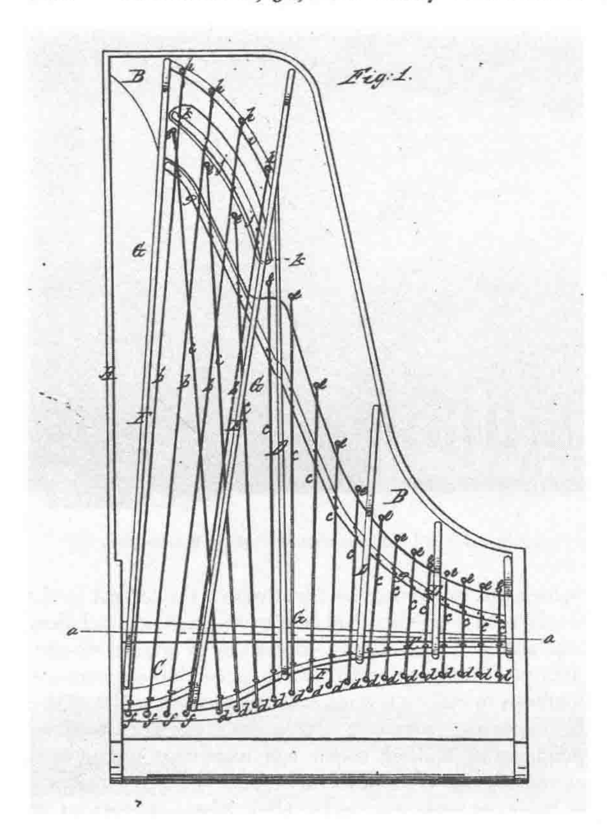


two Babcock squares with an iron frame are extant (fig.26). Many builders, especially in New York and Baltimore, opposed the iron frame, claiming that it resulted in a thin and nasal tone quality. Instead, many used the heavy wooden bracing and a solid five-inch (12·7 cm) wooden bottom for stability in tuning. But by the 1840s, wooden framing alone was not strong enough to withstand the enormous tension required by the piano's expanded compass (seven octaves, *A″–a″″*) and the rigours of American climatic extremes.

By the 1830s American makers of square pianos were using the Erard repetition action. In 1840 the Boston piano maker Jonas Chickering, with whom Babcock worked from 1837 to 1842, patented a metal frame with a cast-iron bridge for a square piano, and in 1843 he patented a one-piece metal frame for grands. He was the first to devise a successful method of manufacturing and selling pianos with metal frames and was the first major American builder to make grand pianos, for which he won special notice at the Great Exhibition in London (1851). Metal frames and felt-covered hammers made American squares characteristically heavy and sonorous instruments. The Chickering factory, with about 300 workers, made over 10% of the 9000 pianos produced in the USA in 1851. After a fire destroyed the factory in late 1852 the firm built a vast new factory (fig.27) and by the 1860s it employed over 500 workers. The Chickering firm set the standard for the American piano industry: production of high-quality pianos with metal frames, an extensive steam-powered factory operation whose workers developed highly specialized skills, an energetic sales programme, and support for musical events and performers.

In 1853, the year of Jonas Chickering's death, the Steinway firm was established in New York; within a decade it had equalled the Chickering firm in production and prestige. Like Chickering, the firm designed pianos

25. Cottage piano by Clementi & Co., London, c1825 (private collection)



26. Square piano with a one-piece metal frame made by Alpheus Babcock in Philadelphia, c1835 (Smithsonian Institution, Washington, DC)

with metal frames, patenting in 1859 a new overstringing arrangement for the grand piano which transformed the sound of the instrument and was eventually adopted by manufacturers throughout the world (see also §9 below). The demand for pianos grew throughout the century. According to statistics gathered by Loesser, Ehrlich and Dolge, one in every 4800 Americans bought a new piano in 1829; by 1851 the figure had risen to one in 2777, and by 1870 to one in 1540.

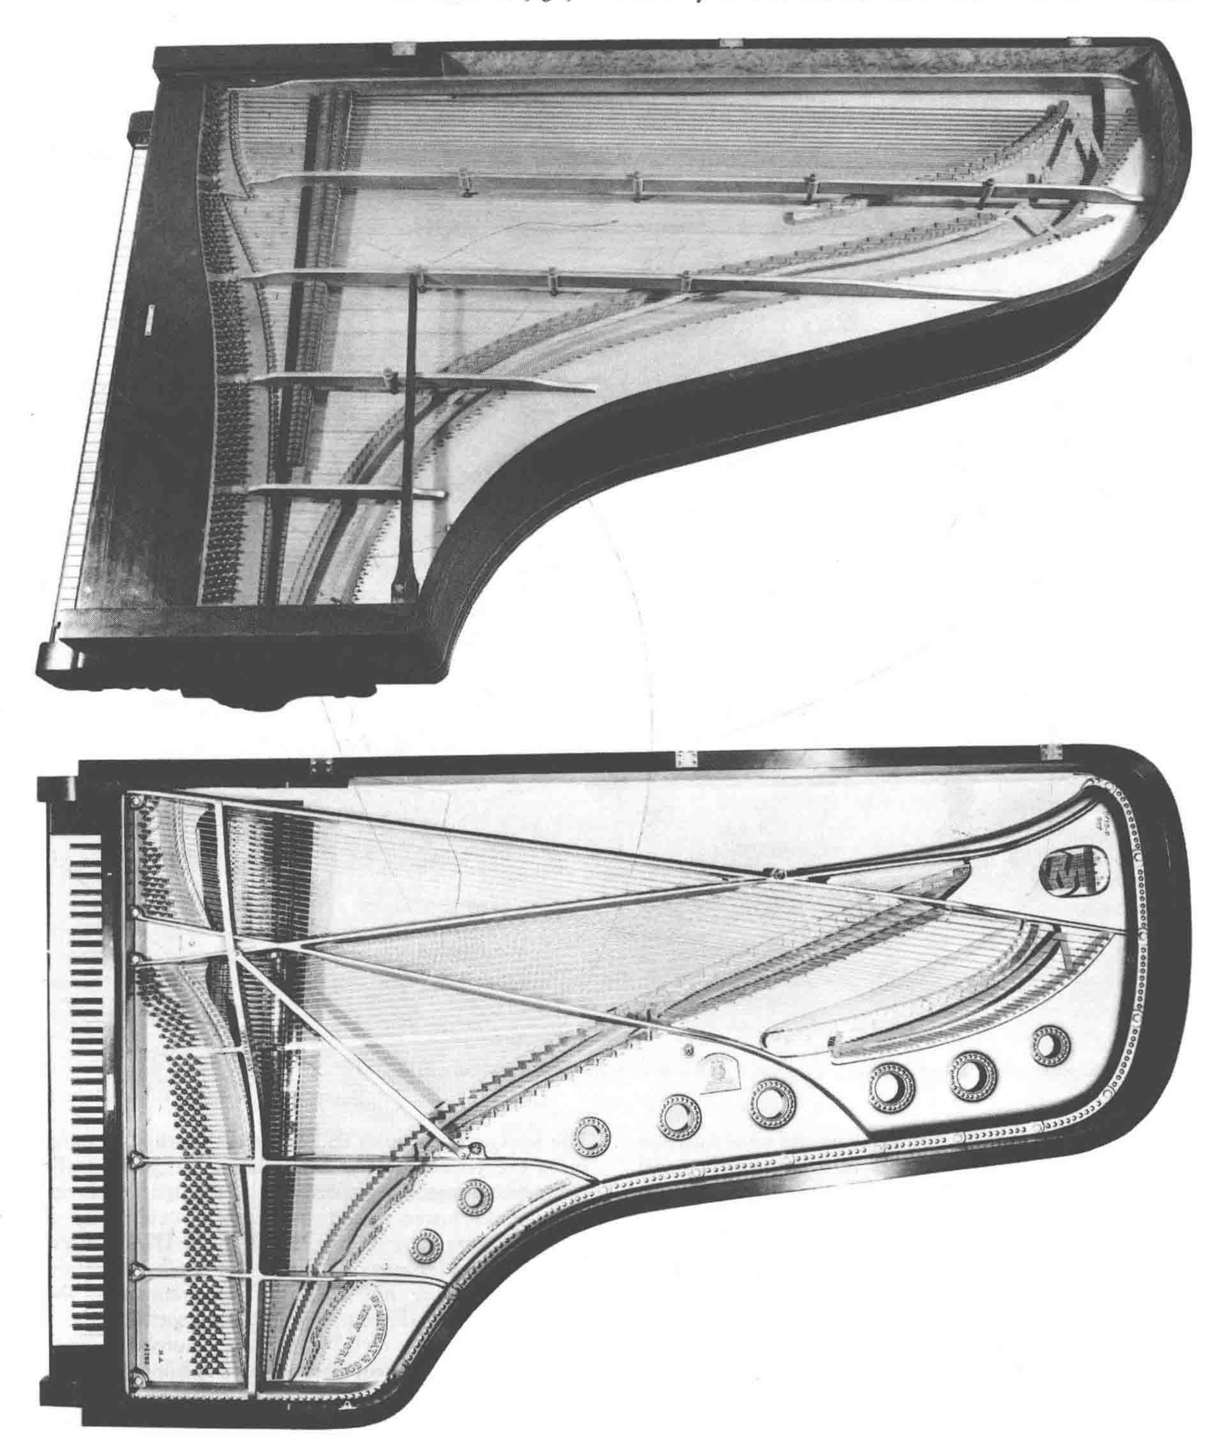
9. 1860–1915. The great change in the period from 1860 to World War I was the shift in piano manufacture from the craft shop to a factory system. Manufacturers before this time, such as Broadwood, the largest in the world with more than 300 employees, used no machinery and achieved virtually no economies of large-scale production. The typical small craft shop used labour-intensive methods to make a few instruments each year. The spread of factories brought a tremendous growth in piano production, making much less expensive instruments available to more modest households. The greatest change of this type took place in the USA, where production, as shown in Table 1, increased by 15 times between 1870 and 1910. Germany's output increased eight times and Britain's three times, while France's production rose only

27. View of the Action Room in the Chickering Pianoforte Manufactory, Tremont Street, Boston USA in 1887

28. Detail from Henry Steinway's patent for an overstrung piano, dated 20 December 1859

about 20%. It has been estimated that, based on comparative income levels, the cost of pianos approximately halved from 1850 to the end of the century. Such growth suggests that the second half of the century saw the actualization of aspirations often expressed in the first half: that even the most modest cottage might have a piano on which the greatest music would be played, that the piano would become the household's altar, the drawing-room's orchestra, the centre and focus of the concert hall. Pianists continued to be leading stars of the musical world. International tours by Rubinstein, Bülow, Paderewski and others continued the tradition begun by such pianists as Liszt, Thalberg and Clara Schumann, bringing the highest realms of pianism to ever-greater numbers of people.

TABLE 1: Estimates of piano production, 1870–1980 (in thousands)



Year	*Britain*	*France*	*Germany*		*USA*	*Japan*	*USSR*	*Korea*

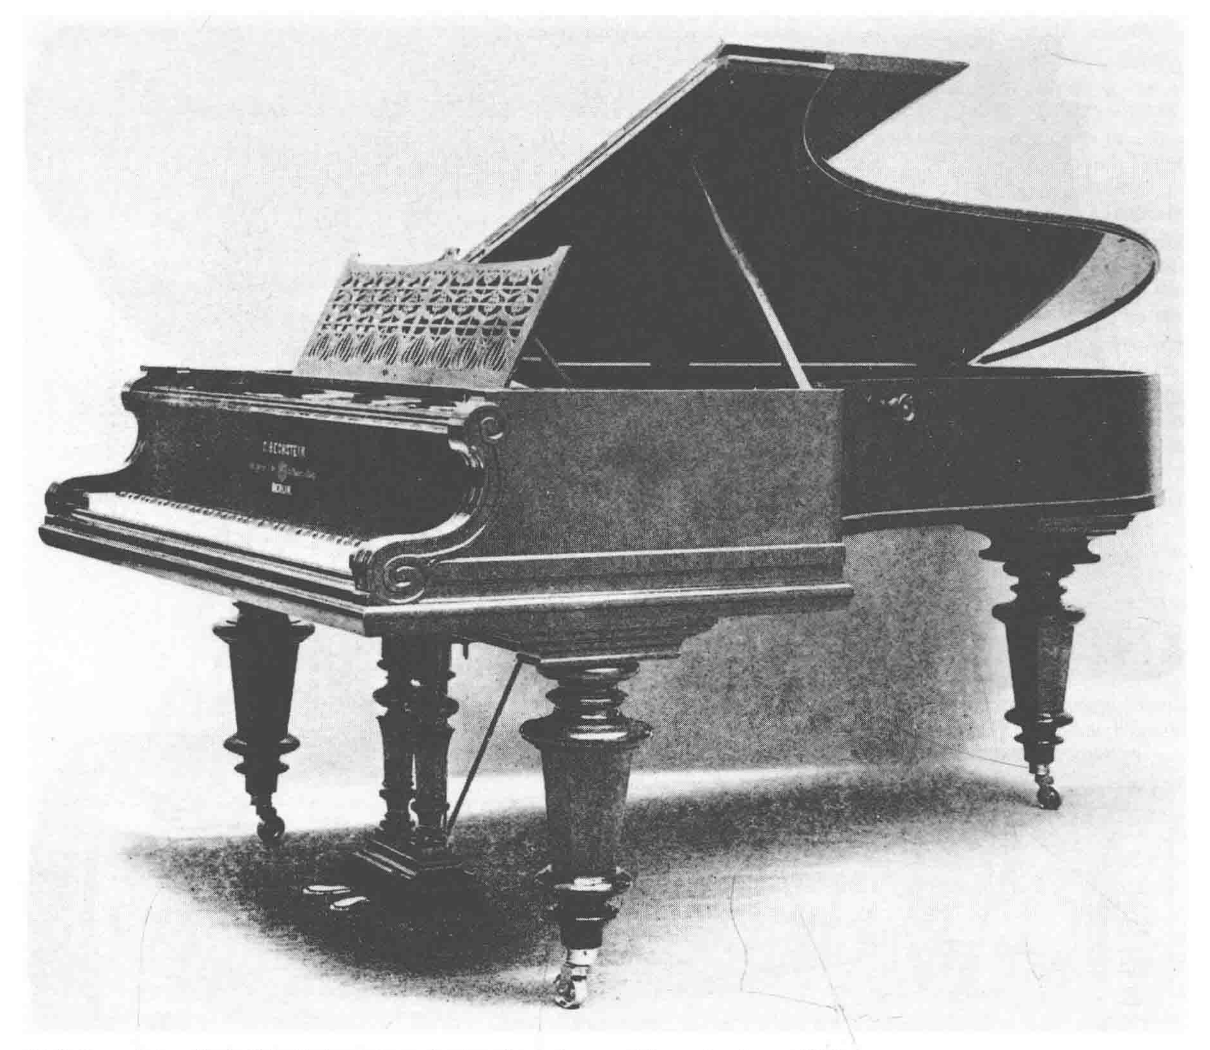
*c*1980	16	3	31	28	248	392	166	81

Note: estimates for 1960, 1970 and 1980 are taken from United Nations 'Growth of World Industry' and 'Yearbook of Industrial Statistics'; for earlier years see Ehrlich, 1976

This period also saw the beginnings of the standardization of what may justly be called the modern piano. Innovations of earlier years, such as overstringing, metal frames, felt hammer-coverings, refinements in actions, and the extension of the range from five octaves to seven or seven and a third, were combined and improved. Types and shapes of instruments were somewhat simplified as the century wore on. Large vertical pianos, such as cabinet pianos and 'giraffes', disappeared to be replaced by smaller uprights, standing only 4 to 5 feet (*c*1·2 to 1·5 m) in height. Such instruments were rapidly becoming the pianos of choice in middle-class European homes by the 1860s, and Broadwood made its last square in 1866. The Americans and Canadians retained their affection for the square for some decades longer. When, after 1865, Theodore Steinway began to concentrate production on the upright at the expense of the square, even workers in the factory objected, and American makers produced larger and larger squares as the century went along. But Steinway, which had made its first uprights in 1862, produced its last square in 1888, and in 1904 the association of American piano manufacturers gathered together all the squares they could find at their meeting in Atlantic City, New Jersey, and burnt them in a bonfire. Many squares survive as relics, but as the symbolism showed, their manufacture had essentially ceased.

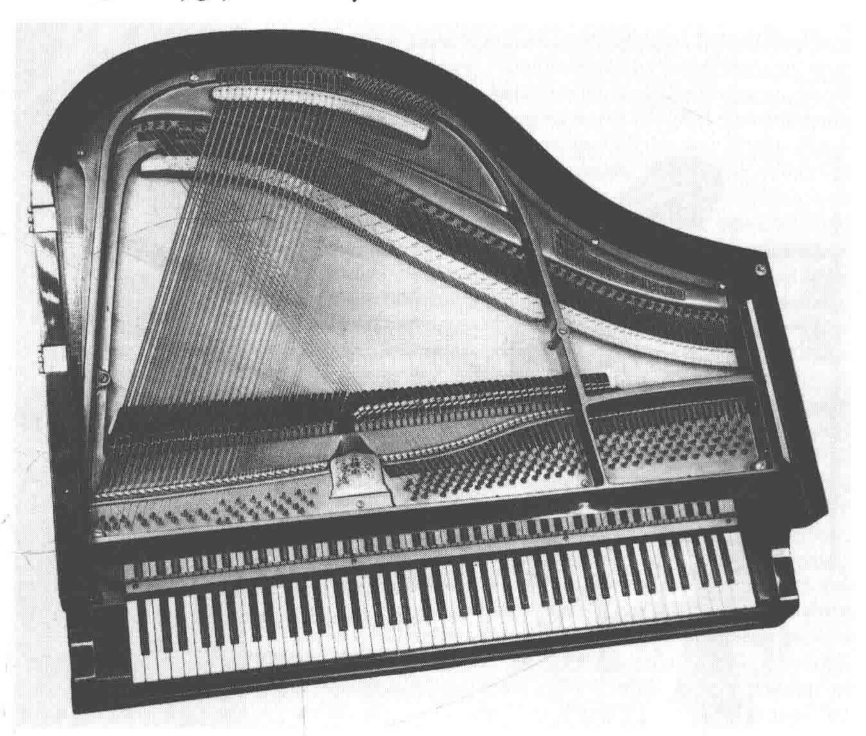
Steinway's 1859 patent for overstringing grand pianos (fig.28) produced what was essentially the modern grand (fig.29). It combined elements of earlier designs: the one-piece iron frame, patented for squares by Babcock, and for grands by Chickering (see §8 above); overstringing, which was pioneered by Jean Henri Pape for small uprights in the 1820s and was widely in use in squares; and the divided bridge, used by John Broadwood in the 18th century and refined in shape by Henry Steinway so that in combination with overstringing the bridge was brought closer to the centre of the soundboard, where vibrating efficiency was greater. Other design innovations came especially from the imagination of Theodore Steinway: the metal action frame, which prevented the warping of the action; the 'duplex scale', which proportioned the lengths of non-speaking parts of strings to the speaking parts in order to enhance the partials and the tone; and the laminated case, which was stiffer and more durable and, by some accounts, improved the tone with more efficient reflection of vibrations across the soundboard. His brother Albert Steinway patented the sostenuto pedal, the middle pedal in most modern grands, which allowed the sustaining of notes whose dampers were already up when the pedal was depressed. Many of these elements were copied by other makers, though Europeans on the whole did not use the sostenuto pedal until after World War II. Some experiments in redesigning keyboards were carried out, notably Józef Wieniawski's double-keyboard instrument with the treble on the right in one and on the left in the other (1876), Ferdinand Clutsam's concave keyboard (1907), and Paul von Janko's six-row, paired whole-tone keyboard (1882). These had only temporary success, Janko's more than the others. (*See* KEYBOARD.)



The Erard action became the most common, though other types were in use. Bösendorfer continued to provide Viennese as well as Erard actions until about 1910. Such makers as Broadwood, Chickering, Pleyel and Blüthner used actions of their own design for quite a time, but by

29. Plan views of grand pianos by Steinway, New York: a) straight-strung, 1857 (Smithsonian Institution, Washington, DC); b) overstrung 'model D', developed c1900

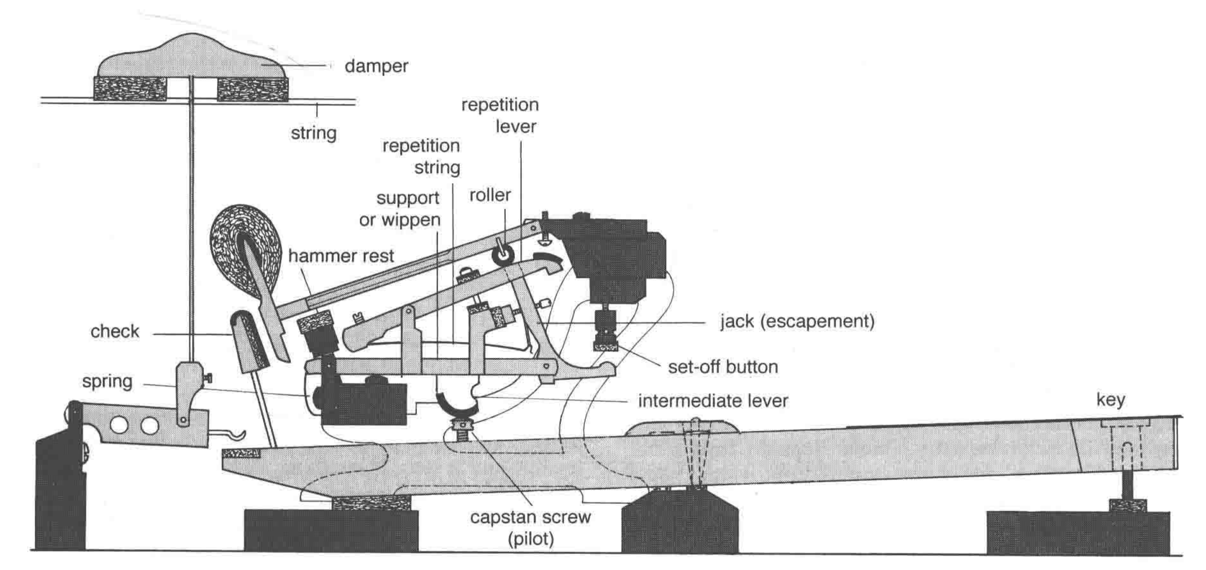
the early 20th century most of these had fallen out of use. Some makers, especially the English and French companies, held back from adopting the one-piece iron frame with overstringing, Broadwood making its first overstrung grand only in 1897 and Erard in 1901. Both continued to make straight-strung pianos after that. Blüthner used (throughout the 20th century) aliquot stringing in the top three octaves, with a fourth string above the others which vibrates sympathetically.



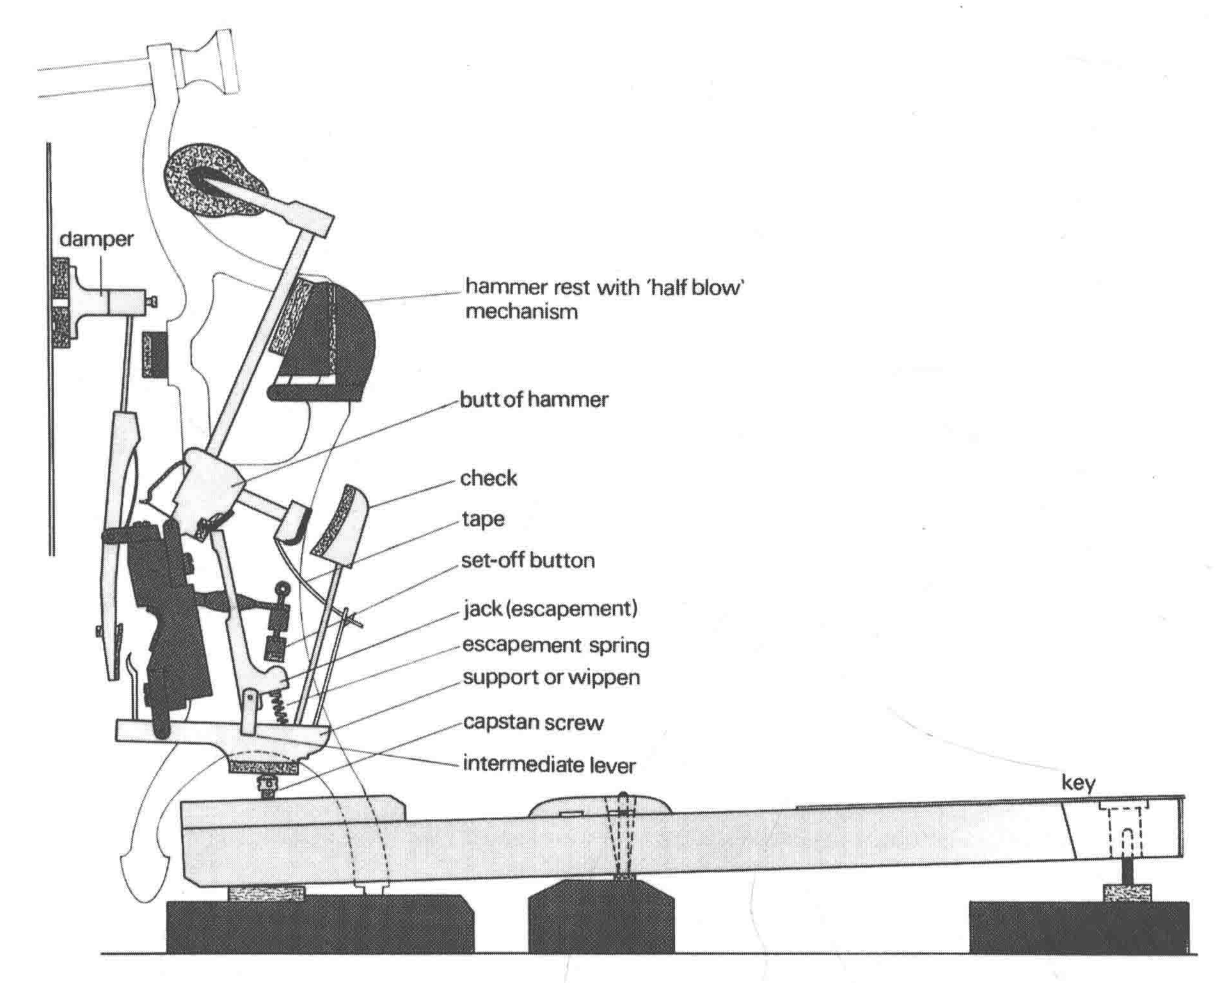
The die was cast in 1867, when at the Paris Exposition the piano competition was decisively won by the Americans. Steinway and Chickering argued inconclusively about which had taken the more important prize. Both were winners, and the outcome was dramatic. They were

30. Full grand piano (Style II) by Bechstein (reproduction after a photograph from a brochure, c1904)

emulated especially by German makers and some Austrian firms. Encouraged by successes in other international exhibitions such as Philadelphia in 1876 and Amsterdam in 1883, the Americans were able by shrewd marketing and vigorous pursuit of export trade to persuade the public that what was widely called the 'American system' was now the norm. It maintained quality and lowered cost by using machinery instead of manual labour, by rationalizing the division of labour and by standardizing parts. Cottage industries had long been employed for the production of some parts, but now the system was extended to all parts, and companies specializing in supplies multiplied. Foundries could cast frames to order, and wood could be properly seasoned and wooden parts supplied to order in many shapes and sizes. Companies specializing in actions had been known since the 1840s, and they certainly saved small makers a great deal of grief and money. The action makers were probably primarily responsible for the final victory of the Erard type of action. By using parts suppliers, even small companies could take advantage of economies of scale, and interchangeable parts meant that many small makers became, in effect, 'compilers' of pianos rather than manufacturers. The leading companies still boasted that they manufactured everything in their own plants, but their smaller competitors met a large need and a large market. People who could never afford a Steinway could buy an instrument made by Joseph P. Hale in the USA and revel in the status and musical presence of a piano. If Hale's instruments were not as 'good' as Steinway's, they nevertheless served essential musical and social needs.



The piano began to be more than a European instrument. It spread to European colonies, as colonial officials and settlers desired the cultural goods they had known at home. After the Meiji Restoration, when in 1868 Japan first opened itself to the West, the Japanese government began an intensive overhauling of the educational system, including the widespread teaching of the piano and violin in schools. American and European firms provided the instruments, though some Japanese makers such as Nishikawa of Tokyo began work even before the end of the 19th century. The American successes of 1867 also contributed to the extension of exports to all the world. Many firms did not participate, partly by choice, but the Germans and Americans were especially active, the Germans simply taking the Australian market away from



31. Baby grand piano (the 'Elfin') by Broadwood, London, manufactured in 1924–30 (private collection)

English makers and having large positions in South American markets. Steinway's expansion into Germany in 1880 gave the company a strong place in European and English markets, and Steinway was the export leader in the USA.

By the onset of World War I, as well as being an international instrument, the piano had become universal as well; no longer found mostly in the drawing-rooms of the wealthy, it was now a nearly ubiquitous furnishing and a source of pride and pleasure in even extremely modest homes. It had also become a modern instrument, manufactured by the latest technological means, designed to withstand climates of all sorts, and marketed by the most up-to-date methods. Some strains were to be found in the industry. The problems of labour unionization had yet to be solved, and the beginning of the 20th century saw some consolidations among firms, such as the purchase of several piano companies, including the proud

32. Action of a modern grand piano: on pressing the key the movement is transmitted via the pilot to the intermediate lever; the jack then acts on the roller of the hammer which rises towards the string. The moment the backward projection of the jack contacts the set-off button the jack moves back permitting the hammer to escape and to continue in free flight to strike the string and then begin its descent; it is then caught and retained by the check and repetition lever as long as the key remains depressed. If the key is partly released the hammer is freed from the check, and the roller is acted on directly by the repetition lever; it is thus possible to strike the key again by depressing the key a second time (the jack will re-engage with the roller only when the key has been fully released so that a full hammer stroke may be made)

33. Action of a modern upright piano: the movement of the key is transmitted directly to the jack which in rising pushes the hammer forward towards the string until the backward projection of the jack reaches the set-off screw, thus allowing the jack to escape and the hammer to fall back from the string to be caught by the check; the return of the hammer is assisted by the tape which is so adjusted to jerk the hammer away from the string at the moment of impact

old Boston firm of Chickering & Sons, by the American Piano Company. There were new companies, such as D.H. Baldwin in the USA, and rejuvenated old ones, such as Chappell in Britain and Ibach in Germany. Some old ones dropped from sight, notably Streicher in Vienna, and others were bought out, such as Brinsmead in England.

10. FROM 1915. World War I effectively stopped piano manufacture in countries immediately affected by it, though American production was only restricted. After the war, production soon reached pre-war levels in England, France and the USA, and by 1927 Germany had regained its prior capacity. Public demand for pianos increased mightily during the boom years of the 1920s, when there was also an astounding rise in the production of automatic pianos, especially in the USA. Already in 1919 their production was greater than that of ordinary pianos; in 1923 it reached a peak of 56% of the entire American output of pianos. These mechanisms, invented before the war, came to their flower afterwards (*see* PLAYER PIANO). Earliest in general production was the Pianola of the Aeolian (later Aeolian American) Corporation, first a 'piano player' set in front of the keyboard that actually depressed the keys, and later a 'player piano' with the mechanism inside the piano's case. In Germany the Welte-Mignon was first brought out in 1904 and the Hupfeld company's DEA REPRODUCING PIANO in 1905. The major American 'reproducing' mechanisms were Aeolian's Duo-Art and the Ampico of the American Piano Company, both released in 1913.

If the rise of automatic pianos tended to diminish the level of active piano playing, other advancing modes of entertainment and recreation may have accelerated decline. During the 1920s the radio was becoming ever more popular as a source of musical and other entertainment – and it was, if anything, even easier to play than the player piano. Competition from the cinema and the automobile for recreational time and money was becoming formidable. Piano playing still attracted many people: the number of music teachers in the USA, where these competing modes of entertainment flourished to the highest degree, actually rose during the 1920s and 30s. Nonetheless, during this period the piano's status as a domestic instrument receded and has never been quite regular.

34. Grand piano ('model 290, Imperial') by Bösendorfer, Vienna, first manufactured c1900 (Musikverein, Vienna)

With the Depression piano manufacture underwent a drastic decline. American production fell to 10% of its pre-Depression level by 1932, German production to about 6% and English to about 30%. Various more or less drastic remedies were tried. Very small grands, well under 1·5 m in length and sometimes in odd shapes, including symmetrical ones, were designed to appeal to families with aspirations to status but straitened finances. As sounding instruments they were 'babies' but not grand. The Mathushek Company in New York attempted unsuccessfully to reinstate the square, in sizes considerably smaller than those familiar in the late 19th century. Beginning in England, very small uprights (the Americans called them 'spinets'), barely higher than keyboard level, were made; they had small soundboards, short strings and 'drop' actions, all of which contributed to technological and tonal inadequacies. Many of them were virtually untunable, their touch was spongy and uncontrollable, their tone an assault on the ear. They were handsomely designed and took up little wall space and even less floor space, but they were probably responsible for a great many children's complete loss of interest in playing the piano. However admirable these attempts to overcome the financial difficulties of the 1930s, their musical contributions were, if anything, negative, and they have been discontinued by almost all manufacturers.

World War II brought an already badly depressed piano industry to a halt. Every country involved required piano companies to stop using valuable steel, iron and other materials for such frivolities as musical entertainment. Steinway manufactured gliders and was permitted to produce a few hundred small uprights for military use. German factories, almost entirely converted to war production, were mostly bombed out of existence (including Steinway's Hamburg factory). English and Japanese companies likewise contributed to the war effort. Some technological improvements came out of the war. The most important in materials were resin glues, less susceptible to temperature and humidity changes than hide glues, and plastics of various kinds, used for key coverings (ivory becoming unusable as elephants were endangered), for bushings, and more recently for cases, allowing considerable freedom in modifying if not completely altering external shapes. Manufacture has benefited from the efficiency of automation technologies. Otherwise there have been few advances in piano design or materials since World War II. There were experiments with microtonal pianos (*see* MICROTONAL INSTRUMENTS), especially in the 1920s, and various methods of modifying the sound by 'preparing' the piano, most famously by John Cage beginning in the 1930s (*see* PREPARED PIANO). The actions that became standard in the late 19th century have remained so: the Erard action for grands and the tape-check for uprights, though small uprights use drop actions. Overstringing is universal, and European makers have given up their antipathy to the sostenuto pedal. Hammers and dampers are still made of felt, actions of wood, frames of cast iron, soundboards of spruce. The range of all models has been standardized at seven and a third octaves except for a few larger sizes (e.g. Bösendorfer's Imperial Grand with eight octaves, fig.34). Sizes have also been to some extent standardized. The concert grand is about 275 cm long. Bösendorfer's Imperial is about 15 cm longer; the Challen company in England celebrated King George V's silver jubilee in 1935 with a grand 356 cm long; and Fazioli made the largest grand in production in the late 20th century, 308 cm long. Upright sizes have been standardized to 'full' about 122 to 132 cm; 'studio', about 114 cm; 'console', about 107 cm; and 'spinet', about 91 cm (the latter almost entirely abandoned).

After World War II North American and European industries saw serious compressions: formerly vigorous companies disappeared, various others combined (sometimes ending in dissolution), and there was general retrenchment, though tone quality was not seriously affected. Some successful American firms acquired famous European ones: Baldwin bought Bechstein in 1963, selling it again during hard times in 1987; Kimball, itself part of the Jasper Corporation from 1959, bought Bösendorfer in 1966 and the English action manufacturer Herrburger-Brooks. Steinway has had several owners not named Steinway since 1972, and the company's stock is now traded on the New York Stock Exchange. Only a few notable new enterprises emerged in Western countries. The firm of Alfred Knight, which made impressive uprights in England from 1935 and successfully exported them after World War II, was bought by Bentley Piano Co., which was in turn bought by Whelpdale, Maxwell & Codd in 1993. The ambitious Italian firm of Fazioli, founded in 1981, concentrates on the high end of the trade; its concert grand has received some enthusiastic reports. In the USA the Walter Piano Company (founded 1975) in Elkhart, Indiana, has produced excellent uprights and introduced grands; Fandrich & Sons (founded 1993) in Hoquiam, Washington, impressed many technicians in the mid-1990s with a redesigned upright action, but their

marketing has not been aggressive. The great story of the postwar period was the expansion of and dominance by the Japanese piano industry, followed closely by that of South Korea. The vigour with which Asian countries rebounded from the devastations of the 1940s and 50s was exemplified in the piano industry. By 1948 the leading Japanese companies, Yamaha (which had begun making uprights in 1900) and Kawai (established 1925), were again producing pianos, and by 1969, owing in part to extensive and systematic automation technologies, Japanese production of pianos outstripped that of all other countries. In the late 1970s, Yamaha alone was making more pianos than all American companies combined, with an output of about 200,000 annually, sold mostly in Japan. Production has recently slowed somewhat, though it remains the largest of any company. Two South Korean manufacturers, Young Chang (founded 1956) and Samick (founded 1958) have increased production and expanded their facilities. The economic difficulties experienced in 1997–8 apparently damaged the East Asian piano industry only temporarily. The Chinese industry has been less forward, though it has profited by technical advice from elsewhere, and Chinese pianos are being exported as well as sold domestically in increasing numbers. Though early exports of Asian instruments often had structural and tonal problems, considerable improvement has taken place.

A striking trend of the late 20th century was the spread of electronic keyboards and their offspring (*see* ELECTRIC PIANO and ELECTRONIC PIANO). Indeed, the term 'keyboard' has come in the USA to mean an electronic instrument, as distinct from a piano. Synthesizers and MIDI controllers now use the keyboard format almost exclusively, and it is a mild irony that these instruments on their stands look much like little 18th-century square pianos. Several companies have introduced computer-driven reproducing systems attached to conventional pianos, whereby the pianist can record a performance to disk and play it back on the piano itself, or play a pre-recorded performance from computer disk or compact disc. Yamaha has been in the forefront of this development, but Music Research Systems in the USA, which owns the Mason & Hamlin, Knabe and Sohmer piano brands names, pioneered a digital instrument, and both Baldwin and Bösendorfer have produced similar systems.

II. Piano playing

The history of piano playing is tied to a great many factors: the development of the instrument, the evolution of musical styles, shifts in the relationship of the performer to the score, the rise of virtuosity, the idiosyncrasies of individual artists, changes in audience tastes and values, and even socio-economic developments. On a more practical level piano playing is concerned primarily with matters of touch, fingering, pedalling, phrasing and interpretation. Even a discussion limited primarily to these can point out only the major signposts along the three centuries of the instrument's existence. Much of the lore surrounding the history of piano playing belongs more properly to the realm of anecdote or even myth than to scholarship; much work in this area remains to be done.

1. Classical period. 2. Romantic period. 3. 20th century. 4. Jazz piano playing.

1. Classical period. The earliest performers brought with them well-established techniques for playing the harpsichord and clavichord, both of which were essentially domestic instruments in spite of their cultivation at leading courts throughout Europe. The best international keyboard repertory required considerable agility, dexterity and coordination, but minimal strength. With a maximum range of five octaves, coupled with long-standing resistance on the part of composers to the fully chromatic use of the keyboard (embraced only by J.S. Bach), there were inherent limits to the musical and technical demands a composer might make upon a player.

Much emphasis has been placed upon the similarity of the early fortepiano to both the clavichord and the harpsichord. There exist parallels in case and in soundboard construction; but as far as the performer was concerned the piano imposed a set of new demands. The various escapements introduced as early as Cristofori allowed the pianist to exert more downward pressure than was feasible on a clavichord. The fortepiano, however, was without the resistance encountered in pressing a plectrum past a string; its dip was correspondingly shallower. While the dynamic range of the new instrument was greater than that of a clavichord, it could not achieve the clavichord's various gradations of *piano*, and its maximum volume was still less than that of a well-quilled harpsichord. The special skills required for playing the piano are acknowledged obliquely in C.P.E. Bach's *Versuch*, i (1753): 'The more recent fortepiano, which is sturdy and well built, has many fine qualities, although its touch must be carefully worked out, a task that is not without its difficulties'. It is known that both Carl Philipp Emanuel and his father had access to the Silbermann pianos at the court of Frederick the Great in Potsdam, where the former was employed, but apart from Johann Sebastian's suggestions for improving the action on his visit in 1747 there is no documentation of his performances on the new instrument. Hence for the first six decades or so after its invention the piano co-existed with its more established rivals. Marpurg's *Anleitung* (1755) treats keyboard instruments as a family with broad performance skills in common. Even Türk's *Clavierschule* (1789) – cited by Beethoven in a conversation book as late as March 1819 – is directed as much at clavichordists as pianists. Until one instrument came to be preferred by composers and players alike, it was not economically feasible to aim a method book at a specialized audience. It is probably safe to assume that a still hand and an even touch remained the primary objectives of keyboard players until well after the death of J.S. Bach.

The persistence of these virtues is displayed in a letter Mozart wrote to his father from Augsburg in October 1777, wherein he criticized in biting fashion the playing

of Stein's little daughter, Nannette, presumably on one of the maker's new fortepianos:

When a passage is being played, the arm must be raised as high as possible, and according as the notes in the passage are stressed, the arm, not the fingers, must do this, and that too with great emphasis in a heavy and clumsy manner. ... When she comes to a passage that ought to flow like oil and which necessitates a change of finger ... she just leaves out the notes, raises her hand, and starts off again quite comfortably. ... She will not make progress by this method ... since she definitely does all she can to make her hands heavy.

Mozart's rival Clementi still admonished his pupils in his treatise of 1801 to hold 'the hand and arm ... in an horizontal position; neither depressing nor raising the wrist. ... All unnecessary motion must be avoided'. Similarly, Dussek (1796) counselled the student 'never [to] displace the natural position of the hand'. Although Beethoven told Ries that he had never heard Mozart play, Czerny reported otherwise, attributing to Beethoven the observation that Mozart 'had a fine but choppy [*zerhacktes*] way of playing, no ligato'. This remark must be understood against the background of the gradual shift from non-legato to legato that had its beginnings in the high Classical period. Nevertheless, the keyboard music of Beethoven supplies the most imaginative examples of non-legato in the first quarter of the 19th century. In spite of his own legendary virtuosity and gift for improvisation, it is hard to form a coherent picture of Beethoven's performing style from contemporary reports. According to one of the best-known accounts, that by Carl Czerny, 'his bearing while playing was masterfully quiet, noble and beautiful, without the slightest grimace. ... In teaching he laid great stress on a correct position of the fingers (after the school of Emanuel Bach)'. But Czerny appears to contradict himself in reporting further that Beethoven's 'playing, like his compositions, was far ahead of his time; the pianofortes of the period (until 1810), still extremely weak and imperfect, could not endure his gigantic style of performance'. And, according to Beethoven's biographer Schindler, 'Cherubini, disposed to be curt, characterized Beethoven's pianoforte playing in a single word: "rough"'.

Whether Beethoven performed it himself or not, it is certain that works like the 'Hammerklavier' Sonata op.106 demanded far greater technical resourcefulness (including participation of the full arm) than anything written before 1818. The last articulate spokesman for the conservative Viennese tradition was Hummel, whose *Anweisung* (1828) emphasized 'ease, quiet and security' of performance. In order to realize these goals, 'every sharp motion of the elbows and hands must be avoided'. Nevertheless, Hummel consolidated many of the innovations in fingering that had been adopted by Beethoven and others. Almost two-thirds of his method is devoted to this subject, with great stress on the pivotal importance of the thumb. Along with his own music Hummel advocated serious study of J.B. Cramer's *Studio per il pianoforte* (1804–10) and Clementi's *Gradus ad Parnassum* (1817–26), two of the first systematic surveys of keyboard technique. Although Cramer's goal of the absolute equality of the ten fingers was eventually abandoned, his studies were recommended enthusiastically by composers with aims as diverse as Beethoven, Schumann and Chopin. The heavier, more resonant (and less clear) English instruments preferred (and, in Clementi's case, manufactured) by English and French performers are compared without prejudice by Hummel with the lighter, transparent Viennese instruments. The gradual domination of the English type, including the eventual adoption of the repetition patented by Erard in 1821, exercised a profound influence on the development of piano playing in the second half of the century.

2. ROMANTIC PERIOD. The dawn of Romanticism in the 1830s brought with it the specialization that produced a breed of pianists who were to dominate the salons and concert halls of Europe for the next 80 years. Although the number of amateur pianists continued to grow, the keyboard became increasingly the realm of the virtuoso who performed music written by and for other virtuosos. It is no accident that two composers on the threshold of the new movement, Weber and Schubert, each wrote a great deal of highly original piano music but were also highly original orchestrators, while two full-blooded Romantics of the next generation, Chopin and Schumann, have their achievements more clearly bounded by the capabilities and limitations of the piano. Weber was an accomplished pianist, but both he and Schubert dreamt of success in opera; Chopin became a highly polished virtuoso, while Schumann tried to become one. Among Romantic composers, some shunned or showed little interest in the piano (Berlioz, Verdi, Wagner), and others lived from its extraordinary powers, both as performers and teachers (Chopin, Liszt, Thalberg). This division helps to explain the intense interest after Beethoven's death in developing a range of sonorities for the solo piano that could be compared to an orchestra. Perhaps the most colourful example of this concern is the account by Charles Hallé of a concert he attended in Paris in 1836:

At an orchestral concert given by him and conducted by Berlioz, the 'Marche au supplice', from the latter's *Symphonie fantastique*, that most gorgeously orchestrated piece, was performed, at the conclusion of which Liszt sat down and played his own arrangement, for the piano alone, of the same movement, with an effect even surpassing that of the full orchestra, and creating an indescribable furore.

The problems of studying piano playing are even more formidable over the Romantic era than over its beginnings. There are several reasons for this. In spite of the proliferation of method books by such artists as Moscheles, Herz and Kalkbrenner, none of the most innovatory contributors to 19th-century pianism (Schumann, Mendelssohn, Chopin, Tausig, Liszt, Brahms and Leschetizky) compiled similar guides. Chopin left behind the barest torso of a method book, apparently prompted largely by financial considerations and perfunctory in all but two respects. The closest testimonial in the case of Liszt is the largely neglected *Liszt-Pedagogium* (Leipzig, 1902), assembled by Lina Ramann with fellow pupils including August Göllerich.

Even more exasperating than the lack of guidance from the major performers themselves is the imprecision of the accounts in an age that worshipped flights of poetic fancy. From a novelist like George Sand one might expect the following description of Liszt at the keyboard:

I adore the broken phrases he strikes from his piano so that they seem to stay suspended, one foot in the air, dancing in space like limping will-o'-the-wisps. The leaves on the lime trees take on themselves the duty of completing the melody in a hushed, mysterious whisper, as though they were murmuring nature's secrets to one another.

But the description of a professional musician like Hallé is scarcely of greater value:

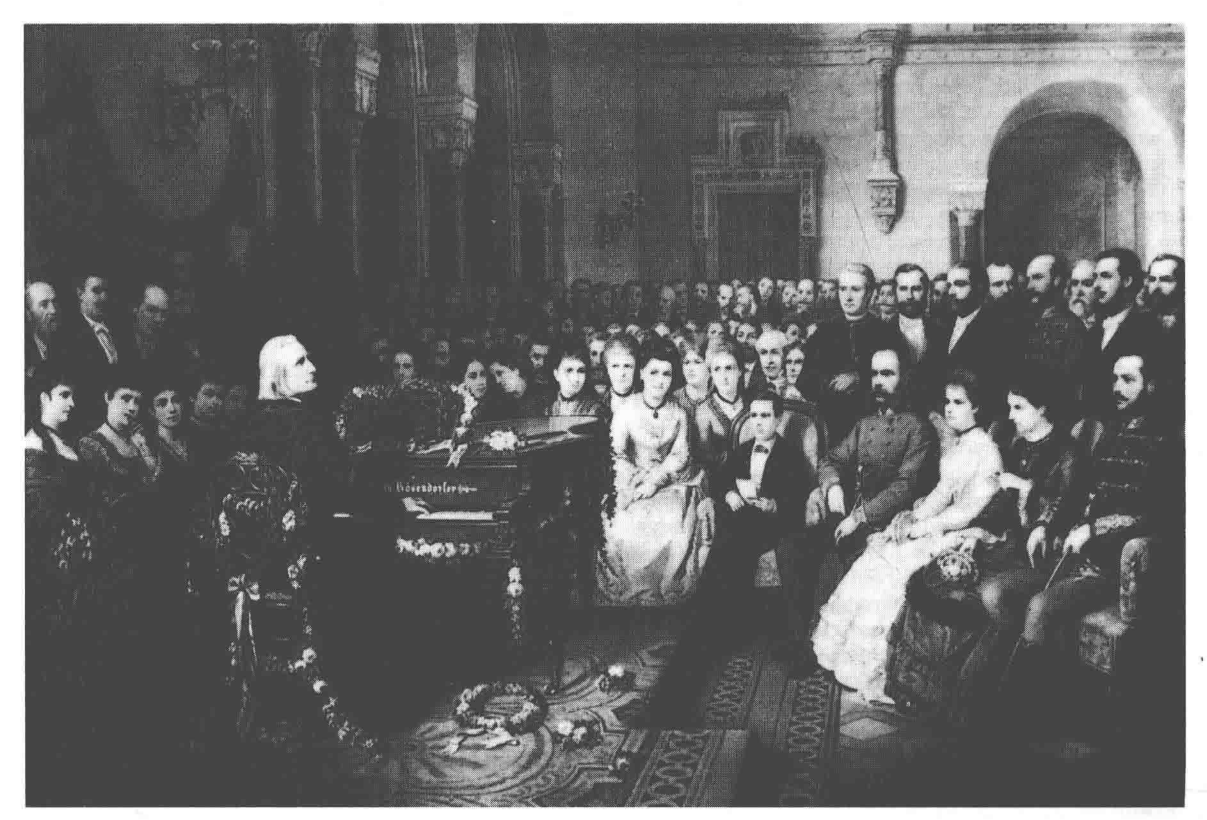
One of the transcendent merits of his playing was the crystal-like clearness which never failed him for a moment, even in the most complicated and, for anybody else, impossible passages ... The power

he drew from the instrument was such as I have never heard since, but never harsh, never suggesting 'thumping'. Nor is Schumann's comment to Clara: 'How extraordinarily he plays, boldly and wildly, and then again tenderly and ethereally!'.

Mendelssohn is only slightly more helpful:

> [Liszt] plays the piano with more technique than all the others ... a degree of velocity and complete finger independence, and a thoroughly musical feeling which can scarcely be equalled. In a word, I have heard no performer whose musical perceptions so extend to the very tips of his fingers.

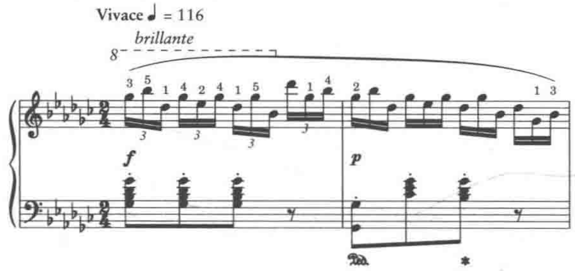
In the case of Chopin, the other revolutionary of Romantic piano playing, the ground is slightly firmer. It seems astonishing that, even as a fresh arrival in Paris, he could make the following remark:



> If Paganini is perfection itself, Kalkbrenner is his equal, but in a quite different sphere. It is difficult to describe to you his 'calm' – his enchanting touch, the incomparable evenness of his playing and that mastery which is obvious in every note.

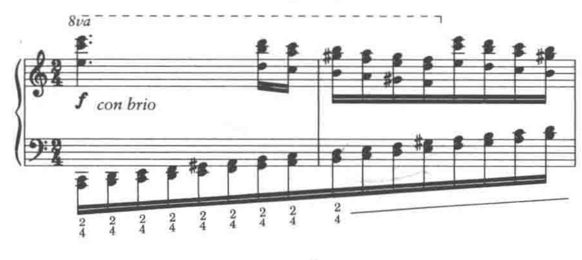
Certain characteristics of Kalkbrenner's conservative style lingered, as in Chopin's advice to his young niece Ludwika to keep the 'elbow level with the white keys. Hand neither towards the right nor the left'. Chopin staked out a more individual position in the tantalizing fragment of a piano method, owned and transcribed by Alfred Cortot (now in *US-NYpm*; see J.J. Eigeldinger: *Chopin, vu par ses élèves*, Neuchâtel, 1970, 3/1988; Eng. trans., 1986 as *Chopin: Pianist and Teacher*):

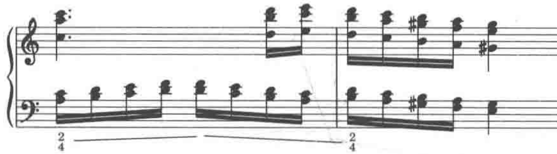
> Provided that it is played in time, no one will notice inequality of sound in a rapid scale. Flying in the face of nature it has become customary to attempt to acquire equality of strength in the fingers. It is more desirable that the student acquire the ability to produce finely graded qualities of sound ... The ability to play everything at a level tone is not our object. ... There are as many different sounds as there are fingers. Everything hangs on knowing how to finger correctly. ... It is important to make use of the shape of the fingers and no less so to employ the rest of the hand, wrist, forearm and arm. To attempt to play entirely from the wrist, as Kalkbrenner advocates, is incorrect.



Chopin recommended beginning with the scale of B major, 'one that places the long fingers comfortably over the black keys. ... While [the scale of C major] is the easiest to read, it is the most difficult for the hands, since it contains no purchase points'. Although Hummel is cited by Chopin as the best source for advice on fingering, his own contributions to this area were bold and innovatory. The 27 studies composed in the decade between 1829 and 1839 (including three for Fétis and Moscheles's *Méthode des méthodes*) are a manifesto for techniques still in widespread use. While Cramer, Clementi and Hummel all include exercises based on arpeggios, Chopin extended their comfortable broken octaves to 10ths and even 11ths in his op.10 no.1; in spite of the easily imagined difficulties of high-speed execution he wrote to the strength of the hand, avoiding, for example, the weak link between the third and fourth fingers. The 'Black-Key' Etude op.10 no.5 teaches the thumb to be equally at home on black or white keys (ex.1). The study in octaves, op.25 no.10, demands the participation (forbidden by Kalkbrenner) of the entire arm. Chopin provided fingering more frequently than almost any other 19th-century composer, adding them not only to autographs and copies but into editions used by students such as Jane Stirling.

Although Liszt's earliest efforts at technical studies were contemporary with those of Chopin, his own 'transcendental' studies, not published in their final form until after the latter's death, are repeatedly influenced by





35. Liszt playing a grand piano by Ludwig Bösendorfer before Franz Josef in Budapest: painting (1872) by an unknown artist (private collection)

Ex.1 Chopin: Study in G♭, op.10 no.5

Ex.2 Liszt: Paganini Study no.6

Ex.3 Brahms: Rhapsody in E♭, op.119 no.4

Chopin's example. The necessity for full involvement of the arm is readily evident from Liszt's fingerings in passages such as ex.2, from the sixth of the Paganini Studies. Brahms, who wrote two sets of variations on the theme of Paganini's A minor Caprice, favoured extensive cross-rhythms and metric shifts in his keyboard music. His specific contributions to piano technique are summarized in the 51 *Übungen* (1893), which feature large leaps, sudden extensions and equally sudden contractions, and the passing of the fifth finger (i.e. the whole hand) over the thumb. This last device is employed freely in both hands of his last piano piece, the Rhapsody op.119 no.4 (ex.3). Because of the lesser leverage available in the actions of the Viennese pianos that Brahms preferred, much of this technical expansion was accomplished on instruments with markedly greater resistance than that of present-day grands. Although data has been published purporting to show a steady increase in resistance through the 1870s, followed by a fall in the 20th century, much more extensive and reliable information will be needed before generalization about the relative touch of differing instruments will be possible. In the second half of the 19th century the only constant in this area was probably variety.

The single most important development in the sound of the Romantic piano was doubtless the new emphasis on the sustaining (or damper) pedal. Although Czerny claimed that Beethoven 'made frequent use of the pedals, much more frequent than is indicated in his works', the sustaining pedal was almost universally regarded, up to the first quarter of the 19th century, as a special effect. Writers from Dussek (1796) to Adam (1802) and Hummel (1828) condemned the indiscriminate use of the sustaining pedal, reserving it for passages where an unusual sound was desired (as in the recitative added at the recapitulation of Beethoven's D minor Sonata op.31 no.2; ex.4). Directions for raising the dampers were transmitted in very individual ways by Romantic composers; Schumann was among the first to specify simply 'Pedal' at the head of a passage or movement, while Chopin generally supplied precise and detailed instructions (frequently

Ex.4 Beethoven: Sonata in D minor, op.31 no.2, 1st movt

ignored or suppressed by his 19th-century editors). It is seldom clear whether Chopin intended those passages not marked (such as all but the first three bars of the opening section of the F major Ballade op.38) to be played without the sustaining pedal, or whether it was to be added as general colouring at the performer's discretion.

Liszt's teacher Czerny was one of the first to exchange public performing for full-time instruction, but a dominant specialist teacher did not emerge until after mid-century in the person of Theodor Leschetizky, who numbered among his pupils Paderewski, Gabrilovich, Schnabel, Friedman, Brailowsky, Horszowski, Moiseiwitsch and many more who achieved international fame. Although it became fashionable to speak of the 'Leschetizky method', Leschetizky himself steadfastly refused to freeze his views into print. In searching for the kernel his student Moiseiwitsch observed that 'above all there was his tone. No-one had a tone like his. He never taught us any "secret" there; one just picked up something of the lustre from him'. Perhaps an even greater contribution was Leschetizky's detailed and painstaking approach to the study of repertory, a tradition still pursued in countless masterclasses. Although his English successor Tobias Matthay (of German parentage) produced many books on piano playing, their tortuous language required explications by students (e.g. A. Coviello: *What Matthay meant*, 1948). Matthay's emphasis on muscular relaxation and forearm rotation was valuable as far as it went but has needed modification in the face of more detailed physiological investigations such as those of Otto Ortmann (1929). Ortmann's research led him to the not surprising conclusion that the most efficient playing requires a judicious balance between muscular relaxation and tension.

Few editors of piano music before 1930 approached their task with the reverence for the composer's intentions found in Schenker's 'Erläuterungsausgaben' (1913–21) of the late Beethoven sonatas. It was not only customary but expected that an editor would add his interpretative suggestions to those provided by the composer, rarely bothering to distinguish between the two. Since most 19th-century editors were themselves active performers who frequently claimed direct association with the composer of the repertory being edited, an interventionist attitude was inevitable. The most frequent text changes were the addition of articulation slurs in the music of Bach and Handel – then considered a regular part of the piano repertory – or the exchanging of articulation slurs (especially in the Viennese repertory from Haydn to Schubert) for longer phrase markings. The wholesale addition of dynamic and pedal indications was equally acceptable. In performance the pianist reserved the right to introduce further changes, perhaps restricted to a few discreet octave doublings but perhaps also extending to the interpolation of embellishments and cadenzas. Although it is known that both Beethoven and Chopin objected to such practices, the practices flourished. The most gifted practitioner may have been Liszt, who did not regard even Chopin's music (as the latter bitterly noted) as sacrosanct. Nevertheless, Chopin himself occasionally interpolated embellishments and cadenzas into his music, as shown in an annotated version of op.9 no.2, which shows a variant of the cadenza and an added flourish to the final bar. In later years Liszt renounced his earlier habits, crusading relentlessly over the tinkling of salon music for the acceptance of works by Beethoven, Schubert, Berlioz and others.

The recent vogue for 'Urtext' editions has reaffirmed the importance of the composer in the chain leading to actual performance, but an enthusiasm for textual purity can prove dangerous when accompanied by naivety about the performing conventions and traditions known to contemporary players. In general, variety in articulation persisted much longer than is usually acknowledged, proving essential not only in the music of Haydn and Mozart but also in that of Schubert and Chopin. Romantic composers handled the issues of phrasing and articulation in highly individual ways, frequently alternating between the two types of notation within the same movement, section or even phrase. Because of the complex relationships among primary sources it is rarely a simple matter to establish an 'Urtext', as the comparison of two such editions of almost any work will prove. The realization that not only Mozart and Beethoven but also Chopin and Liszt played on instruments quite different from our own raises the nagging question of whether a modern performer on a modern instrument should attempt to adapt his playing style to that of the earlier piano or should feel free to make changes he feels are necessitated by intervening developments. Indeed, until a significant number of 19th-century instruments by such makers as Graf, Streicher, Broadwood, Bösendorfer, Pleyel, Erard and Steinway are restored to concert condition, there can be little more than speculation as to how they actually sounded, or even whether it would be desirable to include them as a regular part of concert life. Who would advocate playing keyboard music before Dussek (supposed to have been the first to turn his right profile to the audience) with his back to his listeners? Should music before Liszt (the first to perform regularly in public from memory) be played with the music and a page-turner? The renewed interest in historical performance will not make the performer's task less complex; it both increases the number of options and the obligation to become fully informed.

3. 20TH CENTURY. The development of piano playing in the 20th century received its major impetus from Claude Debussy, who took up where Chopin had left off five decades earlier. Unlike most 19th-century piano composers, Debussy was no virtuoso (few accounts of his playing, and only a fragmentary recording accompanying Mary Garden in a scene from *Pelléas*, survive), but he was on intimate terms with the instrument to which he returned again and again. His piano music is an eclectic blend of Couperin and Chopin (the keyboard composers he admired most) combined with daring new harmonies and textures. The *Suite pour le piano* (1901) proved a landmark in 20th-century pianism, skilfully blending three centuries of keyboard tradition. It should be noted that Debussy achieved his finely graded pedal effects (never specified but always an integral part of the texture) without the benefit of the middle 'sostenuto' pedal found on most modern concert instruments. The capstone to Debussy's piano writing is the set of twelve *Etudes* (1915), fittingly dedicated to Chopin. Beginning with the spoof on 'five-finger exercises' through a chord study, these essays prepare the performer not only for the rest of Debussy's piano music but for much of the keyboard music that followed. Unlike the Romantic composers who cultivated a homogeneous blend, Debussy revelled in

'opposed sonorities', as in his *Etude* of that name (ex.5). In spite of notational fastidiousness in matters of dynamics and phrasing, he elected in the preface of the *Etudes* to grant the performer complete freedom in another important area:

To impose a fingering cannot logically meet the different conformations of our hands. ... Our old Masters ... never indicated fingerings, relying, probably, on the ingenuity of their contemporaries. To doubt that of the modern virtuosos would be ill-mannered. To conclude: the absence of fingerings is an excellent exercise, suppresses the spirit of contradiction which induces us to choose to ignore the fingerings of the composer, and proves those eternal words: 'One is never better served than by oneself'. Let us seek our fingerings!

The cross-influences between Debussy and Ravel may never be entirely sorted out, but it is at least clear that Ravel remained more drawn to the cascades of virtuosity inherited from Liszt. His special fondness for rapid repeated notes (as in *Gaspard de la nuit*) presupposes a crystalline control of touch and nuance essential to all of his music. Although also influenced by Debussy, Bartók travelled an increasingly individual path, beginning with the *Allegro barbaro* of 1911. He is noted for the spiky dissonance that punctuates his keyboard music, but it is too often forgotten that his own playing – both from the recollections of contemporaries and the evidence of numerous sound recordings – was infused with great elegance and rhythmic subtlety. Nevertheless, his frank exploitation of the percussive capabilities of the piano helped pave the way for the experiments with 'prepared' pianos first introduced in Cage's *Bacchanale* (1940) and embraced by many composers since. The placing of small wedges of india-rubber or other materials between the strings to modify the sound is curiously analogous to the mechanical means used in the harpsichord of two centuries

Ex.5 Debussy: Etude X (*Pour les sonorités opposées*)

earlier. Other means of tone production, such as tapping the case or the soundboard, have also been added. No standardized notation for transmitting these directions has evolved, varying not only from composer to composer but from work to work by the same composer. These idiosyncratic developments, along with the new interest in historical performance, have helped mitigate the increasing postwar homogenization in the interpretation of the standard repertory.

See also KEYBOARD MUSIC, §III, 6–7.

4. JAZZ PIANO PLAYING. As an improvised art which is often highly complex, jazz places special demands on piano technique, and jazz pianists have evolved a brand of virtuosity quite distinct from that of the classical tradition. Jazz and blues pianists have not generally set out to acquire an all-embracing technique capable of handling a wide-ranging body of literature; each has concentrated instead on mastering a few technical problems which pertain to his or her individual style, personality and interests. Within these deliberately narrow confines their technical attainments have been quite remarkable, for example the perfect rhythmic separation of the hands required by the boogie-woogie style, the rapid negotiation of wide left-hand leaps in the stride style, or such individual traits as Teddy Wilson's gentle emphasis of inner counterpoints with the left thumb; even classical pianists have difficulty handling these technical problems without sacrificing jazz propulsion or 'swing'. Thus pianists of quite limited technique such as Jimmy Yancey, Thelonious Monk and Horace Silver have developed distinctive and inventive jazz styles, whereas virtuosos such as Friedrich Gulda, André Previn or Peter Nero have not been as successful.

Jazz piano playing evolved early in the 20th century from several separate strands, the most important being ragtime, which was easily within the grasp of the amateur pianist. Its characteristic features – a march-like accompaniment pattern in the left hand against syncopated broken chords in the right – became more technically complex in the 1920s with the Harlem stride school. In a spirit of keen competition its members deliberately set out to dazzle listeners, and especially colleagues, with the speed and daring of their technique. One feature that became almost a fetish was the 'solid left hand', where three-octave leaps at rapid tempo were not uncommon and octaves were regularly replaced by 10ths. By contrast, the right hand played light and feathery passage-work with rapid irregular 3rds, 4ths and pentatonic runs (fingered 3–2–1–2–1). The finest jazz technician, Art Tatum, was especially adept at integrating the hands in rapid passage-work and commanded the admiration of Horowitz; few jazz pianists have been able to match his virtuosity, the only exception perhaps being Oscar Peterson.

A contrasting style arose in the late 1920s with the work of Earl Hines. His 'trumpet style' translated many of the inflections of jazz trumpeting to the right hand of the piano in the form of irregular tremolandos, clusters and punched chords and a thin texture with abrupt *sforzati* and cross-accents. Another development was the boogie-woogie blues style of the 1930s. Here an unwavering rhythmic pattern in the left hand was offset by irregular cross-rhythms and superimposed quintuplet and sextuplet subdivisions in the right, necessitating an absolutely secure rhythmic separation of the hands.

Though crude and homespun by the standards of Tatum and Hines, boogie-woogie nevertheless left its mark on later rhythm-and-blues and rock pianists.

In the 1940s, the 'bebop' style represented a radical rethinking and simplification of previous jazz piano playing. The rhythmic function of the left hand was taken over by the drums and bass of an ensemble and the pianist was left to spin out long lines of 'single-note' melodies (i.e. with one note played at a time) while outlining the harmonic progressions and 'kicking' the beat with sparse chords in the left hand. The emphasis was on a precise and mobile right-hand technique capable of sudden cross-accents, which were generally accomplished by a quick wrist staccato. The inevitable outcome of this approach was an extremely restrained sonority (the pedals were virtually ignored), yet the best bop pianists such as Bud Powell, Thelonious Monk and Horace Silver cultivated a readily recognizable and inimitable touch.

Key figures of the late 1950s to rediscover the different timbres of the instrument were Bill Evans and Cecil Taylor. Evans cultivated an understated technique consisting of blurred pedal effects, careful spacing of notes in a chord ('voicing'), a fondness for low dynamic levels and implied rather than explicitly stated rhythms. Taylor, who had conservatory training, chose avant-garde art music as his starting-point and pursued an extrovert and physically demanding style with clusters, glissandos and palm- and elbow-effects such as those found in Stockhausen's later piano pieces. Both pianists made use of the full tonal range of the instrument, but to completely different ends.

By the later 20th century, emerging jazz pianists were usually trained in a sound classical technique and had a historical grasp of earlier jazz piano playing. This has led to interesting hybrids of classical and jazz technique, especially apparent in the work of Keith Jarrett and Chick Corea. The technical expertise of the players is considerable and almost encyclopedic in scope. The advent of the electric piano has brought a new array of technical problems, such as the handling of the bend bar and the manipulation of volume, wah-wah and other pedals; these have been particularly well mastered by Herbie Hancock and Josef Zawinul. Present-day jazz pianists, however generally prefer the acoustic to the electronic instrument and continue to probe new styles, whether the intricate rhythmic procedures of JoAnne Brackeen and Brad Mehldau, or the virtuoso effusions of Simon Nabatov.

Piano music. *See* KEYBOARD MUSIC, §III.

Piano orchestrion. A variation of the ORCHESTRION, being a self-playing piano with organ pipes and other devices (such as percussion) added. *See also* MECHANICAL INSTRUMENT.

Piano player [cabinet player, push-up player]. An automatic piano-playing attachment consisting of a self-contained cabinet pushed in front of an ordinary piano and having a row of felt-covered wooden 'fingers' projecting over the keyboard. The cabinet contains a pinned barrel, perforated paper roll or other medium containing the musical programme, which, when set in motion by means of a foot pedal or other mechanism, causes the wooden fingers to depress the keys of the piano keyboard. The piano player developed from the BARREL PIANO, and was the forerunner of the self-contained PLAYER PIANO. *See also* MECHANICAL INSTRUMENTS.

□

Piano quartet. A composition for piano and three other instruments, usually violin, viola and cello. The form grew out of the accompanied keyboard divertimentos of the 1750s to 80s (*see* ACCOMPANIED KEYBOARD MUSIC) and is loosely related to the early keyboard concerto; many concertos were published for keyboard with two violins and bass instrument (cello). Before about 1780 that scoring was preferred in many quartets; works with viola started to appear in significant numbers from 1780 to 1800, during which time the two-violin scoring was especially common in arranged quartets published in Paris. From 1800 onwards the scoring for viola was more common, although a separate tradition developed of quartets for keyboard with miscellaneous (including wind) instruments.

In England and France, the accompanied sonata tradition (with the keyboard part as the central focus and the strings lightly accompanying) held sway during the early period (works by Tommaso Giordani, Charles Avison, Garth and Pugnani in England; Gaetano Boni, Bonjour and J.A. Bauer in France; and Giardini, J.-F. Edelmann, J.S. Schröter, Venanzio Rauzzini in both), while in Vienna and elsewhere concerto-like works by Vanhal and G.C. Wagenseil were widely disseminated. Most works from before 1790 were entitled 'sonata', but 'quartet' in various forms gained favour by 1800. The viola scoring and quartet designation seems to have become standardized first in Vienna during the 1780s in parallel with the increasing use of the piano and the growth there in music publishing.

During the 1780s and 90s, Vienna exhibited something of a flowering of piano quartets. After Mozart's two of 1785 and 1787 (K478 and 493), Hoffmeister followed with a set of six in 1788 and E.A. Förster with six in 1794–6. During the same period large numbers of arrangements of works by Haydn and Pleyel were published in Paris and quickly picked up by other publishers across Europe. The Viennese outpouring continued with works by Paul Wranitzky in 1798, and grew further between 1800 and 1805, with quartets by Beethoven, Eberl, Kauer, Franz Clement, Struck, Tomašek and several others.

Beethoven's three earliest piano quartets date from his youth in Bonn (WOO36, 1785). His op.16 arrangement of his piano and wind quintet is one of many widely disseminated arrangements. Music dealers' catalogues published in 1799 and 1817 listed arrangements of works by Haydn, Mozart and Pleyel amounting to 18 and 51 respectively, many of them originating in Paris and perhaps motivated by a desire to provide new materials for dilettante keyboard players (especially women). Andréin Offenbach produced two different perodical series of keyboard music and chamber music intended for female audiences that included both original and arranged piano quartets (*Journal de musique pour les dames* and *Etrennes pour les dames*).

With changes in musical style, the piano quartet developed and came to have much in common with the PIANO QUINTET. Keyboard style and the disposition of the musical materials among the instruments has generally reflected the overall musical style of the composers writing the pieces. The quartets of Prince Louis Ferdinand of Prussia, who studied the piano with Beethoven, were especially popular. His F minor quartet op.6 was cited by Schumann as one of many influences that shaped his 1829 C minor quartet, along with quartets by Ferdinand Ries, Weber, Dussek, J.B. Cramer and others, and exposure to these works no doubt helped shape his later op.47 quartet. Mendelssohn's three quartets (opp.1–3) exhibit a disposition of the instruments not often found in earlier works (where the basic principle was juxtaposition and alternation of the string body with the piano, as well as of solo with accompanimental textures), wherein the piano sometimes provides only a single line: the musical substance is conveyed by the strings, so that the piano is deployed as just another instrument within the chamber texture, not as one instrument equal in importance to the strings as a group. Brahms also avoids excessive emphasis on a soloistic role for the piano in his opp.25 and 26 quartets, where the string instruments are almost never

presented as soloists accompanied by the piano, another texture quite common in earlier works.

By the late 19th century, the piano quartet was established as a genre of serious chamber music, in marked contrast to its beginnings in a tradition originally destined for dilettantes. There are works from this period by Chausson, Dvořák, Fauré, Foote, d'Indy, Raff, Reger, Rheinberger, Saint-Saëns and Richard Strauss. From the 20th century there are works by Bax, Copland, Feldman, Foss, Martinů, Milhaud, Piston, Schnittke and Walton among others, as well as works by Hindemith and Messiaen with clarinet rather than viola. Whereas quartets from 1800 to 1900 generally exhibit a unified conception of style and instrumentation, those of the 20th century exhibit a mixture of styles and approaches to texture and instrumentation almost as various as the number of composers who have turned their attention to the genre. In this move to a more flexible conception of the piano quartet, the 20th century represents something of a return to the state of affairs before 1800, when norms of form, style and instrumentation had yet to be established.

Piano-quatuor. *See* SOSTENENTE PIANO, §3.

Piano quintet. A composition for piano and four other instruments, usually, after 1800, string quartet. Along with the PIANO QUARTET, the form was one of a handful of standardized instrumentations that grew out of the accompanied keyboard sonatas or divertimentos during the second half of the 18th century (*see* ACCOMPANIED KEYBOARD MUSIC) and is loosely related to the keyboard concerto. Some early concertos (such as the three of Mozart's dating from 1782–3) can be performed 'a quattro', which is usually taken to mean by piano and string quartet, but have important formal differences from quintets proper; some quintets however show concerto-derived characteristics. The standard scoring emerged later than for the piano quartet, but some time after the rise of the string quartet in the 1770s and 80s, and it was not until the second quarter of the 19th century that the scoring with string quartet came to eclipse all others.

In all periods, piano quintets were less common than keyboard chamber music for smaller ensembles. Publishers' catalogues issued in the first half of the 19th century list more than twice as many piano quartets as quintets and larger ensembles, and many more piano trios than quartets and quintets combined. The composers of quintets were usually those who also wrote other keyboard chamber music. In the 1770s and 80s piano quintets by J.C. Bach, Tommaso Giordani, Pugnani, Wainwright, Storace and Tindal were published in England; by Tapray and Hemberger in France; and by Giardini and J.S. Schroeter in both. Many of these works, part of the accompanied sonata tradition, were conceived for amateur players and had relatively simple piano parts. As a more elaborate chamber music style emerged and as the piano emerged as the preferred keyboard instrument, the piano quintet increased in difficulty and complexity. Keyboard parts become more demanding in the period from 1780 onwards. Boccherini's two sets, from the late 1790s, show a well integrated style and the standard instrumentation. But instrumentation varied: J.C. Bach called for flute and oboe in one work, oboe and viola da gamba in another; Giardini used no viola, but a double bass; Hoffmeister used two violas; and among the later composers to use wind instruments are Mederitsch and Bachmann (flute), Triebensee and Eberl (oboe) and Brandl (bassoon). Some composers wrote works exclusively with winds instruments, notably Mozart (K452) and Beethoven (op.16) as well as Grund and Danzi. After 1800, a double bass was sometimes used rather than a second violin, most famously in Schubert's 'Trout' Quintet D667 but also by J.L. Dussek, J.B. Cramer, Hummel and Kalkbrenner. Fewere than half the piano quintets in this period used the scoring of piano with string quartet; most of the composers writing piano quintets were successful as pianists.

By the middle of the 19th century, however, works by Schumann, Spohr and Berwald followed what is now the conventional instrumentation, and the genre took on some of the seriousness of the more prestigious chamber music genres as composers who were not necessarily pianists themselves contributed to the genre. These included works by Borodin, Brahms, Rimsky-Korsakov (for piano and wind instruments), Dvořák, Anton Rubinstein, Saint-Saëns, Franck, Chadwick, Sibelius, Bruch, Stanford, Fibich, Suk, Dohnányi, Vierne, Arthur Foote, Granados and Reger. During this period the model exemplified by Schumann's op.44 or Brahms's op.34, substantial four-movement works, came to be the norm. The perennial challenge of the genre was the relationship between piano and strings, even more so than in the case of the piano quartet with its smaller group of strings. In Brahms's op.34, which had originated as a string quintet and was then arranged as a two-piano sonata before it found its ultimate form, all the instruments are treated as equals, with constant exchange of material and roles, and the piano part has equal weight with that of the string group. Extended solo passages are seldom found, either for strings or for piano.

The Brahmsian, post-Wagnerian style predominated into the early years of the 20th century, with works from Reger, Bartók, Fauré (two), Rheinberger, Webern, Pfitzner, Amy Beach, Dohnányi, Bax and Elgar. Out of the welter of styles that emerged from the experimentation after World War I, a new kind of style divorced from the traditional piano quartet emerged. This is exemplified by Ruth Crawford Seeger's 1929 Suite for Piano and String Quartet, a post-tonal work spare in its writing both for strings and piano, often integrating the piano as just another instrument within the ensemble by using it to declaim only a single line.

More traditional quintets continued to be written, as exemplified in works by Frank Martin, Bloch, Korngold, Goossens, Martinů, Roy Harris and Shostakovich, and after World War II by Piston, Medtner, Bacewicz (two),

Leighton, Milhaud (two), Persichetti, Ginastera, Tcherepnin and others. Most of these works departed from the late 19th-century norm in some way, especially in harmonic language, but in some cases also in the adoption of modernist instrumental techniques such as the incorporation of quarter-tone scales and harmonies and an increase in rhythmic complexity.

In the last quarter of the 20th century, the piano quintet was fertile ground for individual artistic expression, ranging from Rochberg's 1975 quintet, notable for its inclusion of a movement for piano alone (an extreme rarely seen elsewhere in the repertory), to Schnittke's 1976 quintet, which makes significant departures in its harmonic language. The extensive use of quarter tones and closely spaced chords in the strings serves to heighten the contrast between the softer sounds of the strings and the clarity of tone and fixed pitch of the piano. Further still from 19th-century norms is Morton Feldman's 1985 quintet, explicitly identified as for 'Piano and String Quartet', which stretches out over more than an hour, consisting entirely of sustained chords in the strings (often with harmonics), juxtaposed with crystalline rolled chords on the upper two-thirds of the piano keyboard. The musical motion unfolds over so long a time-frame that even the smallest alterations of the harmony and rhythm take on great significance.

Piano trio. A composition for piano and two other instruments, usually violin and cello; standard variants include piano with flute and cello (Weber J259), clarinet and viola (Mozart K498, Schumann op.88), clarinet and cello (Beethoven op.11 and Brahms op.114), and violin and horn (Brahms op.40). The genre emerged in the mid-18th century from the Baroque duo and trio sonatas and the keyboard sonata through a shift of emphasis from the string parts to the keyboard (*see* SONATA, §§II and III; ACCOMPANIED KEYBOARD MUSIC).

Obbligato writing (as opposed to continuo parts) for keyboard instruments occasionally appeared in late Baroque chamber music. In a number of J.S. Bach's sonatas, for example (including those for violin, flute or viola da gamba and harpsichord), the texture is predominantly one of three equally important parts, two of them carried by the harpsichord. In his sonatas for harpsichord and violin op.3 (1734) Mondonville shifted the balance in favour of the harpsichord, often reducing the violin to an accompanying role; the change of emphasis was pursued in Rameau's *Pièces de clavecin en concerts* (1741), where the accompanying parts are merely optional. A cello part, often *colla parte* with the keyboard bass line, was sometimes added, particularly by German composers; such accompanied sonatas are the immediate antecedents of the Classical piano trio. In the piano or harpsichord trios of such composers as Johann Schobert (see DDT, xxxix) the harpsichord style of the French school gives way to a keyboard adaptation of the Mannheim style; the keyboard parts no longer relapse periodically into figured bass but are fully written out and dominate the accompanying strings, which, the cello in particular, are rarely genuinely obligatory. Many sets were published with string parts specified 'ad libitum'; sometimes cello parts were not even printed.

In some of Haydn's early piano trios (e.g. HXV:1 in G minor) the musical language recalls Baroque features, but his later examples of the form are as rich in musical substance as the late symphonies and quartets and share their musical language. The relationship between violin and piano is fruitfully exploited in the kind of dialogue anticipated by Mondonville's op.3 or Giardini's op.3 sonatas (*c*1751), although the cello is rarely emancipated. Haydn's formal and tonal schemes in the piano trios are often boldly imaginative: an example is the B major slow movement in the E♭ trio (HXV:29), which eventually turns to the dominant of the home key and leads directly into the finale.

Trios of this kind were written primarily for pianists, often amateurs. Textural richness could more readily be achieved by the addition of further accompanying parts without prejudicing the simplicity of the piano part with elaborate part-writing. Mozart's early B♭ trio K254, for example, is fundamentally an accompanied sonata. But in his later trios, such as K542 in E, the string parts attain a real measure of independence.

The gradual freeing of the cello part from its historical role as harmonic support continued in the piano trios of Beethoven and culminated in Schubert's trios D898 and 929. Both composers adopted a four-movement scheme for the piano trio, lending their works a scale and importance previously associated with the quartet and the symphony. Single-movement pieces such as Beethoven's 'Kakadu' Variations op.121*a* for piano trio also began to appear; this work's inclusion of variations for solo piano and for string duo shows how far Beethoven had moved away from the earlier concept of the accompanied sonata. The piano trio became an increasingly popular medium in the early 19th century, and many larger works were arranged for it; Beethoven himself so arranged his Second Symphony.

The piano virtuoso composers of the 19th century, such as Hummel and Chopin, tended to favour their own instrument with a part of great brilliance; the same might be said of Mendelssohn, although his string parts also contribute vitally to the musical substance. Important trios were written by Schumann, Brahms, Smetana, Dvořák and Franck, but even in Brahms's there is sometimes a feeling of striving after effects that might better have been achieved with a larger body of strings – an imbalance resulting partly from the change of musical vocabulary in the 19th century and partly from a development of the capabilities of the piano which quite

eclipsed analogous developments in string instruments during the same period. Perhaps it was to compensate for this that composers wrote for all three instruments in an increasingly brilliant style. In the piano trios of Tchaikovsky and Arensky virtuosity is required of all three players, resulting in a kind of composition far removed from the amateur-orientated trios of the 18th century.

In the 20th century the range of trios for the standard ensemble was enlarged, most notably, by Ives (1904–11), Ravel (1914), Rebecca Clarke (1921), Fauré (1922–3), Copland (*Vitebsk*, 1928), Bridge (1929), Martinů (1930, 1950 and 1951), Shostakovich (1944), Alexander Goehr (1966) and Isang Yun (1972–5). There are examples of works which incorporate a single wind instrument by Bartók (*Contrasts*, 1938, clarinet and violin), Lennox Berkeley (1954, violin and horn), Hans Zender (*Trifolium*, 1966, flute and cello), Klaus Huber (*Ascensus*, 1969, flute and cello), and Ligeti (1982, violin and horn). Major technical innovations, applied to a fundamentally conservative medium, included skeletal writing for the piano (with a resultant curtailment of its traditionally dominant role), the provision of lengthy solo sections for strings and piano separately, and the use of string devices such as scordatura tuning, microtones, *col legno* and snap pizzicato. Several piano trios from Germany reveal unusual sources of inspiration, literary and historical: these include Zimmermann's *Présence* (1961), a type of chamber ballet with a speaker, dancers, and three characters (Don Quixote, Joyce's Molly Bloom, and the farcical King Ubu) represented by the trio instrumentalists; Killmayer's *Brahms-Bildnis* (1976), a one-movement work with a 'psycho-programme' which seeks to explore 'the secret inner life-chaos of Brahms'; Wolfgang Rihm's *Fremde Szenen* I–III (1st series, 1982–3), an 'anachronistic' setting prompted by titles in Schumann's diaries; and York Höller's *Tagträume* (1994), comprising seven chamber-style 'tone-poems', based on verses by the Dutch author Ces Nooteboom.

Piantanida, Giovanni (Gualberto Maria) (*b* Livorno, 11 July 1706; *d* Bologna, on or before 28 Oct 1773). Italian violinist and composer. His father, Giuseppe Maria, was from Livorno and his mother, Maria Maddelena Cavalli, from Florence. In 1735, in the service of the Tsarina Anna Ivanovna, he travelled to St Petersburg with a company of singers to which his wife Costanza (called 'La Pasterla') belonged. He remained there until 1737 as a virtuoso violinist and teacher. During the winter of 1737–8 he performed successfully in Hamburg. With his wife he then went to Holland and in 1739 to London, where, until 1742, he gave numerous concerts, including some with Handel, and published his *VI sonate a tre, due violini e basso e cembalo* op.1 (1742). In 1743 he played at the Concert Spirituel in Paris and in 1744 went to Geneva. He finally settled in Bologna, where, on 10 March 1752, he was appointed *primo violino* of the musical chapel of S Petronio, succeeding Girolamo Nicolò Laurenti, with a monthly stipend of 8 lire.

In 1758 he was nominated to the Accademia Filarmonica. From 1762 until 1764, while still holding the post at S Petronio, he was absent, and his place taken by Antonio Villani. Because of this absence, since he had taken up service elsewhere, Piantanida was dismissed from S Petronio on 16 April the following year, immediately after the election of Giovanni Salpietro to the position. Five years later, on 30 August 1770, Piantanida appeared as a soloist in the closing sinfonia of a solemn mass at S Giovanni in Monte, Bologna. Burney heard him and reported that he played with 'all the fire of youth, with a good tone, and modern taste'. On 10 September of the same year a competition took place for the unusual position of '*capo orchestra* of the chapel and *maestro di violino* of this city of Bologna, to continue in this position over the next six years'. Piantanida, having competed with Antonio Palmini from Rome and Gaetano Mattioli from Venice, was announced the winner, with a monthly stipend of 30 lire. This time, however, the trustees, to safeguard themselves from an expected possible repeat of the newly elected maestro's absence, stipulated in the contract that he would receive only 20 lire of his agreed salary, and the other 10 lire would be placed in a special fund that would only be paid out to him at the end of the contract. On 9 October 1770 he was a judge of Mozart's application for entry in the Accademia Filarmonica. On 13 November 1772, apparently in view of his serious health problems, the trustees appointed an assistant, one Cristoforo Babbi, a 'deputy with right to succession'. Less than a year later, on 28 October 1773, the Bologna chronicler Baldassare Carrati, listed him among the dead in the church of S Giorgio in Poggiale, noting that he 'died suddenly in S Petronio on the orchestra steps. He was the famous player'.

Quantz compared Piantanida to Tartini. Opinions on his qualities as a composer, however, are conflicting: Torchi admired the compositional skill of his sonatas while Scheibe and others accused him of plagiarism. A *sonata da camera* for violin and cello exists in manuscript

(*A-Wgm*); six violin concertos, mentioned in the Breitkopf catalogue of 1762, are lost.

His son, Gaetano B. Piantanida (*b* before 1752; *d* Milan, Nov 1835), a pianist and composer, studied music first with his father and then with Mattei at the Liceo Musicale in Bologna. He performed as a pianist in Germany and in Copenhagen, where he published the *Sei ariette italiane* and the *Six romances françaises* sometimes attributed to his father. From 1810 he lived in Milan, where, at the Istituto Musicale, he taught harmony, theory (after 1814) and composition (after 1826); in 1827 he was elected *vice-censore*. He published a set of piano studies, *32 preparazioni alla cadenza combinate in tanti piccoli esercizi* (*c*1823) and a *Salve regina* (*c*1825).

GUIDO SALVETTI/OSVALDO GAMBASSI

Pianto (It.). *See* PLANCTUS.

Piatigorsky, Gregor (*b* Yekaterinoslav [now in Dnepropetrovsk], 17 April 1903; *d* Los Angeles, 6 Aug 1976). American cellist and composer of Ukrainian birth. He began to play the cello when he was seven and two years later was admitted to the Moscow Conservatory as a scholarship student of Alfred von Glehn; later he had some private lessons with Brandukov. In 1919 he was invited to join Moscow's foremost string quartet, the Lenin Quartet, led by Lev Tseytlin, and the same year he was appointed principal cellist of the Bol'shoy Theatre orchestra. He left the USSR surreptitiously in 1921, going first to Warsaw, then to Leipzig where he studied with Julius Klengel. In 1924 Furtwängler engaged him as principal cellist of the Berlin PO, a post he left in 1928 to devote himself to a solo career. In Berlin he formed a distinguished sonata partnership with Schnabel, and a trio with Schnabel and Flesch. His American début with the New York PO in December 1929 was the triumphant beginning of an international career. In 1930 he was heard in trios with Horowitz and Milstein, and he formed another trio in 1949 with Heifetz and Rubinstein. Having settled in California, in 1961 Piatigorsky joined Heifetz in establishing a chamber music series in Los Angeles, known as the Heifetz-Piatigorsky Concerts; some of their programmes were heard in New York in 1964 and 1966 and were also recorded. For a number of years he was director of chamber music at the Berkshire Music Center, Tanglewood, and from 1962 until his death was a professor at the University of Southern California, Los Angeles, where his cello classes were renowned; in 1975 a Piatigorsky chair of music was established there. Piatigorsky performed until late in his life, playing at several concerts given for his 70th birthday in 1973, and in London in 1974.

At the height of his career Piatigorsky was acclaimed as a leading cellist of his generation, combining an innate flair for virtuosity with an exquisite taste in style and phrasing; technical perfection was never a goal in itself. His vibrant tone had infinite shadings and his sweeping eloquence and aristocratic grandeur created an instant rapport with his audience. He was at his best in emotional Romantic music, and Strauss commented after hearing him play *Don Quixote*: 'I have heard the "Don" as I thought him to be'. He gave the premières of concertos by Castelnuovo-Tedesco (1935, with Toscanini), Hindemith (1941) and Walton (1957), and the first American performance of Prokofiev's Concerto op.58 (1940). Besides original works for cello (including *Pliaska*, Scherzo, Variations on a Theme of Paganini for cello and piano or orchestra), he published some skilful transcriptions and collaborated with Stravinsky on the cello version of the 'Suite italienne' from *Pulcinella*. There is a rich legacy of Piatigorsky recordings in the solo and chamber music repertory. His autobiography *Cellist* (New York, 1965) has been translated into several languages. Among his numerous awards were several honorary doctorates and membership of the Légion d'Honneur. Piatigorsky owned two magnificent Stradivari cellos, the 'Batta' (1714) and the 'Baudiot' (1725).

BORIS SCHWARZ/R

Piatti (It.). *See* CYMBALS.

Piatti, Alfredo (Carlo) (*b* Bergamo, 8 Jan 1822; *d* Crocetto di Mozzo, 18 July 1901). Italian cellist and composer. The son of Antonio Piatti, leader of the Bergamo orchestra, he studied the violin with his father and the cello with his great-uncle, Gaetano Zanetti, whom he succeeded in the theatre orchestra at the age of eight. Recognizing his talent, Mayr allowed Piatti to play a solo at a local festival. After five years at the Milan Conservatory as a pupil of Merighi, he made his début on 21 September 1837, playing his own concerto at a public conservatory concert. In 1838 he made his first tour of Europe. His concerts were artistically successful but financially disastrous, and in 1843, falling ill in Pest, he was forced to sell his cello. In Munich on his way home, he was invited by Liszt to share a concert, which (given on a borrowed cello) proved a great success. Much impressed, Liszt encouraged Piatti to go to Paris; he did so in 1844, making his début on another borrowed instrument. During this visit he was presented by Liszt with a Nicolò Amati cello.

On 31 May 1844 Piatti made his London début and was immediately welcomed as an exceptional artist. Six more concerts were subsequently rapturously received. On 24 June he played in a Philharmonic concert; Mendelssohn (who was conductor and principal soloist) was so impressed that in 1847 he wrote at least part of a cello concerto for him. E. van der Straeten implied that the work was completed, but also stated: 'The manuscript was lost in transit and Mendelssohn never attempted to write it again. Piatti, who knew the manuscript, told the writer that the work did not come up to the violin concerto by a long way'.

In 1844–5 Piatti toured Great Britain, revisited Milan, and spent nearly a year in Russia. In 1846 he settled in London, rejoined the Italian Opera (in which he had first played in 1844), and established his long, influential

Alfredo Piatti

career in England as performer and teacher. In 1847 he played at a concert given by the Beethoven Quartet Society in Mendelssohn's honour; during 1859 he appeared with Ernst, Joachim and Wieniawski in the society's quartet. That year the Popular Concerts were inaugurated; Piatti was engaged as soloist and as cellist of the quartet led by Joachim, and played regularly at the 'Pops' until his retirement in 1898. On 24 November 1886 he gave the première of Sullivan's concerto at Crystal Palace. He taught privately and as a professor at the RAM; Hausmann, Stern, Becker, Whitehouse and Squire were among his many distinguished pupils. He died at his daughter's home, near Bergamo; his funeral was a public occasion.

An acknowledged connoisseur of instruments, for many years Piatti played on a fine cello by Pietro Giacomo Rogeri, dated 1717; but in 1867 he was given the instrument he had coveted for nearly 25 years – one of Stradivari's finest cellos, made in 1720, and now known as 'The Piatti'. After his death it was bought by Mendelssohn's nephew. It has now been made available on loan to the winner of the Violoncello Society of New York's triennial Gregor Piatigorsky Award.

A composition pupil of Molique (who wrote a concerto for him), Piatti composed a number of works which enjoyed considerable popularity during his lifetime. He also published a good method (London, 1878), and editions of many previously neglected 18th-century works which have now become part of the standard repertory.

As a result of his distinguished playing and his teaching, Piatti had a profound influence on cello history, especially in England. Playing in the old style, without an endpin, he is said to have had a spectacularly agile technique, superb bow control, perfect intonation and a bright, singing, flexible tone, his interpretations being invariably free from the sentimentality into which so many of his contemporaries were lured.

WORKS

LYNDA MACGREGOR

Piave, Francesco Maria (*b* Murano, 18 May 1810; *d* Milan, 5 March 1876). Italian librettist. The son of a glass-maker, he studied for the church before obtaining employment as a proofreader. On the failure of his father's business he went to Rome, where he joined a literary circle that included the librettist Jacopo Ferretti, with whom he remained on close terms. He returned to his old position in Venice in 1838, and in 1842 wrote a libretto, *Don Marzio*, for Samuel Levi, but it was not performed. He also provided the third act of Pacini's *Il duca d'Alba*, which Giovanni Peruzzini had been prevented by illness from completing. The autograph survives, heavily corrected by the composer. Piave was recommended to Verdi by Count Mocenigo, and there began a long and successful collaboration from *Ernani* (1844) to *La forza del destino* (1862). During these years Piave supplied Verdi with the texts for *I due Foscari* (1844), *Macbeth* (1847), *Il corsaro* (1848), *Stiffelio* (1850), *Rigoletto* (1851), *La traviata* (1853), *Simon Boccanegra* (1857) and *Aroldo* (1857). Following a period as poet and stage director at La Fenice, Piave moved in 1859 to Milan, where on Verdi's recommendation he obtained the corresponding position at La Scala. On 5 December 1867, on the way to La Scala for a rehearsal, he suffered a stroke which deprived him of speech and movement; he lingered on for nearly nine years in this condition, leaving unfinished a libretto (*Vico Bentivoglio*) for Ponchielli.

Verdi was initially unsure of Piave's abilities and always harried him unmercifully, often having his work revised by others; Piave rewarded him with doglike devotion, and the two remained on terms of sincere friendship. He was frequently summoned to Verdi's side, and they worked together on librettos. Both Verdi and his wife came generously to Piave's aid in his last years.

Throughout his career Piave wrote for many other composers, some well known like Pacini, but most of them insignificant. There is, however, a wide gulf between

Piave's Verdian and non-Verdian librettos. Most of the latter are of poor quality and, with the possible exception of *Elisabetta di Valois* (Antonio Buzzolla, 1850; a precursor of *Don Carlos*) and the extraordinary black comedy *Crispino e la comare* (Luigi and Federico Ricci, 1850), might almost have come from another hand: both dramatic tension and crispness of versification are absent. Verdi, however, used to give Piave explicit instructions on what he wanted, and often wrote out in prose the passages he needed to have versified. Piave had a wide vocabulary and a facile pen, and an uncanny ability for turning Verdi's drafts into verse with an economy of words that satisfied Verdi's insistence on brevity and provided him with the striking, illuminating expressions he sought. It was Piave's willingness to meet Verdi's detailed requirements which provided the basis of their work together, and it is on this partnership that his reputation as a librettist must rest.

JOHN BLACK

Piazza, Giovanni Battista ['L'Ongaretto'] (*b* Rome; *fl* 1628–33). Italian composer and possibly instrumentalist. According to Pitoni he was a pupil of Vincenzo Ugolini, and he probably continued to live in Rome, though he may have moved to northern Italy, possibly to Venice. His sobriquet is unexplained, though it may mean that he had connections with the Ongaro family, which included the poet Antonio Ongaro. He published at least three books of instrumental music, but of these only *Balletti e correnti ... libro terzo*, for viol and continuo (Venice, 1628), survives. Two small books of *Canzonette* by him for solo voice and continuo (both Venice, 1633; facs. of bk2 in ISS, vii) also survive; they contain a total of 20 short pieces (1 ed. in Carter), most of them strophic. The music is unambitious for its date and not very skilful, but it does seem to have been influenced by Venetian songs, which were the most progressive of the time; this suggests that Piazza did have connections with Venice.

NIGEL FORTUNE

Piazzolla, Astor (*b* Mar del Plata, 11 March 1921; *d* Buenos Aires, 5 July 1992). Argentine composer, bandleader and *bandoneón* player. A child prodigy on the *bandoneón*, Piazzolla and his family emigrated to New York in 1924; in his teens he became acquainted with Gardel, for whom he worked as a tour guide, translator and occasional performer. Piazzolla returned to Buenos Aires in 1937 where he gave concerts and made tango arrangements for Aníbal Troilo, a leading bandleader; he also studied classical music with Ginastera. In 1944 Piazzolla left Troilo's band to form the Orquesta del 46 as a vehicle for his own compositions. A symphony composed in 1954 for the Buenos Aires PO won him a scholarship to study in Paris with Boulanger, who encouraged him in the composition of tangos; the following year he resettled in Argentina and formed the Octeto Buenos Aires and, later, the Quinteto Nuevo Tango, which performed at his own club, Jamaica. Piazzolla left Argentina in 1974, settling in Paris, where he composed a concerto for *bandoneón* and a cello sonata for Rostropovich, among other works.

Piazzolla's distinctive brand of tango, later called 'nuevo tango', initially met with resistance. Including fugue, extreme chromaticism, dissonance, elements of jazz and, at times, expanded instrumentation, it was condemned by the old-guard, including not only most tango composers and bandleaders but also Borges, whose short story *El hombre de la Esquina Rosada* was the basis for Piazzolla's *El tango* (1969); like tango itself, Piazzolla's work first found general approval outside Argentina, principally in France and the USA. By the 1980s, however, Piazzolla's music was widely accepted even in his native country, where he was now seen as the saviour of tango, which during the 1950s and 60s had declined in popularity and appeal. In the late 1980s Piazzolla's works began to be taken up by classical performers, in particular the Kronos Quartet, who commissioned *Five Tango Sensations* (1989). In all he composed about 750 works, including film scores for *Tangos: the Exile of Gardel* (1985) and *Sur* (1987). Shortly before his death, he was commissioned to write an opera on the life of Gardel.

CLIFF EISEN

Pibcorn. *See* PIBGORN.

Pibernik, Zlatko (*b* Zagreb, 26 Dec 1926). Croatian composer. After completing his composition studies with Krsto Odak in 1953, he became a professor at the Osijek Music School (1954–60) and then at the Jordanovac experimental elementary school in Zagreb (1960–61), and from 1961 a music editor in the drama studio of Radio-Television Zagreb. He was the artistic director of the Croatian Music Days festival from 1970 to 1979. In 1983 he became editor for *Ars Croatica* and for the complete edition of the works of Josip Slavenski.

Pibernik's music originally had its roots in folksong, especially the partisan songs of World War II. Having written a number of neo-classical and folk-influenced pieces, such as the early piano works and the *Varijacije na narodnu temu iz Slavonije* for orchestra, he developed a strong expressionistic style that showed its full stature in the cantata *Trijumfi, kantata borbe i slave* ('Triumphs, a Cantata of Struggle and Glory', 1959). An imaginative series of five works with the title *Koncertantna muzika* shows his ability to develop his style in new directions. In these pieces the model of the modern chamber concerto is enlarged to include the use of reciters and tape, and the adoption and assimilation of many new techniques. Pibernik has been at the forefront of new music in Croatia, particularly since the late 1960s. He has made extensive use of electronic techniques, mostly in combination with live instrumental resources, and produced a number of dramatic works that cover the borders between music theatre and dramatic oratorio.

NIALL O'LOUGHLIN

Pibgorn [pibcorn]. A single hornpipe with mouth horn, of Wales. The name is formed from *pib*, meaning pipe, and *corn*, one of many Celtic synonyms for horn or trumpet. The three 18th-century specimens in the Museum of Welsh Life at St Fagans (Cardiff) consist of an elderwood or bone pipe with six finger-holes and one thumb-hole, to which is attached an upcurved bell horn carved with serrated edges and sometimes in an open-jawed shape; a mouth horn is fixed around the reed socket at the top of the pipe. The instruments are between 41 and 52 cm in length. The original reeds of the three extant pibgorns have been replaced; however it is likely (according to W.M. Morris, *British Violin Makers*, London, 1904, 2/1920) that the instruments were fitted with single reeds of cane or quill, like those used in comparable instruments elsewhere.

The importance of the pibgorn in Wales is evident in the earliest writings. The laws of Hywel Dda (codified 940–50) specify that every master employing a *pencerdd* (chief musician) should give him the necessary harp, crwth and pibgorn. However, the instrument was not described in writing until 1775, the date of Daines Barrington's account; the extant specimens also date from that time. References in literary and manuscript sources mention the pibgorn as a pastoral instrument used in the Berwyn Hills (Meirionethshire), in North Pembrokeshire and in the rural communities of mid-South Wales, where farm hands, cattle drovers and shepherds carried their pibgorns to fairs, markets and wakes. By the late 18th century it appears to have been exclusively a rustic instrument, though perhaps more functional than was realized by Edward Jones, who wrote in *Musical and Poetical Relicks of the Welsh Bards* (1794, p.116):

> Its tone is medium between the flute and the clarinet, and is remarkable for its melody... it is now peculiar to the Isle of Anglesey, where it is

Pibgorn from Anglesey, 18th century (National Museum of Wales, Cardiff)

played by shepherds and tends greatly to enhance the innocent delight of pastoral life.

At that time some pibgorns had a wooden reed-cap instead of a mouth horn, as do surviving specimens of the equivalent Scottish instrument, the STOCK-AND-HORN. The ideal material for the middle section was thought to be bone – particularly the thigh bone (tibia) of a deer. (In lowland Scotland a rustic pipe was made from the thigh bone (stock) of a sheep: it would be reasonable to suggest that the Anglo-Saxon *swegel-horn* (shin-horn) was similar to the pibgorn.) No comparable instruments survive in Ireland, though F.W. Galpin considered that a deer bone now in the National Museum of Ireland may have been the tube of a hornpipe.

In the British Isles there is iconographic evidence from the 15th and 14th centuries. In the Beauchamp window (1447) of St Mary's Church, Warwick, one angel plays a single hornpipe while another holds an identical instrument (see HORNPIPE (i), fig. 1). They resemble surviving pibgorns, apart from having apparently five rather than six finger-holes and straight-cut instead of serrated and jawed bell horns. An illuminated initial in the Beauchamp Psalter (1372) contains the figure of a shepherd outside the walls of Bath, playing what seems to be a single hornpipe with mouth horn. Stone carvings in the roof of the 15th-century parish church of St Eilian, Llaneilian (Anglesey) depict angels playing bagpipes with pipes that end in bells like that of the pibgorn. An early western European depiction is in one manuscript of the late 13th-century *Cantigas de Santa María* (*E-E* b.I.2), where a double hornpipe similar to the Basque *alboka* is shown. Actual hornpipe fragments survive from a still earlier time. During the latter half of the 20th century, the pibgorn has been revived for use in Welsh folk music.

JOAN RIMMER/WYN THOMAS

Pibrac [Pybrac], **Guy du Faur de** (*b* Château de Pibrac, nr Toulouse, 1529; *d* Paris, May 1584). French poet, orator and magistrate. He followed a family tradition in pursuing a judicial and diplomatic career: he was *juge mage* at Toulouse in 1557, representative and orator for Gallicanism at the Council of Trent in 1562, *avocat-général* to the Paris parliament in 1565, chancellor to Henri d'Anjou in Poland in 1573, to Marguerite of Navarre in 1578 and to François d'Anjou in 1582. In the mid-1570s he organized the meetings of the Académie du Palais at the request of Henri III. Its meetings seem to have been less concerned with the union of music and poetry (which had been the chief preoccupation of Baïf's Académie a few years earlier) and more with philosophical, rhetorical and ethical subjects.

Pibrac is remembered today for his 126 *Quatrains*, printed between 1574 and 1576. These elevating maxims, taken from Greek and Latin poets or from the books of *Psalms* or *Proverbs*, provided a code for wisdom and virtue which remained an essential part of a moral education right up to the 19th century. They reappeared in innumerable editions during the 17th century, not only in French but in many other languages – English, German, Latin, Greek, even Turkish, Arabic and Persian. During the years of the Counter-Reformation and religious strife they provided French Catholics with a popular rival to the Huguenot Psalter. A single melody was provided for all 126 quatrains when they were published in the *Nouveau recueil et élite de plusieurs belles chansons* (Rouen, *c*1580 RISM *c*1580[8]). It is possible that Pibrac met both Lassus and Boni in Paris in the 1570s (he may have known Boni even earlier, as they were both resident in Toulouse in the 1560s). Lassus's seven four-voice settings of texts by Pibrac were published by Le Roy & Ballard first in 1581 (lost) and reprinted in 1583 (RISM 1583[7]); Boni's settings of all 126 *Quatrains* appeared in 1582. Another complete setting of the *Quatrains*, for two to six voices, that of Paschal de L'Estocart, also appeared in 1582, but this time in Geneva. The musical style is simpler than that of Boni and uses the same melody for several different quatrains. 19 quatrain settings were also published by Jean Planson (1583) and 50 by Jean de Bournonville (1622).

Pibrac's cousin, Jacques du Faur de Pibrac, more commonly called simply 'Du Faur' (*b* Toulouse, *c*1545; *d* after 1574), was an amateur lutenist and composer who collaborated with Baïf and Courville in the early experiments in *musique mesurée*. By 1568 he had graduated in law at the University of Paris and become prior of Saint-Germier, near Muret. All his music is lost.

MARIE-ALEXIS COLIN, FRANK DOBBINS

Pibroch [pibrach, pibrugh] (from Scots Gael. *pìobaireachd*: 'piping'). A term used since the 18th century to denote that part of the Highland bagpipe repertory known otherwise as *ceòl mór* ('great music') or a single item of that repertory. Daniel Dow in his *Collection of Ancient Scots Music* (1776) refers to 'ports, salutations, marches or pibrachs' and includes the tune *Pibrach Chlann Raonailt*. Devotees of the Highland bagpipe often use the Gaelic spelling *pìobaireachd* even when writing in English, as in the dual name adopted in 1903 by a society set up to further the preservation and performance of the repertory: Commun na Pìobaireachd/The Piobaireachd Society. Pibroch is often described as the 'classical' music of the Highland bagpipe to distinguish it from the rest of the piping repertory which consists of dance music, airs and military music (such as 2/4 and 6/8 quick marches).

Its early history is obscure and clouded by many legends of doubtful origin, but it apparently evolved as a form of ceremonial music played at Highland courts, for clan gatherings and as battle music. Hence the main classes of pibroch are the *failte* (salute), *cumha* (lament), *spaidsearachd* (march) and *cruineachadh* (gathering). The last

named type usually consists of easily recognized repeated signal motifs. Pibrochs are all in theme and variation form.

Although in earlier times, possibly until the middle of the 18th century, the content and order of the variations were probably somewhat flexible (for example, some early manuscripts indicate frequent restatements of the theme or *urlar*), the variations are now stereotyped and played in a fixed order. This resulted from two important changes: the first was in the mode of transmission (from oral to literary), though, as with other classical traditions, the repertory had always been rigorously taught in a master-pupil situation, often at special 'colleges'; the second was a change in the social function of the pibroch following the effective demise of the clan system during the 18th century. Since 1820 the efforts of individual collectors and organizations, notably the Piobaireachd Society, have resulted in an expansion of the pibroch repertory, not only as a result of the publication and teaching of rare items from manuscript sources, but also by encouraging the composition of new pibrochs through occasional competitions. Beginning in the 1990s, there have been attempts to re-evaluate the received style of playing commonly heard in competitions, the principal platform for the performance of pibroch. This has involved experiments in reviving earlier playing styles as far as can be deduced from manuscripts and oral tradition.

For music examples, further discussion and bibliography *see* SCOTLAND, §II, 6(i).

PETER COOKE

Picada (Sp.: 'pricking' or 'biting'). A kind of staccato bowing. *See* BOW, §II, 2(iv).

Picander. *See* HENRICI, CHRISTIAN FRIEDRICH.

Picañol [Picanyol], **José** (*d* Madrid, ?1769). Catalan composer. In 1734 he was an assistant *maestro de capilla* to Francisco Valls at Barcelona Cathedral. In 1744 he was *maestro* of the Carmelite church in Tarazona and by 17 August 1747 he was *maestro* of the Descalzas Reales convent at Madrid. Musically he was overshadowed by the chief organist of the convent from 1725, José Elías, a fellow Catalan. His comments on the examination music of Juan Nogués (1763, *E-Bc*) show his severe and uncompromising contrapuntal standards. His *Missa 'Ave regina coelorum'* blends a slow cantus firmus with other voices moving in fast functional harmony. He composed eight oratorios for performance by the cathedral chapel at S Felipe Neri, Barcelona; the four works which are dated range from 1720 to 1732. The music preserved at Puebla Cathedral features unbowed violin parts, in which ascending demisemiquaver runs are not uncommon, intermittent organ parts which duplicate the harp continuo, and extended instrumental introductions.

WORKS

ROBERT STEVENSON

Picard. A name held, in one form or another, by many musicians in the 15th century, among them at least three composers. It was sometimes a family name, more often a regional suffix indicating that the holder was from Picardy, in northern France.

(1) **Pycard** [Picart] (*fl c*1410). English composer. The lack of an initial for the forename renders identification uncertain, though a possible candidate is a Thomas Pycharde who witnessed a charter together with Thomas Damett, probably the composer, in 1420. One Jehan Pycard alias Vaux was recruited for the chapel of John of Gaunt in 1390/91 and appears to have served until the late 1390s, as he was noted as a principal singing-man in 1392/3 and 1397/8. This may or may not have been the John Vaux resident in the Close of Lincoln Cathedral in 1382 and 1394 (Wathey; Bowers).

After Leonel Power, he is the most fully represented composer in the original layer of the Old Hall Manuscript, and the only English composer in that layer other than Leonel to be ascribed a work other than a concordance outside this source. He is remarkable for the ingenuity and resource of his compositional techniques and has many distinctive features of style. Of his eight surviving works at least four are canons, one of them a double canon. Four canons are ascribed to him in Old Hall, one more to Byttering, and the two remaining canonic works in this source (both Credos) might well be by Pycard. Anselm Hughes first suggested that he might have written the Credo Old Hall no.75, a triple mensuration canon and proportional exercise of truly doctoral complexity, which survives anonymously. The triple canon no.71, copied anonymously, is consistent with the style of Pycard's other canons. His authorship may also be suspected in the case of some canonic compositions with English features preserved in continental manuscripts. Harrison was the first scholar to publish a solution to the Sanctus, no.123, in which the plainchant itself is presented in canon (*NOHM*, iii, pp.103–4). If the canon is two in one, complete consonance results. If a third canonic part is added, as Harrison recommended, this consonance is undermined, and is not much worsened by the addition of further canonic derivations. It is no coincidence that these supernumerary parts fit as well as they do, since the harmonic framework is static and repetitive, and the plainchant has been rhythmicized to fit it. The thin texture of a canon two in one with tenor cannot stand alone, but the missing parts (probably a contratenor and an upper part, which might have been pseudo-canonic) must have been written on the facing page which is now lost. (For a discussion of the incomplete canonic Sanctus see Bent, 1969, pp.87–95, where the possibility is raised of a five-part canonically related cycle by this composer.) The remaining canons by Pycard are indicated either by an explicit Latin directive or simply by a double row of text underlay requiring telescoped performance. No.26 is unusual in applying canon for part of the composition only, and at the interval of a 4th. The Stratford Credo, *GB-STb* 1744, starts with two repeated notes followed by a rest: two of Pycard's Old Hall Glorias open with a descending 5th, each note of which is repeated. It has several melodic and rhythmic features consistent with Pycard's style, but the two surviving parts are not

sufficiently legible to determine whether this piece too was canonic, though canon can be made to work for short sections, and the recurrent harmonic pattern of the tenor commends the possibility.

None of Pycard's mass sections can be conclusively related to each other, though technical and stylistic relationships are often evident. (Andrew Hughes, for example, has discussed those of nos.26 and 76.) All Pycard's known works open in Ͼ or C time, often using exceptionally short note values and placing single text syllables on abnormally short notes. His use of *musica ficta*, explicit and implicit, is very bold, often arising from the canonic writing.

All the works that survive intact are in four or five parts, two of them having a solus tenor as an alternative to two of the lower parts. Of the non-canonic pieces only one, no.28, is isorhythmic, and it sets up some complex cross-rhythms between lower and upper parts. The Credo, no.76, uses a unique device, the placing of subsidiary red clefs to indicate 'mental transposition' of the middle section in a manner related to the technique of sights (see Bent, 1969, pp.266–76). Imitation is present in the remaining non-canonic piece, no.78, with some striking involvement of all four parts.

On the Stratford leaf, in the space between discantus and tenor parts, appears the rebus 'long joy long dolour' (with the note form of the long in place of the word 'long' in each case) which calls to mind the appearance of 'long joy bref langour' in the English source of the anonymous and rather later Mass *Quem malignus spiritus*.

WORKS

Edition: *The Old Hall Manuscript*, ed. A. Hughes and M. Bent, CMM, xlvi (1969–72) [OH]

Gloria, 4vv, OH no.26 (except at beginning, 2 middle voices in canon at 4th)
Gloria, 5(4)vv, OH no.27 (upper and lower pairs of voices in canon; alternative solus T provided)
Gloria, 5(4)vv, OH no.28 (isorhythmic, on 'Johannes Jesu care'; alternative solus T provided)
Gloria, 5vv, OH no.35 (2 upper voices in canon)
Credo, 4vv, OH no.76
Credo, 4vv, OH no.78
Credo, inc., *GB-STm* 1744
Sanctus, inc., OH no.123 (2 or more upper voices in canon)

ANONYMOUS WORKS POSSIBLY BY PYCARD

Credo, 5vv, OH no.71 (3 upper voices in canon)
Credo, 5vv, OH no.75 (3 upper voices in complex mensuration canon, including use of blue notation)

(2) **Biquardus** [Wiquardus] (*fl c*1440–50). Composer of the three-voice hymn settings *In excelsis te laudant* and *Ave stella matutina* in the St Emmeram Choirbook (*D-Mbs* Clm.14274). They may be contrafact songs. On another piece in the same manuscript the ascription 'Biquardus' is erased but still visible. The work is an arrangement of an English song in which the original text *Love woll I* is replaced by *Resurexit victor mortis*. It has no stylistic similarity to the other two pieces. Despite the unison imitation and masterly textural control of these hymns, they can hardly be by the English composer Pycard (1). It is far more likely that Biquardus is Arnold Pickar or Pickhart, a cleric of the diocese of Liège who was in the Kantorei of Emperor Friedrich III from 1444–80, because the pieces appear in the manuscript close to those of another musician working in Vienna, Hermann Edlerawer.

(3) **Anthonius Picardus** [Picchardo] (*fl c*1460–70). Composer of the three-voice hymn setting *Phebus astris cum omnibus* in *I-MC* 871 for the feast of St Justina. By comparison with the Biquardus pieces this one is fussy and stumbling, and can scarcely come from the same composer. An 'Ant. Picchardo' sang contrabassus at S Pietro, Rome, in 1507.

Other musicians with the same name include: Andreas Picardi, alias Druet, a singer at the ducal chapel of Savoy from 1 May 1449 to 1 October 1455, who died on 30 October 1455 and whose *exécution testamentaire* was signed by Dufay on 8 November (see Bouquet); Johannes Piccardo [Comitus], who was soprano at the papal chapel in 1478, and was at SS Annunziata, Florence, in 1482, at Florence Cathedral in 1485, and at the chapel of Philip the Fair, 1492–1501 (as Picquet, Picavet); Filippo Pichardo, at SS Annunziata, Florence, in 1482; PIETREQUIN BONNEL 'di Piccardia', at Florence Cathedral, in 1490–92; Jacopo Picchardo, in the papal chapel in 1500; Clyment Thiebault dit Pickart, who sang at the funeral of Philip the Fair, 1507, and whose son Adrien Thiebault dit Pickart (1496–10 March 1546) was in Charles V's chapel, as was Joannes Robert dit Piquart.

Picart [Pickard, Pickart], **Nicolas** (*b* Paris, 1589/90; *d* after 1648). French violinist, dancing-master and composer. He seems to have been the son of Guillaume Picart, master mat-maker, who had him apprenticed in Paris on 13 August 1602 for six years to the royal violinist Henri Picot; Picart was 12 at the time, and is recorded in Paris on his own account from 1608 to 1618. He is listed as Henrietta Maria's 'mr a danser des filles d h' (dancing-master to the Queen's maids of honour) in 1625, and may have been a member of her household before she came to England as Charles I's bride. He was given a place in the court violin band by a patent dated 22 November 1628, back-dated to Michaelmas 1627, and appears as a treble violin player in lists of the group from 1631 and 1634. He served until the beginning of the Civil War in 1642, when he apparently returned to France and joined the court violin band there. He lived in the Paris parish of St Merri in 1644. In 1646 he was recruited for a violin band at the Swedish court, where he remained until 1649. His only known composition is a rather poor suite of branles in five parts (*S-Uu*, ed. in MMS, viii, 1976).

PETER HOLMAN

Piccaver [Peckover], **Alfred** (*b* Long Sutton, Lincs., 24 Feb 1884; *d* Vienna, 23 Sept 1958). English tenor. He was brought up in New York, where he studied at the American Institute of Applied Music. In 1907 he went to Europe and was engaged for the Neues Deutsches Theater, Prague, where he made his début as Romeo. He continued his studies with Rosario in Milan and Prohaska-Neumann in Prague. In 1910 he joined the Vienna Hofoper, remaining a favourite there until his retirement in 1937. He sang in the first Austrian performances of *La fanciulla del West* and *Il tabarro*. His repertory included Andrea Chénier, Radames, Lohengrin, Walther, Faust, Des Grieux, Don José, Canio, Werther, Florestan and Lensky. He sang with the Chicago Opera from 1923 to 1925 and at Covent Garden in 1924. Piccaver made many recordings, both acoustic and electric, which well convey the velvety yet voluminous character of his voice.

HAROLD ROSENTHAL/ALAN BLYTH

Picchardo, Antonio. *See* PICARD, (3).

Picchi, Giovanni (*fl* 1600–25). Italian composer, organist and lutenist. He is depicted playing the lute among three other instrumentalists on the title-page of Fabritio Caroso's *Nobiltà di dame* (Venice, 1600, 2/1605). He was organist of the Cà Grande, Venice, by 1615 according to Romano Micheli (*Musica vaga et artificiosa*, Venice, 1615, p.42), and the title-page of his own *Canzoni da sonar* states that he was still there in 1625. On 5 March 1623 he was also appointed organist of the Scuola di San Rocco, Venice. In 1624 he applied unsuccessfully for the post of second organist at St Marco and was passed over in favour of Giovanni Pietro Berti.

Of Picchi's keyboard works the improvisatory toccata is probably the earliest: it must have been written well before the 1620s, for it appears (in somewhat garbled form) in the *Fitzwilliam Virginal Book*, whose copyist, the younger Francis Tregian, died in 1617. The remaining pieces are dances, eight of which appear in the *Intavolatura di balli d'arpicordo*. In the dedication to the reader Picchi promised 'four books of dances which I shall have printed when I see that this first book proves pleasing to the public'. As no more than the one book has survived, the public's response can only be guessed. Besides a paduana and a large-scale passamezzo paired with a saltarello, it includes several more unusual dances such as a *ballo alla polacha* and a *ballo ongaro*. The keyboard layout consists mainly of a melodic line in the right hand, at times florid and with occasional cadential chords, plus a fuller left-hand accompaniment. But whereas the left-hand part in the earlier dances of Marco Facoli rarely contains more than plain chords, Picchi followed the example of his immediate predecessor Giovanni Maria Radino in occasionally enlivening the texture with simple counterpoint, particularly in the slower movements. His remaining keyboard pieces (in MS at *I-Tn*) are also on a large scale; since two of the three passamezzos have the simpler type of left-hand accompaniment, they at least are probably earlier than the *Intavolatura di balli* (but later than the toccata). Though Picchi was no more than a minor composer, his keyboard works competently met a demand for agreeable and not too difficult music suitable for performing in the home.

Picchi's *Canzoni da sonar*, published in partbook form, consist of 16 canzonas and three sonatas for various combinations of wind and strings: for example one of the two-part works is for two violins or cornetts; another is for violin or cornett with bassoon; and there are two for trombone with violin and two for two violins or horns.

HOWARD FERGUSON

Picchi, Mirto (*b* San Mauro a Signa, nr Florence, 15 March 1915; *d* Florence, 25 Sept 1980). Italian tenor. He studied in Florence with Giuseppe Armani and Giulia Tess. He made his début as Radames in the season organized by La Scala at the Milan Palazzo del Sport in 1946. At first he sang Verdi and Puccini roles in Italy and abroad, appearing at the Cambridge Theatre, London (1947–8), as the Duke of Mantua, Rodolfo and Cavaradossi, and at the 1949

Edinburgh Festival as Riccardo in *Un ballo in maschera*. In 1952 he sang Pollione at Covent Garden at Callas's London début as Norma. From the early 1950s he specialized in contemporary music, creating roles in Juan José Castro's *Proserpina y el extranjero* (1952, La Scala), Pizzetti's *Cagliostro* (1953, La Scala) and *La figlia di Iorio* (1954, Naples), and Testi's *La celestina* (1963, Florence), and took part in the Italian première of *War and Peace* (1953, Florence). He scored notable successes as Peter Grimes and as Captain Vere (*Billy Budd*), and his large repertory included the Drum Major (*Wozzeck*), Tom Rakewell, Tiresias (*The Bassarids*) and Stravinsky's Oedipus. His last appearance was as Mozart's Don Basilio at La Scala in 1974. Picchi's recordings of Riccardo (Edinburgh), Don Carlos (1951), Pollione (1952) and Jason to Callas's Medea at La Scala (1957) disclose his virtues as a singer of style and subtle artistry seldom found among Italian tenors, compensating for a voice somewhat lacking in native warmth.

ALAN BLYTH

Picchi, Silvano (*b* Pisa, 15 Jan 1922). Argentine composer and music critic of Italian birth. His family emigrated to Córdoba, Argentina, in 1926, then moved to Buenos Aires in 1938. He studied the violin and theory at the National Conservatory in Buenos Aires with (among others) Carlos María Ramos Mejía, Erwin Leuchter and Alberto Ginastera. He has written over 140 symphonic, chamber, choral and solo vocal works, which have won numerous awards in Argentina and elsewhere, including the prestigious National Prize of Argentina. Between 1962 and 1990 he was the music critic for *La prensa* in Buenos Aires. He has also been a professor at the Municipal Conservatory of Music Manuel de Falla in Buenos Aires. Picchi describes himself as a self-taught composer who pursues an independent course. For over ten years, beginning in 1982, he was a member of the Comisión de Música Sinfónica y de Cámara de la Sociedad Argentina de Autores y Compositores de Música (SADAIC), which awarded him its Grand Prize in 1991.

WALTER AARON CLARK

Piccinini, Alessandro (*b* Bologna, 30 Dec 1566; *d* probably at Bologna, *c*1638). Italian lutenist, composer and writer on music. His father, Leonardo Maria Piccinini, his brothers Girolamo and Filippo (see below) and his son Leonardo Maria were all lutenists too. Duke Guglielmo Gonzaga summoned him to his court at Mantua in 1582, but, because of commitments that his Father had entered into, he went instead with his family to the Este court at Ferrara, where he and his brothers remained until the death of Duke Alfonso II on 27 October 1597. He then entered the service of Cardinal Pietro Aldobrandini, papal legate at Bologna and Ferrara, who died in 1621. He was a member of the Accademia dei Filomusi, Bologna. Three autograph letters from him survive (in *I-MOs*), one of 31 January 1595 to the Duke of Ferrara and two, of 2 June 1622 and 1 January 1623, to the Duke of Modena.

Piccinini published two volumes, *Intavolatura di liuto, et di chitarrone, libro primo, nel quale si contengano dell'uno, & dell'altro stromento arie, baletti, correnti, gagliarde, canzoni, & ricercate musicali, & altre à dui, e trè liuti concertati insieme; et una inscrittione d'avertimenti, che insegna la maniera, & il modo di ben sonare con facilità i sudetti stromenti* (Bologna, 1623: facs and edn. in AntMI, *Monumenta bononiensis*, ii, 1962) and *Intavolatura di liuto, nel quale si contengono toccate, ricercate musicali, corrente, gagliarde, chiaccone, e passacagli alla vera spagnola, un bergamasco, con varie partite, una battaglia, & altri capricci* (Bologna, 1639), which was seen through the press after his death by his son. The first of these volumes has a particularly important preface in which he described a type of archlute that he claimed to have developed and had made in Padua in 1594. While these claims have aroused scholarly controversy (see in particular Kinsky, and *MGG1*), Piccinini's claim to have invented the archlute – the first extended-neck lute – in the 1590s is plausible, although the extended-neck chitarrone (as a restrung and retuned bass lute) predated his invention. Piccinini also made significant modifications to the chitarrone and according to Giustiniani invented an instrument 'similar to the kithara of Apollo', which he called a pandora and which was perhaps akin to the English *poliphant* (*see* BANDORA). His preface also includes a short but detailed manual on performance, which advances several interesting ideas: in imitative writing the theme must be played louder so that it stands out; a technique of playing *forte* and *piano* ('ondeggiato') should be adopted in pieces rich in dissonances, which should be highlighted (as, according to him, they were at Naples); embellishments should be left to the taste of the player, but the cadential *gruppo* should always be pronounced, its notes being given equal value, and it should be completed as quickly as possible. Piccinini was a talented composer. His toccatas, which are very varied in form and style, are specially rewarding. The dances have attractive melodies and varied, piquant rhythms; some of them are arranged in suites. Piccinini wrote the music (apparently lost) to *La selva sin amor* (libretto by Lope de Vega Capio), the first opera performed in Spain.

After working with him at the Ferrara court, Piccinini's brothers both went abroad: Girolamo (*b* Bologna; *d*

Flanders, 1615) entered the service of Cardinal Guido Bentivoglio and accompanied him when he was appointed papal nuncio in Flanders, and Filippo (*b* Bologna; *d* Bologna, 1648) worked at the Spanish court until about 1645, when he returned to Bologna; a two-part madrigal by Filippo survives (RISM 1610[17]).

PIER PAOLO SCATTOLIN

Piccinni. Italian, later French, family of composers.

(1) (Vito) Niccolò [Nicola] **(Marcello Antonio Giacomo) Piccinni** [Piccini] (*b* Bari, 16 Jan 1728; *d* Passy, nr Paris, 7 May 1800). He was one of the central figures in Italian and French opera in the second half of the 18th century.

1. LIFE. Although his father was a musician and his mother the sister of the composer Latilla, he was destined originally for the church. His precocious musical talent, however, would not be suppressed. Most of the information about his early years comes from La Borde. This, the first substantial notice, was incorporated in Ginguené's memorial biography (1800–01); Ginguené claimed to have written the notice for La Borde, in which case it originated from a person close to Piccinni at a time when he could have consulted his subject directly, a possibility strengthened by the precision of some of its details. Thus Piccinni is said to have entered the S Onofrio Conservatory in Naples in May 1742 and to have studied there until 1754, under Leo (*d* 1744), and then under Durante, who had a special affection for him. Prota-Giurleo published documents (1954) that throw doubt on this by indicating that Piccinni became a resident of Naples only in 1753. But Piccinni himself called Durante his teacher in a letter published in Alessandro Manfredi's translation of Fux's *Gradus ad Parnassum* (Carpi, 1761). Further, Villarosa (*RosaM*), using manuscript material left by Giuseppe Sigismondo, wrote that Piccinni was so devoted to his old conservatory that after leaving it he visited it frequently and even acted with some of his old companions in carnival time, as he did in Sigismondo's *I figliastri*.

In 1754 Piccinni embarked on a career of almost exclusively operatic composition. Beginning with comic works, as was the custom, he quickly gained a following in Naples, where the public had formerly been devoted to the *opere buffe* of Logroscino. It was the first of several

1. Niccolò Piccinni: engraving by J.F. Schröter

competitive situations that were later to overshadow the career of this amiable and generous man. The extent of his early success and recognition of his promise are reflected in his soon being invited to compose an *opera seria*, his first, for the Teatro S Carlo. This work, *Zenobia* (1756), was also a success and was followed by others, so that in the next few years his output was balanced almost evenly between the serious and comic genres. In 1756 he married one of his singing pupils, the 14-year-old Vincenza Sibilla, who sang his music exquisitely in private but never appeared on the stage. The extent of Piccinni's labours in Italy, his resistance to Burney's inducements to visit England, and his subsequent reluctant move to Paris, were dictated by his desire to obtain the best conditions possible to support seven children (two more died in infancy).

The rapid growth of Piccinni's reputation is indicated by the commission from Rome in 1758 for *Alessandro nelle Indie*. His second Rome opera, *La buona figliuola* (1760), created a furore and began a period in which he remained the undisputed favourite of the reputedly fickle Roman public. Goldoni's rather crude adaptation of Richardson's *Pamela* had already been set by Duni in 1756, with scant success. The charm and vitality of Piccinni's music, which according to Ginguené was composed in only 18 days, conquered Europe; it also won the approval of Jommelli: 'Questo è inventore'. Piccinni produced new works in Rome at every Carnival up to 1773 except that of 1767. His fertility became legendary in a period when prolific operatic composition was by no means unusual. Burney reported Sacchini's assertion that Piccinni had written 300 operas. More sober commentators, like La Borde (or Ginguené), gave a figure of 130 that is not much exaggerated. Piccinni remained in Naples, where Burney met him in 1770 and called him 'a lively

agreeable little man, rather grave for an Italian so full of fire and genius'. He was second *maestro di cappella* under Manna at Naples Cathedral, taught singing and on 16 February 1771 was appointed second organist of the royal chapel. Yet from 1758 to 1773 he produced over 30 operas in Naples, over 20 in Rome and others in all the main Italian cities. This period represents the first peak in his achievement.

Piccinni's position in Rome was suddenly undermined by a craze, which began in 1773, for Anfossi, an inferior composer who, although a year Piccinni's senior, had been his pupil in Naples and at first his protégé in Rome. Piccinni's fall was sudden and cruel; a cabal hissed his last Rome opera and he returned to Naples and fell seriously ill. The date of this event is somewhat in doubt. Ginguené placed it in 1775, but Piccinni did not visit Rome in either 1774 or 1775 (1775 was a jubilee year and the theatres were closed). He did go in Carnival 1776, when his *La capricciosa* (also known as *L'incostanza*) followed Anfossi's *La vera costanza* at the Teatro delle Dame, and that seems the most likely occasion for his defeat. However, he maintained his reputation in Naples with a second *Alessandro nelle Indie* and the successful comedy *I viaggiatori*, and by 1776 a superficially more alluring prospect had already arisen in Paris. In 1774 the Neapolitan ambassador there, Caraccioli, had commended Piccinni to the court, and negotiations began. A delay was imposed by the death of Louis XV, but in 1776, with the promise of an annual 'gratification', revenue from his operas and employment by the court and nobility, Piccinni left Naples (16 November). He reached Paris on the last day of the year, suffering cruelly from the cold, knowing no French and with little idea of what was in store. In the subsequent squabbles of the 'Gluckists' and the 'Piccinnists' he almost alone emerged with dignity and credit; his ability to adapt to the needs of the French stage, a far greater adjustment than Gluck had had to make, demonstrates both courage and versatility.

The italophile party was large and influential, and Piccinni soon found friends. Marmontel undertook to adapt the librettos of Quinault and reconcile them to a modern, italianate musical idiom. He had also to coach Piccinni daily in French; if his account is to be trusted, he may be considered as much an accessory to Piccinni's music as Calzabigi was to Gluck's. In 1777 Gluck, who claimed to have discarded his *Roland* on hearing that Piccinni was at work on one, produced *Armide*. Battle was joined over La Harpe's review of it, the performance in Paris of Sacchini's *Olimpiade* and Marmontel's polemical *Essai*. Isolated at the centre of controversy, Piccinni became depressed and expected failure; but *Roland*, performed early in 1778, won both respect and affection from the public. Among the cast even the devout Gluckist Larrivée was won over and performed the title role magnificently.

In 1778–9 Piccinni was engaged to direct a troupe of Italians, giving performances of *opere buffe* at the Académie Royale. The repertory included works by Anfossi, Paisiello, Sacchini and Traetta, as well as Piccinni himself (*Le finte gemelle*, *La sposa collerica*, *La buona figliuola*, *La buona figliuola maritata*, *Il vago disprezzato*). *La buona figliuola* was also known in Paris as *La bonne fille* (Comédie-Italienne, 1771). Later in his Paris sojourn Piccinni was in charge of singing instruction at the Ecole Royale de Musique et de Déclamation, and he undertook private teaching, including well-paid visits to the country home of La Borde, where he seems to have composed *Didon*. He was evidently used unscrupulously by the court, however, and although from 1783 he was granted a pension, the chief promise of Paris – that he would be better off while writing fewer operas – was hardly fulfilled. He also suffered from the chicanery of the Opéra management. He was promised that his *Iphigénie en Tauride* would be staged before Gluck's; in the event it came two years later and was preceded by the composer's nervous disclaimer of any intention to rival Gluck (*Journal de Paris*, 22 January 1781). Nevertheless it survived the problems of a poor libretto (Dubreuil resisted Ginguené's attempts to improve it) and the drunkenness of Marie-Josephine Laguerre at the second performance. Only when juxtaposed with a revival of Gluck's work was its undoubted inferiority to that masterpiece demonstrated, albeit crudely, by lower receipts. It was favourably received when revived in 1785. In 1783 Piccinni reached his second peak with a highly successful revival of *Atys* and the introduction of *Didon*, which momentarily eclipsed the rising star of Sacchini. The triumph of *Didon* was partly due to the exceptional performance of Mme de Saint-Huberty in the title role; without her at rehearsal it had seemed doomed to failure. Piccinni followed it with two charming and successful comic operas, of which *Le faux lord* would stand revival as well as any of his works.

In 1784 the rival attraction of Sacchini became serious, and Salieri's *Les Danaïdes* diverted attention further from Piccinni. He was no longer a novelty; not only did the dramatically weak *Diane et Endymion* fail to please but he suffered a quite unmerited failure with *Pénélope* in 1785 (it was revived briefly in 1787). A projected revival of *Adèle de Ponthieu*, an inept work which Piccinni had nevertheless revised, came to nothing (1786), and *Clytemnestre*, although rehearsed in 1789, was never performed. Saddened rather than embittered, Piccinni remained generous; he spoke at Sacchini's funeral and proposed an annual concert in memory of Gluck. With the Revolution and the withdrawal of his pension, his position became precarious, and in 1791 he left for Naples, where he was warmly welcomed. In 1792 his daughter indiscreetly married a Frenchman of Jacobin leanings. Deemed guilty by association in the tense and reactionary atmosphere of Naples in those years, Piccinni, on returning from Venice where he had staged two new works, was quite unjustifiably placed under house arrest in 1794. He remained there in indigence and misery for four years, composing psalms, until political changes enabled him to return to France; his family followed as soon as they could. Financially he fared little better; his pension was only partly restored and he was forced to appeal to Bonaparte. By the time he was granted the post of sixth inspector at the Conservatoire he was too ill to benefit from it.

2. Works. It has become customary to describe Piccinni in his Italian operas as a composer whose vein was primarily 'the tender, the intimate, the sad and the higher comic', in the words of Abert, who considered him to have been 'made of far finer and more delicate stuff than most of his predecessors and contemporaries'. The same attitude was sometimes expressed at the time; J.A. Hiller wrote (1768) that Piccinni's forte was 'the naive and the tender'. The sentimental role of Cecchina in his most famous opera, *La buona figliuola*, encouraged this view. Contemporary manuscript collections of his arias often

2. Scene from a production of Niccolò Piccinni's 'Atys', by the Stockholm Opera 1784: painting by Pehr Hilleström

show a preference for pieces of this sort, and there seems to be a higher proportion of them in his operas than in most others of the time. While his contemporaries had a special affection for this aspect of his work and prized the elegance and grace of his style in general, most of them also stressed its vigour and variety. Burney called him 'among the most fertile, spirited and original' composers then working, while La Borde (or Ginguené) distinguished in his music 'a vigour, a variety, and especially a new grace, a brilliant and animated style'. Piccinni's style in his Italian operas is in fact a rather complex one in the number and variety of its elements and the sources on which it drew. Its originality, also mentioned by most writers of the time, should probably be seen in the way it brings together, balances and plays off against each other elements of simplicity and complexity in vocal lines, accompanying textures and the relationship between the two. The style (if not the form) of many of Piccinni's pieces from the 1750s would not have seemed out of date even in the 1780s. This is most remarkable in the harmonic layout, the way in which accompaniment motifs are used to clarify and articulate it, and the textures that they result in; all were to remain typical of the Classical style.

Piccinni's gifts included his dramatic imagination and his ability to adapt his music to the situation at hand. While *La buona figliuola* is a masterpiece of sentimental comedy, his intermezzo *La canterina* (1760) is noteworthy for its straightforward comic vigour, particularly in comparison with Haydn's setting of the same text. His French operas, while retaining many italianate characteristics, nevertheless include colourful orchestration, harmonic diversity and an occasional terseness of style that reflect the practices of his adopted country. Although Anfossi's setting of *L'incognita perseguitata* (1773) contains numbers that are more immediately beautiful than anything in Piccinni's setting of 1764 (the heroine Giannetta's aria 'Come figlia ubbidiente' is a case in point), Piccinni avoided the saccharine quality of Anfossi's music by using a wide variety of aria forms and types, and by occasionally introducing rather short arias to punctuate the action. Anfossi's characters are more obviously differentiated than Piccinni's; but Anfossi's attempt to distinguish between them results in rigid stereotypes, whereas Piccinni's characters display much greater flexibility.

Piccinni's music grew over the years in fineness of detail and elegance of craftsmanship, if sometimes falling into

the perfunctory. That can be seen in his accompanying techniques, which, starting from the standard mid-century texture in which the first violins doubled the vocal line, developed increasing brilliance of orchestral sound and independence and subtlety of interplay between voice and orchestra. The variety of Piccinni's style found freest play in comic opera, which made rapid shifts of dramatic tone (the sentimental, the mock serious or heroic, the farcical) a basic part of its manner. These were reflected in a tendency to sectionalism in the music, marked by changes of metre, tempo and expressive character. The comic arias fall into many formal patterns, of which the most frequent consists of two complete statements of the whole text in a binary tonal scheme. Piccinni is traditionally said to have introduced the musically and dramatically expansive multi-sectional finale – already found in the operas of Galuppi and other northern composers – into Neapolitan comic opera. His earliest use of it is in his first Roman comic opera, *La buona figliuola*, and he is said to have brought it to Naples in *La furba burlata* (1760), which is lost. Kretzschmar identified Piccinni with what he called the 'rondo-finale', by which he meant not the return of whole sections within the finale (a technique Piccinni was also to use, but which was certainly known before him), but a departure from and return to significant material within a section, linked to characters or dramatic relationships. The layout of the text in some surviving librettos of earlier Neapolitan operas suggests, however, that something of the sort may have been done earlier. In practice his finales, like his comic arias, took many forms.

Although his comic operas have received more attention, Piccinni was also a central figure in *opera seria*, and most of his works in that genre have some remarkable songs. In the first of them, for example, *Zenobia* (1756), the aria 'Ch'io parta?' begins like an accompanied recitative (and away from the tonic of the key) and retains a fluid, declamatory character, although the form remains that of the da capo aria. The duet 'Va, ti consola' does not, as usually happens, have the second singer enter by repeating the first's solo with different words; rather, he makes a strong expressive contrast, changing to the minor, a favourite device of Piccinni's. In the form of his *opera seria* arias Piccinni mostly followed the general trends of the time. In the earliest ones the full da capo predominates, giving way in the course of the 1760s to the dal segno form. In the last to be written before his move to Paris, the dal segno form was replaced by one close to that of sonata form. A few cavatinas appear (arias of one stanza set like the first part of a da capo), and in the 1770s he also used a somewhat related, but more expansive, form (not called cavatina) in which not just one stanza but the complete poem of two stanzas is set straight through and then repeated in a binary tonal layout (a form perhaps taken over from the comic opera).

In his French operas Piccinni used a wide variety of aria forms, including arias in several movements (Dido, 'Vaines frayeurs') and with contrasting middle sections (Sangaride, 'Malheureuse, hélas', *Atys*). He also used arioso and open-ended and incomplete forms. His melodies were much admired, but he was inferior to Sacchini as a lyricist and his line lacks the tautness of Gluck's; too often his cantabile arias seem emotionally uncommitted. Often more effective are arias of that Neapolitan type which, over a motivic continuum, builds a melodic line of short, declamatory phrases (Roland, 'Je me reconnais'; Orestes, 'Cruel et tu dis que tu m'aimes', *Iphigénie*; Diana, 'Cesse d'agiter mon âme', which Grimm called 'the finest aria M. Piccinni has produced in France'). Piccinni's own ideas on proper aria composition are given by Ginguené and are reflected in the writings of N.E. Framery.

In his Italian works Piccinni was already unusually lavish in his orchestration; in France, where a fuller orchestra was normal, he scored more elaborately still and – the opinions of admirers such as Marmontel notwithstanding – more heavily than Gluck. While it is generally true that in Piccinni's French recitatives the orchestral interjections reflect the sense of the words, the effect is often weakened by a rather too regular rhythm of alternation between voice and orchestra and by a certain predictability in the orchestral figures. Piccinni's alternation between short chords and long notes played simultaneously with the voice is often quite dramatic, however, and his occasional use of tremolo accompaniments is effective.

As well as flexible forms and the insertion of ariosos in recitatives, the French heritage in the use of chorus and ballet makes his operas the natural outcome of Encyclopedist principles, embodied particularly in Marmontel's *Essai*: Italian music shorn of its unreasonable excesses, and French forms. In *Roland* the blend is still uncomfortable. The arias and duets are too long for their contexts; but the best recitatives and ariosos, and a few arias, lend

3. Mme de Saint-Huberty in the title role of Niccolò Piccinni's 'Didon', which she created in Paris, 1783: engraving after Dutertre from 'Costumes et annales des grands théâtres de Paris' (1786)

the title role, at least, great dramatic force. The monologue 'O nuit, favorisez mes désirs amoureux' and the subsequent mad scene, in which Piccinni boldly juxtaposed a chord of C major, a dominant ending to an 'open-ended' F minor Allegro, with a Grave in E♭ minor, were immediately admired and remain impressive even beside Lully's noble setting. In *Atys* Piccinni achieved a more integrated style, which set the pattern for French opera in the next decade. There are perhaps too many arias (seven for Atys alone), but the interest is better distributed among the roles, as it is in *Iphigénie*. In *Atys* Piccinni rose particularly well to the most French features, such as the dream sequence of song, chorus and dance and the choral lament at the death of Sangaride. He was able, however, to include without incongruity an italianate quartet, in C minor, some 200 bars long; this forms the dramatic crux. The memoirs of André Morellet assert that Piccinni, like Gluck before him, adapted material from his Italian operas in *Atys*. Although his contemporaries favoured *Didon*, *Atys* and *Pénélope* are its equals, and Act 1 of *Pénélope* is perhaps the finest fruit of Piccinni's collaboration with Marmontel.

Piccinni's French operas are not, as has been suggested, an attempt to oppose Gluck's 'reforms' with the methods of Italian *opera seria*. The 'rivalry' is over different musical styles; in dramatic organization both composers represent various possibilities of synthesis between a modern musical language and the traditional French forms. Piccinni was doubtless indebted to Gluck, and his French operas are at least as dramatically engaged as Gluck's. There is, however, more emphasis on musical colour and musical expansion for its own sake. Gluck, belonging to an older generation and inimitable through the very qualities for which he is now most admired, had no very substantial following, although aspects of his works, particularly *Alceste* and the *Iphigénie* operas, contributed to the genre one may term 'Piccinniste opera'. When Piccinni went to France, Italian music was already familiar in concert programmes and had influenced the establishment of a sophisticated *opéra comique* to which, with his skill in handling ensembles and his ability, under-used in the serious operas, to write succinct lyrical numbers, Piccinni contributed as to the manner born. At the Opéra he succeeded where the Frenchman Philidor had not in establishing this synthesis of France and Italy by using the lingua franca of the day in the main national theatre. Thereafter French and German composers increasingly adopted an italianate style. Piccinni prepared the way for Sacchini and ultimately for Spontini, who with his omnipresent lyricism, rich orchestration and dramatic vehemence, is more exactly a Piccinnist than a Gluckist.

(2) **Luigi** [Lodovico] **Piccinni** (*b* ? Rome or Naples, 1764; *d* Passy, nr Paris, 31 July 1827). He was the third son (the second to survive) of (1) Niccolò Piccinni, who was his teacher. When his father moved to Paris in 1776, Luigi remained in Naples, joining his parents about 1782; he published a set of piano sonatas with a toccata (Paris, 1782). In 1784 his first *opéra comique* was performed in Paris, followed by several others until 1790. In 1791 he returned with his father to Naples and had comic operas performed in several Italian cities during the period 1793–5. From 1796 to 1801 he was Kapellmeister at the Swedish court in Stockholm. He returned to Paris in 1801 and had several *opéras comiques* performed there, 1804–9; in 1810 he suffered a failure at the Opéra with *Hippomène et Atalante*. He thereafter confined his activities to the teaching of singing, except for one last unsuccessful *opéra comique* in 1819.

Luigi Piccinni seems to have been generally regarded as a mediocre composer. Fétis wrote that he was 'devoid of genius and even of that elegant taste that in the theatre sometimes takes its place'. None of his operas was a great success, although some were published, along with songs and piano pieces.

For list of stage works see *GroveO*.

(3) **Louis Alexandre** [Luigi Alessandro; Lodovico Alessandro] **Piccinni** (*b* Paris, 10 Sept 1779; *d* Paris, 24 April 1850). He was the illegitimate son of Giuseppe Piccinni (*b* 1758), (1) Niccolò Piccinni's eldest child, who wrote the librettos of two *opéras comiques* composed by his father. Louis studied composition with Le Sueur and had advice from his grandfather on his return to France (1799). He became a skilful accompanist and rehearsal pianist, serving in that capacity first at the Théâtre Feydeau and from 1802 at the Opéra. He was also conductor at the Théâtre de la Porte-St-Martin (1803–7, 1810–16), second accompanist of the imperial chapel from 1804 (in a letter to the editor of the *Courier des Spectacles*, published on 20 Feb 1804, he signed himself 'Accompagnateur du Théâtre des Arts'), and from 1814 chief accompanist of the royal chapel and accompanist of the dauphine's private music from 1818. In 1816 he became third chorus master at the Opéra, later second and finally chief. He was accompanist at the Théâtre du Gymnase from 1820 to 1824, when he was put in charge of stage design at the Opéra, but he was dismissed from there in 1826. In 1827 he managed an unsuccessful theatre season in Boulogne and then was a teacher in Paris (to 1836), Boulogne, Toulouse and Strasbourg. In 1849 he returned to Paris.

A highly prolific composer, Piccinni was best known for his music for a large number of melodramas and ballets at the Porte-St-Martin and other popular Paris theatres.

For list of stage works see *GroveO*.

DENNIS LIBBY (1 with JULIAN RUSHTON), MARY HUNTER (work-list with JAMES L. JACKMAN, MARITA P. McCLYMONDS, DAVID CHARLTON)

Piccioli, Giacomo [Jacomo] **Antonio** (*b* Corvaro, nr Rieti; *fl* 1587–8). Italian composer. He was a pupil of Costanzo Porta and, according to the title-page of his *Missa, cantica Mariae verginis ac sacrae cantiones octo vocibus concinendae* (Milan, 1587, inc.), a Franciscan conventual and *maestro di cappella* at Vercelli Cathedral. Dedicated to Constanzo Sarriano, Bishop of Vercelli, whose coat of arms appears on the title-page, this volume contains the *Missa 'Factum est silentium'* together with three settings of the *Magnificat* and a number of motets. Piccioli was still at Vercelli in the following year, when his *Canzonette a tre voci* (Venice, 1588) were published. He contributed one mass each to two anthologies: *Missarum quinque vocum* (RISM 1588[1]), which also contains four masses by Orfeo Vecchi, and *Missae quatuor, & quinque vocibus decantandae* (1588[4]), edited by Giulio Bonagiunta and including works by Hauville, Lhéritier and Lassus.

IAIN FENLON

Piccioni [Pizzoni, Pisoni], **Giovanni** (*b* Rimini, 1548/9; *d* Orvieto, after 17 June 1619). Italian composer and organist. He was organist at the cathedral of Rimini from 1569 probably until shortly before 15 November 1577 when, according to the dedication of his first book of five-voice madrigals, he moved from Rimini to Conegliano, Veneto, where he became *maestro di musica* to the 'Magnifici Signori Desiosi', who formed an academy there. His books of canzoni of 1580 and 1582 bear dedications testifying to connections in the Romagna, and he may once again have been active there during these years. In the years 1583–6 he may have been in Dalmatia with Marc'Antonio Venier, as he later claimed (in his seventh book of madrigals). From August 1586 until 31 December 1591 he was organist at the cathedral of Gubbio. He held the same post at Orvieto Cathedral from 8 January 1592 until 1617; in 1615 he became *maestro di cappella* there as well. In 1616 he held the additional posts of organist and *maestro di cappella* at nearby Monte Fiascone. He was recalled to Orvieto as organist in 1619, and the last notice of his activity there is found in the dedication of his *Concertus ecclesiastici* on 17 June 1619.

Piccioni's extensive output falls into two categories, distinguishable not only by genre but also generally by date and style; all his extant earlier prints, up to 1602, are polyphonic music, except one secular work, while his surviving later publications are all sacred works that show the influence of the *seconda pratica*. In the preface to his *Concerti ecclesiastici* (1610) he claimed to have taken the music of Andrea and Giovanni Gabrieli as the model for his own compositions. He also gave some useful advice to the less expert performer. First, the organist must transpose the music to the octave below when playing it on 'small organs with 3½′ stops such as are to be found in many Italian towns', because the actual sound they produce is an octave higher than the human voice; he particularly recommended this practice for the solo concertos. He next explained that he had indicated neither accidentals nor figures as they 'would only confuse the less expert organist', and more skilled players could in any case manage without them. Finally, he advised organists unused to playing from a basso continuo to score and intabulate the music. The *Salmi intieri concertati* (1616), which depart from the spezzati style, are an important example of the use of the new style of the contrast of solo and tutti.

WORKS
all published in Venice

PIER PAOLO SCATTOLIN

Piccola Pasta, La. *See* TACCHINARDI-PERSIANI, FANNY.

Piccolo (It.: 'small'). (1) (Fr. *petite flûte*; Ger. *kleine Flöte, Pickelflöte, Pikkoloflöte, Oktavflöte*; It. *ottavino, flauto piccolo*). A small flute sounding an octave higher than the ordinary or concert flute; *see* FLUTE, §II, 3(i).

(2) Used as an adjective – i.e. in its correct Italian grammatical form – 'piccolo' describes various instruments, the smallest and highest in pitch of their type, e.g. the VIOLINO PICCOLO, VIOLONCELLO piccolo, piccolo clarinet, piccolo timpani and so on. Occasionally the sopranino cornet in the 19th century was called simply 'piccolo'. The term 'piccolo bass' refers to a rare small double bass used in jazz; it is fitted with thin strings and

tuned an octave higher than the standard instrument. There is also a piccolo bass guitar, which bears a similar relationship to the electric bass guitar.

(3) An ORGAN STOP.

Piccolo bass. A rare, small DOUBLE BASS used in jazz. It is fitted with thin strings and tuned up to an octave higher than the standard instruments. The player best known for using it is RON CARTER.

Piccolomini, Marietta (*b* Siena, 15 March 1834; *d* Poggio Imperiale, Florence, 23 Dec 1899). Italian soprano. She made her début in February 1852 at the Teatro della Pergola, Florence, in *Lucrezia Borgia* and later that year sang at the Teatro Apollo, Rome, in *Poliuto* and *Don Pasquale*. In 1853 she sang Gilda in *Rigoletto* at Pisa, and at Turin in 1855 she sang Violetta in *La traviata*, a role for which she became famous; she was the first Violetta in London (1856, Her Majesty's Theatre) and Paris (1856, Théâtre Italien). At Her Majesty's in 1858 she sang Arline in *La zingara*, the Italian version of Balfe's *The Bohemian Girl*, and the title role of *Luisa Miller*. She was also heard as Serpina in *La serva padrona*, Zerlina in *Don Giovanni*, Lucia, Adina in *L'elisir d'amore*, Marie in *La fille du régiment*, Amina in *La sonnambula*, Elvira in *I puritani* and Leonora in *Il trovatore*. In 1863 she married the Marchese Gaetani della Fargia and retired from the stage. Her popularity, especially as Violetta, rested more in her youthful, attractive appearance and her acting ability than in her vocal accomplishment. According to Henry Chorley, 'her voice was weak and limited ... hardly one octave and a half in compass. She was not sure in her intonation: she had no execution'.

ELIZABETH FORBES

Piccolomini, Niccolò (*fl* first half of 16th century). Sienese priest, canon of the Cathedral, professor of canon law at Siena's university, poet and composer. A member of the important Sienese family that had included two popes, Piccolomini was provost of the Cathedral from 1521 to 1532. He is the author of two pieces in Pietro Sambonetto's *Canzone sonetti strambotti et frottole libro primo*, published in Siena (1515[2]): *Mentre lo sdegno*, ascribed there to 'Nico[lò] Pic[colomini] Pre[te] Sen[ese]', and *S'io fui servo*, ascribed to 'Nicholaus Pre. Se.'

Picco pipe. A small DUCT FLUTE 8·5 cm long, named after the instrument used by the Italian musician Joseph Picco [Angelo Picchi] (*b* Robbio, 1830) called the 'Sardinian Minstrel', who in 1854–7 enjoyed massive acclaim in Italy, France and England. The son of a poor shepherd and born blind, he was inspired by the sounds of the village organ. Apparently self-taught, he was heard playing in the Apennine mountains by a huntsman and brought to Milan. After successful concerts in Italy he was awarded a diploma by the Academia di S Cecilia in Rome in 1855 for his performing and extemporizing skills. His debut in London on 21 February 1856 was at Covent Garden. According to press reports, the 'tibia pastorale' he played was nothing more than a three-holed whistle, 2·5 to 3 inches (6·35 to 7·62 cm) in length and made of common white wood which was dyed yellow, a type of child's toy then commonly found at the smallest country fair (*see* ZUFFOLO). With a range of three octaves, he was praised for 'difficult variations, those double notes, those flying octaves, those chromatic runs performed with so much precision and an accent so marked . . . he makes use of all his fingers, using particularly the forefinger of the left hand to close more or less the end of the whistle, in the way that a performer on the horn employs his hand'.

Such were his successes that London flute makers sold an instrument similar to his, made in boxwood or other hardwood, for some years. Like many earlier pipes from the Bronze Age onwards, it is a flute with two finger-holes and a thumb-hole above them, played with one hand. The bore is cylindrical but widely flared at the lower end. When this end is closed with the palm of the other hand

Picco pipe, London, 2nd half of the 19th century (Horniman Museum, London)

the pipe behaves like an ocarina, sounding *c″*; opening the holes gives the notes *g″* to *b″*, and partially uncovering the end produces all the semitones of this octave. The scale is continued upwards in open harmonics with the end uncovered, and further in stopped harmonics. The English maker A.W. Simpson has recently marketed a modified version in plastic to serve as an introduction to the recorder. However, none of these models appear ever to have equalled Picco's original pipe in range and response.

WILLIAM H. STONE, ANTHONY C. BAINES/ WILLIAM WATERHOUSE

Picerli, Silverio (*b* Rieti; *fl* Naples, 1629–31). Italian music theorist and theologian. He was a friar belonging to a strict order of Franciscans. According to the dedication to the reader in his *Specchio primo di musica* he was forbidden by his order to make music his profession. The same publication reveals that in 1629 he was superior of the convent of S Maria Maddalena at Naples, and the dedication of his *Specchio secondo di musica* shows that in 1631 he was living at another monastery there, S Chiara.

Picerli wrote three treatises, the first two of which are *Specchio primo di musica* (Naples, 1630) and *Specchio secondo di musica* (Naples, 1631). The *Specchio terzo* was announced by Picerli in the *Specchio primo*, but no copy now exists; it dealt with 'theory and the numbers on which music is based'. The *Specchio secondo* reveals that the superiors of Picerli's order gave their approval to the manuscript of the *Specchio terzo* on the same date, 17 January 1631, as the *Specchio secondo*. A copy of the *Specchio terzo* is listed among the books belonging to Girolamo Chiti, who also left a collection of annotations on Picerli's writings (in *I-Bc*).

In the *Specchio primo* Picerli formulated a new system of solmization made necessary by the increasingly widespread use of accidentals; in it he tabulated three 'orders' of music. The *Specchio secondo*, which is concerned almost exclusively with counterpoint, is less original, but its subject matter is presented in a notably clear, well-ordered way, and it was the principal source for the fifth book of Kircher's *Musurgia universalis* (1650). Picerli gave much useful practical advice on consonances, dissonances and 'the way to move from one to the other and to treat them in counterpoint', cadences, canon and various other kinds of counterpoint. Chapter 22 is specially interesting; it deals with 'the particular considerations concerning composition for two, three, four and more voices and for two or more choirs, together with other important matters'. Picerli also paid attention to the art of composing for interchangeable voices, advising on the construction of such compositions so that they are practical for singing (p.189), and to the handling of the basso continuo (pp.166, 184–5 and 191). He appeared too to accept the principles of the *seconda prattica* when he stressed the need to compose 'according to the nature and demands of the subject or text to be set to music' (p.181), using 'consonance and dissonance according to the meaning [of the words], their joy, sadness, grief, failure, mistaken opinion or other emotion, expressing their significance in the music as well' (p.190). Chapter 18 is noteworthy for its discussion of the number of modes. Systems of three, four, seven and 14 modes are rejected. Picerli concludes that plainchant employs the traditional eight modes, while polyphony uses four more 'irregular' modes. The difference with traditional 12-mode theory is only a terminological one. In addition to Kircher, Picerli's writings influenced Penna, Bononcini, Berardi and Pitoni.

WRITINGS

Specchio primo di musica, nel quale si vede chiaro non sol'il vero, facile, e breve modo d'imparar di cantare di canto figurato, e fermo; ma . . . scoperti nuovi segreti nella medesima circa il cantare, comporre, e sonar di tasti, nascosti (Naples, 1630)
Specchio secondo di musica, nel quale si vede chiaro il vero, e facil modo di comporre di canto figurato, e fermo, di fare con nuove regole ogni sorte di contrapunti, e canoni, di formar li toni di tutt'i generi di musica reale, e finta, con le loro cadenze à proprij luoghi e di porre in prattica quanto si vuole, e può desiderare di detti canto figurato, e fermo (Naples, 1631)
Specchio terzo di musica, written in or before 1631, announced in *Specchio primo*, lost

AGOSTINO ZIINO/R

Pichl [Pichel], **Václav** [Venceslaus; Wenzel] (*b* Bechyně, nr Tábor, 25 Sept 1741; *d* Vienna, 23 Jan 1805). Czech composer, violinist, music director and writer. He first studied music at Bechyně with the cantor Jan Pokorny. From 1752 to 1758 he attended the Jesuit college at Březnice, where he served as a singer. In Prague he was a violinist at the Jesuit seminary of St Václav and studied philosophy, theology and law at the university. In 1762 he was appointed first violinist of the Týn Church, where he studied counterpoint with the organist J.N. Seger. In 1765 he was engaged by Dittersdorf as a violinist and assistant director for the private orchestra of Bishop Adam Patachich at Nagyvárad (Grosswardein, now Oradea, Romania). After the dissolution of the orchestra in 1769 Pichl became the music director for Count Ludwig Hartig at Prague; in about 1770 he was appointed first violinist of the Vienna court theatre. On the recommendation of the Empress Maria Theresa, who preferred him to Mozart, he became the music director and *Kammerdiener* (valet) for the Austrian governor of Lombardy at Milan, Archduke Ferdinando d'Este; he went to Italy in 1777 (not 1775). The French invasion of Lombardy (1796) caused him to return to Vienna, where he remained in the service of the archduke until his death.

While in Italy Pichl visited all the important music centres, Gyrowetz's autobiography indicates that he was appreciated as one of the foremost European composers of that time. He was in contact with Padre Martini (correspondence of 1778–84, see Straková, 1962), Cherubini, probably also with J.F. Reichardt and others, being a member of the Filarmonici at Mantua (from 1779) and Bologna (from 1782), and for a time music director of the theatre at Monza, near Milan. He is reported to have been Prince Nicolaus Esterházy's musical

trustee at Milan; his compositions were performed at Eszterháza by Haydn (e.g. 11 February 1778), who copied his quartets to be performed there in 1780, and who remained in contact with him (see Haydn's letter to Pleyel of 6 December 1802).

Pichl was a man of broad knowledge and manifold interests. At Nagyvárad he wrote Latin librettos which were set to music by both himself and Dittersdorf. Later he compiled a history of Czech musicians in Italy (the manuscript of which was destroyed at Milan during the French occupation) and translated the libretto of Mozart's *Die Zauberflöte* into Czech (lost). He supplied information for numerous entries in Dlabač's *Künstler-Lexikon* and visited him at Prague in December 1802.

Pichl's music stands between the early and high Classical styles. A detailed list of works that he prepared for Dlabač's *Künstler-Lexikon* shows about 900 pieces, the greater number of which are extant. His numerous symphonies, written from about 1769 to 1803, are stylistically close to those of Dittersdorf and of Haydn's middle period (some were confused with works of these composers). They consist of three or four movements, sometimes with a slow introduction; his use of sonata form in both orchestral and chamber works shows a marked contrast between the energetic primary and melodious secondary themes, and some have elaborate development sections. His chromaticism and expressive harmony bear Mozartian traits. In his later years Pichl was appreciated more for his sacred works and violin concertos. He was one of the founders of the Viennese violin school. Dlabač's statement (1794) that Pichl was a violin student of Dittersdorf is not supported by the latter's autobiography: Pichl had already completed his training before Dittersdorf enlisted him for Patachich's orchestra (1765). In Italy he is reported to have studied the violin with Pietro Nardini, to whom he dedicated his *Cento variazioni* op.11. His compositions for solo violin, employing all the current technical devices, are still valued as excellent pedagogical works, particularly the fugues as preparatory studies for works by J.S. Bach. There is no documentary evidence for Gyrowetz's allegation that Pichl was one of Paganini's teachers.

WORKS

MSS mostly in A-Wgm, Wn; CZ-Bm, K, KRa, Pnm; D-Bsb, Dl, SWl; GB-Lbl; H-Bn; I-Bca, Mc, MOe; list in DlabacžKL

ORCHESTRAL

Syms., symphonic concertantes: over 20 pubd as opp.1, 5–6, 8, 15, 17, 24–6, without op. nos. (1778–*c*1805); *c*70 in MS (1764–1803); 2 ed. A. Zakin (1977, 1979), 3 ed. in The Symphony 1720–1840, ser. B, vii (New York, 1984) [incl. thematic index]

Over 30 concs., concertinos: 16 for vn, incl. 3 as op.3 (Berlin, 1779) [1 ed. J. Čermák and J. Maštalíř (Prague, 1957)], 1 in *A-Wgm* and 1 in *I-Gl*; 1 for db, *D-SWl*, ed. M. Říha and F. Pošta (Prague, 1972); 1 for bn/db, *SWl*, ed. H. Herrmann and M. Schlenker for db (Leipzig, 1957); 1 for bn, *CZ-Bm*; others, mostly lost

*c*20 serenatas (partitas, notturnos), incl. 3 as op.9 (Berlin, 1784); minuets, German dances

CHAMBER

Qnts: *c*20 divertimentos, str/(str, wind insts), incl. 6 as op.3 (Paris, ?*c*1778), 6 as op.5 (Berlin, 1781), 3 as op.30 (Offenbach, 1797)

Qts: 18 str qts, incl. 6 as op.2 (Berlin, 1779), 3 as op.13 (Berlin, 1788); 3 for fl, vn, va, vc, op.12 (Berlin, 1787); 3 for cl, vn, va, vc, op.16 (Berlin, 1790)

Trios: 45 str trios, incl. 6 as op.4 (Paris, ?*c*1785), 6 as op.7 (Berlin, 1783); 12 for fl, vn, vc, incl. 6 as op.1 (Lyons, n.d.), 2 ed. in MVH, xxiv (1969); 3 sonatas, hpd/pf, vn/fl, vc, op.26 (Vienna, 1795)

Duets: 15 for 2 vn, incl. 6 as op.4 (Berlin, 1780), 3 as op.34 (Offenbach, 1797), 3 as op.38 (Vienna, *c*1799); 18 for vn, va, incl. 6 as op.10 (Berlin, 1784), 6 as op.18 (Berlin, 1793), 3 for va, vc, op.14 (Berlin, 1789), also as op.16 (Paris, 1793)

Vn solo: 100 variazioni sulla scala del basso fermo per esercizio del violino, op.11 (Florence and Naples, *c*1787); 100 variations, 1776–96, lost; 12 variations, 1798–1803, lost; 60 capriccios, incl. 12 as op.19 [21] (Berlin, 1796), 12 as op.46 (Vienna, *c*1801); 6 fughe con un preludio fugato, op.41 (Vienna, 1800), also as op.22 (Berlin and Amsterdam, 1801), as op.35 (Leipzig, 1811), ed. in MAB, vii (1951, 3/1989), 1 ed. in DČHP, no.145; 18 sonatas, b acc., incl. 6 as op.20 (Brunswick and Hamburg, ?*c*1796); 3 sonatas, vn/va acc., op.23 (Berlin, 1804)

*c*180 works, 4–8 insts, baryton, lost; *c*15 partitas, wind insts, *CZ-Pnm*; 9 sonatas, 6 sonatinas, hpd/pf, lost

STAGE

music all lost

3 Lat. ops (Pichl): Olympia Jovi sacra, Grosswardein, 1765; Pythia, seu Ludi Apolloni, Grosswardein, 1766; Certamen deorum, Grosswardein, 1767

Lat. op 'per Klosterbrack', Vienna, 1770–76

Das Schnupftuch (Spl), Pest, 1774

Der Krieg (Ger. op), Vienna, *c*1775

Raol de Crequi (ballet), Monza, 1795, collab. P. Winter, lib pubd

4 opere buffe, 3 opere serie

It. arrs. of 8 Fr. ops, 1776–96, incl. A.-E.-M. Grétry: La caravana del Cairo (with addl nos.), Monza, 1795, lib pubd

OTHER VOCAL

Over 100 sacred works, incl. over 30 masses

Mag, Gloria pastorale, *I-Bca**

6 It. ariettas (P. Metastasio), 1v, hpd, op.42 (Vienna, 1801), incl. Tu mi chiedi, ed. M. Poštolka, *Songs*, ii (Prague, 1962)

Pickelflöte (Ger.). Piccolo. *See* FLUTE, §II, 3(i).

Picken, Laurence (Ernest Rowland) (*b* Nottingham, 16 July 1909). English musicologist. He studied natural sciences at Cambridge as a scholar of Trinity College (BA 1931, MA 1935, PhD 1935, DSc 1952), becoming a Fellow of

Jesus College in 1944. He became assistant director of research in zoology at the university (1946–66). His research into Asian music dates from 1944 when as a member of the British Council Scientific Mission to China he had the opportunity of studying the *ch'in* (board zither) with Hsü Yuan-pai and Cha Fu-hsi. From 1951 he frequently visited Turkey, collecting instruments and related data on Turkish art and folk music. He studied the *kanun* (board zither) with Nejdet Senvarol (1951) and the *baglama* (lute) with Saz Evi (1953), both in Istanbul. After acting as Walter Ames Visiting Professor of Zoology at Washington University, Seattle (1959), Picken was appointed assistant director of research at the Faculty of Oriental Studies at Cambridge (1966–76). During this time he was also an editor of the *Journal of the International Folk Music Council* (1961–3) and founder-editor of *Musica asiatica* (1977–84). He was elected Fellow of the British Academy (1973), Docteur Honoris Causa of the Université de Paris X, Nanterre (1988), and Honorary Fellow of Jesus College (1989) and Trinity College (1991), Cambridge, and of the School of Oriental and African Studies, University of London (1991). He received the Trail Medal and Award of the Linnean Society in 1960 and the Curt Sachs Award of the American Musical Instrument Society in 1995; he has also been honoured with two Festschriften, the first one on the occasion of his 60th birthday (*Asian Music*, vi/1–2, 1975, ed. F.A. Kuttner and F. Lieberman) and the second one honouring his 70th birthday (*Music and Tradition: Essays on Asian and other Musics presented to Laurence Picken*, ed. D.R. Widdess and R.F. Wolpert, Cambridge, 1981; for a list of his publications on music see *CHIME: Journal of the European Foundation for Chinese Music Research*, iv, 1991, pp.63–5).

Picken's particular areas of musical research are China and Turkey, though he has also directed attention to other regions of Asia, including Central Asia, South-east Asia, Korea and Japan. The main emphases of his work are historical and organological. The latter is characterized by a scientific approach which embraces a range of aspects such as terminology and taxonomy, manufacturing processes, regional distribution, historical relationships, acoustic properties, ritual connotations or functions, repertory and technique. This work culminated in *The Folk Musical Instruments of Turkey* (1975), the most comprehensive study of Turkish instruments (and perhaps of any folk instrumentarium); it is organized according to the Sachs–Hornbostel system of classification, and includes a defence of that system with reference to scientific taxonomy. Smaller studies of organological problems have appeared in the pages of *Musica asiatica*.

Picken's early studies of Chinese music concentrate on the music of the Tang and Song dynasties, and particularly on the transcription, analysis and cultural history of notated repertories in Tang and Song sources. The search for further records of the secular court repertory of Tang dynasty China led him to investigate the Tōgaku ('Tang music') repertory of Japan. Recognizing similarities between the historical scores of Tōgaku (from the 9th century onwards), Chinese notations of Tang and Song date, Chinese song lyrics from the Tang period, and musical idoms of Central Asia (where much of the Tang court repertory originated), he concluded that the Japanese belief that the Tōgaku repertory was imported from Tang China to Japan is correct; however, transformations in performing practice – including a substantial retardation of tempo – occurred after its arrival in Japan. From 1972 he established a 'Tang Music Project' to undertake the elaboration of this hypothesis and the analysis of the earliest Tōgaku scores; transcriptions of the latter, analyses of the music, and evidence for the history of the music from Chinese and Japanese sources, are brought together in the multi-volume *Music from the Tang Court* (1981–). The first volume of this series contains a full statement of the objectives and methods of this project, perhaps the most extensive yet undertaken in the historical musicology of Asia. In October 1990, Picken and N.J. Nickson were guests of the Shanghai Conservatory of Music, where they supervised a performance of his transcriptions of Tang and song music.

LUCY DURÁN/RICHARD WIDDESS

Picker, Martin (*b* Chicago, 3 April 1929). American musicologist. He received the PhB (1947) and the MA (1951) from the University of Chicago, where he worked with Gombosi. At the University of California at Berkeley he studied under Lowinsky and Kerman and took the doctorate in 1960. He taught at the University of Illinois from 1959, and in 1961 he joined the faculty of Rutgers University, where he was appointed professor in 1968 and became professor emeritus in 1997. He chaired the department of music from 1973 to 1979. He was editor of the *Journal of the American Musicological Society*, 1969–71. Picker's field of interest is Renaissance music, and his main work has been his critical edition of the chanson albums of Marguerite of Austria (1965; originally submitted as his dissertation); in addition to providing reliable transcriptions, he discusses the cultural background and history of the manuscripts and analyses the texts and music. His later contributions include detailed research guides to Renaissance composers and articles on Isaac.

PAULA MORGAN

Picker, Tobias (*b* New York, 18 July 1954). American composer and pianist. He studied with Charles Wuorinen (Manhatten School, 1972–6), Elliott Carter (Juilliard, 1976–8) and Milton Babbitt (Princeton, 1978–80). He quickly attracted critical attention, being characterized at age 24 by Andrew Porter as 'a genuine creator with a fertile, unforced vein of invention' (A. Porter: 'Musical Events', *New Yorker*, 20 Nov 1978). At the age of 18, Picker was an improvising pianist for the Martha Graham School of Contemporary Dance, an experience that encouraged his intuitive, pulse-based musicality. His professed affinity for two composers, one romantic and one modern, also catalyzed his compositional style. He has met the challenge to reconcile the warm, earnest, arching continuity of Brahms and the cool, playful, fractured energy of Stravinsky with music distinctive for its emotional immediacy and impulsive, visceral rhythm.

Picker's early compositions, through to the age of 25, are exclusively chamber works that usually involve searching astringent harmonies, exclamatory gestures and motoric drive; his serialized pitches are often used in a manner that implies a transient tonality within a succession of striking moments. In succeeding works involving full orchestra, these moments are protracted, often into textures of even more sharply defined character. Breadth and grandure is achieved through the slow, pulsed interlocking of theme and pedal point. Melodically elaborated and colorfully scored ostinato passages continually propel the music forward. Picker imbues romantic conventions with a modern spirit which rejects nostalgia, but retains considerable expressive freedom.

One work tends to engender the next, usually with a shift in focus. The unremitting bravura and textural invention of the Violin Concerto (1981) is followed by the weighty, more integrated Symphony No.1 (1982). Piano Concerto No.2, 'Keys to the City', commissioned for the centennial of New York City's Brooklyn Bridge, effectively absorbs American vernacular elements, most

conspicuously in a driving boogie woogie passage. Picker's imagination responds particularly well to extramusical subjects. Based on a text by Hermann Melville, *The Encantadas* (1983), a concerto for actor and orchestra, which is distinctive for a wide variety of musical tableaux, has enjoyed internationally successful productions in seven languages. Another work which quickly gained popularity, especially in its orchestrated form, is *Old and Lost Rivers* (1986), a short, serene Texan pastorale for piano which Picker wrote while Composer-in-Residence for the Houston SO (1985–90). Its homogeneous polyphonic texture anticipates more extended works in which faster movements are balanced by those of slow, cursive chromatic lines stretched across sustained harmonies. Representative is the string quartet, *New Memories* (1987), commissioned by the Santa Fe Chamber Music Festival to commemorate the 100th birthday of the local artist Georgia O'Keefe, who died during the writing of the work. Her painting reinforced Picker's awareness of an American southwest geologic time frame that informed his slowly unfolding works of this period. In the hybrid *Romances and Interludes* (1989), Picker confronts the 19th century directly by composing a prelude and two interludes around his orchestration of Schumann's *Three Ramanzen* op.94 for oboe and piano. Thematic allusion and mediating orchestration convincingly bind the otherwise disparate musics in a complementary relationship. *Two Fantasies* (1989) for orchestra revisits favoured textures: a slow, expansive, though somewhat restive movement followed by a kaleidoscopic etude in motoric frenzy.

Between 1978 and 1992, Picker wrote eight songs for soprano and piano, one of which, *Aussohnung*, he orchestrated to become the culminating moment in his Symphony No.2 (1986–7). *The Rain in the Trees* (1993), for soprano, flute and orchestra, based on a text by W.S. Merwin, represents at this time his most expanded use of the voice. In this work, purely instrumental blocks of stratified polyphony alternate between Ivesian vigour and Javanese serenity. It is, however, the rapturous vocal movements which make the lasting effect and anticipate the composer's most ambitious completed project to date, *Emmeline* (1994–6), commissioned by the Santa Fe Opera. The story of a 19th century New England woman's unwitting marriage to a son she bore at 14 and abandonned entails a pathos appropriately met by primarily tonal music which is emotionally charged and theatrically effective. The opera's initial success was exceeded in a second production two years later by the New York City Opera, prompting international commitments and further opera commissions. Written for the Los Angeles Opera, *Fantastic Mr. Fox* (1998) is based on a children's story well served by pulsing, playfully angular counterpoint and tunes which drift in and out of tonality.

JOHN VAN DER SLICE

Pickett, Philip (*b* London, 17 Nov 1950). English recorder player and conductor. His development as a player of the recorder, crumhorn, racket and shawm was inspired by contact with Anthony Baines and David Munrow. As professor of the recorder at the GSMD from 1972 to 1997 he also contributed significantly to the school's pioneering early music department. While noted as a flexible and colourful solo recorder player, his more recent successes have occurred as director of the New London Consort, with whom he has travelled and recorded widely. Clear if often speculative scholarship informs his enterprising programming which ranges from medieval music to mainstream 18th-century repertory. In 1988 he was appointed artistic director of the South Bank Summerscope Festival of Medieval and Renaissance Music, following successes in the City of London Festival. His recordings display a strong sense of communication, consistently accomplished solo singing and astute characterization, as demonstrated in several landmark recordings, including a majestic rendering of Praetorius's Terpisichore dances in 1985 and rhetorically sensitive performances of Monteverdi's *Orfeo* and Blow's *Venus and Adonis*. In 1994 Pickett became director of the Musicians of the Globe, with whom he has recorded music with Shakespearean associations.

JONATHAN FREEMAN-ATTWOOD

Pickett, Wilson (*b* Prattville, AL, 18 March 1941). American soul singer. He moved to Detroit with his family at the age of 14. He first recorded in 1957 as part of the gospel quartet, the Violinaires. Having decided to sing secular music, Pickett replaced Joe Stubbs as lead singer of another Detroit-based vocal group, the Falcons, whose members included future soul stars Eddie Floyd and Mack Rice. In 1962 Pickett composed and sang lead on the Falcons' second hit, *I found a love*, following which he began a solo career.

After brief stints with the Correctone and Double L labels, in 1964 he signed with Atlantic Records. After an undistinguished session in New York, Atlantic co-owner Jerry Wexler suggested that Pickett should record in Memphis at Stax records. Wexler believed that the Southern musicians and approach to recording would be

better suited to Pickett's gospel-based style. In 1965 Pickett recorded three sessions at Stax where he was backed by the house band, Booker T. and the MGs (without Jones, who was away at college) and the Memphis Horns. Four hits resulted, *In the Midnight Hour*, *Don't fight it*, *634-5789 (Soulsville U.S.A.)* and *Ninety-Nine and a Half (won't do)*. After Stax closed its doors to outside sessions, Wexler took Pickett to record in Muscle Shoals, Alabama. Possessing perhaps the harshest voice in soul music, by the mid-1970s Pickett had had over 40 records in the rhythm and blues and pop charts.

ROB BOWMAN

Pick-Mangiagalli, Riccardo (*b* Strakonice, Bohemia, 10 July 1882; *d* Milan, 8 July 1949). Italian composer of Czech birth. The family settled in 1884 in Milan, where he studied at the conservatory (1896–1903). Until 1914 he was active as a pianist, spending some time in Vienna; subsequently he concentrated on teaching and composition, and from 1936 to 1949 was director of the Milan Conservatory. As a composer he excelled in light ballet music: already in *Il salice d'oro* there is a pleasing if facile tunefulness, combined with Viennese dance rhythms and spiced with harmonies and orchestration reminiscent of Strauss and Ravel. In *Il carillon magico*, Pick-Mangiagalli's most successful stage work, this promise reached fulfilment: though slight, the style is recognizably personal, with frequent unrelated triads, chromatic slithers, unusually placed augmented triads and diminished 7th chords and so on. Musical means are perfectly matched to dramatic context. The later stage pieces rarely explore fresh territory: in the *commedia dell'arte* opera *Basi e bote* the basic idiom is still that of *Il carillon*, proving less adequate for a full-length work, but the ballet *Casanova a Venezia* develops the style more positively, with appropriate touches of local and period colour. When in *Notturno romantico* Pick-Mangiagalli attempted a more tragic manner, the result sounds merely second-hand from Puccini and others. His best music, whether for the theatre or not, tends to alternate between the basic moods of gentle nocturnal contemplation and sparkling mercurial exuberance. These two aspects are already evident in the early String Quartet; later they are sometimes deliberately juxtaposed in pairs of contrasted pieces, such as the *Deux lunaires* for piano and the orchestral *Notturno e rondò fantastico*.

WORKS
(*selective list*)

Stage: Il salice d'oro (ballet, Pick-Mangiagalli), op.25, 1911–12, Milan, 1914; Il carillon magico (commedia mimo-sinfonico, Pick-Mangiagalli), op.30, 1915, Milan, 1918; Sumitra (leggenda monomimica, G. Clausetti), op.38, 1917, Frankfurt, 1923; Basi e bote (commedia, 3, A. Boito), op.43, 1919–20, Rome, Argentina, 3 March 1927; Mahit (ballet, Pick-Mangiagalli), op.44, Milan, 1923; Casanova a Venezia (ballet, G. Adami), op.48, Milan, 1929; Notturno romantico (op, 1, A. Rossato), op.60, Rome, Opera, 25 April 1936; 5 other works

Pickup [pick-up] (Fr. *capteur*, *transducteur*; Ger. *Tonabnehmes*; It. *transduttore*, *pickup*). A transducer that converts sound vibrations received directly from a musical instrument or other source (rather than from the air, as in a microphone) into variations of electrical current. The two most common types are the magnetic pickup, best known in the electric guitar, in which an object (such as a string) containing sufficient iron or steel vibrates in close proximity (typically 2–4 mm) to an electromagnetic coil, and the contact microphone, in which a piezoelectric crystal element is fixed to the source in such a way that it vibrates as if it were part of it. The term 'pickup arm' describes the tone-arm of an LP record player, at one end of which the cartridge is mounted.

See also ELECTRONIC INSTRUMENTS §I, 2(iv).

HUGH DAVIES

Pico, Foriano (*b* Florence; *fl* 1628). Italian ?guitarist, ?composer and ?editor whose name appears on the *Nuova scelta di sonate per la chittara spagnola* (?1628), containing works attributed to PIETRO MILLIONI.

Picon, Molly (*b* New York, 1 June 1898; *d* Lancaster, PA, 6 April 1992). American singer and actress. In Philadelphia, where she grew up, she performed with vaudeville acts (from 1904) and Yiddish repertory companies. She married Jacob (Yonkel) Kalich (1881–1975), the manager of the Grand Opera House in Boston; he subsequently wrote over 40 musicals for her, including *Shmendrick* (1924), *The Little Devil* (1926), *Hello Molly* (1929), the biographical *Oy is dus a Leben*, *Abi gezunt* (1949), *Mazel tov, Molly* (1950) and *Farblondjete Honeymoon* (1955). Their first tour to Europe, in 1921, marked a change of style in European Yiddish theatre from music dramas to musical comedy, and also enhanced Picon's reputation in the USA. On her return she became the leading performer at the Second Avenue Theatre in New York. She first sang on Broadway in 1929, and from 1940 performed in dramatic productions; she also performed on radio and in films. Kalich and Picon appeared together in the play *The World of Sholem Aleichem* (1957) and the film of *Fiddler on the Roof* (1971), and she created the role of Clara Weiss in Jerry Herman's *Milk and Honey* (1961). In collaboration with Joseph Rumshinsky, Picon wrote songs and lyrics for Kalich's works; the most famous were *East Side Symphony*, *Song of the Tenement*, *The Story of Grandma's Shawl*, *Working Goil* and *Hands*. Known as

an exuberant actress whose performances often included acrobatics and tap dances, the diminutive Picon coupled a natural comic flair with ingratiating warmth that made her a much-loved performer with both English- and Yiddish-speaking audiences. She wrote two memoirs, *So Laugh a Little* (1962, with E.C. Rosenberg) and *Molly!* (1980, with J.B. Grillo).

SUSAN FEDER

Picot, Eustache (*b* diocese of Evreux, *c*1575; *d* Paris, 26 June 1651). French composer and priest. He was a choirboy and then a *clerc de maîtrise* at the cathedral at Evreux, where in 1592 he became a member of the *puy de musique* in honour of St Cecilia. From 9 May 1601 to the beginning of 1604 he was *maître de musique* at Rouen Cathedral. He then became *sous-maître de musique* at the royal chapel for the January quarter: he appears as such in the records for 1613, together with Formé, who held the post in the July quarter. After Formé's death in 1638 Gobert succeeded him as *sous-maître*, and Picot, while continuing in his own post of *sous-maître*, assumed Formé's other position of composer to the chapel. Veillot, who was to inherit both his posts after his death, became his assistant on 4 May 1643.

According to Gantez, Picot 'cared only for amassing wealth', and indeed livings and prebends were showered on him. In 1613 he requested two permanent livings at the Ste Chapelle du Palais; he did not receive them but repeated his request successfully in May 1620. In the same year the king granted him a prebend as canon at St Hilaire-le-Grand, Poitiers, and in 1626 accorded him the benefice of the abbey of Cercamp, near Arras. This nomination was contested by the Archduchess Isabella, who had granted the same benefice to someone else, and was cancelled after a lawsuit; however, by way of compensation, Picot received on 21 January 1627 the benefice of the abbey of Chalivoy, in the diocese of Bourges. Finally, in 1639 he received the benefice of the abbey of St Bertault de Chaumont, near Reims. His will (reproduced by Brenet) bears witness to the opulence that he enjoyed as a result of these various incomes. He used his money carefully: in 1642 he established an annual Easter Day procession at the Ste Chapelle, stipulating that during it only his own music be performed, and in 1650 made a similar endowment, for the peace of his own soul, at Evreux Cathedral. He also made handsome donations to the Hôtel-Dieu for the benefit of poor patients.

In his will Picot left all his music to Eustache Guéhennault, *maître de musique* at the Ste Chapelle. None of it remains but he listed and described it in the articles of his endowment; it consisted of psalms, responds, antiphons and motets, all with organ interludes. They were probably in a simple contrapuntal or fauxbourdon style, with accompaniment for organ alone. Picot's output included works performed at the coronation of Louis XIII and also at his funeral in 1643, when 'all those present were greatly moved by the plaintive accents of a funeral dirge'.

Pidhorets'ky [Podgoretsky], **Borys Volodymyrovych** (*b* Lubny, nr Poltava, 25 March/6 April 1873; *d* Moscow, 19 Feb 1919). Ukrainian composer. He studied at Warsaw Conservatory and then in Moscow under Aleksandr Il'yinsky. In 1912 he was sent by the Music-Ethnographic Commission of the Russian Geographic Society to collect folksongs in Ukraine. He joined the faculty of the Moscow Conservatory in 1915 and was music critic for *Golos Moskvï* and from 1917 for *Izvestiya*. Besides much choral and piano music, he wrote two operas. *Kupal'na iskra* ('The Spark of Kupalo'; 2, L. Yanovs'ka; 1901, Kiev; rev. version, 1907, Lubny) is based on Ukrainian lore regarding the flame of Kupalo (St John's Eve). The principal dramatic element lies in the contrast of the real and the fantastic; in Act 1 the 'real' rests heavily on the use of folk genres in arias and choruses, while in Act 2 the 'fantastic' is expressed through recitative, arioso and a richer harmonic and instrumental fabric. The true protagonist is the chorus, which Pidhorets'ky handles with great skill. *Bidna Liza* ('Poor Lisa'; 4, M. Vashkevych, after a novel by M. Karamzin; 1916, Moscow; rediscovered only in 1968) deals with everyday life and emotions where an individual is the victim of difficult social circumstances; here Pidhorets'ky uses a sharper harmonic language and relies more on orchestral episodes.

VIRKO BALEY

Pidoux, Pierre (*b* Neuchâtel, 4 March 1905). Swiss organist and musicologist. He graduated in 1933 from the theology faculty of the Eglise Libre in Lausanne and studied the organ in Geneva with Montillet from 1933 to 1936. In 1929 he founded the Choeur J.S. Bach in Lausanne, which he directed until 1948, holding at the same time an organ post in Lausanne. In 1948 he was appointed organist at the Montreux Temple. From 1946 to 1965 he was in charge of the hymnology course at the theology faculty of the Eglise Libre in Lausanne; in 1964 he was given the honorary doctorate in theology by the university.

Pidoux's activities have been devoted mostly to hymnology, musicology and teaching. Though he has edited many volumes of other early music, he is known as a specialist in the history of the Huguenot Psalter and has sought especially to promote the music of the Protestant church, for instance with his editorship of the series Collection de Musique Protestante (from 1935). He was co-founder (in 1954) and general editor of the sacred music series Cantate Domino, and in 1967 he became co-director with Luther Dittmer of the complete works of Goudimel, to which he has contributed several volumes.

He has also composed many works for mixed choir and organ.

ETIENNE DARBELLAY/DOROTHEA BAUMANN

Piece (Fr. *pièce*, *morceau*; Ger. *Stück*; It. *pezzo*). A non-technical term applied mainly to instrumental compositions from the 17th century onwards. The term was first used to describe a completed work of art or literature (as distinct from a separate portion of a larger mass or substance) in the 16th century. Its earliest use with reference to music, as recorded by the *Oxford English Dictionary*, was in 1601, in Shakespeare's *Twelfth Night* ('that piece of song'; Act 2 scene iv, line 2). The term gained a wider currency in the French genres of *pièce de clavecin* and *pièce de viole* in the later 17th century and the 18th. It is unusual to speak of movements of larger works such as symphonies or sonatas as 'pieces', but there are exceptions: Beethoven used the Italian *pezzo* to refer to the first movement of his C♯ minor Piano Sonata op.27 no.2 in his directions for performance. From the 19th century onwards, German and French composers took to using various compound forms as titles of compositions: *Konzertstück*, *Fantasiestück*, *Klavierstück* and *Orchesterstück* are common, together with more specific titles such as *Nachtstück* and *Blumenstück*. In French, *Pièce de concours* and *Morceau de concert* are found, as well as such exotic designations as *Pièce en forme de habañera*.

Attempts to pin down a more precise definition of a 'piece of music' are beset by philosophical and semantic problems, which were highlighted in the work of certain avant-garde composers of the 1950s and 60s and in subsequent musicological literature. The issues involved include how the concept of a 'piece' has been culturally constructed within Western musical tradition, and what music is thereby excluded from this category. The ontology, or mode of existence, of a piece of music, is also highly problematic. Finally, there is the question of how the concept of 'piece' relates to those of 'composition' and 'work'.

It has been suggested that no definition of 'piece' is general enough to cover every form of composition: even such basic criteria as the Aristotelian requirement of a beginning, a middle and an end have demonstrable exceptions (Crocker). Alternatively, the idea of the piece may be regarded as a way of conceiving musical form that arose during musical history and may be dated tentatively from about 1420–30 to about 1910 (Carpenter). A piece of music is conceived as an object, the qualities and structure of which are fixed by the composer, and which comprises a 'single unified gesture or motion'. The listener remains outside the musical object, and does not participate in it. Carpenter's chronological limits thus exclude medieval sacred polyphony, which was conceived as an element of the liturgy, rather than as an entity in its own right, and, at the other extreme, aleatory music which was not completely determined by the composer. (With less obvious justification, 14th-century secular polyphony is also implicitly excluded.) A number of factors contributed to the 'objectification' of music in the 15th and 16th centuries, including the humanistic understanding of the artist as a creator and the development of printing. After the Renaissance musical history shows an increasing objectification of the piece, supported by factors including Kant's concept of the aesthetic, and composers' striving for ever greater musical unification.

This conception of the musical piece has profound implications for the understanding of musical perception, of music as a temporal entity, and of musical unity. Carpenter also touches on the problem of how a musical piece may be said to exist: it does not have a material presence and is dependent on the composer and upon individual performances for its existence, but it continues to exist beyond these. Ingarden has explored the same theme at greater length (though with reference to the term 'work'). He considers the hypotheses that the identity of a musical work or piece is located first in its performances,

then in conscious experiences of it, and finally in its score, but argues that it goes beyond all of these. He concludes that musical works exist as heteronomous objects (that is, they depend for their existence on acts of the composer and listeners) and as intentional, as distinct from real, objects (that is, they have no material presence, but constitute an 'ideal boundary' at which all real performances and experiences of the work aim). The semiologists Jean Molino and Jean-Jacques Nattiez have adopted Ingarden's position, with subtle modifications: rather than viewing the material manifestations of the work as imperfect embodiments of the intentional object, as Ingarden does, Nattiez advocates a de-centred concept of the 'total musical fact', the ontology of which is located in the totality of all the acts of composition that engendered it, the musical score, and all the acts of perception to which it gives rise.

The foregoing theoretical issues are relevant equally to the concepts of 'work' and 'composition' as to 'piece'. However, the three categories differ slightly in ways that go beyond mere usage. A folk melody is a 'piece' of music, but it cannot be said to be a composition. A rudimentary student exercise is a 'composition', but does not possess the stature required to be considered a work. A composition or work must be capable of repetition; however, a skilful improvisation may be perceived as a 'piece' of music, in the sense of a finished product of artistic imagination. Moreover, if an improvisation is recorded, would it then be a composition? If jazz, pop, folk music and non-Western music are considered, the answer to what constitutes a 'piece' becomes even more elusive.

PETER FOSTER

Pièce croisée. A term used by François Couperin (*Troisième livre de pièces de clavecin*, 1722) and revived by modern writers to designate a harpsichord piece in which two parts, one for each hand, cross and re-cross one another in the same range, often sounding the same note simultaneously. Such pieces must be performed on a two-manual harpsichord with independent unison registers, one for each manual. The first such instruments seem to have been made in France in the 1640s, and two *pièces croisées* are included among the surviving works of Louis Couperin (*d* 1661).

EDWIN M. RIPIN

Piechteler von Greiffenthal, Matthias Siegmund. *See* BIECHTELER VON GREIFFENTHAL, MATTHIAS SIEGMUND.

Piede (It.). The second formal unit of the Italian 14th-century BALLATA.

Pié de Dieu, Pierre (*fl* early 17th century). French printer, successor to Corneille [?Camille] Hertman in the firm formerly owned by PIERRE HAULTIN.

Pieltain, Dieudonné-Pascal (*b* Liège, bap. 4 March 1754; *d* Liège, 10 Dec 1833). Flemish violinist and composer. He seems to have studied in Liège, and from 1761 to 1763 was a choirboy at the church of St Pierre. He probably remained there until 1765, when he left Liège and went to Italy, no doubt with his friend Henri Hamal. He took lessons from Giornovichi, and probably followed him to Paris: Giornovichi first performed at the Concert Spirituel in 1773, and the *Spectacles de Paris* for that year mentions, among the four tenor violins of the orchestra, a certain Pieltain resident at the Hôtel de Soubise. From 1778 Pieltain regularly played as a soloist with the Concert Spirituel. He also attracted comment for his brawling lifestyle. On 21 March 1779, Pieltain performed one of his own compositions with the Concert Spirituel. Giornovichi left Paris that year, and Pieltain took his place in the Prince de Guéméné's orchestra. His brother, Jacques-Joseph-Toussaint (bap. 24 Jan 1757), a well-known horn player and a pupil of Punto, joined him there. The two musicians returned to Liège with the prince's orchestra, and gave concerts at Spa with Carl Stamitz in September 1780. In 1782 the brothers went to London; Dieudonné-Pascal gave concerts at Drury Lane Theatre, the Lent Oratorios and the New Rooms, and the following year became leader of the orchestra of the Hanover Square Concerts. He also played violin solos at Vauxhall Gardens from 1783, and in 1785 became leader of the Professional Concert. In 1786 he married Marie Chanu, a soprano who performed at the Pantheon and the Salomon concerts.

Pieltain continued his career as a soloist on the Continent while pursuing his activities in London. He was apparently on friendly terms with either Leopold or Wolfgang Amadeus Mozart. The death of Marie Chanu in 1793 caused Pieltain to leave London for good. He played in Germany, Poland and Russia, and seems to have returned to Paris and Liège at regular intervals. It was to Liège that he finally retired, when he turned to teaching and had a number of future violin virtuosos among his pupils, who included Hubert Léonard. Pieltain died in 1833, a wealthy patron of music.

Pieltain's own compositions were mostly for his own instrument: 13 of his violin concertos, six sonatas, 12 quartets, six duets and 12 *petits airs* for violin were engraved. According to Fétis and Vannes, he left some 30 concertos, 167 quartets, six sonatas for violin and cello, and 50 violin studies, all in manuscript, but these are now lost. His works reflect the various contacts he made during his career; his first concertos, for example, are in the direct line of descent from Italian concertos, but his later works reflect the Mannheim style. In his quartets, which show the characteristics of Viennese classicism, Pieltain cultivates a certain melodic elegance without neglecting virtuosity.

WORKS

Vn concs.: 30 incl. 13 pubd, mentioned by Vannes

Str qts: 167 mentioned by Vannes, incl. 6 quatuors concertants, bk 1 (Paris, n.d.); 6 quartettos, op.2*d* (London, n.d.) [nos.1–3, 6 are identical with nos.1–4 of 6 quatuors concertants]; 6 quatuors, op.4, bks 1, 2 (Paris, n.d.); nos.24, 41, 52, 92, 103, 115, *B-Bc*; others, lost

Other works: 6 sonates, vn, op. 1*a* (Paris, n.d.), lost; 6 solos, vn (London, n.d.); Etude, solo vn, str qt, *Bc*

PHILIPPE VENDRIX

Pieno (It.). Full, as in *organo pieno* (FULL ORGAN), *coro pieno* (full choir), and a *voce piena* (with full voice).

Pierce, Edward. *See* PEARCE, EDWARD.

Pierement. A term widely used since about 1912 in the Low Countries to designate the book-playing street organs of Amsterdam. It is not applied to any other type of mechanical organ. *See* FAIRGROUND ORGAN.

Pierlot, Denis (*fl* Paris, 1784–92). French violinist and composer. According to Fétis, the source for Pierlot's first name, he was a violinist in the orchestra of the Concert Spirituel in 1786. There is no mention of him as soloist, nor does his name appear in connection with any other Parisian orchestra. Gerber wrote of him as still living in 1792. The only other contemporary references to him are all publication announcements by Imbault between 1784 and 1789 concerning his *Deux symphonies concertantes* (the first for two violins, the second for two violins and viola), his *Trois symphonies* op.1, and arrangements by P. Sehnal (*c*1786) of the latter for keyboard with optional violin and cello parts. Only the *symphonies concertantes*, published in 1784, are extant. These show him to be a product of his time; he used a simple harmonic structure, clear-cut four- and eight-bar phrases and an effective but uncomplicated orchestration. Their principal feature is their attractive melodic line, which shows an undeniable lyric gift. Incipits of the three lost symphonies, which also appeared by 1784, are in Imbault's thematic catalogue (Paris, 1790). (*BrookSF*; *Choron-FayolleD*; *FétisB*; *GerberL*)

BARRY S. BROOK, JAIME GONZALEZ

Pierné, (Henri Constant) Gabriel (*b* Metz, 16 Aug 1863; *d* Ploujean, Finistère, 17 July 1937). French composer and conductor. His parents were musicians: his baritone father introduced him to singing and his mother to the piano. When Lorraine was annexed by Germany following the Franco-Prussian War of 1870, the family moved to Paris where Pierné became a student at the Conservatoire. He won *premiers prix* for organ (at 16, Marmontel's class), harmony (at 17, Durand's class), counterpoint (at 18) and *second prix* for organ (Franck's class). He was also in Massenet's composition class, and at 19 he won the Prix de Rome for his cantata *Edith*. After three years in Rome at the Villa Medici, he returned to Paris, to teach at his parents' private school of piano and singing; one of his pupils for piano, Louise Bergon, became his wife in 1890. In that year he succeeded Franck as organist at Ste Clotilde, a post he retained until 1898.

In 1903 he became deputy conductor of the Concerts Colonne. When Edouard Colonne died in 1910 Pierné was appointed principal conductor, remaining president and director of the orchestra until 1933. At the Concerts Colonne he conducted the symphonic repertory of Mozart, Beethoven and Berlioz, he made Franck's works better known, and he conducted first performances of works by leading composers of the time, notably Debussy (*Ibéria*, *Images*, *Jeux*, *Chansons de Bilitis* and *Khamma*), Ravel (*Une barque sur l'océan*, *Tzigane*, and the first suite from *Daphnis et Chloé* over a year before the première of the complete ballet) and Roussel (*Pour une fête de printemps*). For Diaghilev's Ballets Russes he conducted the première of Stravinsky's *Firebird*. From March 1928 to May 1931 he recorded extensively with the Concerts Colonne orchestra for the French Odéon company, including some interesting Berlioz performances (reissued on CD) and works by Ravel.

While Pierné's principal activity was conducting during the musical season in Paris, entailing at least 48 different programmes a year, he was able to devote himself to composition during the summer months, which he spent with his wife and their three children at their house at Ploujean in Brittany. The period of Pierné's compositional activity (1880–1936) falls into three distinct periods. The first was dominated by the piano works, *mélodies*, incidental music and the light early operas. At the threshold of the 20th century he embarked on the ten years of vocal-orchestral frescos, the triptych of oratorios (*La croisade des enfants*, *Les enfants à Bethléem*, *Saint François d'Assise*) which were followed by the Piano Quintet, a work typical of the manner of the second period, on the one hand, and on the other some solid concertante works and other orchestral pieces. The final period, 1916–36, was dominated by the chamber music, the best of the ballet scores (above all *Cydalise et le chèvre-pied*), the comic opera *Fragonard* and the *Divertissements sur un thème pastoral* for orchestra.

Pierné forged a very personal language, classical in form and modern in spirit, balancing technique and individuality, discipline and instinct. From Massenet he learnt the art of melody, and a lightness of touch that is evident in such works as the operatic comedy *On ne badine pas avec l'amour*, staged in 1910. Meanwhile Franck imbued him with the high consciousness of art, the sense of vast architectural structures and the taste for religiously inspired music, which yielded not only the oratorios, but also instrumental works such as the *Paysages franciscains* (1919). Pierné was influenced by Saint-Saëns's notion of 'ars gallica'; he composed a number of works inspired by early French dance forms. He was also open to the style of his contemporaries and was attracted to the exoticism that was much in vogue at the time: oriental scales, pentatonic modes and Spanish-Basque rhythms (for instance, in the second movement of the Quintet). His rostrum at the Concerts Colonne was like an observation post from which he surveyed contemporary musical trends, freely absorbing many of them into his own personal style. That style is pure and refined, incorporating gentle humour and a palpable charm, as well as intermittent gravity and mystical depth. While there is abundant melodic invention, thematic designs tend towards brevity. In terms of form, Pierné shared a preference for cyclical structure and chromatic development. His later style owed something to Debussy's harmonies, to Ravel's luxuriant orchestration, and to Roussel's dynamism.

Pierné was elected a member of the Académie des Beaux-Arts in 1925 and was also made a Commandeur of the Légion d'Honneur in 1935. His cousin Paul Pierné (1874–1952) was also a composer.

WORKS
(*selective list*)

DRAMATIC

Ops: Le chemin d'amour (oc, 1), 1883, unperf.; Les elfes (légende dramatique, E. Guinand), 1884; Don Luis (oc, 3, Beaumont), 1886, unperf.; Bouton d'or (fantaisie lyrique, 4, M. Carré), Paris, Nouveau, 3 Jan 1893; Lizarda (oc, 3, A. Silvestre), 1893–4; La coupe enchantée (oc, 3, F. Matrat, after J. de La Fontaine), Royan, Casino, 24 Aug 1895 [1 act version perf. Paris, OC, 26 Dec 1905]; Vendée (op, 3, 4 tableaux, C. Foley and A. Brisson), Lyon, Grand, 11 March 1897; La fille de Tabarin (comédie lyrique, 3, V. Sardou and P. Ferrier), Paris, OC, 8 Feb 1901; On ne badine pas avec

l'amour (comédie lyrique, 3, G. Nigond and L. Leloir after A. de Musset), Paris, OC, 30 May 1910; Sophie Arnould (comédie lyrique, 1, G. Nigond), Paris, OC, 21 Feb 1927; Fragonard (comédie musicale, 3, A. Rivoire and R. Coolus), 1930, Paris, Porte Saint-Martin, 17 Oct 1934

Ballets: Le collier de saphir (pantomime, 1, 2 tableaux, C. Mendès), perf. 1891; Les joyeuses commères de Paris (ballet-féerie, 5, C. Mendès and G. Courteline), perf. 1892; Le docteur Blanc (mimodrame fantastique, 4, C. Mendès), perf. 1893; Salomé (pantomime lyrique, 1, 5 tableaux, A. Silvestre and Meltzner), perf. 1895; Cydalise et le chèvre-pied (ballet, 2, 3 tableaux, R. de Flers and G.-A. de Caillavet), perf. 1923; Impressions de music-hall (ballet, 4 scenes), perf. 1927; Giration (divertissement chorégraphique, R. Bizet and J. Barreyre), perf. 1934; Images (divertissement chorégraphique, 1, L. Staats and A. Hellé), perf. 1935

Incid music: Izeyl (A. Silvestre and E. Morand), perf. 1894; Yanthis (J. Lorrain), perf. 1894; La princesse lointaine (E. Rostand), perf. 1895; La samaritaine (Rostand), perf. 1897; Francesca de Rimini (M. Crawford, transl. M. Schwob), perf. 1902; Ramuntcho (P. Loti), perf. 1908; Hamlet (Morand and Schwob, after W. Shakespeare), 1910; Les cathédrales (Morand), 1915

VOCAL

With orch: Edith (cant., E. Guinand), 1882; Pandore (scène lyrique, P. Collin), S, spkr, chorus, orch, 1888; La nuit de Noël de 1870 (épisode lyrique, E. Morand), solo vv, chorus, orch, org, 1895; L'an mil, sym. poem, chorus, orch, 1895; La croisade des enfants (légende musicale, after M. Schwob, chorus/children's chorus, orch, org, 1902; Les enfants à Bethléem (mystère, G. Nigond), solo vv, children's chorus, orch, org, 1907; Saint François d'Assise (orat., Nigond, after St Francis of Assisi: *Fioretti*), 1912

Songs (1v, pf unless otherwise stated): A nous deux (Mme Blanchecotte), 1879; A Saint Blaise (A. de Musset), 1879; Découragement (J. Chailley), 1879; Dernier voeu (Blanchecotte), 1879; L'oeillet rouge (T. Gautier), 1v, pf/orch, 1880; Les trois chansons (V. Hugo), 1880; Mimi Pinson (de Musset), 1881; Le moulin (E. Guinand), 1881; Le sais-tu bien (Blanchecotte), 1882; L'adieu suprême (Blanchecotte), 1883; A Lucette (H. Gauthier-Villars), 1883; Bonsoir (A. Silvestre), 1883; La brise (H. Passerieu), 1883; Chanson de berger (Gauthier-Villars), 1v, pf/orch, 1883; Connaissez-vous mon hirondelle (A. Capon), 1883; Le coup de l'étrier (L. Durocher), 1v, pf/orch, 1883; Les deux roses (J. Soulary), 1v, pf/orch, 1883; En barque (Guinand), 1883; Les filles de Cadix (de Musset), 1883, also orch; Hymne d'amour (C. Grandmougin), 1883; Mignonne (A. Labitte), 1883; Provence (Guinand), 1883; Tristesse (Guinand), 1883; Villanelle (P. Desportes), 1883; Bergerie (Capon), 1v, chorus ad lib, pf, 1884; Ritournelle (F. Coppée, 1884); Le voyageur (A. Silvestre), 1884; Le réveil de Galatée, scène (P. Collin), 1v, pf/orch, 1885; La rieuse, conte en prose (C. Mendès), 1885; Souvenir triste (Gauthier-Villars), 1888; Les petits lapins (J. Aicard), 1890; Tes yeux bleus (L. Solvay), 1892; Ton rire est si doux (P. Collin), 1892; Les trois petits oiseaux (J. Richepin), 1892; Vous souviendrez-vous? (Labitte), 1892; Sur la route (R. Launay), 1896; Contes (J. Lorrain), 5 songs, 1897 [no.2, 1v, chorus, pf/orch]; Soirs de jadis (Lorrain), 3 songs, 1898 [no.3, 1v, spkr, pf]; Boutique japonaise (L. Gallet), 1899; 3 adaptations musicales (Lorrain, Samain, Rosemonde Rostand), 1902; 3 mélodies (T. Klingsor), 3 songs, 1904; 6 ballades françaises (P. Fort), 1921 [no.5, 1v, pf/orch]

INSTRUMENTAL

Orch: Suite d'orchestre no.1, op.11, 1883; Fantaisie-ballet, op.6, pf, orch, 1885; Ouverture symphonique, op.10, 1885; Pf Conc., op.12, 1887; Marche solennelle, op.23, 1889; Pantomime, op.24, 1889; Scherzo-caprice, op.25, pf, orch, 1890; Poème symphonique, op.37, pf, orch, 1901; Ballet de cour, 6 airs à danser, 1901; Concertstück, op.39, hp, orch, 1903; Paysages franciscains, 1919; Divertissement sur un thème pastoral, op.49, 1932; Gulliver au pays de Lilliput, 1935; Viennoise, op.49bis, 1935

GEORGES MASSON

Piero [M(agister) Piero] (*fl* northern Italy, 1340–50). Italian composer. He was one of the earliest generation of Trecento musicians. Since he was not of Florentine origin he is not mentioned in Villani's Florentine chronicle. It is possible that Piero is the 'Magister Petrus Andreutii' who came from Assisi and who stayed in Perugia in 1335 where he was employed as a 'doctor comunis Perusii in arte cantus'. Piero certainly spent some time in the 1340s and early 1350s with Giovanni da Cascia and Jacopo da Bologna at the courts of the Visconti family in Milan and of the della Scala family in Verona. This is indicated by the texts of his madrigals and cacce. The caccia *Con brachi assai*, also set to music by Giovanni, was composed at the court of the Visconti: the text mentions the river Adda, which flowed through territory at that time under Milanese rule. *All'ombra* and *Sovra un fiume* sing the praises of 'Anna', who also appears in the madrigals of Giovanni and Jacopo and who was presumably associated with the court of the della Scala family. The name 'Margherita' occurs in *Sì com'al canto*, a madrigal that was also set to music by Jacopo.

Piero was evidently older than Jacopo. He presumably died shortly after 1350. In a legal manuscript from Bologna apparently dating from the first half of the 14th century (*D-FUl* D23) there is a miniature with musical representation: among other figures, an old man with a beard and tonsure is depicted and named as 'Ser Piero'; despite the very conventional style of the miniature he may be identifiable with the composer (see illustration; also von Fischer, 1973).

Only eight works by Piero are known, all in the Biblioteca Nazionale in Florence (*I-Fn* Pan.26), although two occur in an older manuscript (*I-Rvat* Rossi 215) presumably of Paduan or Veronese origin, where they are entered as anonymous pieces. In addition, there are two

Marginal illustration from an Italian legal document, 14th century; the bearded figure on the right may be identifiable with Piero (D-FUl D23, f.302)

further cacce, suspected by Pirrotta (1959) to be works of Piero (in *I-Rvat* 215 and *I-Fn* 26 – with concordance in *GB-Lbl* 29987). None of the pieces seems to have been widely known.

The most striking feature of Piero's work is the canonic technique. He may with certainty be regarded as the composer of the earliest surviving two- and three-part canonic madrigals and cacce. The eight works can be divided into four distinct groups, each of which represents one stage of development from the simple two-voice madrigal to the three-voice caccia. The madrigals *Quando l'àire* and *Sovra un fiume* are written in the style of the oldest and simplest madrigals of the manuscript *I-Rvat* 215. In *All'ombra* and *Sì com'al canto* there are ritornellos with imitative free voice-exchange technique (similar to some anonymous pieces in *I-Rvat* 215). *Cavalcando* and *Ogni diletto* are set to music as two-voice canonic caccia-madrigals (with non-canonic ritornellos), whereas *Con brachi assai* and *Con dolce brama* represent the fully developed Italian caccia genre with canon in the upper voices and a textless tenor. The works of the two last-named groups by Piero had an enduring effect on the younger Jacopo da Bologna and perhaps also on his approximate contemporary, Giovanni da Cascia.

KURT VON FISCHER/GIANLUCA D'AGOSTINO

Piero degli Organi [Pierino Fiorentino]. Italian musician, son of BARTOLOMEO DEGLI ORGANI.

Pierray, Claude (*d* Paris, 28 Dec 1729). French violin maker. The finest of the early French makers, his instruments often pass as Italian. He worked in the rue des Fossés-St-Germain-des-Prés; his shop was situated 'proche la Comédie française'. He was a contemporary of JACQUES BOQUAY, whose instruments are similar in appearance, but Pierray on the whole had a better choice of wood for his fronts and achieved a certain extra elegance in the details of his workmanship. Even so, his instruments were not so highly valued at the time as those of Boquay. In addition to the violins, which are now much appreciated by players, Pierray made a number of fine cellos, though some would criticize their rather small dimensions. He also built viols and repaired harpsichords.

CHARLES BEARE/SYLVETTE MILLIOT

Pierre, Constant(-Victor-Désiré) (*b* Passy, nr Paris, 24 Aug 1855; *d* Paris, 12 Feb 1918). French musicologist. He entered the Paris Conservatoire in 1878 and won a prize for bassoon in 1881. Between 1877 and 1882 he played the bassoon in various Paris theatres. He then took a

variety of administrative posts, including clerk at the war ministry from 1876 to 1880, and at the Conservatoire in 1881, where he became assistant secretary from 1900 to 1910. He wrote for a number of journals including *Le monde musical* (1891–1900) which he also edited, and won awards from the Société des Compositeurs (1889) and from the Institut de France (Bordin prize, 1900, 1905). His studies on the music of the French Revolution and on the Conservatoire from its founding until 1900 are still the basic source of any research into these subjects, because of their fullness and scientific precision.

FRÉDÉRIC ROBERT/JEAN GRIBENSKI

Pierre, Francis (*b* Amiens, 9 March 1931). French harpist. He entered Lily Laskine's class at the Paris Conservatoire, gaining a *premier prix* in 1950, and then continued his studies with Pierre Jamet. He has been particularly active in contemporary and experimental music, having worked closely with Boulez and Maderna in the late 1960s and 1970s, and has given the first performances of many solo and ensemble works by such composers as Berio (*Circles, Sequenza II, Chemins I*, Rands (*Formants I – Les gestes*), Jolas (*Tranche*) and Miroglio (*Réseaux*). Pierre was appointed solo harpist Of the Orchestre de Paris on its formation in 1967. In 1972 he formed the Trio Debussy, to play the repertory for flute, viola and harp.

ANN GRIFFITHS

Pierre, Paul de la. *See* LA PIERRE, PAUL DE.

Pierre Bonnel. *See* PIETREQUIN BONNEL.

Pierre de Corbeil (*d* Sens, 1222). French theologian and prelate. He was a master of theology at the University of Paris; his best-known pupil later became Pope Innocent III. Pierre received ecclesiastical preferment, becoming a canon of Notre Dame in Paris, Archdeacon of York (1198), Bishop of Cambrai (1199) and Archbishop of Sens (1200). He led the council at Paris in 1210 which forbade the public teaching and private reading of Aristotle's works on natural history. As archbishop Pierre was a respected familiar of King Philip Augustus. Of his works, including sermons and commentaries, very few have survived. An Office of the Assumption, used at Sens until the 17th century, and the Office for Circumcision are attributed to him.

It is on the latter that his musical reputation is founded. In 1198 Cardinal Peter of Capua, papal legate for France, addressed a letter to the Bishop and cathedral chapter of Paris concerning the Feast of Fools which traditionally took place on the Feast of Circumcision and which had become the focus for much abuse. This document, an attempt to regulate the celebration of the feast, sets guidelines including prescriptions for processions and the performance of liturgical items 'in organo, vel triplo, vel quadruplo'. Reference to 'quadruplo' at once suggests the four-voice compositions of Parisian composers associated with Notre Dame. Other works of the Notre Dame repertory are, furthermore, associated with Sens; it seems possible that Pierre, who is named among the other members of the chapter, responded to the cardinal's letter by writing an Office for the Feast of Circumcision, and by taking the decrees on musical practice with him to Sens.

The Office for Circumcision (ed. H. Villetard, Paris, 1907) was first attributed to Pierre in 1524 and thereafter in various notes referring to documents no longer traceable, but his association with the Office is circumstantially acceptable. His role in creating it would, however, be rather that of a compiler than author, since the majority of items are of standard liturgical use, or are drawn from the Christmas cycle. Of the 57 pieces not in the normal Circumcision Office, about half have not been traced to other sources: the additions consist mainly of tropes, to versicles such as *Deus in adjutorium*, to *Benedicamus Domino*, to the Ordinary and Proper of the Mass including the Credo, and to responsories and the like. As well as tropes, the Office includes seven conductus, the most famous of which is *Orientis partibus*, a *conductus ad tabulam* from one line of which derives the common but false title of the Office, the 'Feast of the Ass'. Other interesting features are the presence of invitatory and hymn in each of the three nocturnes of Matins, and the rubrics, which refer to performance 'in falso' or 'cum organo'.

ANDREW HUGHES/RANDALL ROSENFELD

Pierre de Corbie (*d* after 1195). French trouvère. He came from the region of the Ile de France, and is probably identifiable with the 'Magister Petrus de Corbeia' who was canon of Notre Dame d'Arras in the late 12th century. He is mentioned as such in contemporary documents from 1188 to 1195, and is thus a member of the older generation of trouvères. Seven songs including one jeu-parti are attributed to him in a very small group of sources. Metrically, all are of the very common bar form type, and several survive with more than one melody.

WORKS

Edition: *Trouvère Lyrics with Melodies: Complete Comparative Edition*, ed. H. Tischler, CMM, cvii (1997) [T]

ROBERT FALCK

Pierre de la Croix. *See* PETRUS DE CRUCE.

Pierre de Molins [Molaines] (*fl* ?1190–1220). French trouvère. He was probably a member either of a family with estates in the region of Epernay (Marne), or (less likely) of a family residing in the region of Noyon (Oise). A 'Pierre II' appears in archival sources between 1210 and 1224. Pierre de Molins was acquainted with one or more of the oldest generation of trouvères, probably with either Gace Brulé or the Chastelain de Couci. Four works are ascribed to Pierre in the Manuscrit du Roi (*F-Pn* fr.844) and the Noailles manuscript (*F-Pn* fr.12615), all with conflicting ascriptions in other sources. They are in bar form, with no evidence of regular rhythmic organization. Somewhat unusual is the introduction of the outline of a melodic tritone in *Fine amours* through the use of written accidentals in two sources, and the suggestion of the sharpened 4th in *Chanter me fet*.

WORKS

(V) etc. MS (using Schwan sigla: *see* SOURCES, MS) containing a late setting of a poem

Chanter me fet ce dont je crien morir, R.1429 [model for: Anon., 'Destroiz d'amours et pensis sans deport', R.1932; music used in two readings of Gautier de Coincy, 'Pour la pucele en chantant me deport', R.1930 = 1600] (V, a); ed. in CMM, cvii (1997)
Quant foillissent li boscage, R.14 (V); ed. in CMM, cvii (1997)

THEODORE KARP

Pierrekin de la Coupele (*fl* 1240–60). French trouvère. Probably a native of the Pas-de-Calais area now designated Coupelle-Vieille and Coupelle-Neuve, Pierrekin addressed *Je chant en aventure* to a count of Soissons, probably Jehan ('le Bon et le Bègue') of Nesle, brother of the trouvère Raoul de Soissons. A poor poet, Pierrekin is credited with six works, three of which survive with music. The most interesting of the melodies is the non-strophic setting of *A mon pooir ai servi*, one of the late additions to the main corpus of the Manuscrit du Roi (*F-Pn* fr.844). Mensurally notated, the work documents various exceptions to strict modal usage, and shows that equivalent line lengths do not always receive the same rhythmic treatment.

Pierrequin de Thérache. *See* THÉRACHE, PIERREQUIN DE.

Pierreson Cambio. *See* PERISSONE CAMBIO.

Piersanti, Franco (*b* Rome, 12 Jan 1950). Italian composer. He graduated from the Conservatorio di S Cecilia in double bass and composition, studying with Armando Renzi, director of music at the Cappella Giulia. He also took classes in conducting there with Franco Ferrara and became assistant to Rota. His first incidental music for the theatre came in 1976 and the following year he made his film début with the score to *Io sono un autarchico* directed by Nanni Moretti. He has since composed more than 60 film scores (working with, among others, Carlo Lizzani, Margarethe von Trotta, Ermanno Olmi and Roberto Faenza) and incidental music to more than 30 plays (with such directors as Carlo Cecchi, Giancarlo Cobelli and Luigi Squarzina). Piersanti's melancholy, introspective streak, punctuated by fleeting bursts of lyricism made him the ideal composer for Moretti's *Ecce Bombo* (1977), *Sogni d'oro* (1981) and *Bianca* (1984) and particularly for Gianni Amelio's work including *Colpire al cuore* (1982), *Porte aperte* (1990) and *Lamerica* (1994). However it is in the theatre, for example in a production of Aristophanes's *Acharnians* (Teatro Greco, Siracusa, 1994), in which he has been able to experiment most fruitfully, arriving at a personal style in which the moods and colours of Mediteranean culture, ancient and contemporary, are merged. He has won two David di Donatello awards.

SERGIO MICELI

Pierson [Pearson], **Henry Hugo** [Hugh] (*b* Oxford, 12 April 1815; *d* Leipzig, 28 Jan 1873). German composer of English origin. Educated at Harrow School, he spent two years in London preparing himself for the medical profession, but also studying music with Attwood and Corfe despite his father's opposition. He entered Trinity College, Cambridge, in October 1836; while there he composed two sets of songs, with words by Byron and Shelley. From 1839 to 1844 he lived in Germany, where he studied under Rinck and Reissiger, and also under Tomášek at Prague; he continued to compose, and his op.7 songs were reviewed by Schumann in 1842. Dresden appears to have been his main centre. In July 1842 he joined Mary Shelley, the poet's widow, on a trip that took him from Dresden to Florence, which he left in November. He also took up with the poet J.P. Lyser, became involved with his wife Caroline (née Leonhardt, 1811–99), an 'improvisatrice', and married her in 1844 after she had secured a divorce. During this period he adopted the *nom de plume* of Edgar Mannsfeldt, from his wife's family; in about 1853 he decided on Henry Hugo Pierson as the final form of his name (he rarely used the form 'Heinrich').

On 1 June 1844 he was elected to the Reid Professorship of Music at Edinburgh University in succession to Bishop (and in preference to S.S. Wesley and Sterndale Bennett, among others) but he resigned eight months later, having settled in Germany with his wife. His reputation in that country increased with the production of *Leila* (1848, Hamburg), with a libretto by Caroline, and reached its greatest height when his incidental music to the second part of Goethe's *Faust* was performed (1854, Hamburg). So popular was this work that for a time it was played in many of the leading German towns annually on Goethe's birthday. His songs were published in Germany and acclaimed by German critics. Meanwhile he tried to improve his hitherto negligible reputation in England. In collaboration with W. Sancroft Holmes, he prepared an oratorio, *Jerusalem*, which was performed at the Norwich Festival of 1852. A kind of contest was worked up by the press between this work and Bexfield's *Israel Restored*; although the audience at Norwich seemed to prefer Pierson's oratorio, the London press, led by Davison in *The Times*, attacked it with extraordinary energy. Davison associated Pierson with the 'aesthetic' school of Schumann, and, less plausibly, with Wagner; this was enough to condemn him out of hand. Chorley in *The Athenaeum* wrote of 'the crude and fierce noises', 'the high pretensions, fantastic and unauthorized method of construction', and the 'desperate intervals' for the voices. Not unnaturally Pierson was deeply wounded. He did not feel inclined to try his luck in England for some time after this episode. Instead he developed his character as a German composer, publishing a long series of lieder and male-voice partsongs. In 1863 he settled at Stuttgart, where Parry, who studied with him in summer 1867, found him 'kind and jolly', 'a wonderfully well-read man', and knowledgeable about orchestration. According to Frehn, he composed in 1869 an opera based on Byron's 'Childe Harold', to a libretto by his son-in-law C.L. Bauer. Pierson visited Norwich again in 1869 for the performance of his unfinished oratorio *Hezekiah*, but this too met with a hostile reception from the press.

In contrast, Meyerbeer said 'H.H. Pearson is in truth a genius; and promises accordingly, as far as I know him, great things for the German opera'. Pierson's reputation in Germany remained at a high level for some time after his death, and his music continued to be performed there. A Leipzig obituary called him a 'great artist, whose strivings were after the noblest ends ... highly educated, but after the fashion of true genius somewhat of a recluse'. He adapted the music of his partsong *Ye Mariners of England* for a German nationalistic hymn *O Deutschland hoch in Ehren*, which was a hit throughout World War I. In England too Pierson was known by a patriotic song, *Hurrah for Merry England*.

His larger works are of great interest, for in place of the slavish conventionality that constrained most English music of the time, he set up the opposite ideal of unfettered originality. His melodies, his forms, his harmonies, are quite as unpredictable as those of Berlioz – so much so that when he did occasionally bring a phrase to its normal cadence, even this comes as a surprise. It must be admitted that such methods can quickly exhaust the listener and almost preclude the possibility of cumulative musical structure such as a full-length opera or oratorio requires. Pierson's operas have not been located. Of his extant larger works, the most succssful are the *Faust* music and the symphonic poem *Macbeth*. Programmatic and episodic, they are well suited to Pierson's gift for short-term

Ex.1 *All my heart's thine own*

All my heart's thine own, love!
all my heart's thine own, love! Ah, when I plight-ed thee my
troth, Said not each im-pas-sion'd tone, love.

interest and surprise; their scoring is colourful, after the manner of Berlioz; they hold closely to detailed programmes which are linked to short motifs. It is not surprising that their success was confined to German-speaking countries.

It was in his songs that Pierson made his most remarkable contribution. German critics were aware of him as a secondary, but by no means negligible, figure in the history of the lied; in England his songs have hardly been known. Nevertheless he did not adopt entirely the German manner, though Schumann was certainly a strong influence. His English background is noticeable chiefly in his choice and treatment of texts. Throughout his life he returned to great English poets, and above all to Shakespeare, who also inspired much of his orchestral music. He frequently published his songs with both German and English texts, but his minute attention to the verbal stresses of the English texts shows that his native language remained a major force in his art. His melodies are complex, sometimes pretentious: Schumann found them too cumbersome for the simple Burns verses. Often they take a surprising turn, as if in rejection of the English ballad style that he had learnt in his youth (ex.1). The eccentricity of Pierson's musical thought is like a spice: in his most successful songs, such as *Heimweh*, *Ruhe* and *Die weisse Eul'*, it is applied in just sufficient quantity to enhance interest; in his worst, of which *Der Malteser Ritter* may serve as an example, it overwhelms and destroys the lyrical essence. Every one of his songs has points of interest and surprise, if only because of his avoidance of the sentimental clichés of his era.

Pierson also mastered the selfconsciously 'manly' style of the German *Männerchor*, here relying perhaps more obviously on Weber, Schumann and Liszt as models. In his English choral music, including *Jerusalem*, he was less successful, never reaching an understanding with his audience. Of his Anglican church music, commissioned near the end of his life by a London publisher, one beautiful Agnus Dei stands out from a dull and perfunctory collection. His only important work for piano, the three *Musical Meditations*, dedicated to Meyerbeer, is a rare and early example of English programme music.

Pierson translated into English Seyfried's *Beethovens Studien*, Schumann's *Musikalische Haus- und Lebens-Regeln* and several German song lyrics.

WORKS

published in Leipzig unless otherwise stated

STAGE

Der Elfensieg, oder Die Macht des Glaubens (Feenoper, 3, C. Pierson), Brno, 7 May 1845, unpubd

Lelia (romantische Oper, 3, C. Pierson, after her *Schneewittchen*), Hamburg, 22 Feb 1848, unpubd

Contarini, oder Die Verschwörung zu Padua (grosse Oper, 5, M.E. Lindau), 1853, Hamburg, 16 April 1872, unpubd; revived as Fenice, Dessau, 1883

Musik zu Goethe's Faust, zweiter Theil (incid music), 1854, Hamburg, Stadt, 25 March 1854 (Mainz, 1858)

CHORAL

op.	
9	6 Gesänge, chorus, pf ad lib (Dresden, *c*1843): Grablied, Die Heimath, An den Tod, Das Vaterland, Lied des Trostes, Nacht
—	Now the bright morning star (J. Milton), ode, chorus, pf (London, *c*1850)
—	Salve eternum (B. Lytton), int, S, B, chorus, orch, 1850, vs (London, 1853), *GB-Lcm*
—	Jerusalem, orat, solo, vv, chorus, orch (London, 1852), as op.100 (*c*1877)
30	O Deutschland hoch in Ehren (Beharrlich!) (L. Bauer), Volkshymne, male vv (*c*1860)
31	2 Männerchöre (*c*1860): Kein schön'rer Tod, Der Liedertafeln Ständchen
32	3 Gesänge (*c*1860): Die Stimme der Zeit, Wie schlummert sanft, Sag' mir, du vielgeliebtes Herz
35	2 Männerchöre (1862): Reiterlied vor der Schlacht (Bauer), Des Helden Braut (C. Pierson, after V. Alfieri)
—	Germania (Bauer), male vv (1862)
37	Der deutsche Männergesang (*c*1862)
42	Zu den Waffen, male vv, pf (*c*1864)
43	Einladung in den Wald, male vv (1864)
—	Des Waldes Wiegenlied (Vienna, *c*1864)
—	4 Männerchöre (in Tauwitz's Deutsches Liederbuch, Prague, 1865): Erklang dein traulich Wiegenlied, Liedergruss, Ein deutscher Kaufherr, An die Todten
—	Hezekiah, orat, solo vv, chorus, orch, unfinished, perf. Norwich Festival, 1869
73	2 Männerchöre (*c*1869): Süss und leis (Der Fischerin Wiegenlied) (after A. Tennyson), Vertraue nur der reichen Gnade (Beruhigung) (F. Dahn)
—	Communion Service, F, chorus, org (London, 1870)
—	Te Deum, Benedictus, F, chorus, org (London, 1870)
—	60 hymn tunes (London, 1870–72)
—	Te Deum, B♭, 3 vv, org (London, 1872)
—	Hurrah for Merry England (B. Cornwall), 1v, chorus, pf (London, 1880)

SONGS

for solo voice with piano unless otherwise stated

Editions: *H. Hugo Pierson Album* (Leipzig, *c*1875) [P]
English Songs 1800–1860, ed. G. Bush and N. Temperley, MB, xliii (1979) [B]

op.	
—	Thoughts of Melody: 10 Canzonetts (London, 1839, 2/1852): There be none of beauty's daughters (Byron); Beware of the black friar (Byron); Maid of Athens, ere we part (Byron); The isles of Greece (Byron); When we two parted (Byron); Under the greenwood tree (W. Shakespeare); Go, you may call it madness (S. Rogers); Had I a cave on some far distant shore (R. Burns); Maiden, weep, thy mantle round thee (H. Kirke White); When lovely woman stoops to folly, cavatina (O. Goldsmith)
—	[5] Characteristic Songs of Shelley (London, 1840): The odour from the flower is gone (On a Faded Violet); Arethusa arose; Swiftly walk over the western wave (Invocation to Night); Sacred goddess, mother earth (Hymn to Proserpine); False friend, wilt thou smile or weep? (Song of Beatrice Cenci)
—	Rheinlied (N. Becker), Leipzig, 2 Dec 1840
—	2 Lieder (Wahl, after Shelley) (1841): Dein Bild im Traum erweckt (Indisches Ständchen); Windsbraut, du Klägerin (Herbstgrablied); Eng. trans. as Serenade, An Autumn Dirge (London, 1852)
7	6 Lieder (F. Freiligrath, after Burns) (1842): Die finstre Nacht (Die Ayren-Ufer); Nun holt mir eine Kanne Wein (Soldatenlied); Mein Herz ist im Hochland (Des Jägers Heimweh), later pubd with hn obbl; John Anderson, mein Lieb, B; O säh' ich auf der Heide (Liebe), P; Die süsse Dirn (Die Maid von Inverness)
12	2 Lieder (Dresden, *c*1843): Wohl glücklich ist (Sängers Glück); Die alten bösen Lieder (Romanze) (? H. Heine)
—	All my heart's thine own (London, 1844), later pubd as All mein Herz, op.22 no.2, P, B
—	O fairy child (Wilson), cavatina (London, 1844)
—	O listen while I sing to thee (M. Shelley), canzonet (London, 1844)
22/1	Verrathene Liebe (A. von Chamisso) (*c*1845)
—	Durch alle Auen ist's gedrungen (Elegie, den Manen F. Mendelssohn Bartholdys) (C. Pierson) (Hamburg, 1847)
—	Ein Blick (Schlönbach), dramatic romance (Hamburg, *c*1847)
—	Erscheinung (Schlönbach) (Hamburg, *c*1847)
—	Liebesübermuth (L. Tieck) (Dresden, *c*1847)
—	Mondlied (J.W. von Goethe) (Dresden, *c*1847)

—	Der Heimat fern mit nassem Blick (Heimweh) (C. Beck) (Vienna, *c*1848), later pubd as op.41, P
—	Es war dein erster Kuss (Marie) (E. Janinski) (Hamburg, *c*1848)
—	O meine schönste Hoffnung (An Madonna Consolatrice) (Vienna, *c*1848)
—	Wenn der kalte Schnee zergangen (Der Schnee) (J. Eichendorff) (Vienna, *c*1848)
—	Wenn in Lenz die Berge grünen (Weinlied) (C. Pierson) (Vienna, *c*1848)
—	Ave Maria (Offertorium), 1v, orch/pf (Vienna, *c*1850)
—	Schlachtgetös' ist meine Lust (Vor der Schlacht) (Vienna, *c*1850)
23	4 Lieder (*c*1851): Es schlafen rings die Haine (Ruhe), P; Wiegenlied; Nähe der Geliebten; Ach, wenn du wär'st mein Eigen (An die Geliebte), P
26	4 Lieder (*c*1852), P: Kehrt nie die Lieblichkeit (Erste Liebe); Sie schwuren sich kein Liebeseide (Die Liebenden) (Beck); Bleibt, o bleibt ihr Lippen ferne (Lieb und Leid) (after Shakespeare), B; Willst kommen zur Laube?
27	2 Lieder (1853), P: O weine nicht, du holdes Kind (An Henriette); Tief wohnt in mir (Treue Liebe) (after Byron)
28	2 Lieder (*c*1854); P: O Abendglocken, Abendhall (C. Pierson, after T. Moore), B; Wo die Myrthen ewig blüh'n (Sehnsucht nach Italien)
—	Viribus unitis (Oestreichs Wahlspruch) (Vienna, *c*1855)
29	2 Lieder (1859), P: Ich hatt' einen Cameraden (Der gute Camerad) (L. Uhland); Nun schmückt die Rosse (Der Malteser Ritter) (Freiligrath)
33	6 Concert-Lieder (*c*1861): Sie gleicht der wundervollen Nacht (Das Portrait) (after Byron), P; Wo Claribel tief lieget (Claribel) (C. Pierson, after Tennyson), P; Du tratest in mein dunkles Leben (Mein Glück) (after Lamartine), P; Wenn durch die Piazzetta (Ninetta) (Freiligrath, after Moore), P; Der Eichwald brauset (Thekla's Klage) (F. von Schiller), P; Die Zauberin
34	2 Lieder (*c*1861): Ständchen; Elegie
—	Der beste Schütz (H. Marggraf), ballad (*c*1862)
40	2 Gesänge für tiefe Stimme (1863), P: Lass die Rose schlummern (An der Nachtwind) (R. Hamerling); Es war die Zeit der Rosen (C. Held)
44	4 Lieder (*c*1864): In Venedig, barcarolle; O komm zu mir (E. Geibel, after Moore), serenade, P; Roland der Held! (Freiligrath, after T. Campbell), ballade, P; Mein Lieb ist eine rothe Ros' (Freiligrath, after Burns), P
—	Geh, wo Ruhm dir zuwinkt (Vienna, *c*1864)
—	Holkisches Reiterlied (Vienna, *c*1864)
—	4 songs in Tauwitz's Deutsches Liederbuch (Prague, 1865): Gebet für das Reich; Von der Koppe; Die Dorfglocke; Beim Friedhof
60	2 Gesänge (*c*1865): Rastlos Herz will Ruhm erjagen (F. Seebach, after Cornwall); Sängers Vorüberziehen (Uhland)
61	Über fremde Gräber (Der Friedhof) (F. Dingelstedt), aria, B solo, pf (*c*1865)
62	Der Burgwall glänzt (Das Hifthorn) (Bauer, after Tennyson), romance (*c*1865)
63	3 Gedichte von Shakespeare (*c*1865): Sagt, woher stammt Liebeslust?; Wer ist Sylvia?; Fürchte nicht meine Sonnengluth, B
64	O du, mein alles auf der Welt (F. Oser) (*c*1865)
65	2 religiöse Gesänge (*c*1865): Birg mich unter deinen Flügeln (Gebet) (Oser); Der Himmel bringt die Ruhe nur (Freiligrath, after Moore)
66	Mein Herz ist schwer (F. Kohlhauer, after Burns), concert aria, 1v, orch (*c*1865)
89	2 zweistimmige Lieder, 2vv, pf (*c*1867): Über allen Gipfeln ist Ruh' (Goethe); Frühling im Herbst (Bauer)
95	3 Gesänge (1868): Hörst du nicht die Quellen gehen (Nachtzauber) (Eichendorff); Das macht das dunkelgrüne Laub' (Herbst); Wenn's Kätzchen heimkehrt (Die weisse Eul') (C. Pierson, after Tennyson), P, B
81	O lieb', so lang' du lieben kannst (Freiligrath) (*c*1869)
69	Zu Ross, zu Ross (Sturmritt) (F. Löwe), 1v, pf/orch (*c*1870)
90	2 Lieder (after I. Hill) (*c*1870): Wie gern ich doch (Liebesträumen); Im hellen, klaren Mondenschein (Ständchen), P
—	Das schlafende Kind (*c*1875)
—	Die Rose wendet ihr (Traum und Liebe) (A. Bube), 1871, OO. Neighbour's private collection, London

NICHOLAS TEMPERLEY

Pietersen, David. *See* PETERSEN, DAVID.

Pieterszoon, Adriaan (*b* Delft, ?*c*1400; *d* Delft, 1480). Netherlandish organ builder. He may have learnt his trade from the Delft organ builders Godschalk and Jannes. In 1446 he was granted, as an organ builder, the freedom of the city of Bruges. In 1472 he was in Tournai, and was also in Lille as a surveyor. He was patron of a prebend at St Pancraskerk, Leiden, and in 1476 named a Franco Wilhelmi as his deputy. He lived to a great age and died in a Delft home for the aged.

In 1448 Pieterszoon built a new organ in St Niklaaskerk, Veurne, and in 1449–50 enlarged the organ in Antwerp Cathedral. In 1450 or 1451 he returned to Delft, where in 1451 he built a new organ in the Nieuwe Kerk for the Fellowship of the Cross. He built a large organ for the same church in 1454–5 (which during his lifetime was replaced by another) and in 1458–60 began a large organ for the Oude Kerk in Delft (this was given to another builder in 1461 for completion). Apart from the unusually extended keyboard (beyond the normal *f″*, to *a″*), the Oude Kerk organ was generally old-fashioned in design: it was in the medieval 'steep' scale rather than the new diapason scale; the Mixtur stop on the second manual could not be played separately, although the builders Vastart in 1454 and Van Bilsteyn in 1455 had Mixturs which could be used alone; and the Mixtur of the *Blockwerk* had no repetitions (a device which had recently achieved the aim of 'sweetness', i.e. brilliance).

HANS KLOTZ

Pietkin, Lambert (*b* Liège, bap. 22 June 1613; *d* Liège, 16 Sept 1696). Flemish composer and organist. He was probably trained at the cathedral of St Lambert, Liège; he then entered holy orders and became second organist in 1630. In 1632 he became first organist and the following year served temporarily as *maître de chapelle* (in place of Léonard de Hodemont, who was his godfather). He was appointed permanently to the post in 1644, and he also held prebends as canon of St Materne and as imperial canon of the cathedral. He retired in 1674.

The ten early motets in the *Grand livre de choeur de Saint Lambert*, several of them based on Marian antiphons and chants from the liturgy for Corpus Christi, show Pietkin's contrapuntal skill but are close in style to music by his immediate predecessors, much of which is in the same collection. His surviving mature works, two sonatas for four instruments and continuo and the 32 motets for voices and instruments published as op.3, are all in a more modern style, with freer contrapuntal textures, italianate melodic lines, expressive chromaticism, and (in the vocal works) rhythms derived from the declamation of the Latin poetry. Sébastien de Brossard, who owned a copy of the *Sacri concentus*, remarked in his famous catalogue that 'all that one might ask or desire for good and solid music is found in this op.3'.

WORKS

Grand livre de choeur de Saint Lambert, 1645, 11 motets (incl. 1 motet for which only the bc part survives), 5–8vv, bc, *B-Lc* Fonds Terry 1325, 520
2 sonatas, 4 insts (3 tr, b), bc, *GB-Ob* Mus.Sch.C.44
Sacri concentus, op.3 (Liège, 1668), 32 motets, 2–5vv, insts, bc
Opp.1–2 and various masses and motets mentioned in church records at Ghent, Oudenaarde and Tongeren are lost

JAMES MUSE ANTHONY

Piéton, Loyset [Aloysis, Louys, Loys] (*fl c*1530–45). Composer. His works were widely disseminated in both manuscript and printed sources between 1532 and 1574; the greatest concentration of his works appeared during the 1530s and 40s. Much of his music survives in Italian sources (in Gardane's motet books, in a group of Vatican manuscripts and in such sources of Florentine provenance as the Vallicelliana Manuscript and *I-Fn* Magl.XIX. 125[bis]), suggesting that he lived in Italy. But his ties to Lyons would appear to be equally strong: Moderne printed some eight motets by Piéton as well as the *Davidici Poenitentiales Psalmi septem*, published in about 1532; a lost Lyonnaise book of *Psalmi penitentiales* exclusively by him was purchased by Ferdinand Colombus in Lyonsin, summer 1535.

Florence, Rome, Venice and Lyons represent by no means, however, the only cities in which Piéton's works were known. German printers in Augsburg, Nuremberg and Wittenberg published his works, as did their Flemish counterparts in Antwerp and Leuven. Only a few of Piéton's pieces were printed in Paris; even his one surviving chanson did not appear there, having been printed in the first book of Susato's main series of chansonniers in the company of works by such thoroughly Flemish masters as Josquin Baston, Cornelius Canis and Thomas Crecquillon. Another sign both of Piéton's links with Flemish musicians and of the broad dissemination his music attained may be seen in a reference to his *Magnificat* in the inventory of the music library at the Spanish court of Felipe II, prepared by Géry de Ghersem late in 1602.

The musical style of *Par faulte d'une je suis seulle* reflects, in its pervasive imitation, meandering melody, marked independence of line, and paucity of chordal writing and cadences, the Flemish approach to the chanson. The same is true of such motets as *Salve crux digna* and *Vive Deo semper* and of the *Magnificat quarti toni*, underscoring all the more Piéton's affinity with the Flemish school of composition. A number of the motets use unusual combinations of voices and 'modulations' as far as A♭ or D♭ (as in the six-voice setting of the antiphon *O beata infantia*).

Loyset Piéton should not be confused with Loyset Compère, Luiset Patin, Jean Louys or any of the Loysets attached to the court of Philip the Fair.

WORKS

Davidici Poenitentiales Psalmi septem, 4vv (Lyons, *c*1532)
Missa 'In te Domine speravi', 5vv, *I-Rvat* C.S.19

Ave Maria, 5vv, 1547[25] (intabulation); Beati omnes qui timent Dominum, 4vv (attrib. Lhéritier in 1539[12], 1564[6]; attrib. Piéton in 1532[10], 1542[6], 1545[4], 1569[1]), ed. in SCMot, ix (1998); Benedicta es celorum regina, 6vv, ed. in SCMot, xiii (1993) [intabulation ed. in DTÖ, xxxvii, Jg.xviii/2 (1911/*R*), 74]; Inviolata integra et casta, 6vv, *I-Fn* Magl.XIX.125[bis]; Jesum queritis, 5vv, 1547[25] (intabulation); Laudem dicite deo nostro, 4vv, 1542[7]; Magnificat quarti toni, 4vv, ed. P. Bunjes: Georg Rhaw: *Postremum vespertini officii opus … Magnificat octo modorum seu tonorum, 1544* (Kassel, 1970), 123
Nativitas tua, 4vv, 1539[10]; O admirabile commercium, 4vv, ed. in SCMot, ix (1998); O beata infantia, 6vv, ed. A. Smijers: *Treize livres de motets parus chez Pierre Attaingnant en 1534 et 1535*, iii (Paris, 1938), 1 and CMM, iii/4 (1952), 97; Pax vobis, 4vv, 1542[7]; Quae est ista que progreditur, 4vv, ed. in SCMot, xiii (1993); Regina caeli, 4vv, 1539[10]; Salve crux digna, 4vv, 1539[10]; Si acuero ut fulgur, 3vv, 1565[3]; Si ascendero in coelum, 3vv, 1565[3]; Si dormiero dicam quando, 3vv, 1565[3]; Sponsa Christi Cecilia, 4vv, ed. in SCMot, ix (1998); Veni sancte spiritu, 6vv, 1549[3]; Verbum bonum et suave, 6vv, ed. in SCMot, xiii (1993); Virgo

Pietoso (It.: 'pitiful', 'piteous'; in non-musical contexts 'compassionate', 'merciful'). An expression mark. Brossard (*Dictionaire*, 1703) defined the term as 'd'une manière capable d'exciter de la pitié ou de la compassion', but the word is of limited usefulness.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Pietragrua [Grua]. Family of Italian and German musicians.

(1) **Gasparo Pietragrua** [Cranesteyn] (*b* Milan, late 16th century; *d* ?Monza, nr Milan, after 1651). Italian composer and organist. He was an uncle of (2) Carlo Luigi Pietragrua. In 1629 he was organist at the collegiate church of S Leonardo, Pallanza. Fétis stated that he was organist at the collegiate church of nearby Canobio at this time; it is possible that he held the two posts simultaneously or that both statements refer to the same post. He held the same post at the collegiate church of Giovanni Battista at Monza, near Milan, in 1651. He published *Concerti et canzoni francesi* for one to four voices, op.1 (Milan, 1629), and *Musica spedita, cioè Messa, salmi alla romana per cantarsi alli vesperi di tutto l'anno con dio Magnificat, le quattro antifone, & falsibordoni otto, con il Gloria intiero libro 5*, op.9 (Venice, 1651). Fétis also mentioned *Canzonette* for three voices, op.2, and *Motetti* for solo voice, op.3. Settings of *Beatus vir* and *Laetatus sum* for four voices and instruments are now lost (fomerly in *D-Dkh*).

(2) **Carlo Luigi Pietragrua** (*b* Florence, *c*1665; *d* Venice, 27 March 1726). Italian composer, active in Germany. He was an alto in the Hofkapelle of the Elector of Saxony in Dresden from 1687. By a decree of 20 February 1693 he was made vice-Kapellmeister, and during Carnival 1693 his opera *Camillo generoso* was given in Dresden. He left in the following year for Düsseldorf, the residence of the Elector Palatine Johann Wilhelm, where he served under J.H. Wilderer as vice-Kapellmeister of the Hofkapelle; his opera *Telegono* was performed there during Carnival 1697. He served in Düsseldorf until the death of Johann Wilhelm in 1716, when the court moved to Heidelberg and merged with the Innsbruck Kapelle of the new Elector Carl Philipp in 1718; his brother, Vinzenz Paul, also went with the court and was an organist until his death in 1732. A serenade given in Heidelberg in 1718 by 'Carl Peter Grua, Kapellmeister to his Highness, the Elector Palatine' (according to the libretto) has been attributed to (3) Carlo (Luigi) Grua but is probably the work of Carlo Luigi Pietragrua. In 1719 he was appointed *maestro di coro* at the Ospedale della Pietà, Venice. Three of his operas were performed there in 1721 and 1722; the librettos give the composer as 'Carlo Luigi Pietragrua, Florentino'. Among Steffani's literary remains (in the archive of the Propaganda Fide, Rome) are letters from Pietragrua to Steffani, whom he knew from Düsseldorf, which reveal that while in Italy he recruited singers on behalf of Steffani for the Schönborn Kapelle at Würzburg. In manuscript collections numerous chamber duets by Pietragrua are wrongly attributed to Steffani.

WORKS

music lost unless otherwise stated

DRAMATIC

Camillo generoso (dramma [per musica]), Dresden, carn. 1693, 12 arias, *D-Dl*, aria in *Bsb*

Telegono (tragedia in musica, 5, S.B. Pallavicino), Düsseldorf, carn. 1697, *A-Wn*

Il pastor fido (tragicommedia pastorale, 5, B. Pasquaglio, after G.B. Guarini), Venice, S Angelo, carn. 1721, *Wgm*

La fede ne'tradimenti (dramma per musica, 3, G. Gigli), Venice, S Angelo, aut. 1721

Romolo e Tazio (dramma per musica, 3, V. Cassani), Venice, S Giovanni Grisostomo, aut. 1722

Das fünfte Element der Welt (serenata, ?G.M. Rapparini), Heidelberg, Nov 1718, lib *D-HEu*

Doubtful: Arsinöe, Dresden, 1693; Aleramo ed Adelaide, Dresden, 1694; Festa boschereccia (serenata), Düsseldorf, 9 July 1697

OTHER WORKS

Chamber duets, *D-Dl*, *WD*; *GB-Cfm*, *Lbbc*, *Lcm*; *I-Bc*

Mass (Ky, Gl), 5vv, insts; Beatus vir (motet), 4vv, insts, *D-Dl*; Alleluja (Easter cant.), 5vv, insts, *Bsb*, *GB-Lbl*

(3) **Carlo (Luigi) Grua** [Pietragrua] (*b* ?Milan, *c*1700; *d* Mannheim, 11 April 1773). Italian composer, active in Germany, a nephew of Carlo Luigi Pietragrua. Fétis stated that he was born in Milan. The first printed court calendar of the Elector Palatine's establishment at Mannheim in 1734 names him as Kapellmeister; he accompanied his father, Vinzenz Paul, an organist, from Düsseldorf, and became a member of the orchestra between 1723 and 1728. He held the position of Kapellmeister from 1734 until his death, though after the arrival of Ignaz Holzbauer in Mannheim in 1753 he directed only church music. His most important contributions to Mannheim's music history were the festival opera *Meride*, produced both for the marriage of the future elector, Carl Theodor, and the opening of the new court opera on 17 January 1742, and *La clemenza di Tito*, performed on the birthday of the elector's wife on 17 January 1748. Besides these two operas several oratorios by Grua are known to have been performed in Mannheim between 1740 and 1750. In style his music is typical of the first-generation Mannheim School.

WORKS

music lost, performed in Mannheim, unless otherwise stated

OPERAS

Meride (dramma per musica, 3, G.C. Pasquini), Jan 1742, lib *US-Wc*

La clemenza di Tito (dramma per musica, 3, P. Metastasio), 1748, lib *D-MHrm*

ORATORIOS

La conversione di S Ignazio (2, L. Santorini), 1740, lib *DHEu*

Bersabea, ovvero il pentimento di David (azione tragico-sacra per musica), 1741, lib *HEu*

Jaele (2, Santorini), 1741, lib *HEu*

Il figliuol prodigo (azione sacra, 2, Pasquini), 1742; revived 1749, lib *HEu*
La missione sacerdotale (Santorini), 1746
S Elena al Calvario (azione sacra, 2, Metastasio), 1750, lib *HEu*
La passione di Giesù Christo nostro Signore (Metastasio), Bamberg, 1754

OTHER SACRED WORKS

Mass, 4vv, insts, 1733, ed. in DTB, new ser., ii/1 (1982); Missa brevis, D, 4vv, insts, 1751; Missa brevis, d, 4vv, insts, 1751, *Mbs*; Mass, E♭, 4vv, insts, 1757, *Mbs*; Missa brevis, F, 4vv, insts, 1766, *Mbs*
Litanie della Beata Vergine, 5vv, insts, 1737, ed. in DTB, new ser., ii/1 (1982)

(4) **Paul** [Paolo] **(Joseph) Grua** (*b* Mannheim, 1 Feb 1753; *d* Munich, 5 July 1833). German composer of Italian descent, son of (3) Carlo (Luigi) Grua. He studied composition under Ignaz Holzbauer and the violin under Ignaz Fränzl. In 1776 he is named as a deputy violinist in the court calendar of the electoral court at Mannheim. A year later he received a grant of 350 florins from Elector Palatine Carl Theodor for study in Italy with Padre Martini in Bologna and probably also with Traetta. In November 1778 he went with the Mannheim orchestra to Munich, where in 1779 (according to the court calendar of 1780) he was named vice-Kapellmeister under Andrea Bernasconi, whom he succeeded in 1784 as Hofkapellmeister with a salary of 1200 florins. His only opera, *Telemaco*, introduced him to the Munich public during Carnival 1780 (with ballet music by C.J. Toeschi). After Peter Winter became vice-Kapellmeister in Munich in 1787, Grua confined his activity to church music, as his father had done. Mozart wrote to his father from Munich on 13 November 1780 concerning one of Grua's 31 masses: 'one can easily compose half a dozen of this sort of thing a day'. This judgment relates not only to the quality of Grua's church music but also to his prolific output of it.

WORKS

Telemaco (os, 3, Count Serimann), Munich, Jan 1780, *D-Mbs*
28 masses, 4vv, orch, *Mbs*; 2 masses, 4vv, Frauenkirche, Munich; 1 mass, E♭, 1786, *WEY*; 4 Requiem, 4vv, orch, *Mbs*
29 offs, some with insts; 4 grads, 4vv, org; 6 Miserere, 4vv, orch; 3 Stabat mater, 4vv, orch; 138 smaller sacred works incl. settings of Beatus vir, Dixit Dominus, Laudate Dominum, Laudate pueri, Magnificat, Regina coeli, Ave regina, Salve regina, hymns: all *Mbs*
Sym. movt, *AB*; several solo concs. for cl, fl, kbd and ob, *Mbs*

NONA PYRON (1), ROLAND WÜRTZ/PAUL CORNEILSON (2–4)

Pietrequin [Pierre] **Bonnel** (*b* Picardy; *fl* late 15th century). French singer and composer. It is just possible that he is identifiable with the 'Pierre Donnell' or 'Donelli' reported at the court of King René of Anjou from 1462 to 1472 and again in 1479. But he certainly worked at the court of Savoy in 1488–9 and at both the cathedral and the convent church of the SS Annunziata in Florence in 1490–91 and 1492–3; later in the decade – perhaps from 1496 to 1499 – he sang in the chapel of Anne of Brittany, Queen of France. He had probably worked at the French court before, for he copied one of his chansons, *Qu'en dictez vous*, and added attributions for three others in *I-Fr* 2794, a manuscript almost certainly written at the court during the 1480s. In this source as elsewhere his works appear under his first name alone, which has led some writers to ascribe them to Pierre de La Rue or to Guillaume Pietrequin, a musician by whom no compositions survive.

Pietrequin's chansons – all rondeaux except *Adieu florens* – vary widely in quality. The pieces in *I-Fr* 2794 observe the contrapuntal and formal conventions of their genre without notable imagination or technical polish; *Mais que ce fust*, however, achieves much greater success and merits the popularity suggested by its appearance in nine sources. *Adieu florens* also shows inventiveness in Pietrequin's varied treatment of repetition within the tenor melody – perhaps a popular tune – that serves as its foundation.

JOSHUA RIFKIN/DAVID FALLOWS

Pietrobelli, Francesco. *See* PETROBELLI, FRANCESCO.

Pietrobono [Petrus Bonus] **de Burzellis** [de Bruzellis, del Chitarino] (*b* Ferrara, ?1417; *d* Ferrara, 20 Sept 1497). Italian lutenist and singer, one of the most important

musicians in Italy in the 15th century. He spent most of his career at the Este court in Ferrara, with periods of service at Milan, Naples, Mantua and the Hungarian court. He is first documented in 1441 as a member of the household of Leonello d'Este, marquis of Ferrara, who gave him the considerable sum of 20 gold ducats (the same amount Du Fay had received in 1437). His reputation grew during his service with Leonello in the 1440s and his successor Borso d'Este in the 1450s and 1460s, by which time he was reported to be earning 1000 ducats a year (chiefly in gifts). The first of several portrait medals of him was struck in 1447. He was in close contact with Francesco Sforza, duke of Milan, in the mid-1450s and early 1460s, visiting Milan in 1456. He accompanied Borso to Rome for his investiture as duke of Ferrara in 1471.

Pietrobono remained in Ferrarese service when Borso's brother Ercole I became duke later in 1471, and was a member of the retinue sent to Naples in 1473 to bring back Ercole's bride Eleonora d'Aragona. Tinctoris, who praised him highly in *De inventione et usu musicae*, may have heard him at this time or perhaps on a visit to Ferrara in 1479. He made a strong impression at Naples: King Ferrante I requested the loan of his services in 1476, and he later entered the service of Beatrice d'Aragona, daughter of Ferrante and sister-in-law of Ercole. Plague and a war between Ferrara and Venice drove Pietrobono to Mantua in 1482; he returned between 1484 and 1486. In 1487 he was sent to Hungary in the train of Ippolito I d'Este, the eight-year-old archbishop of Esztergom. He had been particularly requested by Beatrice d'Aragona, wife of Matthias Corvinus, king of Hungary, and he probably remained in her service for several years, as he is not recorded again in the Ferrarese salary rolls until 1493. In 1488 he had written to Francesco Gonzaga, marquis of Mantua, recommending his grandson to Francesco's patronage. He died at an advanced age in 1497.

Pietrobono played the lute as a melodic instrument in ensembles of various sorts. From 1449 onwards he was regularly accompanied by a *tenorista* (perhaps a tenor-viol player), he was said in 1484 to excel in 'soprano' playing, and in 1486 Beatrice d'Aragona asked Ercole d'Este to send her 'Pietrobono and his viols'. He also accompanied his own singing, either alone (as attested by Antonio Cornazzano) or with other instruments. He is frequently recorded as a teacher of both playing and singing. Besides Tinctoris and Cornazzano, his music was extolled by a number of prominent humanists, including Aurelio Brandolino Lippi, Battista Guarini, Filippo Beroaldo, Paolo Cortese and Raffaello Maffei. Although not a note of his music survives, no other musician in 15th-century Italy made such a profound impression on such a wide range of his contemporaries.

LEWIS LOCKWOOD/R

Pietrowski, Karol (*fl c*1790–1800). Polish composer. There is no extant biographical information about him, but like other 18th-century Polish composers he was a local musician who composed for chapel orchestras. The manuscript material of one of his two symphonies, both in D, was found with other Polish symphonies among the music at the parish church of Grodzisk near Poznań, together with a *Veni Creator* for soprano, alto and bass, two violins, two horns and organ continuo. The other symphony and an offertorium, *Benedictus sit Deus*, for soprano, alto, tenor and bass, two violins and organ continuo, came to light in the archives of the collegiate church at Poznań itself, where the Benedictus remains. The three other works are now in *PL-Pu*. The symphonies, edited by Jacek Berwaldt in the series Symfonie Polskie, are remarkable chiefly for having been modelled on specific Viennese Classics: the first movement of the 'Grodzisk' Symphony on the *Zauberflöte* overture, the first movement of the 'Poznań' on Haydn's no.70 in the same key and its finale on Haydn's finale (both in D minor and in the same free and peculiar form). Both of Pietrowski's symphonies are scored for two flutes, two horns, two trumpets, timpani and strings, the first consisting of Grave–Allegro, Andante, Minuetto and Presto, the second of Allegro, Andante ma non troppo, Minuetto and Prestissimo. In style and form they represent an advanced stage in the development of the 18th-century symphony in Poland. The two religious works have been edited by Jacek Berwaldt and Jan Prosnak in the series Źródła do Historii Muzyki Polskiej. These are Pietrowski's only known compositions; an offertorium, *Jesu corona virginum*, formerly attributed to him, is the work of F. Piotrowski, director of the cathedral choir of Płock in the early 19th century.

Pífano (Sp.). An ORGAN STOP.

Pifaro, Marc'Antonio [del] (*b* ?Bologna, *c*1500). Italian composer. Although a native of Bologna, he probably lived too early to be the Marc'Antonio Pifaro mentioned

in a Bolognese catalogue as *maestro di cappella* at Carpi Cathedral in 1575. His *Intabolatura de lauto ... Libro I* (Venice, 1546) contains a repertory of dances (pavans or chiarenzanas paired with saltarellos having the same tune in triple metre); three are related to vocal pieces. Two of these are modelled on Janequin and Passereau, and the third is based on an unknown Italian work.

Pifay. *See* PIFFET family.

Piffaro (i) [piffero] (It.). A woodwind instrument. The use of the term (an Italian cognate of fife and *Pfeife*) goes back at least to the 15th century. In the 16th century the term denoted a SHAWM; the closely related term *fiffaro* was used to indicate a transverse flute. 17th-century documents, however, imply that the term *piffaro* could also be used for a flute, and this ambiguity has been the source of some confusion. In present-day Italy the name is still applied to the small shawms that peasants from the Abruzzi (*pifferari*) play at the Christmas season in the streets of Italian cities, accompanied by *zampogne* (bagpipes), but it is also used as a generic name for woodwind instruments. In the 16th century and the early 17th the term also indicated an instrumentalist who played in a wind band.

Piffaro (ii). *See under* ORGAN STOP.

Piffet [Pifet, Pifay, Pifait]. French family of violinists and composers. The activities of the various members are difficult to document because most of the 18th-century references lack forenames.

(1) Pierre Piffet (*b* late 17th century; *d* after 1760). Violinist. He was probably the Piffet who on 17 October 1728 played at a funeral (the earliest known reference to the family's musical activity). On 7 August 1729 he became a member of the 24 Violons du Roi.

(2) Pierre-Louis Piffet (*b* 1706 or 1707; *d* Blois, 26 Sept 1773). Violinist, son of (1) Pierre Piffet. From 1733 he was resident in Amiens. He gained the reversion of his father's position in the 24 Violons on 20 March 1734, and retained membership to at least 1754 and probably into the early 1760s. Of his four children only (4) Louis-François-Barthélemy became a professional musician.

(3) Joseph-Antoine Piffet (*b* ?*c*1710; *d* late 18th century). Violinist and composer, son of (1) Pierre Piffet. A teacher whose pupils included La Houssaye, he joined the Opéra orchestra in 1739, where he remained until 1751. It is reported that he had been a member of the Musique de la Chambre du Roi from 1734. He was possibly a member of the Concert Spirituel orchestra from 1751 and was probably the Piffet who frequently performed solos there from 1756 to 1761, often his own violin concertos. His last documented performance was in 1761. It is also likely that he was the Piffet *le cadet* who published a collection of six violin sonatas with continuo and another of violin duos in about 1750. These pieces, in three or four movements, are mostly bithematic, with both contrapuntal passages and accompanied melody, and, though conventional, they show a mastery of violin technique, especially that involving double stops.

(4) Louis-François-Barthélemy Piffet [*le fils* or *le neveu*] (*b* Amiens, 22 April 1734; *d* Port-au-Prince, Haiti, 19 Aug 1779). Violinist and composer, son of (2) Pierre-Louis Piffet. In 1751 he (or (3) Joseph-Antoine, whom Louis replaced in the Opéra orchestra in that year) joined the Concert Spirituel orchestra. The membership of a Piffet in both organizations, though not continuous, can be traced to 1761. On 23 April 1753 he played a solo at the Concert Spirituel, and on 5 September 1754 he became a member of the 24 Violons. A Piffet *le fils* is also listed among the retired members of the Comédie-Française after 1765 (a Piffet was a member of this organization from 1749 to 1758). Louis was apparently the composer of three cantatas for solo voice and instruments – *Les travaux d'Hercule*, *La nouvelle nimphe* and *Le départ de Roquette*; the first two were written and published by 1747, when he was only 13.

Other musicians named Piffet, whose relation (if any) to this family remains uncertain, include Antoine-Joseph Piffet (possibly identical with (3) Joseph-Antoine Piffet), who joined the 24 Violons on 5 February 1734, and Etienne Piffet, called 'Le grand nez'. The latter has frequently been equated with Piffet *le cadet*; it is possible that he was identical with either (3) Joseph-Antoine Piffet or (4) Louis-François-Barthélemy Piffet. He composed two songs published in the *Mercure de France* (November 1751 and March 1752; the first was also published separately in 1763) and may have been the Piffet who performed in London in 1762. A Piffet was praised by the *Mercure de France* (1738); various musicians called Piffet gave concerts in London (1750), competed unsuccessfully for the post of Opéra director (1757), and published a trio called *Petits soupers* (1760).

JEFFREY COOPER

Piggott, Patrick (Edward Smerdon) (*b* Dover, 15 June 1915; *d* Bristol, 9 May 1990). English composer, pianist and writer. He studied at the RAM in London (1932–8) with Harold Craxton and Benjamin Dale, and won the coveted Mendelssohn Scholarship, which allowed him to study with Nadia Boulanger in Paris. He performed and broadcast widely, taught at the RAM and later at the Welsh College of Music and Drama, also lecturing at the University of Wales at Cardiff. Between 1965 and 1970 he was head of music at the Midland Region of the BBC. From 1972 he concentrated increasingly on composition, and also completed a pioneering study of John Field.

Piggott's early works show an excellent craftsmanship, as well as the extent of his debt to Ireland, Bridge and Bax. His fastidious approach led him later to destroy or

withdraw many compositions, especially those written before 1963. After 1972 he developed an ever more personal style in which, while still paying tribute to the traditional forms of his youth, he found an expressive use of dissonance to match his already strongly marked lyricism. This is particularly apparent in two of his extended last works, *The Quest* for piano and orchestra (1987) and the song-cycle *Rosanes Lieder* (1987–9), commissioned by the BBC and completed only months before his death. His writing for piano reflects his own polished, virtuoso and highly sensitive playing.

□

Pignoni, Zanobi di Francesco (*fl* 1607–41). Italian bookseller and printer, active in Florence. He matriculated in the *Arte dei medici e speziali* on 15 November 1607 and by 1614 had become head of the printing firm founded by Giorgio Marescotti and continued by his son Cristofano. He was also a singer trained in the choir of Florence Cathedral. Pignoni made an auspicious entry into music printing in 1614–15 with no fewer than six editions, including masses and motets by Marco da Gagliano, madrigals by Giovanni del Turco, and Giulio Caccini's *Nuove musiche e nuova maniera di scriverle*. This initiative was prompted by a generous, if shortlived, financial investment in the firm (in June 1614) by three prominent Florentine patrons, Giovanni del Turco, Lodovico Arrighetti and (for Cosimo del Sera) Giovanni Battista da Gagliano: hence the imprint 'Zanobi Pignoni, e Compagni'.

Thereafter Pignoni diversified his interests, printing poetry, occasional items and *descrizioni* of court festivities, while publishing music less frequently: three titles survive from 1617, one from 1618 and two from 1619, including music by Francesco Caccini, Jacopo Peri and Filippo Vitali. All these music editions are closely related in format, typography and content to the earlier ones of Cristofano Marescotti.

By the 1620s Pignoni was in competition with Pietro Cecconcelli, and he produced very few new music editions. The printing quality in Marco da Gagliano's opera *La Flora* (1628) is poor, and Pignoni's later editions of music by Antonio Guelfi (1631), Gregorio Veneri (1631) and Bartolomeo Spighi (1641) are provincial in content, while a reprint (1637) of Giovanni Abatessa's *Cespuglio di varii fiori* (Orvieto, 1635), a set of guitar intabulations, suggests an attempt to reach a popular market. No music editions bearing the Pignoni imprint survive from after 1641, although the C. Marescotti/Pignoni music fount appears in Vitali's *Musiche a tre voci … libro quinto* (Florence, 1647), printed by Lando Landi and Giovanni Antonio Bonardi.

TIM CARTER

Pigott [Pickett, Pigot], **Francis** (*b* 1665–6; *d* London, 15 May 1704). English organist and composer. He was perhaps related to Francis and George Piggot, members of the Old Jewry music society in the 1660s; a George Pigot was also appointed clerk of the Corporation of Musick in February 1672. He was a Chapel Royal choirboy from at least August 1678 to Michaelmas 1683. Soon after leaving the chapel he became organist of St John's College, Oxford, and in January 1686 succeeded Benjamin Rogers as organist of Magdalen College. On 27 May 1688 he became the first organist of the Temple Church, London, and on 5 December he married Anne Pelling at St Benet Paul's Wharf. Despite promising the Temple authorities not to be 'organist in any other church or chapel whatsoever', he became organist-extraordinary of the Chapel Royal on 11 December 1695 and succeeded William Child as organist on 24 March 1697. In 1698 he

took the MusB at Cambridge. He was succeeded at the Temple Church by his son John (*d* 24 Nov 1762), who also held appointments at St George's Chapel, Windsor (1719), and Eton College (1733) before inheriting a fortune in 1756. Only a few pieces by Pigott survive, but they are good quality. The duet, *The Consort of the Sprinkling Lute*, was apparently 'Sung at St. Ce[ci]lia's Feast'; it may come from an ode written for the 1694 celebrations.

WORKS

I was glad, ? for Queen Anne's coronation, 1703, full anthem, 4vv, *GB-Ob*, *US-AUS* (facs. in *The Gostling Manuscript*, Y. Austin, 1977)

PETER HOLMAN

Piguet, Michel (*b* Geneva, 30 April 1932). Swiss oboist, recorder player and teacher. One of the first professional musicians to devote his attention to the Baroque oboe, he studied with Roland Lamorlette at the Paris Conservatoire and played first oboe in the Zürich Tonhalle Orchestra from 1956. In 1964 he resigned his orchestral post to concentrate on Renaissance, Baroque and Classical repertory and the revival of the playing techniques of the shawm, early oboe and recorder. In 1972 he opened the first professional class for recorder at the Schola Cantorum Basiliensis, and in 1974 inaugurated a class there for the historical oboe. Piguet assembled an important collection of wind instruments, much of which he sold in 1997, and his research has contributed significantly to the history of the technique of the oboe and the reassessment of the importance of original recorder fingerings. Outstanding among his many recordings are Mozart's Oboe Quartet and Oboe Concerto – both first recordings using historical instruments – and performances of Renaissance music by the Ricercare Ensemble, of which he is director.

GEOFFREY BURGESS

Pijper, Willem [Frederik Johannes] (*b* Zeist, 8 Sept 1894; *d* Leidschendam, 18 March 1947). Dutch composer and teacher.

1. LIFE. He was, with Vermeulen, the most important composer in the Netherlands in the first half of the 20th century; his teaching and writing also made a significant impact. He grew up in a working-class Calvinist milieu in a village outside Utrecht. Due to recurring bronchitis and asthma, he was educated at home until the age of 14 but then attended Gymnasium in Utrecht. Already studying the organ, he left school in 1911 to enroll in the Utrecht Toonkunst Muziekschool, where he studied composition with Johan Wagenaar and the piano with Helena van Lunteren-Hansen. His final examination, in 1915, was in theory, and he continued composition lessons privately for three more years.

The family of his first wife, Annie Werker (they married in 1918), brought him social and musical opportunities in Utrecht, and he came under the influence of two older, Francophile colleagues: Diepenbrock and the critic J.S. Brandts Buys. It was Mengelberg's Concertgebouw première (April 1918) of the Mahler-like First Symphony which brought him national recognition. During 1918–21 he taught theory at the Amsterdam Muziek lyceum and from 1917 to 1923 he wrote for the *Utrechtsch Dagblad*. His long, pithy reviews crusaded against complacency and amateurishess; one victim was the conductor Jan van Gilse, who resigned his post with the Utrecht orchestra in 1922 as a result of Pijper's criticisms. This incident created a nationwide furore, and his reputation as a musical essayist was assured.

A radical new compositional style, confirmed in 1920 with *Heer Halewijn* and the Septet, made Pijper leader of the Dutch musical avant garde. He represented the Netherlands at the founding of the ISCM in Salzburg, 1922; soon after, backed by Sem Dresden, he established the Dutch ISCM section. In 1923 he met the playwright Balthazar Verhagen, and new co-productions of Greek dramas resulted, beginning with *De bacchanten*. Otherwise this was a difficult period. An anticipated critic's post in Amsterdam failed, and he was left almost without work. An affair with his student Iet Stants ended unhappily in spring 1925, and in July he attempted suicide. He then separated from his wife and moved to Amsterdam. His prospects improved when, in September of that year, Dresden appointed him head of composition and orchestration at the Amsterdam Conservatory. Monteux, now second conductor in Amsterdam, was also in search of new compositions; and after two major successes, the Symphony no.3 and the Piano Concerto, he was to champion Pijper's music internationally, performing it in France, Belgium, the UK and the USA. ISCM contacts led to concert tours in France, Belgium, England and Germany, through which his chamber and vocal music gained admirers. Dent and Edward Clark recommended him to Oxford University Press, which now began to publish his piano and chamber works. In 1926 he became co-editor (with Sanders) of *De Muziek*, an outstanding professional journal which they ran for seven years. In the meantime he began a relationship with the author Emmy van Lokhorst; they married in 1927.

Following an earlier, unsuccessful attempt, Pijper in 1930 became head of the Rotterdam Conservatory, a position he held until his death. Several of his former students joined the teaching staff, and together with the local conductor, Flipse, they made Rotterdam a centre for contemporary music. In 1932, supported by his wife, he moved to a luxurious house in Wassenaar, and two years

later, following the triumphant Amsterdam première of the opera *Halewijn*, he was knighted. But in 1935, personal troubles again erupted, as another process of separation and divorce began, with subsequent moves to Rotterdam and Leidschendam.

Pijper joined a masonic lodge in 1938 and simultaneously began to practise astrology. From then and throughout World War II, he was preoccupied with *gematris* (a kind of numerological thinking in music which dates back to the Netherlandish polyphonists and also to Bach) and other symbolic thought. In May 1940, following the German bombardment of Rotterdam, fire destroyed his house and most of his possessions; yet copies of nearly all his compositions survived in safekeeping. He kept his conservatory alive during wartime, under very meagre conditions, and served briefly on artistic reconstruction panels after liberation in 1945. Falling ill in the summer of 1946, after the London ISCM Festival, he was diagnosed with cancer in November and died four months later.

His students, including Karel Mengelberg, Stants, van Lier, van Hemel, Bosmans, Guillaume Landré, Piet Ketting, Badings, Henkemans, van Baaren, Escher, Jan van Dijk and Masséus, were prominent in Dutch musical life throughout the 1960s. For a time younger composers attacked this Pijper group (de Leeuw, 1966), but in the mid-1980s a counter-reaction occurred, and since then there have been numerous performances, and recordings, of the orchestral and chamber works and the operas *Halewijn* and *Merlijn*.

2. Works. Pijper's compositions before 1919 are juvenilia reflecting Wagenaar's insistence on learning from older models. However, the *Tema con 5 variazioni* (1913), the *Passepied* for carillon (1916) and especially the String Quartet no.1 (1914), cyclic in structure, deserve to be played, as do the succinct, atonal *3 Aphorismen* (1915), which foreshadow his mature style. For a time his music echoed Mahler (e.g. Symphony no.1) and Debussy (e.g. *Fêtes galantes*, *Romance sans paroles)*, but with the first sonatas for violin and for cello and *Maumariée I* (1919), the style became personal and Mediterranean in flavour. Here, as later in life, he wrote for fine performers sympathetic to his work.

A radical departure is the *a cappella* double choir composition *Heer Halewjin* (1920), based on a Bluebeard-like ballad which Pijper knew from his school days in Utrecht. He identified with its opening line: 'Heer Halewijn sang a song; all who heard it had to go to him'. The complex, atonal idiom cost Dresden and his chamber choir, the Madrigaal-vereniging, 35 rehearsals before the première in 1922. Similar *a cappella* pieces were to follow: *Heer Daniëlken* in 1925, *Van den coninc van Castilien* in 1936.

The press typified him as a composer who worked in 'germ cells', a term borrowed from d'Indy and reflecting Pijper's youthful interest in biology. The earliest of these cells (beginning with the Septet in 1920) consist of four notes, which recur throughout a movement or an entire work. The Piano Trio no.2 (1921), Symphony no.2 (1921) and Sextet (1923) are all formed this way, while the Violin Sonata no.2 (1922) uses one mirror-chord as its cell. Traditional thematic development and chord relations are replaced by linear counterpoint (Septet) and occasional heterophony (Trio no.2, Symphony no.2). The Symphony no.2 is remarkable for its lavish instrumentation, which recalls Mahler's Seventh Symphony, including a solo tenor horn, organ, 4 harps, 3 pianos, 6 mandolins and a large steel plate. It created a break with Mengelberg, who could not understand the score; the Amsterdam première in November 1922 under Pijper's direction was a failure.

Starting with the employment of germ cells, Pijper's music from the 1920s consists of an eclectic mix of devices. The habanera rhythm introduced in the second of the *Fêtes galantes* progressively becomes a fixation in later works. Polymetre apparently stems from Ravel's Piano Trio; it is used widely in Pijper's solo and chamber pieces (briefly in *Merlijn*). Bitonality and polytonality were acquired, soon after World War I, from the music of Milhaud. These 'poly' formations yield a music in which two or more distinct actions, loosely coordinated, appear to be taking place at once. Yet the compositional style also becomes strikingly original. Terseness, abrupt changes and conclusions, thunderous climaxes, restless rhythmic motion and truncated, varied reprises are common to his mature works. The bitonal harmonies, used hauntingly in the *Twee liederen* on old Dutch texts (1923), provide a special flavour. In the incidental music to *De Bacchanten* he superimposes triads of B, D and F major (he had stumbled upon octatonic scales of alternating tones and semitones and their asscociated harmonies, apparently without knowledge of Stravinsky's octatonic writing). In the Cello Sonata no.2 (1923–4), cello and piano parts are mostly autonomous, chordally and rhythmically; polymetre is widespread, and microtones appear in the finale.

Pijper's foreign reputation arose from pieces written in the late twenties: not only the Monteux commissions, but also the fresh and individual Flute Sonata (1925). In three movements, it uses a germ cell based on an altered overtone series. Like the Second Cello Sonata, it has entered the standard repertory. Over time the habanera figures grew more complex and were combined with other Caribbean rhythms; one such formation creates a violent climax near the end of the Piano Concerto (1927). The ragtime-filled Second and Third Piano Sonatinas and the Third Symphony are strongly octatonic, and all have met with success internationally (the latter through Monteux's efforts). This octatonic trend, which Pijper described in his writings as 'pluritonality', continued through the blues-laden Piano Concerto and the *Marialied* (1929). The String Quartet no.4 (1928), based on an octatonic germ cell, attains polymetric extremes; during moments in the finale, none of the players share a common downbeat.

The octatonic focus in Pijper's music diminished after the opera *Halewijn* (1932–3), where one phrase of the Halewjin ballad, used as a germ motif, fits octatonic pitches. In this psychological drama, to Emmy van Lokhorst's libretto, Halewijn's magical song predestines a tragic encounter between himself, symbol of nature (a sung role), and the king's daughter, symbol of reason (in Sprechgesang). Recalling Debussy's *Pelléas et Mélisande*, its exotically perfumed octatonic harmony continues an air of decadence. After *Halewijn* there is a growing preoccupation with counterpoint and a reversion to simpler forms of tonality. In the Sonata for two pianos (1935), written for Bartlett and Robertson, the slow movement is an invention, the finale a fugue. The Violin Concerto (1938–9) employs updated Baroque ritornello forms. The Cello Concerto (1936), however, is a work of

Bergian darkness; in six short sections, it emphasizes the lowest registers of the solo instrument. Like most of his later compositions, it gained public acceptance slowly.

Pijper's accession to freemasonry and astrology led to intense numerical calculations in his compositions (as in the *6 Adagios*, largely in C major, written in 1940 for a masonic initiation) and occasional use of *soggetti cavati*. In the unfinished Arthurian opera *Merlijn* (1939–45), a rigorous system of proportion and key relations is based on numerology and astrology (Van Dijk and Vestdijk 1992, 147–77). New chord combinations, learned counterpoint and brilliant, Wagnerian brass scoring suggest an overall renovation of style. The last major composition after *Merlijn* is the nostalgic String Quartet no.5 (1946), of which two movements and a fragment of a third were completed.

Pijper made numerous arrangements, among which the collections of Dutch and French songs show a keen feeling for the old texts and tunes, tastefully enhanced by simple piano accompaniments. By contrast, the *Wachterliederen* and *Old Dutch Songs* series no.2 (1934–5) display his devotion at the time to counterpoint. Pijper's vocal music, including several of these arrangements, is among his best work but remains largely negelcted.

HARRISON RYKER

Pikayzen, Viktor Aleksandrovich (*b* Kiev, 15 Feb 1933). Ukrainian violinist. After graduating from David Oistrakh's class at the Moscow Conservatory in 1957, he completed postgraduate studies under his direction in 1960. He was a prizewinner at international violin competitions in Prague (1949), Paris (1957), Moscow (1958) and Genoa (1965). In 1960 he became a soloist with the Moscow PO. He is an outstanding virtuoso whose playing is distinguished by exceptional technique and nobility of style, and is noted for his performances of the Bach and Paganini works for violin solo. He tours in many countries and has also served on the juries of many international competitions. In 1966 he began teaching at the Moscow Conservatory.

I.M. YAMPOL'SKY/R

Pilati, Mario (*b* Naples, 16 Oct 1903; *d* Naples, 10 Dec 1938). Italian composer and critic. He studied composition with A. Savasta at the Naples Conservatory before teaching at the Liceo Musicale in Cagliari (1924–6) and at the Milan Conservatory (1926–30). He returned to Naples, where he held the professorship of counterpoint at the conservatory there (1930–33) and then, that of composition in Palermo, before returning to Naples Conservatory at the end of his life. He was active as a critic for various newspapers and journals, including Rassegna Musicale, and published guides to two operas by Pizzetti, *Orséolo* and *Fra Gherardo*. Pilati shared with many other early 20th-century Italian composers an interest in reviving instrumental music of the past, both Italian and European (his Suite for piano and strings and Piano Quintet are clearly neo-classical and reminiscent of Ravel, while later works assume the characteristics of sonatas of the Romantic era). The influence of Pizzetti is significant, especially in his assimilation of linguistic and formal models (*Il battesimo di Cristo* for soloists, chorus and orchestra) and in a structural rigour, tempered in Pilati's case by a rich vein of folksong inspiration which finds full expression in his last works.

ANTONIO TRUDU

Pilcher. American firm of organ builders. It was founded by Henry Pilcher (1798–1880), a native of Dover who emigrated to the USA about 1832. He set up a business in Newark, New Jersey, in 1833, moving to New Haven, Connecticut, in 1839 and back to Newark in 1844. In 1856 he was joined by his sons Henry jr (1828–90) and William Pilcher (*b* 1830), the firm becoming known as Henry Pilcher & Sons; it moved to St Louis about 1858. There some notable organs were built, including a large instrument for St Paul's Church (1859). In 1863 the firm moved to Chicago, where it remained until 1871 when its factory was destroyed in the great fire. The following year Henry Pilcher senior retired, and the firm, under the directorship of Henry jr and his sons R.E., William E., Paul B. and J.V. Pilcher opened a new factory in Louisville, where it grew and prospered. In 1893 one of its largest organs was built for the St Louis World's Fair (Louisiana Purchase Exhibition). The firm carried on an English tonal tradition and was noted for its complex but reliable wind-chest design, patented early in the 20th century by William E. Pilcher. His sons, Gerard W. and William E. jr, succeeded to the firm, the latter continuing until shortly after his brother's death in 1941; in 1944 the company and its assets were sold to the M.P. Möller Co.

BARBARA OWEN

Pilgrimage. Pilgrimage provides a metaphor for life's sacred journey for religions throughout the world. Music is used not only to contextualize and to articulate the different

stages of the pilgrim's journey – departure from the quotidian world, the formation of a new community of fellow travellers and arrival at a shrine – but to facilitate the spiritual and physical transformation of the pilgrim's life. The sacred is interpreted through the music of pilgrimage, and it has been argued that in certain cultures, notably Buddhism and Islam, the understanding of music itself may be rooted in pilgrimage practices.

Pilgrimage music metaphorically traces the passage of a human being through life and, upon completing the sacred journey, pilgrims re-experience the event through subsequent performance of pilgrimage repertories (for example, in *talbiyyah*, the song genre associated with the Muslim *hajj*). In most religions pilgrimage repertories are distinct from other sacred repertories and, when they are performed, are especially powerful forms of remembering the genealogies of those who have passed along the path.

Pilgrimage repertories depend on mass participation and therefore they use familiar forms (e.g. hymns) and repetitive structures (e.g. Buddhist mantras). Mass participation, moreover, involves the entire body, not only in the passage along the sacred journey and in processions at the shrine, but also in dance and other forms of ritualized expression. The metaphors of pilgrimage also lend themselves, through stylization and dissemination, to popular and art musics. Metaphors of the sacred journey in the African diaspora pervade blues, gospel and reggae repertories. In addition music representing pilgrimage spills from sacred to secular genres, accompanying processes of sacralization.

Pilgrimage becomes a spatial template by which people map human experience, through music, the landscapes of religious community, nation and politics. Music enables the crossing of political and linguistic borders often required in sacred journey, further inculcating pilgrimage repertories with political significance, such as the return to Jerusalem in songs of the Passover *seder*. The sacred landscapes embedded in pilgrimage repertories often conflict with secular geographies, thereby heightening music's potential to be used in the making of history.

The musical practices of pilgrimage yield genealogies in which music and history intersect. In Buddhism, for example, the sacred journey undertaken by devout Buddhists retraces the journey of the Buddha himself. The musical narratives of Buddhist mantras are therefore individual only in so far as they connect to the larger chain of Buddhist history. Pilgrimage is immanent in Buddhist musical practice with chant and song metaphorically reproducing transitions that have cut across regional and stylistic differences in the musics of Asia during the course of Buddhist history.

The historical tension of diaspora is present in Jewish pilgrimage repertories. The holidays most explicitly associated with exodus and return, Passover, Shavuot and Succot, are collectively known as the 'Three Pilgrimage Festivals', and the songs performed during them bear witness to the exigencies of survival away from the sacred site, Israel, and more specifically, Jerusalem. Jewish repertories are also localized, coalescing around the shrines of saints specific to individual communities. Among Iraqi Jews, for example, women's songs in Judeo-Arabic were performed as part of the trips to shrines of saints whose role in Iraqi-Jewish history was particularly significant.

Western music history owes many aspects of its genealogical and geographical construction to the music of pilgrims of different historical moments, especially during the early Middle Ages and the Early Modern Era. For medieval Christians the known world comprised a cosmos of pilgrimage sites, with Jerusalem at the centre and marginal sites such as Santiago de Compostela on the periphery. Within Europe itself pilgrimage sites often took shape in areas that were sacred to pre-Christian religions, with Christian musical genealogies and histories supplanting those of pre-literate cultures. When the Christian world expanded so too did the sacred landscapes of pilgrimage practices, particularly in Central and South America. The appearance of the Virgin Mary at Guadalupe in Mexico occurred in 1530, only 11 years after the Conquest of Mexico. In the 20th century the music of the Guadalupe pilgrimage is essential to the fabric of Mexican national identity and diaspora.

The pilgrimage practices of Islam give rise to distinctive repertories on local, regional and global levels (*see* ISLAMIC RELIGIOUS MUSIC, §I, 5(i)). The repertories on all these levels express distinctive genealogies and histories ranging from the local to the global. Local music practices emanate from the shrine of an individual Sufi saint and they interact stylistically with regional musics. *Qawwālī* in North India and Pakistan, for example, responds to the canon of Hindustani music. However, the saints celebrated by *qawwāl* at Sufi shrines, such as Amir Khusrau, have themselves been active participants in the shaping of Hindustani music history.

The texts of pilgrimage songs express subjectivities constructed from five primary themes: a specific saint or individual; a miracle; a sacred geography; a genealogy of previous pilgrims; and a political or historical event revisited by pilgrims. Specific musical genres incorporate these themes in different ways according to both religious and musical practice. The most common genre of pilgrimage song in Catholicism, Marian song, is profoundly eponymous. However, individual songs and repertories may also express special connections to space, such as the multilingual Marian songs of the Italian Tyrol, which refer to the political strife that has historically characterized the border region. Hindu *bhajans* may also be used as pilgrimage songs, evoking a spatial dimension by tracing the paths, ancient and modern, taken by Hindu pilgrims to holy sites. *Bhajans* nonetheless may retain a strong sense of authorship and the names of specific poet-composers may be inscribed in the texts themselves.

The musical texts of pilgrimage both specify and generalize the sacred geographies to which they are connected. Many songs accumulate around a single place and bear witness to the significance of that place. The 'Medjugorje song' appeared soon after Marian appearances in Herzegovina in 1981 and during the Bosnian civil war (1992–5) it spread throughout Europe. The melody of the 'Medjugorje song', however, is a contrafact from the so-called 'Fatima song' which musically connects the song to the most important pilgrimage site in Portugal, which has its own musical practices.

Although pilgrimage songs circulate widely in oral tradition, undergoing extensive variation, numerous other media participate in the production and distribution of texts. Passover songs are frequently inscribed in elaborately decorated *haggadot*, the books used in the *seder* services. With the explosion of print technology in the

Early Modern Era, Christian pilgrimage songs quickly appeared on broadsides, on votive paintings and cards, and in printed songbooks intended for lay use. Recording technology in the 20th century has been no less profound in the ways it has expanded the mass dissemination of pilgrimage music. With the advent of inexpensive cassettes in the late 20th century, pilgrimage songs became available on an almost universal scale. Because of the widespread distribution of pilgrimage songs, extensive trade networks developed, with musical artefacts sold at sacred sites, in markets and at other stations along the pilgrimage route itself.

As pilgrimage underwent a global revival in the late 20th century, music contributed fundamentally to the representation of the religious, social and political issues revitalized through late-modern and postmodern religious movements. In the late decades of the 20th century, for example, more than 100 million Europeans embarked on pilgrimages every year, with most evidence suggesting that these numbers would increase even more sharply with the return of officially sanctioned religion to Eastern Europe. Sacred shrines in contested areas – the Middle East, Sri Lanka, national borders in Europe and the Andes – were the sites of a proliferation of traditional repertories and the creation of new musical practices that made the experience of pilgrimage available to a broader population. CD, videotape and the internet have provided new media for pilgrims helping them to interact musically with the public religious practices of pilgrimage.

The music of modern and postmodern pilgrimage often historicized the political response to rising nationalism, racism and political repression. Just as pilgrims cross national borders, so too do they join with co-religionists from other nations and linguistic regions. The miracles and healing that 20th-century pilgrims sought assumed the forms of metaphors, in which spiritual and physical healing often represented the healing of national strife or the extension of resources to those lacking sufficient resources for survival. The music of 20th-century pilgrimages often gave voice to the powerless and used religious faith as a means of empowering subaltern resistance. In doing so it mapped music histories on the political and sacred histories of modernity.

PHILIP V. BOHLMAN

Piliński, Stanisław (*b* Paris, 5 April 1839; *d* Paris, 20 Jan 1905). Polish pianist and composer, active in France. He was the son of the well-known lithographer Adam Piliński (1810–87), who emigrated in 1831. He spent his childhood in Clermont-Ferrand, singing in the cathedral choir. From 1855 he lived in Paris, attended the Polish school and for five years studied music at Niedermeyer's Ecole de Musique Religieuse et Classique. He then became organist at the church of Ste Marguerite, gave piano lessons and worked with his father on the engraving of old manuscripts. In this work they achieved considerable artistic success, winning a number of prizes at exhibitions in Clermont-Ferrand and Paris (including one at the Exposition Universel of 1878). His popularity as a musician and composer came largely from the Polish community, particularly during the 1880s when he was conductor of the Polish Philharmonic Society. He was a member of the Société des Auteurs, Compositeurs et Editeurs de Musique; the Société des Etudes Japonaises, Chinoises, Tartares et Indo-chinoises; the Académie des

Sciences, Belles-Lettres et Arts de Clermont-Ferrand; and an honorary member of the Association des Anciens Elèves d'Ecole Polonaise in Paris. In the 1890s financial difficulties compelled him to accept the post of librarian at the Centre de l'Union Artistique. He wrote mostly piano pieces and solo songs with piano accompaniment; he was extremely prolific, his works showing strong links with Romantic and national themes, as well as an interest in oriental thematic themes.

WORKS

MSS of unpublished works and of works published in arrangements in F-Pc, Pn, PL-KO; not all works with opus numbers were published.

STAGE

Źmija (Zmiya) [The Viper] (op, 5, W. Gasztowtt, after J. Słowacki), op.50, 1881

Balladyna (ov. and incid music, 5, Słowacki, trans. Gasztowtt), op.162, 1893, orchd 1895

VOCAL

12 accompanied choral works, incl. Hymne à Bouddha, solo vv, chorus, pf, op.51 (Paris, 1873); Ode aux montagnes d'Auvergne, chorus, orch, op.65, pf score (Paris, 1880)

*c*75 solo songs, pf acc., incl. Le pêcheur de Venise (P. Fauré), op.10 (Paris, 1875); Au rossignol, harmonie poétique (A. de Lamartine), op.17 (Paris, 1875); Menuet and Le printemps (F. Coppée), opp.60, 61 (Paris, 1877); [5] Mélodies (P. Blanchemain, Lamartine), opp.63, 64, 109, 129, 154 (Paris, n.d.); Chants de l'exil (Gasztowtt), pubd as 3 mélodies (Paris, 1906); Les danaïdes (S. Prudhomme), op.120 (Paris, 1907); Présent et avenir (Martin), op.122 (Paris, 1907)

Arrs. of Pol. folktunes

INSTRUMENTAL

Orch: Souvenir de Mazovie, polka-mazurka, op.1, 1857; Polka de puces, op.2, 1857; Sibilla: souvenirs de Pulawy, elegy, op.21, 1863; Souvenir d'Edgar Poë, sym., op.42, ?1869; Fantasia on 'Pije Kuba do Jakuba', op.47, 1869; Ouverture fantastique, op.49, 1870; Polka de quatre pattes, op.133, 1887; Sym., f, op.24, 1896; Fantasia, f, op.12, 1899; Ouverture symphonique ... sur la mélodie japonaise, op.68, 1899

Chbr: Qnt, F, fl, 2 vn, vc, pf, hmn ad lib, op.14, 1862; Mao-li-hoa, fantasia on a Chin. air, fl, vn, va, vc, pf, op.58, 1874; Pf Trio, E, op.34, 1880; Souvenirs de l'Ukraine, fantasia, pf, vn, op.3, 1857; Notturno, pf, vn, op.39, ?1868; Fudjiyou, pf, vn, op.67, 1878; Ouverture sur deux chants de Noël, fl, pf, op.192, 1900

Kbd (pf unless otherwise stated): Fantasia, g, org/hmn, op.23, 1862; 2 rêveries, op.4, 1857, 1860; Grande valse fantaisie, op.6, 1858; Valse romantique, op.9, 1858 (Paris, 1905); Elégie sur l'hymne nationale 'Boże coś Polskę', pf/org/hmn (Paris, 1864); Fantaisie ouverture, op.28, 1865; Fantasia, g, op.33*bis*, 1867; Marche funêbre sur le carillon des morts, org/hmn, op.37, 1867; Praga, marche funêbre, op.38, 1868; Fantasia, B, org/hmn, op.48, 1869; Ov. for an orat, op.41, 1869; Fantasia, E♭, op.45, 1869; Ov. for an oc, op.46, 1869

[8] Scènes polonaises, opp.58, 89, 92, 161, 164, 180, 190, 191, 1876–1900; Intermède entr'acte, op.115, 1884; Intermède-introduction alla pastorale, for an orat or os, op.123, 1886; Fantaisie-ballet, op.144, 1889; [10] Fantaisies alpestres, opp.156, 166, 172, 174, 181, 184–6, 190 and without op. no., 1892–1904; Idéalas harmonies, les cloches des jours de fête à la campagne, op.163, 1894; Offertoire pour l'inauguration de l'orgue de Beaumont-le-Roger, org/hmn, op.168, 1895; Nuit devant la mer, fantaisie nocturne, op.173, 1897; Ouverture de fête, op.179, 1898; Souvenir de Beaumont-le-Roger 'Dans les ruines', fantasia, 1903; many other pieces, incl. barcarolles, fantasias, farandoles, marches, mazurkas, minuets, nocturnes, polonaises, rondos, waltzes; arrs. of orch works, Pol. songs etc.

IRENA PONIATOWSKA

Pilkington, Francis (*b c*1570; *d* Chester, 1638). English composer. Other musical members of this Lancashire family included Zacharias and Thomas Pilkington (i), both probably sons of Francis. The former was a chorister at Chester Cathedral until 1612, the latter from 1612 to 1618; by 1625 he was the sixth conduct (or lay clerk), holding this position for at least two more years. Thomas Pilkington (ii), probably Francis's grandchild, was a later chorister at Chester Cathedral. Fellowes stated that Thomas (i) died at Wolverhampton, but it was probably Thomas (ii) of whom Hawkins wrote '[he] died about 1660, at Wolverhampton, aged 35'. It was this Pilkington who, Hawkins asserted, invented an instrument called the orphion, and who was a musician to Queen Henrietta Maria, wife of Charles I.

In 1595 Francis took the BMus at Lincoln College, Oxford, stating that he had been a student of music for 16 years. His father and brother were under the patronage of the Earl of Derby, and Pilkington himself was indebted to the family. By midsummer 1602 he was a conduct at Chester Cathedral, and in 1612 he was made a minor canon, although still a layman. Subsequently he took holy orders, being made a 'full minister' on 18 December 1614. He held a number of curacies in Chester: at Holy Trinity (in 1614), St Bridget's (by 1616; this, as Jeffery has shown, was his main charge), and at St Martin's (by 1622). By 1631 he had added the rectory of Aldford, near Chester, to these, though he relinquished this between 1634 and 1636. Notwithstanding all this, Pilkington maintained his position in the cathedral choir, and from 1623 until his death was precentor, or 'chaunter'. In the preface to his second collection of madrigals (1624) he wrote of his 'now aged Muse', yet suggested that he intended to compile another collection. This did not materialize. On his death his place as a minor canon was filled by John Pilkington – possibly a son or grandson – who had previously been a conduct.

Pilkington's volume of lute-songs (1605) contains much poetry of real quality. Though showing less variety of musical style than Morley's volume of songs (1600), Pilkington's also has the marks of a transitional volume in which the exploration of the powerful new expression that Dowland had introduced into English music in his second volume (1600) is still timid and unsure, despite the predominant seriousness of his choice of verse. Most of Pilkington's songs come closer to the ayres of Campion and Rosseter, though the substantial, long-lined stanzas of his lyrics foster more extensive structures than are typical of the ayres of these two composers. Pilkington lacked their gifts for fresh melodic invention and for devising clearcut, integrated structures. His harmonic movement is sometimes uncomfortable, prone to loss of direction and stagnation. Of the more extensive songs, *Down a down thus Phillis sung* is one of the most attractive. *Beautie sate bathing* shows a lightly humorous touch, but the best pieces in the collection are among the shortest, notably *Diaphenia*, and especially the exquisite *Rest sweet nimphes*. The lyric of *Thanks gentle moone* appears to be from a play, and *With fragrant flowers* is an adaptation for James I of a text used for Elizabeth's entertainment at Elvetham in her progress of 1591 (there

is, however, no evidence that Pilkington set the verse on that earlier occasion). There are several occasional pieces, including *Come, come all you*, an elegy to Pilkington's friend Thomas Leighton, probably a relative of Sir William Leighton to whose *Teares or Lamentacions* (RISM 1614[7]) Pilkington contributed two pieces. All Pilkington's ayres were issued in an alternative form for four voices.

The lyrics in Pilkington's first collection of madrigals (1613/14) show a surprising reversion to the light type of verse which Morley had set in the 1590s, and Pilkington's musical style is equally rooted in that period. Pilkington shows little invention or defined character in this first set, and his technique is limited. In the three-voice madrigals he made no attempt to go beyond the simplest canzonet manner used by Morley, but in the four- and five-voice works he essayed a wider range of expression, and his weaknesses are more apparent; his counterpoint is in places feeble and faltering, and his harmonic thrust tends to weaken suddenly (as in his ayres) or be lost completely. A comparison of Pilkington's settings of *Have I found her?* and the Oriana text, *When Oriana walkt*, with those of his Chester Cathedral colleague, Thomas Bateson, is not to Pilkington's advantage (in the latter madrigal the final line is altered, as in Bateson's 'Orianaes farewell' (1604), to 'In heaven lives Oriana').

The prefatory material of Pilkington's second madrigal collection reveals an aggressive provincialism, and it was doubtless his remoteness from London that accounts for his continuing retention of outmoded poetic and musical manners. In general quality, however, the volume shows a marked improvement over its predecessor. In addition to madrigals, it includes two viol-accompanied works, a fantasia for six viols, and a sonorous psalm setting, *O praise the Lord*, which contains a remarkably high level of dissonance. The viol-accompanied *Weepe sad Urania* is an elegy on Pilkington's friend Thomas Purcell (who may have belonged to the same family as Henry Purcell). The best piece in the volume is *Care, for thy soule*, in which Pilkington reset a text which Byrd had treated and published 36 years earlier. In this piece Pilkington combined something of the 'gravitie' of an earlier English tradition with a more emotional expression characteristic of his own times; indeed he borrowed a passage from Weelkes's deeply affective *O my son, Absalom* to begin *Care, for thy soule*, and later employed extended chromaticism in what is expressively the most advanced passage in all his work. In general Pilkington's technique is more secure throughout this volume, and his handling of five and six voices is more assured, with the textures at times taking on a massiveness redolent of Weelkes.

On the title-page of each of his three printed collections Pilkington described himself as a lutenist, and a small quantity of lute music by him survives. Jeffery has suggested that most, if not all of it, is early work. Though well written for the instrument, none is of much musical importance.

WORKS

SACRED

2 pieces, 4, 5vv, 1614[7]; ed. in EECM, xi (1970)

Sacred madrigal, 6vv, in The Second Set of Madrigals (London, 1624[17]); ed. in EM, xxv (1923, 2/1959)

SECULAR

The First Booke of Songs or Ayres, 4vv, lute/orpharion, b viol (London, 1605/*R*); the versions for 4vv, lute pubd in The Old English Edition, xviii–xx (London, 1897–8/*R*); the versions for v, lute ed. in EL, 1st ser., vii (1922, 2/1971), xv (1925, 2/1971)

The First Set of Madrigals and Pastorals, 3–5vv (London, 1613/14); ed. in EM, xxv (1923, 2/1959)

The Second Set of Madrigals, and Pastorals, 3–6vv/viols (London, 1624); ed. in EM, xxvi (1923, 2/1958)

INSTRUMENTAL

A Fancie for the Violls in The Second Set of Madrigals (London, 1624[17]); ed. in EM, xxv (2/1959)

Lute music (all ed. in Jeffery): 6 galliards, including Mrs Anne Harccourts Galliarde, Mrs Elizabeth Murcots, Mrs E. Murcots Delight, Mrs Marie Oldfeilds Galliard and Mr Ti. Wagstaffs Content of Desier; 6 pavanes, including Georg Pilkingtons Funerall, Pavin for the lute and base violl and The Spanish paven; Curranta for Mrs E. Murcott; Goe from my windowe; The L Hastins god morow

DAVID BROWN

Pilková [née Volbrachtová], **Zdeňka** (*b* Prague, 15 June 1931; *d* Prague, 13 April 1999). Czech musicologist. She studied musicology and ethnography at Prague University (1951–5) graduating in 1955 with a study of the melodramas and Singspiele of Jiří Benda; she took the doctorate in Prague (1968) with a study of the music section of the Prague Artistic Society. After working in the music division of Czechoslovak Radio, Prague (1955–64), she joined the Musicology Institute of the Czechoslovak Academy of Sciences (1964–91). Her special field was Czech 18th-century music, and in particular those Czech musicians who worked abroad, including the Benda family, Kammel, Mysliveček, J.L. Dussek, Antoine Reicha and J.B.G. Neruda. Her preferred medium was the small, fact-based article, solving well-defined questions rather than addressing larger speculative issues. A good linguist, she was one of the few Czech musicologists allowed to travel abroad freely during the communist era and was a frequent participant at international conferences. With her numerous foreign contacts she helped coordinate the Garland series The Symphony 1720–1840, to which she contributed editions of symphonies by Neruda, Kammel and Mysliveček. With Sonja Gerlach she also edited a two-volume edition of Czech violin sonatas (1982–5).

JOHN TYRRELL

Pillai, T(iruvaduthurai) N. Rajarathnam [Balasubramaniam] (*b* Tirumarugal, Tamil Nadu, 27 Aug 1898; *d* Madras, 12 Dec 1956). South Indian *nāgasvaram* player. During his lifetime T.N. Rajarathnam was hailed as the 'emperor of *nāgasvaram* music', a testament to his skill as a performer. Although interested in technique (he exchanged a shorter instrument for a longer, less strident, *nāgasvaram*) his great strength was his musical imagination. Required to explore and develop *rāga* over a long period of time during night-long processions of temple deities, he revelled in the challenge of unfolding and expanding a *rāga* without repetition, often at the expense of the initial song and its associated text. He was closely identified with a number of *rāga*, in particular *Tōḍi*. Disdainful of authority during a period when feudal elements were strong in the patronage system, he had a larger-than-life image. He married more than once – reportedly as many as five times – and spent his large earnings on a lavish lifestyle. However, when he died his admirers had to raise funds to conduct his funeral.

N. PATTABHI RAMAN

Pillays [Pilloys], **Johannes.** *See* PULLOIS, JOHANNES.

Pilotti-Schiavonetti, Elisabetta (*d* Hanover, 5 May 1742). Italian soprano. A virtuoso of the Hanover royal house, she was a member of the Queen's (later King's) Theatre company in London from 1710 to 1717, making her début in Mancini's *Idaspe fedele*. She sang in the first performances of Handel's *Rinaldo* (Armida), *Il pastor fido* (Amarillis), *Teseo* (Medea) and *Amadigi* (Melissa), in Francesco Gasparini's *Antioco* and *Ambleto*, Giovanni Bononcini's *Etearco*, the pasticcios *Ercole*, *Dorinda*, *Ernelinda*, *Lucio Vero* and *Clearte*, and probably in Handel's *Silla* (Metella). She was the only singer who appeared in all 47 performances of *Rinaldo* between 1711 and 1717. The four parts Handel composed for her, three of them sorceresses, show that she was an exceptional artist with technical agility, dramatic fire and a compass of two octaves (*c′* to *c‴*). In 1726 she sang at Stuttgart in a comic opera, *Pyramus und Thisbe*, directed by her husband Giovanni Schiavonetti (*d* 19 March 1730), a Venetian cellist. (*SartoriL*)

WINTON DEAN

Pilsen (Ger.). *See* PLZEŇ.

Pinacci, Giovanni Battista (*b* Florence, 1694–5; *d* Florence, 1750). Italian tenor. For many years he was in the service of the Prince of Darmstadt. He sang in Rome in 1717 (Francesco Gasparini's *Il Trace in Catena*), 1721–3, 1727, 1728 (Vinci's *Catone in Utica* and Feo's *Ipermestra*) and 1731 (including Vinci's *Artaserse*), Milan in 1718–22, 1727 and 1729–30, Florence in 1718 and many later seasons (at least 16 operas), Bologna in 1719 and 1722 (Orlandini's *Ormisda*), Genoa in 1720 and 1723–5, Naples in 1721 (A.M. Bononcini's *Rosiclea in Dania* and Porpora's *Gli orti esperidi*) and Venice in 1723–4 (operas by Giacomelli and Francesco and Michelangelo Gasparini) and 1728. He also appeared in Mantua, Reggio

nell'Emilia, Alessandria, Turin and Pistoia. Engaged by Handel for London in 1731–2, he probably made his debut as Bajazet in *Tamerlano*, sang in the revivals of *Poro*, *Admeto*, *Giulio Cesare* and *Flavio*, in the new operas *Ezio* (Maximus) and *Sosarme* (Haliate), and in Ariosti's *Coriolano* and Handel's pasticcio *Lucio Papirio dittatore*. Handel adapted and recomposed Hercules and Lotario in *Admeto* and *Flavio* for him. His wife, Anna Maria Antonia Bagnolesi, was in Handel's company at the same time.

After leaving London, Pinacci sang in Florence in 1732–3, 1739, 1743–4 (when he managed the carnival season) and 1748–9, Naples in 1733–4 (three operas, including Hasse's *Cajo Fabricio* and Pergolesi's *Il prigionier superbo*) and 1747 (Jommelli's *Eumene*), Rome in 1735 (Pergolesi's *L'olimpiade* and two other operas), 1740 and 1742, Venice in 1740–43 (seven operas, including Galuppi's *Oronte re de' sciti*, Hasse's *Alessandro nell'Indie* and Jommelli's *Semiramide*), 1746 (Jommelli's *Tito Manlio*) and 1747 (Hasse's *Demetrio* and Pescetti's *Ezio*) and Livorno in 1738 and 1746. He also appeared in Milan, Padua and Pisa. He was one of the leading tenors of his generation, a dramatic singer with powerful low notes, to judge by the parts Handel composed for him; the compass is *c* to *a'*. He was often criticized for bellowing. (*SartoriL*)

WINTON DEAN

Pinaire [first name unknown] (*fl* Paris, 1748–52). French composer. His name appeared three times in the Paris press between 1748 and 1752 (*Affiches*, 11 March 1748; *Annonces*, 19 Nov 1751; *Mercure de France*, Feb 1752), twice in publication announcements and once as composer of a symphony played at the Concert Spirituel. His 12 known works all appeared in this same period and mark him as one of the earliest French Classical symphonists. Along with his Parisian contemporaries Guillemain, L'Abbé *le fils*, François Martin and others, he explored pre-Classical symphonic trends coming mainly from Italy. His op.1, *Six symphonies en trio* (Paris, 1748), combines elements of the Baroque trio sonata with *galant* traits, and follows the structure of the three-movement Italian sinfonia. The *Six symphonies à quatre* op.2 (Paris, 1751), also in three movements, are more varied in expression; the middle movements bear affective tempo markings and the allegros show a greater awareness of dynamics, orchestral sonority and balanced phrasing. Pinaire's rather advanced writing for the violin suggests that he was a violinist.

BARRY S. BROOK, BARBARA S. KAFKA

Pinarol, Johannes de (*fl* late 15th century). Composer. He is one of a number of composers whose few works are extant only in Petrucci prints (and manuscripts derived from them). His four-voice motet *Surge propera* (*I-Fn* Panc.27, ed. in SCMot, i, 1991) was published in Petrucci's *Motetti A* of 1502. Most of the motets in this collection were written in a manner which combined homophony and imitative four-voice sections with occasionally imitative duets; this style has been associated with late 15th-century Milan and the works of Compère and Weerbeke. As Drake notes, Pinarol's motet fits squarely within this style: the text, from the *Song of Songs*, is divided more or less according to its syntax among four-voice sections that begin in imitation and with imitative duets; straight four-voice homophony is reserved for the affective words 'columba mea' and 'vox enim tua dulcis' (where a strongly implied false relation between B♭ and B♮ emphasizes 'dulcis'). His style of composition may indicate that Pinarol worked at some time in northern Italy. His one extant secular work is a four-voice setting of *Fortuna desperata* (1504[3], *D-Mbs* 1516) in which three contrapuntal voices are added to the superius of the chanson, now in the bass.

Pincé (i) (Fr.). Plucked, as in plucked instruments, and hence a word for PIZZICATO. *See also* PUNTEADO.

Pincé (ii). An ornament (*see* ORNAMENTS, §7(ii)), variously a mordent, a trill (*pincé renversé*), or an acciaccatura (*pincé étouffé*), and sometimes the word for 'vibrato'.

Pincement (Fr.). A type of mordent. *See* ORNAMENTS, §7.

Pincherle, Marc (*b* Constantine, Algeria, 13 June 1888; *d* Paris, 20 June 1974). French musicologist. He studied musicology at the Sorbonne with Rolland, Laloy and Pirro. After World War I, he taught the history of the violin at the Ecole Normale de Musique in Paris; he also worked as editor-in-chief of *Le monde musical* (1925–7) and *Musique*(1927–30) and as music critic of several newspapers. He was artistic director of the Société Pleyel (1927–55), founding president of the Académie Charles Cros (from 1948), vice-president (1945–8), president (1948–56) and honorary president (from 1956) of the Société Française de Musicologie, a member of the Académie Royale de Belgique and an honorary member of the Royal Musical Association, London.

Pincherle's research was mainly concerned with French and Italian music of the 17th and 18th centuries. His outstanding achievement was his first book on Vivaldi (1948), a pioneer study in which he considered Vivaldi's life, musical environment, instrumental and vocal works and influence with thorough scholarship and imaginative insight, fully supported by musical and pictorial illustrations and documentary evidence. Throughout his work he concentrated on instrumental music, producing books on the quartet and the chamber orchestra, showing particular interest in performance. His library, containing books on the violin, music for strings, autograph compositions and letters, was sold by auction in Paris in 1975.

JEAN GRIBENSKI

Pindar [Pindaros] (*b* 522–518 BCE; *d* 442–436 BCE). Theban lyric poet. As a young man Pindar went to study in Athens, which had become an unequalled centre of musical and poetic influences from Ionia and the Peloponnesus. Tradition credits him with having had eminent teachers of choral lyric, chief among them LASUS OF HERMIONE and Agathocles. Lasus developed the dithyramb into a mature art form and supposedly wrote the first prose treatise on music; Plato (*Laches*, 180d1) mentioned Agathocles as Damon's music teacher.

Although Pindar's compositions include all the various types of choral lyric, only the *epinikion*, or victory ode, is well represented by complete surviving examples. The four substantial books of Pindar's *epinikia* are among the great monuments of Greek lyric: each corresponds to one of the four festivals – the Olympia, Pythia, Isthmia and Nemea – and a number of the *epinikia* can be assigned to particular festivals and victors (for example, *Pythian*, xii, written in honour of Midas of Acragas, the prize-winning aulete at the 24th and 25th Pythian festivals in 490 and 486 BCE). His works were for the most part religious; even the secular victory odes show a strength of religious feeling and exaltation that only Aeschylus could match. The literary handling goes far beyond the immediate occasion, usually that of a triumph in the national games. Myth receives special prominence, together with a gnomic element, and the victor is shown in the transfiguring moment of supreme achievement.

All but seven of the 45 extant odes have a triadic metrical scheme of stanza groups: strophe, matching antistrophe and dissimilar epode. Where multiple triadic groups appear, the epodes correspond in metric structure. Pindar's *epinikia* make use of three basic rhythmic patterns: the paeonic, the dactylo-epitritic and the logaoedic. One dactylo-epitritic *epinikion* is described by the poet as Dorian (*Olympian*, iii.5) and one logaoedic *epinikion* as Aeolian (*Olympian*, i.102), but there are also references to the Lydian aulos, *harmonia* and mode (*tropos*) in both rhythmic types (*Olympian*, v.19 and xiv.17; *Nemean*, iv.45 and viii.15). The references to Dorian and Aeolian would seen to pertain more to the overall style of the *epinikia* than to any specific *tonos* or *harmonia*.

The poet refers freely to musical details, displaying a wholly professional pride in his skill. He speaks most often of the kithara, usually calling it 'phorminx' rather than 'lyra' and describing it variously: it was Dorian, seven-stringed and had a deep, ringing tone. The double aulos is virtually always mentioned in any ode that also mentions the lyra, and often the two are in close conjunction; the sole exception (*Olympian*, v) has been thought suspect. This repeated and often explicit evidence for a concerted accompaniment of lyras and auloi serves as a safeguard against creating false antitheses between the two types of instrument. Attempts to parallel metre with mode and strophic responsion with melody have not succeeded. Pindar mentions in passing the NOMOS, a stylized melodic pattern (*Olympian*, i.101; *Pythian*, xii.23), and the *tropos*, literally 'turning' (*Olympian*, xiv.17) – a term that at this period quite possibly described the contour of a melody, especially when taken in a given mode. The supposedly Pindaric melody of *Pythian*, i, printed by Athanasius Kircher in his *Musurgia universalis* (Rome, 1650), is spurious.

The fragments of Pindar's other works contain a number of noteworthy musical references. 'The Dorian melody is [?the] most dignified', he declares (Bowra, frag.56), seeming to anticipate the later development of doctrines of modal ethos; elsewhere (frag.288), as reported by Plutarch, he confesses his own inattention to

the melodic *tropos* and continues by referring strangely to the unjust nature of destructive change in skills and capacities produced by certain kinds of modulations (*metabolai*). The first of these statements is not easily credited to Pindar; the second shows a direct concern with ethos and sounds remarkably like the later complaints of a Phrynichus or a Plato. He also credits TERPANDER with having discovered the BARBITOS (frag.110a), and speaks cryptically of an Aeolian double aulos entering upon 'a Dorian pathway of hymns' (frag.180). Music had ultimate significance for Pindar, however, not as an aggregate of technical details but as the power to which he paid tribute in the opening strophes of *Pythian*, i: a cosmic force capable of instilling order and peace into the communal life of men.

WARREN ANDERSON/THOMAS J. MATHIESEN

Pineda, Francisco de Atienza y. *See* ATIENZA Y PINEDA, FRANCISCO DE.

Pinel, Germain (*b* early 1600s; *d* Paris, early Oct 1661). French lutenist and composer. From a well-to-do Parisian family, he is first mentioned as master lutenist in 1630. In 1645 he entered the service of Marguerite de Lorraine, Duchess of Orléans. In 1647 he was appointed lute teacher to Louis XIV, then nine years old, a post he held until 1656 when he became lutenist and theorbo player of the *chambre*, with a salary that put him among the highest-paid members of the royal music. In the same year he took part in Lully's *Ballet de Psyché* with his younger brother François and youngest son Séraphin, as well as Louis Couperin and others. He is listed among participants in further Lully ballets in 1657 and 1659. In 1658 he is described as composer and ordinary of the king's music.

Pinel wrote 78 dances and eight *préludes non mesurés* for lute, and one *prélude non mesuré* for theorbo (ed. M. Rollin and J.-M. Vaccaro, Paris, 1982). The exceptionally wide diffusion of his works in manuscript points to his stature as one of the greatest lute composers of the century (for sources see edition and Ledbetter). In their technical resourcefulness and broad paragraphing his *préludes non mesurés* provide the nearest lute equivalent to the harpsichord preludes of Louis Couperin.

DAVID LEDBETTER

Pinelli, Ettore (*b* Rome, 18 Oct 1843; *d* Rome, 17 Sept 1915). Italian violinist, conductor, teacher and composer. He studied the violin with his uncle Tullio Ramacciotti and at 13 was giving concerts. In 1864 he studied with Joachim at Hanover. At Rome again, he joined his uncle's ensemble, the original Quartetto Romano, which in 1866, when Ramacciotti left it, became a quintet with the addition of Tito Monachesi, violin, and Giovanni Sgambati, piano. For almost half a century Pinelli and Sgambati, both individually and jointly, made important contributions to Rome's musical life. In 1869 they established a free school of violin and piano for poor children; this was the nucleus of the Liceo Musicale of the Accademia di S Cecilia, founded in 1877, where Pinelli and Sgambati taught for the rest of their lives. Pinelli excelled as a teacher, and many of his pupils had distinguished careers. With Sgambati he founded the Chamber Music Society of Rome; they also alternated as directors of the Royal Court Concerts. In 1874 Pinelli founded the Società Orchestrale Romana which he directed for 25 years. He composed a symphony, a string quartet, an Italian Rhapsody and a number of songs. His editions of works by Bach and Corelli and of études by Campagnoli, Kreutzer and Rolla are no longer in print. His brothers, the pianist Oreste and cellist Decio, also became professional musicians.

FERRUCCIO BONAVIA/ALBERT MELL

Pinello di Ghirardi [Pinello di Gherardi; Pinellus de Gerardis], **Giovanni Battista** (*b* Genoa, *c*1544; *d* Prague, 15 June 1587). Italian composer and singer, active in Germany. Born into a noble Genovese family, he served at a number of important institutions, rising to the position of Kapellmeister at the electoral court in Dresden. In a letter written in 1580 as an application for this post, he stated that he had been 'in der Sangerey' for about 30 years. The exact nature of his education, beyond this suggestion of choirboy training, remains unknown, but coming from an established noble family he may have had some form of private musical training.

His earliest known professional activity dates from 1569, when he was appointed to the chapel of Duke Wilhelm V in Landshut. This experience no doubt exposed him to the works of the already legendary Lassus. Unfortunately, debt was beginning to have an adverse effect on Bavarian court music, and the Landshut chapel was disbanded in 1570. Pinello subsequently moved to Vicenza, where he served as *maestro di cappella* in the

cathedral. His earliest extant collection, three books of *canzoni napolitane*, were published in Venice during this period. He returned to Germany no later than 1576, serving as a singer in the Habsburg chapel in Innsbruck. Exactly how long he remained in imperial service is unclear, but it is most probable that he was at the Prague court of Emperor Rudolf II by 1580. On the death of Antonio Scandello in 1580, Elector August of Saxony seemed determined to appoint a foreigner to the post of Kapellmeister in his court. It was offered to Lassus and to Jacob Regnart, but both declined the post. Pinello's name was submitted to August by the Emperor, and the Italian was appointed in November 1580.

Pinello's tenure as Kapellmeister in the Saxon court was one of considerable compositional activity, comprising lieder, German *Magnificat* settings and motets. In other respects, however, it seems as though his employment in Dresden was a failure: he experienced trouble with the choirboys, with his Vice-Kapellmeister, Georg Forster (who had served as interim Kapellmeister before Pinello was appointed) and with the court in general. All this culminated in his release from his duties in 1584. Although these issues probably played a part in his dismissal, Pinello's ties with Rudolf suggest that the composer might also have been a spy. He subsequently returned to Prague, where he assumed the duties of *Knabenpräceptor*, and he served the imperial court until his death in 1587. A collection of five-voice motets was published one year later.

Pinello's output includes settings of Italian, Latin and German texts. His early canzoni are typical of the three-voice Neapolitan style, as exemplified by the works of Nola. His motets and German works, however, reveal a relatively daring use of chromaticism and dissonance. Ranging from dense polyphonic and complex polychoral textures to relatively brief chordal works, some of his Latin and German settings are intensely emotional. Additional collections of masses and madrigals, attributed to Pinello by Walther, are no longer extant. Pinello's first book of three-voice canzoni is also lost. A collection of five-voice *napolitane*, listed by Walther as missing, has apparently survived, in German translation, as the 1584 collection of lieder.

In terms of total impact, however, it seems that Pinello's reputation was limited. None of his collections was ever republished, and just two works were included in printed anthologies. One of these, *When I would thee embrace*, is in Nicholas Yonge's *Musica transalpina* (RISM 1588[29]). This work is an English translation of *Quand'io voleva*, which as *Wenn ich habe gewolt* was included in the 1584 publication of lieder. Copies of his works in manuscript sources are also relatively infrequent; a six-voice setting of *Veni in hortum meum*, attributed to Pinello in *D-Bsb* 40039, is concordant with a copy ascribed to Caspar Speiser in *D-Dl* Glashütte 5.

DANE O. HEUCHEMER

Piñera (Infante), Juan (Manuel) (*b* Havana, 18 Jan 1949). Cuban composer and pianist. He studied the piano with César Pérez Sentenat, Silvio Rodríguez Cárdenas, Margot Rojas and Ninowska Fernández-Britto, and composition with Enrique Bellver. When the Instituto Superior de Arte was established (1976) he studied composition with Ardévol, as his last pupil. He has won numerous prizes for composition, the most outstanding of which include La Edad de Oro, for music for children, the Unión de Escritores y Artistas de Cuba awards for both symphonic and electro-acoustic music, the 12th International Electro-acoustic Music Competition in Bourges (France) in 1984, and the 3rd TRIMALACA in Rio de Janeiro (1985). As the composer himself affirms, his music can be both profoundly lyrical and an obvious joke at the expense of conventionality. His earliest composition, *La 'cosa' no está en el título* for piano (1972–3), is in sonata form and exploits the rich effects produced by the pianistic treatment of avant-garde concepts. His songs are based on complex poetic texts, especially the work of poets such as José Martí, Mirta Aguirre, Nicolás Guillén and Virgilio Piñera. Associated with theatre music from an early age, his recent theatre pieces have included reworkings of music originally from zarzuelas or musical comedies to create highly contemporary versions for original productions (*Las hijas de Bernarda Alba*, 1992, *El tío Francisco y las Leandras*, 1991), and operas such as *Amor con amor se paga* (1987–97) and *La taza de café* (1989–93).

VICTORIA ELI RODRÍGUEZ

Pinet. Variant of the HOMMEL (box zither) of the Low Countries.

Pingirolo, Gabriele (*b* Lodi; *fl* 1589–91). Italian composer. His *Vespertina concentus quatuor concinendi vocibus* (Venice, 1589) was dedicated from Alessandria to Ottavio Saraceno, Bishop of that city, suggesting that Pingirolo was living and working there at the time. Further indications of contacts in the area are offered by the contents of the book, which include a sequence of Vespers psalms together with a setting of the *Magnificat* by Flaminio Tresti who is known to have been in nearby Casale Monferrato in the following year. Another work, the *Missarum quinque vocum liber priumus* (Venice, 1591) survives incomplete. This may be the book of masses that Eitner attributed to an otherwise unknown Paolo Pingirolo (*EitnerQ*).

IAIN FENLON

Pingirolo, Paolo. *See* PINGIROLO, GABRIELE.

Pingoud, Ernest (*b* St Petersburg, 14 Oct 1888; *d* Helsinki, 1 June 1942). Finnish composer of Russian birth and Huguenot origin. He studied privately with Siloti and at the St Petersburg Conservatory with Anton Rubinstein, Rimsky-Korsakov and Glazunov. He studied in Germany until 1906 with Hugo Riemann and spent three years with Reger. As a student he began his remarkable activity on the *St Petersburger Zeitung*, to which he sent articles on music from Berlin (1910–11) and wrote concert and opera reviews (1911–14). In 1918 he emigrated to Finland, where he worked initially as a music teacher. He was director of the Fazer concert agency (1924–31, 1935–7), and ran his own agency from 1931 to 1933. In 1924 he also became manager of the Helsinki City Orchestra, and continued in that role until his death.

The first concert of Pingoud's work, in Helsinki in 1918, marked the arrival of modernism in Finnish music. Works showing the influence of Strauss, Debussy and Skryabin were the boldest that had been heard in Finland, and Pingoud was dubbed a futurist, cubist, ultra-modernist and even a musical bolshevik. He was praised for his brilliant command of orchestration but censured for aspiring to extremes. His feverish productivity was reflected in the rapid succession of premières throughout the early 1920s. His music, conducted by himself, was also performed in Berlin (1923) and in Viipuri, Finland (now Vyborg, Russia), in 1936. Pingoud was above all an orchestral composer, and his work concentrated on the Skryabin-inspired idealist-symbolist symphonic poem. His three piano concertos, however, are in a more traditional style redolent of Liszt and Rachmaninoff. He is at his most modern in the *Fünf Sonette*, which approach the aphoristic early style of the Second Viennese School. His works, however, remained tonal. His *La face d'une grande ville*, heard in Helsinki at the end of the 1930s, was the first Finnish composition to belong to the sphere of urban machine-poetry. In the interwar period when almost all composers drew on nationalist themes and texts, Pingoud was an isolated phenomenon. He was a cosmopolitan, sternly opposed to national aspirations, and for this reason he was to some extent shunned.

ERKKI SALMENHAARA

Pinheiro, António (*b* ? Montemór-o-Novo, *c*1550; *d* Évora, 19 June 1617). Portuguese composer. According to Barbosa Machado he was a pupil of Guerrero. However, Alegria (1983, p.156) suggests that Pinheiro studied at Évora, probably with Francisco Velez or Matheo de Aranda. The *Reitor do Colégio dos moços do coro* at Évora from 1579 was Vicente Guerreiro but he is not known to have been a musician (see Alegria 1997, p.75). According to Manuel Joaquim, Pinheiro was appointed *mestre de capela* to the Duke of Bragança from 12 March 1576, the first Portuguese known to have held the position. In the *Mercês de D. Teodósio II* (MS, *P-VV*), Pinheiro is recorded as receiving regular payments from 4 January 1584 which amounted to a modest annual salary of around 10,000 reis plus extras. He was, for example, paid an additional 6000 reis for the *chançonetas* for Christmas of 1593. For the year 1605 his salary was increased to 20,000 reis and he was given two further payments, 3000 reis in 1606 and 4000 reis in 1609. However, by this time, he had already been appointed to and dismissed, on 4 October 1608, from the position of *mestre da crasta* at Évora Cathedral, where his salary had been 40,000 reis. The reasons for the dismissal are not recorded, but both Pinheiro and Miguel Bravo, a bass and rebec player, were dismissed on the same day. Four days later, Domingos Martins was appointed to replace Pinheiro with the much lower salary of 16,000 reis. Pinheiro made an appeal on 11 October and was granted his salary but not reinstated. Bravo was reinstated as an instrumentalist at the cathedral from January 1609 and Domingos's salary was raised to 40,000 reis from February 1610.

Pinheiro's settings of the even-numbered verses of five psalms survive at Vila Viçosa, three in a manuscript probably dating from the early 18th century and two in a volume copied by Julião Ferreira da Crus in 1735. In most verses, the psalm tone is presented in one of the parts with the others providing contrapuntal elaboration. His verses are, on average, slightly longer than those of Juan Navarro (i) (copies of whose psalms also survive at Vila Viçosa) though his doxologies, usually in triple metre, tend to be shorter.

The library of João IV included Pinheiro's four-part settings of *Ave Regina caelorum*, and *Inter natus mulierum* and a five-part *Tollite jungum meum*. The *Biblioteca Lusitana* also lists a book of *Magnificat* settings. All this music is lost.

MICHAEL RYAN

Pinho Vargas (Silva), António (Manuel Faria) (*b* Vila Nova de Gaia, 15 Aug 1951). Portuguese composer and jazz pianist. He studied piano at the Oporto Conservatory and took a degree in history at the University of Oporto. As a jazz pianist he has performed in many countries with his group as well as making six CDs (1974–96), for which he has three times won the Prémio de Imprensa Sete de Ouro for the best instrumental record of the year. His interest in contemporary classical composition came a little later, and he went to study with Klaas de Vries at the Rotterdam Conservatory (graduated 1990). In 1991 he was appointed a teacher at the Escola Superior de Música in Lisbon. He has been musical advisor to the Casa Serralves, Oporto (since 1994), and the Centro Cultural de Belém, Lisbon (1996–9). He was awarded the Comenda da Ordem do Infante D. Henrique in 1995.

Showing many influences, his music ranges from an unequivocal atonal language to neo-tonal passages. The structural starting-points in his music are usually of great simplicity and clarity. Recently, his rhythmic language has become more audibly striated and his harmony more tonally orientated. His second opera, *Os dias levantados*, written for the 25th anniversary of the 1974 revolution, is typical of the present more eclectic phase.

WORKS

CHRISTOPHER BOCHMANN

Pini, Anthony [Carlos Antonio] (*b* Buenos Aires, 15 April 1902; *d* Barcombe, Sussex, 1 Jan 1989). British cellist of French and Scottish parentage. As a soloist, orchestral leader and chamber musician he had a long and distinguished career. For 13 years he was a soloist at the London Promenade Concerts and also played concertos, particularly Elgar's, with Beecham, Sargent and van Beinum in England and the USA. Pini gave the first performance of Rawsthorne's Cello Sonata (1949), dedicated to him. He was principal cellist of the LPO (1932–9), the BBC SO (1939–43), the Liverpool PO (1943–5), the RPO (1947–63) and the Royal Opera House orchestra (1964–76). He was a member of the Brosa and Philharmonia string quartets; the latter's recordings of Schubert's 'Death and the Maiden' and Mozart's 'Hunt' are classics, as are Pini's recordings of Elgar's Concerto, with the LPO under van Beinum, and Beethoven's 'Archduke' Trio with Solomon and Henry Holst. He taught at the RCM and the GSM (1948–76). His tone was remarkably pure and he played a Grancino cello of 1696. He was awarded the OBE in 1976. His son, Carl Pini (*b* London, 2 Jan 1934), a violinist, is a soloist and was leader of several major British orchestras.

WATSON FORBES/MARGARET CAMPBELL

Pini-Corsi, Antonio (*b* Zara [now Zadar], Dalmatia, June 1858; *d* Milan, 22 April 1918). Italian baritone. He made his début in 1878 at Cremona as Dandini in *La Cenerentola*, and for 15 years appeared throughout Italy, specializing in the comic operas of Rossini and Donizetti. Having made his first appearance at La Scala in January 1893, as Rigoletto, he created the role of Ford in Verdi's *Falstaff* on 9 February. That year he also sang Ford at Genoa, Rome, Venice and Brescia, and on 19 May 1894 he repeated the part at Covent Garden, where he had made his début five days before as Puccini's Lescaut. He sang Schaunard in the first performance of Puccini's *La bohème* at Turin (1896), appeared in Franchetti's *Signor di Pourceaugnac* at Genoa and Rome (1898), and made his début at the Metropolitan, New York, in 1899 as Masetto. At La Scala he took part in the first performances of Giordano's *Siberia* (1903) and Franchetti's *La figlia di Iorio* (1906), and appeared in Catalani's *La Wally* (1905) and in *Der Freischütz* (1906). At the Metropolitan, between 1909 and 1914, he sang many character roles, and he created the miner Happy in *La fanciulla del West* (1910) and the Innkeeper in Humperdinck's *Königskinder* (1910). His last appearance was in 1917 in Rossini's *Signor Bruschino* at the Teatro Dal Verme, Milan, when his voice, if not as powerful as it had been 40 years previously, was still as agile as ever and used with the same keen intelligence that had distinguished his performances throughout his long career. His brother, Gaetano Pini-Corsi, a character tenor, sang at La Scala as David in *Die Meistersinger* (1898), Mime in *Siegfried* (1899) and Goro in the first performance of *Madama Butterfly* (1904).

ELIZABETH FORBES

Pinilla, Enrique (*b* Lima, 3 Aug 1927; *d* Lima, 22 Sept 1989). Peruvian composer. He studied in Lima with

Antonio Pini-Corsi as Falstaff

Carlos Sánchez Málaga at the Bach Institute, with Andrés Sas at the Sas-Rosay Academy and with Rodolfo Holzmann at the National Conservatory. Holzmann introduced him to various 20th-century compositional techniques, principally those of Hindemith. At the age of 20 he went to Spain where he studied with del Campo, and then to Paris where he studied with Koechlin. Between 1950 and 1958 he lived in Madrid, studying music with Francisco Calés Otero and taking a degree in composition at the Royal Conservatory. A scholarship from the Deutscher Akademischer Auslandsdienst took him to the Berlin Hochschule für Musik to study for two years with Blacher, who opened wide perspectives in the field of rhythm; particularly important to Pinilla was Blacher's concept of 'variable metres'. This lengthy European training freed Pinilla from the marked nationalist tendency of most Latin American composers, though this did not prevent him from often using elements of Peruvian popular traditions as starting material. He particularly favoured the rhythmic motifs of coastal music (e.g. in *Estudio sobre el ritmo de la marinera*, where he employs 'variable metres', or in *Cinco piezas* for percussion), pentatonic scales (e.g. in *Tema y variaciones*) and Amazonian melodies (e.g. in *Suite peruana*). He returned to Lima in 1961 to teach music history and ethnomusicology at the National Conservatory, and he also held musicological and administrative posts in the National Cultural Institute (1967–73). In 1966–7 he spent a year studying electronic music with Ussachevsky and Alcides Lanza at Columbia University on a Fulbright grant. Pinilla received the Dunker Lavalle Prize in 1966 and a composition award from San Marcos University in 1967. He believed in making use of all available procedures and means, including serial, polytonal or atonal writing and electronic composition (only in *Prisma* for tape), but his stated aim was to widen expressive possibilities rather than to search out unusual sounds. *Evoluciones 1* is probably the best example of his explorations of timbral variation and orchestral writing. In his final years he became interested in a new approach to tonality. Parallel to his activity as a composer, Pinilla was active in literature, cinema and television. He was also the first person to carry out a comprehensive musicological study of 20th-century Peruvian music and is the author of an important account of the history of academic and popular music in Peru.

CÉSAR ARRÓSPIDE DE LA FLOR/J. CARLOS ESTENSSORO

Pink Floyd. English rock group. It was formed in London in 1965 by architecture students Syd Barrett (Roger Keith Barrett; *b* Cambridge, 6 Jan 1946; guitar and vocals), Nick Mason (Nicholas Berkeley Mason; *b* Birmingham, 27 Jan 1945; drums), Roger Waters (George Roger Waters; *b* Great Bookham, Surrey, 9 Sept 1944; bass guitar and vocals) and Rick Wright (Richard William Wright; *b* London, 28 July 1945; keyboards). They began by playing covers of rhythm and blues standards, but combined these with a highly innovatory light show, promising a 'total environment of light and sound'. They thus became the most visible initial exponents of 'psychedelia' and by 1966 were headlining the new UFO club in central London. They deftly exploited media horror at the psychedelic movement, dispassionately denying any use of drugs. In late 1966 they played at the launch of the radical publication *International Times*, an important

counter-cultural event. The early style was typified both by the song *Interstellar Overdrive*, which consisted of an opening and closing chromatic riff, enclosing an improvisation structured through a gradual loss and recovery of consistent metre, texture and registral spacing, and also by *Bike*, a childlike song full of metrical shifts and unsuspected timbres. By 1968 Barrett had become impossible to work with (a situation normally credited to psychiatric problems brought on by drug abuse) and his childhood friend Dave Gilmour (David Jon Gilmour; *b* Cambridge, 6 March 1947) was drafted in first to supplement his work on stage, then by mid-1968 to replace him. In this guise they began to move away from the spaced-out, freely improvised material on *Piper at the Gates of Dawn* (Col., 1967) and *A Saucerful of Secrets* (Col., 1968), although in live performance they still employed vivid light shows and back projections.

Up until this time Barrett had been their chief songwriter, a role subsequently taken by Waters. *Atom Heart Mother* (an eclectic mix of acoustic songs and richly orchestrated choral textures) reached number one in the UK in 1970, and a mature style was finally achieved by the long-awaited *The Dark Side of the Moon* (Harvest, 1973). This album brought them to the awareness of a US public, staying in the US album charts for 15 years; it sold more than 19 million copies worldwide and still proved immensely popular when re-released in 1993. Their music had become slow, with resonant, uncluttered guitar work and lyrics concerning various aspects of alienation (lunacy, despair and death). This theme was becoming ever more present in Waters's writing, particularly on the 1979 double album *The Wall* (Harvest). The intervening years had seen two important albums, *Wish You Were Here* (Harvest, 1975), which was previewed at their much praised performance at the Knebworth Festival some months earlier, and *Animals* (Harvest, 1977).

Waters's growing megalomania, much in evidence on *The Wall*, became harder to handle; Wright left in 1980 and after the poorly received, though high selling, *The Final Cut* (Harvest, 1983), Waters also departed. Mason and Gilmour recruited various others (including Wright from the mid-1980s) for the occasional album, most notably *A Momentary Lapse of Reason* (EMI, 1987) and *The Division Bell* (EMI, 1994), in addition to undertaking two international tours and individual projects. Although Gilmour's ringing guitar and their songs' generally slow pace help their style retain its identity, it has long since lost its psychedelic and experimental edge, acting as a voice for a middle-aged, financially successful British audience for whom it evokes exciting memories.

ALLAN F. MOORE

Pinkham, Daniel (Rogers) (*b* Lynn, MA, 5 June 1923). American composer. He started playing the piano and composing at the age of five, and received organ and harmony lessons from C. Pfatteicher at Phillips Academy, Andover, MA (1937–40). Subsequently he studied composition with A.T. Merritt, A.T. Davison, Piston and Copland at Harvard University (1940–44) and with Hindemith, Honegger and Barber at the Berkshire Music Center at Tanglewood. He took private lessons with Nadia Boulanger in composition (1941–7), with Jean Chiasson, P.C. Aldrich and Landowska on the harpsichord and with E. Power Biggs on the organ. He has held teaching positions at the Boston Conservatory of Music, Simmons College in Boston, the University of Boston, Dartington Hall and Harvard (1946–58); he became music director of King's Chapel, Boston (1958). In 1959 he joined the faculty of the New England Conservatory as a lecturer in music history, theory, composition and the harpsichord, later establishing and chairing there the department of early music performance. He performed extensively on the harpsichord in a duo with the violinist Robert Brink, with the Boston SO and in solo recitals. Among his numerous awards are a Fulbright scholarship (1950), a Ford Foundation grant (1962), an American Academy of Arts and Sciences Prize and five honorary doctorates. His works have been commissioned by major institutions and have been widely performed.

Pinkham is a versatile composer whose prolific output covers a great variety of genres. His early involvement with church music as a student organist at Christ Church, Boston, and his attraction to biblical stories and liturgy led to a large body of work for organ, short choral pieces, songs and extended sacred compositions for choir and instruments. Attracted to bell-like sonorities since his time as a school carillonneur at Andover, he incorporated the evocation of bells into many of his instrumental compositions. Reflecting the influence of Stravinsky and Hindemith and his commitment to the early music revival, Pinkham's music of the 1930s and 40s embraces church modes, 16th-century contrapuntal techniques and 17th-century forms and instruments. Though in the 1950s and 60s he employed chromaticism and dodecaphonic techniques and investigated new tonal and intervallic relationships, he never used serial techniques dogmatically, instead combining 12-note rows with tonal elements. In 1970 he began to explore electronic music, creating tapes in his own studio. In many of his numerous works for tape and live musicians, especially organ and voices, he allows the performer rhythmic flexibility and free choice in the order of events to avoid rigid synchronization. With his strong interest in theatre and drama, Pinkham provides theatrical instructions for some of his cantatas, while other works, such as *The Passion of Judas* (1976), can be performed either in concert or as a theatre piece. He has written articles for journals on music.

WORKS
(*selective list*)

Stage: Passion of Judas (cant./op), 1976; Garden Party (op, Pinkham, N. Farber), S, Bar, 2 actors, chorus, 5 insts, tape, 1976; The Dreadful Dining Car (comic melodrama, Pinkham, after M. Twain, N. Farber), Mez, actors, solo vv, 7 insts, 1982; The Left-Behind Beasts (music play for children, Pinkham), actors, chorus, chbr ens, perc, 1985

Choral: Wedding Cant., opt. solo vv, chorus, insts, 1956; Christmas Cant., chorus, insts, 1957; Easter Cant., chorus, insts, 1961; Requiem, solo vv, chorus, insts, 1963; Stabat mater, S, chorus, orch, 1964; St Mark Passion, solo vv, chorus, orch, 1965; Jonah, spkr, solo vv, chorus, orch, 1967; Ascension Cant., chorus, orch, 1970; To Troubled Friends (J. Wright), chorus, str, tape, 1972; Daniel in the Lions' Den, nar, solo vv, chorus, insts, tape, 1972; Fanfares (Bible), T, chorus, insts, tape, 1975; Descent into Hell

(Pinkham), solo vv, chorus, insts, tape, 1979; Hezekiah, solo vv, chorus, tpt, org, 1979; When God Arose, solo vv, chorus, insts, 1979; Before the Dust Returns, chorus, insts, 1981; Lauds, 2vv, insts, 1983; Dallas Anthem Book, chorus, org, 1984; Advent Cant., chorus, insts, 1991; Christmas Syms., solo vv, chorus, insts, 1992; The Dryden Te Deum (J. Dryden), chorus, insts, 1992; The Creation of the World, nar, chorus, insts, 1994; many Psalm motets and works for choir with acc.

Solo vocal: The Song of Jephtha's Daughter (R. Hillyer), S, pf, 1963; 8 Poems of Gerard Manley Hopkins, Bar, va, 1964; Letters from St Paul, S/T, org, 1965; Safe in their Alabaster Chambers (E. Dickinson), Mez, tape, 1972; Charm me Asleep, Bar/Mez, gui, 1977; Transitions, Mez, bn/pf, 1979; Manger Scenes (N. Farber), S, pf, 1980; The Death of the Witch of Endor, A, hpd, perc, 1981; Music in the Manger (Farber), S, hpd/pf, 1981; The Wellesley Hills Psalm Book, medium v, org, 1983; Called Home (Dickinson), Mez, pf, 1996

Orch: Vn Conc., 1956; Sym. no.1, 1961; Catacoustical Measures, 1962; Sym. no.2, 1962; Signs of the Zodiac, opt. nar, orch, 1964; Org. Conc. no.1, 1970; Serenades, tpt, wind orch, 1979; Sym. no.3, 1985–6; Sym. no.4, 1990; Ov. Concertante, org solo, orch, 1992; Org. Conc. no.2, 1995; Org. Conc. no.3, 1996; works for band, music for TV and film

Chbr and solo inst: Sonata no.1, org, str, 1943; Conc., cel, hpd, 1955; Concertante no.3, org, cel, perc, 1962; Partita, hpd, 1962; Sonata no.3, org, str, 1968; Lessons, hpd, 1971; Toccatas for the Vault of Heaven, org, tape, 1971; Blessings, org, 1977; Epiphanies, org, 1978; Masks, hpd, chbr ens, 1978; Miracles, fl, org, 1978; Vigils, hp, 1982; Brass Qnt, 1983; Psalms, tpt, org, 1983; Str Qt, 1990; Organbook nos.1 and 2, 1991; Nocturnes, fl, gui, 1992; Preludes, pf, 1995–6; Divertimento, tpt, hp, 1997; Str Trio, 1998; works for carillon

Arrs., many vocal, of works by Handel, Purcell, Schubert, Selby

SABINE FEISST

Pinkullu [pinkillu, pincullo, pincollo, pincuyllu, pingullo, pinkayllu]. A generic term for 'flute', in the Andean languages Quechua and Aymara. Today, the many variants of this name apply principally to end-blown DUCT FLUTES, made from cane, wood or bone, of which numerous types are played throughout the Andean regions of Ecuador, Peru, Bolivia, northern Chile and north-west Argentina. The name applies equally to the three-hole pipe, played with a drum by a single player, or to five-, six- or seven-hole duct flutes which are typically played in consort. In a few isolated cases this name is also used to refer to transverse and notch flutes. Due to the paucity of archaeological evidence of pre-Hispanic duct flutes in the region, it is unclear whether the *pincollo* of Inca times, played widely as a courtship instrument, was a duct or notch flute (*see* KENA).

In today's Bolivian and Peruvian Andes, *pinkullu* or *pinkillu* duct flute performance is exclusively male, strongly associated with courtship and usually restricted to the rainy growing season between All Saints (November) and Carnival (February or March). The instrument's sound is widely claimed to attract rain and to cause the crops to grow. On the Bolivian high plateau the clear, high-pitched sound of cane *pinkillu* flutes, played to attract the rain and prevent frosts, is alternated with the harsher and vibrant sound of wooden *tarka* duct flutes, which herald the harvest season and are believed to reduce rainfall.

In central Bolivia, wooden *pinkillu* flutes with six fingerholes, but otherwise closely resembling Renaissance recorders in sizes and voicing, are played in consorts of four to six sizes. They are made by scraping and burning out the pithy centre of, for example, elder (*sauco*) branches. Exceptionally, these flutes are played using interlocking technique (like many Andean panpipes) between paired *tara* and *q'iwa* instruments, pitched a 5th apart.

In parts of northern and southern Bolivia and southern Peru, many types and sizes of wooden *pinkullu* or *pinkillu* duct flute are constructed by splitting curved branches (e.g. acacia) lengthwise. A central channel is gouged from each half, fingerholes and voicing cut, and the two halves bound back together using ox or llama sinews. Complex cross-fingerings are typical in performance and players often favour notes with a rich, vibrant timbre (*tara*).

In contrast to the above rainy-season flutes, three-hole pipes, played by single players as PIPE AND TABOR tend to be associated with festivals of the dry winter months. These include the Ecuadorian *pingullo* and the cane *waka pinkillu* (bull flute) of the Bolivian high plateau, played at Corpus Christi to accompany a dance which parodies the Spanish bullfight. In central Bolivia, the three-hole *kuntur pinkillu* (condor flute) or *quri pinkillu* (golden flute), made from the wingbone of a condor, is occasionally played beside the church door during patronal festivals to accompany the exit of the congregation.

HENRY STOBART

Pinnock, Trevor (*b* Canterbury, 16 Dec 1946). English harpsichordist and conductor. He received his musical education as a chorister at Canterbury Cathedral and keyboard player at the RCM in London. His professional début was as a solo harpsichordist, and he has sustained this aspect of his performing career, with many admired recordings of music from the Baroque and Classical periods, including Scarlatti sonatas, Handel's harpsichord suites, and Bach's partitas and Goldberg Variations. Among his recorded performances as a concerto soloist

are Poulenc's *Concert champêtre* with the Boston SO, and Bach and Haydn keyboard concertos with the ENGLISH CONCERT, the chamber orchestra which he founded in 1973. He directs it from the keyboard with a characteristic energy and enthusiasm which are readily communicated to audiences. Here, as in his solo career, he has remained almost exclusively within his chosen field of the Italian and German Baroque and some later 18th-century repertory. After their début appearance at the English Bach Festival in 1973, Pinnock and the orchestra recorded keyboard concertos by C.P.E. Bach in 1974 and the following year made a highly acclaimed recording of Vivaldi's *Four Seasons* with Simon Standage. Since then, their numerous recordings have included the major orchestral works of Handel and Bach, symphonies by C.P.E. Bach and Haydn and a notably vital, stylish Mozart symphony cycle. Pinnock has often added the English Concert Choir to his forces, first for a performance of Handel's *Ode to St Cecilia* at the Proms and subsequently for performances and recordings of works including *Messiah*, *Belshazzar* and Haydn masses.

Pinnock has also appeared as a guest conductor with many leading orchestras, including the Boston, San Francisco and Detroit symphony orchestras and with the St Paul and Los Angeles chamber orchestras. He made his Metropolitan Opera début in 1988 with Handel's *Giulio Cesare*. From 1991 to 1996 he was artistic director and principal conductor of the National Arts Centre Orchestra, Ottawa. He was made a CBE in 1992.

GEORGE PRATT

Pinnosa (probably corruption of *vinnosa*, from late Lat. *vinnus*: 'lock of hair'). In Western chant notations a neume signifying three notes, the second higher than the others, the third being semi-vocalized. The *pinnosa* is the LIQUESCENT form of the TORCULUS. Liquescence arises on certain diphthongs and consonants to provide for a semi-vocalized passing note to the next pitch. The *pinnosa* is one of the rarer ornamental neumes, and does not appear on most neume tables, medieval or modern.

DAVID HILEY

Piňos, Alois (Simandl) (*b* Vyškov, Moravia, 2 Oct 1925). Czech composer and theorist. While qualifying as a forestry engineer in Brno, he was a private composition pupil of Blažek; later he studied under Petrželka (1948–9) at the Brno Conservatory and under Kvapil (1949–53) at the Brno Academy, where he joined the teaching staff in 1953. He was appointed professor of composition at the academy in 1990 and for the next two years was head of composition and conducting. He has taught at the Darmstadt summer courses (1984–94), at international masterclasses run by the Vienna Hochschule für Musik, and at foreign universities, among them Malmö, Freiburg and Riga. In 1994 he was awarded the Czech Critics' Prize for his third string quartet.

In the late 1950s Piňos, with his colleagues Ištvan and Kohoutek, thoroughly applied principles taken from the 20th-century classics. At first they were influenced by Bartók and, in part, Prokofiev, Honegger and Janáček; in the 1960s they drew increasingly on the Second Viennese School and the postwar avant garde. Piňos's detailed study of 12-note serialism, and his contact with aleatory writing and other new developments at the Darmstadt summer courses of 1965 and 1966, contributed greatly to the formation of his technique. His new understanding of dodecaphony, summarized in his theoretical work *Tónové skupiny* ('Note groups'; Prague, 1971), has been used compositionally in his works after the mid-1960s, particularly fine examples being *Konflikty* ('Conflicts') and the concertos. In the late 1960s these detailed miniatures gave way to more complicated forms generated principally by tone-colour. Piňos has sometimes applied his theory of note groups to other parameters than pitch, and his use of chance is generally restricted to a choice in the ordering of controlled structures. Some of his music displays an ironic humour. In 1967 he founded a composers' group with Parsch, Růžička and Miloš Štědroň; during the period 1967–73 they produced ten collaborative works, including *Teamworks peripatie* for soprano, baritone, orchestra and tape (1968–9), and in the 1990s Ivo Medek joined original members Piňos and Štědroň for the collective composition of two chamber operas.

MILOŠ ŠTĚDROŇ

Pin Peat. Cambodian ensemble which accompanies court dance, masked plays, shadow plays and ceremonies, in addition to performing outside these contexts. The large ensemble consists of *korng tauch* and *korng thom*, (circular gong-chimes); *sralai tauch* and *sralai thom* (quadruple reed aerophones); *roneat daik* (metallophone); *roneat aik* and *roneat thung* (xylophones); *ching* (a pair of small cymbals); *skor thom* and *sampho* (drums); and vocalists (*neak chrieng*). The reduced ensemble often comprises *korng thom*, *sralai thom*, *roneat aik*, *sampho*, *ching* and vocalists (*see* CAMBODIA, §2).

TRẦN QUANG HAI

Pinsuti, Ciro (*b* Sinalunga, 9 May 1829; *d* Florence, 10 March 1888). Italian composer and singing teacher. He made his début as a pianist at the age of nine, and two years later was made an honorary member of the Accademia Filarmonica, Rome. In 1840 he was taken to London, where he studied the piano, composition and the violin. He returned to Italy in 1845 and took lessons with Rossini in Bologna, while teaching the piano at the Liceo Musicale. In 1848 he settled in London as a singing teacher and coached many Italian opera singers, among them Grisi, Mario and Ronconi. From 1856 he was on the staff of the RAM; he was also greatly in demand as an accompanist. A prolific composer, he had three operas produced in Italy: *Il mercante di Venezia* (4, G.T. Cimino; Bologna, 8 Nov 1873), *Mattia Corvino* (3, C. D'Ormeville; Milan, Scala, 24 March 1877) and *Margherita* (2, A. Zanardini; Venice, Fenice, 8 March 1882). He also composed occasional vocal works, piano pieces and nearly 250 songs, many of which were extremely popular.

ELIZABETH FORBES

Pintarić, Fortunat (Josip) (*b* Čakovec, 3 March 1798; *d* Koprivnica, 25 Feb 1867). Croatian composer and organist. He studied music in Varaždin and Zagreb with F. Langer and J.K. Wisner-Morgenstern, and in 1821 was ordained into the Franciscan Order. Besides his other monastic duties he served as cantor and organist, and taught singing and organ in Franciscan monasteries in Zagreb (1821–9, 1832–5, 1857–60), Varaždin (1830–31, 1836–56), Virovitica (1860–65) and Koprivnica (1866–7). Pintarić was a very prolific composer of religious and secular music. As an enthusiastic advocate and supporter of the Croatian national movement of the 1830s and 40s, he attempted to imitate in his compositions the idiom of traditional Croatian music. However, because of his training in the Viennese Classical style he rarely succeeded in this. His best compositions are piano miniatures, particularly genre pieces such as his several *Dudaš*, and organ movements which involve elaborate polyphony. In 1849 he published in Vienna *Knjiga bogoljubnosti kárstjanske*, an anthology of 45 religious hymns in Croatian, and in 1860 finished an anthology of church music (revised in 1867), *Crkvena lira*, with 378 instrumental and vocal movements to Latin and Croatian texts, to be used by the congregation and church choirs. Both anthologies were largely based on his own compositions. Pintarić also wrote about 30 masses in Croatian and Latin, many other liturgical works, organ and piano pieces, as well as patriotic songs (MSS in *HR-Zh*, *Zu*, *Zhk*, *Zs*).

ZDRAVKO BLAŽEKOVIĆ

Pintelli, Johannes (*b* ?Avignon, *c*1460; *d* Rome, before 26 May 1505). Singer and composer. He was employed at various Florentine musical institutions in the late 15th century, as was his brother Thomas. Johannes was a singer at Siena Cathedral between 1481 and 1484, when he moved to Florence where he is recorded as a singer at the Baptistry, SS Annunziata and the cathedral until 1491. In July 1504 he is described in documents as a member of the papal chapel and he died in Rome shortly before 26 May 1505. D'Accone has suggested that the Pintellis, despite their Italian name, came originally from France and this is confirmed by Vatican documents in which Johannes is consistently called a cleric of the diocese of Avignon (Avignon was, of course, a papal territory at that time and they could have come from an Italian family resident in the area).

Pintelli's extant works consist of one mass and one setting of an Italian text. His *Missa 'Gentils gallans de France'* (*I-Rvat* C.S.41) is based on a monophonic melody found in the collection *F-Pn* f. fr.12744, but also makes reference to two polyphonic settings, both in Florentine sources: an anonymous setting in *I-Fn* Magl.xix.164–7, no.63, and a setting of a different 'Gentils gallans' ascribed to Agricola in *I-Fn* B.R.229. Both his Gloria and Credo are extremely homophonic. His setting of a ballata, *Questo mostrarsi adirata di fiore* (ed. D'Accone, 1970), shows his familiarity with the style of Italian-texted music popular in Florence in the late 15th century.

RICHARD SHERR

Pinto, Mrs. *See* SIBILLA.

Pinto, Francisco António Norberto dos Santos (*b* Lisbon, 6 June 1815; *d* Lisbon, 30 Jan 1860). Portuguese composer. A boy soprano, he studied solfège with a singer in the royal chapel of Bemposta, then the horn with the royal cavalry bandmaster Justino José Garcia. At 15 he became a member of the same band and, on 30 September 1830, of the Brotherhood of St Cecilia, not being required to take the usual tests because of his already recognized ability. Two years later he became cornettist in the royal police guard band and in 1833 first horn player of the S Carlos Theatre orchestra. During the next five years he studied composition and orchestration with Manuel Joaquim Botelho, second flautist of that orchestra from 1825 to 1865. In 1854 he won the competition to succeed Franz Kuckembuk as professor of brass instruments at the National Conservatory and in 1857 he was promoted to director of the S Carlos orchestra.

Pinto made his début as a composer with music for the ballet *Adoração do sol* (S Carlos, 19 October 1838), which was danced by Huguet Vestris both that season and the next. During the next 15 years he composed 18 more ballets and, between 1841 and 1859, incidental music for 33 plays by such leading dramatists as Mendes Leal, Augusto Lacerda, José Romano and Silva Leal. His 46 sacred works composed between 1833 and 1859 culminated in the ambitious *Te Deum* given its posthumous première on 17 October 1863 in the church of Loreto in Lisbon in honour of D. Fernando. Although italianate, Pinto's prolific output of theatre and church music competed with Casimiro's for first honours in mid-19th-century Lisbon. Both his eighth orchestral overture (1845), dedicated to Liszt, and his Symphonia in D major in one movement with slow introduction (MS, *P-Em* 147) extracted maximum brilliance from a reduced theatre orchestra.

Stage: 19 ballets, incl. contradanças from Dionisio tirano de Syracusa, 1841, in *Semario harmonico*, 3rd ser., no.63; incid music for 33 plays, incl. ballet from O tributo das cem donzellas (Mendes Leal), 1845, arr. pf in *Semario harmonico*, 3rd ser., nos.126–7

Sacred: 46 works, incl. 3 solemn masses, solo vv, 4vv, orch; 6 masses, 2–4vv, orch; 2 Gloria, 3–4vv, orch; 4 Cr, 3–4vv, orch; 5 matins, 3–4vv, orch; 8 Tantum ergo, 1–4vv, orch; 3 novenas, 1 for 4vv, org, 2 for 3–4vv, orch; 2 TeD, 3vv, orch; 3 Litanies of Our Lady, 3–4vv, orch; 2 Lamentations, 4vv, orch; other pieces for Holy Week

Other vocal: 1 modinha, 1v, pf, in *Semario harmonico*, 3rd ser., no.71; Romance, sung by Clara Novello, S Carlos, 18 June 1851 (Lisbon, n.d.); 2 romances (J. Romano) (Lisbon, n.d.); A pomba e a saudade (Romano), melodia, in memory of Queen Maria II (Lisbon, n.d.)

ROBERT STEVENSON

Pinto, George Frederick (*b* Lambeth, 25 Sept 1785; *d* Chelsea [now in London], 23 March 1806). English composer. His father's name was Samuel Saunders or Sanders, but he took his surname from his mother Julia Pinto, daughter of Thomas Pinto and herself the composer of a published vocal duet, *The Morning* (*c*1788). He began studying the violin very early, and at eight became a pupil of Salomon, who soon presented him as a prodigy. His first public appearance was at Signora Salvini's benefit on 4 May 1796, when he played a violin concerto. Between 1798 and 1803 he played frequently at concerts in London and the provinces, and is said to have made two excursions to Paris. At Salomon's benefit on 10 March 1800 he played a violin and piano sonata with John Field. He also learnt the piano, which became his favourite instrument. At Corri's Edinburgh concerts in January 1803 he 'presided at the pianoforte', though only 17 years old, when Corri was incapacitated by an accident. Pinto was particularly idolized in Edinburgh; Campbell wrote prophetically in 1802:

> Young Pinto is not only an admirable violin player, but also a first-rate performer on the grand piano forte: to excel on two instruments so widely different from each other, is a proof of genius and unwearied application very seldom to be met with. If dissipation, and consequent idleness, do not impede him in his career, what may not the musical world expect in his riper manhood . . . ?

But 'riper manhood' did not await Pinto. After the 1804 season he became increasingly ill; in November 1805 he was engaged for a series of concerts at Oxford, but was able to play in only one, his last public performance. A few months later he was dead, 'a martyr to dissipation'. The symptoms described by eyewitnesses suggest that in fact he died of tuberculosis.

Pinto was a remarkably handsome youth, and was intelligent and well informed on many subjects. He was apparently a tender-hearted person: he loved animals and birds, and he visited prisons to distribute money to the inmates. As a musician he excited an extraordinary degree of admiration from well-qualified critics. Samuel Wesley said that 'a greater musical Genius has not been known'; Salomon remarked that 'if he had lived and been able to resist the allurements of society, England would have had the honour of producing a second Mozart'; J.B. Cramer, William Ayrton and others joined the chorus of enthusiasm. The chief source of their admiration seems to have been Pinto's compositions. Yet within a few years of his death, his name was almost forgotten by the public. There was a brief revival of interest in the 1840s and 1850s led by Sterndale Bennett, Davison and Hallé, then oblivion for a century. Only in the early 1960s did Pinto's importance as a composer begin to be recognized once again.

The most remarkable group of works comprises the sonatas for piano solo, more particularly the two sonatas op.3 and the Grand Sonata in C minor 'Inscribed to his Friend John Field' (1803); a Fantasia and Sonata in C minor, left unfinished and completed by Wesley and Wölfl; and three sets of Variations, one of which (in E minor, on 'Je crains de lui parler la nuit' from Grétry's *Richard Coeur-de-lion*) comes up to Pinto's best standards. These works are lavishly endowed with beautiful and original ideas; although the influences of Mozart, Dussek and Cramer are clearly discernible, there are many original touches to give freshness to a well-known idiom, and there are astonishing anticipations of Beethoven, Schubert and even Chopin. Indeed Ringer suggested a direct influence on Beethoven, and remarked, 'as a "prophet" of keyboard things to come Pinto is virtually without peer'. Some of the piano music is comparatively trivial, but in the Rondo and Minuetto printed by Ayrton in *The Harmonicon* the true Pinto is evident on a smaller scale. 'Either would do credit to the name of the greatest composer that ever lived', as Ayrton commented.

Pinto also wrote for his other instrument, the violin. At least one violin concerto is known to have existed (Davison described the manuscript in 1850), but it is lost, and we cannot know how Pinto would have written for orchestra. The violin duets are models of their kind (it was a very popular genre in Pinto's day), comparing favourably with Viotti's. Of the four sonatas for violin and piano, all are genuine duos rather than 'accompanied sonatas', and one (in G minor) is fully up to the standard of the best solo sonatas. Its first movement is 'passionate in mood, cogent in argument, and full of splendid thematic invention' (Geoffrey Bush; see Temperley, 1981).

The third group of compositions, the songs (or canzonets, as Pinto modishly called them), displays a vast range of expression, from the despair of *The Galley Slave* and *Eloisa to Abelard*, through the charming coyness of *Little Warbler* and the nostalgia of *Absence* and *Dear is my Little Native Vale*, to the classic repose of *Invocation to Nature*. The text and music are not always balanced, for this was not Pinto's own performing medium; some are embarrassingly naive in sentiment. But their promise is quite as tantalizing as that of the instrumental music. Only Schubert himself wrote more striking songs before the age of 20.

The speed and intensity with which Pinto produced all this remarkable music in a space of little more than three years, while at the same time pursuing an active career as a performer, seems to give the lie to the stories of his idleness and dissipation. He must have been an extraordinarily fast worker. The one autograph that survives, of an unfinished *Sonata for Scotland*, does show some evidence of haste and impatience; and Wesley, in his preface to the music he edited after Pinto's death, complained of his carelessness. The frequency of errors in his published music is unusually high for the time and place.

One other aspect of Pinto's musicianship has earned him frequent mention in books of music history: his place in the English Bach Revival. In about 1800 a small group of musicians in England, as well as in Germany, began to circulate and discuss the hitherto unknown music of J.S. Bach, and more particularly the preludes and fugues of *Das wohltemperirte Clavier*. No one has conclusively shown that A.F.C. Kollmann was the originator of this movement in England, though his claim would seem to be a strong one. But Samuel Wesley unequivocally stated in his *Memoirs* that it was Pinto who first showed him a copy of Bach's fugues. Other evidence connecting Pinto with Bach is slight, but suggestive; no Bach influence however can be detected in Pinto's music, except perhaps in the fugue of the posthumous Fantasia and Sonata in C minor.

WORKS

printed works published in London unless otherwise stated

Editions: *Four Canzonets and a Sonata . . . by the Late George Frederick Pinto*, ed. S. Wesley and J. Woelfl (Edinburgh, 1808) [W]

NICHOLAS TEMPERLEY

Pinto, Guiomar. *See* NOVAËS, GUIOMAR.

Pinto, Julia. Singer, daughter of SIBILLA.

Pinto, Luiz Álvares (*b* Recife, 1719; *d* Recife, ?1789). Brazilian composer, poet and teacher. Diniz discovered two of his works and substantial archival documentation of his activity in 1967; 19th- and early 20th-century Brazilian biographical dictionaries had reported his middle name as Alves, creating confusion with another musician active in the area in the early 19th century, Luiz Alves Pinto.

After elementary studies in Latin, rhetoric, philosophy and music Álvares Pinto went to Portugal about 1740 and studied theory and composition in Lisbon under Henrique da Silva Esteves Negrão (*d* 1787). According to

de Mello he taught in 'some noble houses' in the Portuguese capital and was a cellist in the royal chapel ensemble. By 1762 he had returned to Pernambuco, married and become a member of the Irmandade de Nossa Senhora do Livramento. He then devoted himself to music and teaching; among his pupils were several composers and chapelmasters active until the mid-19th century. On the inauguration in 1782 of S Pedro dos Clérigos at Recife he was appointed its first *mestre de capela*. His last achievement for the city's musical life was the founding in about 1787 of the Irmandade de S Cecília dos Músicos, a sort of musicians' union in the Portuguese tradition.

Of the several compositions by Álvares Pinto mentioned in the biographical literature (liturgical works, hymns, Passion music and masses) only two are now known: a *Te Deum* (*c*1760) and a *Salve regina*, both in a private collection. Other works that may be attributed to him on stylistic grounds include two four-voice *Mandatum*, one of them a cappella, a *Miserere* and seven motets. The *Te Deum*, of which only the voice parts, continuo and one horn part remain, reveals in Diniz's edition (Recife, 1968) good technical command of counterpoint (the 'In te Domine' is a double fugue) and fine melodic invention. A manuscript *Arte de solfejar* bearing Álvares Pinto's name was completed at Recife in 1761 (*P-Ln*; facs. (Recife, 1977), ed. J.C. Diniz), and his three-act comedy *Amor mal correspondido*, written in verses and containing a sung chorus, was produced at the Recife Casa da Opera in 1780.

GERARD BÉHAGUE

Pinto, Thomas (bap. Cripplegate, London, 2 Feb 1727; *d* ?Dublin, Dec 1782/Jan 1783). English violinist. His father, William (Guglielmo) Pinto, was a civil servant of Naples who fled to England for political reasons. It is not known who taught Thomas the violin; as a child he played in Corelli's concertos, and led the band at concerts in Edinburgh. He soon became one of the most prominent violinists in Britain, playing both as soloist and leader in many London and provincial concerts and theatres. He replaced Giardini in 1757 as principal violinist at the King's Theatre, London. Having lost £2000 in a joint speculation with Samuel Arnold (they had bought shares in Marylebone Gardens) he withdrew to Ireland, where he was leader of the band at Smock Alley Theatre, Dublin, from 1773 to 1779. He then seems to have retired to Edinburgh, possibly returning to Dublin later still. About 1770 he published a set of six sonatas for violin and bass.

Pinto married first Anna Maria Sibylla Catharina Groneman (b.1721), a German soprano resident in London, and second (16 October 1766) Charlotte Brent, the well-known soprano. His daughter by the first marriage, Julia Pinto, married Samuel Sanders and was the mother of George Frederick Pinto.

NICHOLAS TEMPERLEY

Pintscher, Matthias (*b* Marl, 29 Jan 1971). German composer. While still at school, he acquired experience as an instrumentalist and as an occasional conductor of the youth orchestra in his native city. His first compositions, written as an adolescent, resulted from his fascination with the symphony orchestra. He began studying composition with Klebe in 1989 and continued his studies with Trojahn in Düsseldorf (1992–3); Henze also gave him support and encouragement. His early success is reflected in his many honours, which include composition prizes, stipends and commissions from famous opera houses, orchestras, conductors and soloists. He established his reputation as a conductor with the Berlin Staatsoper's première of his ballet *Gesprungene Glocken* in 1994.

Pintscher's music, with its attention to tone colour and its response to compositional impulse, relies on poetic force. Ideas from the visual arts (as in *Figura I–II*) and literature suggest associative structures and dimensions that he translates into music, transforming the intensity gradient of objects or metaphors into atmospheric densities of sound. He has described many of his poetry-inspired works (such as *Monumento I–V*, after Rimbaud) as 'speech-music'; these compositions seek a way through the colour of poetic language into the heart of the poetic scene, while acknowledging that such an ideal cannot be achieved. This sense of imaginary drama led him to compose his first opera, *Thomas Chatterton* (1994–7), on a subject who is, in the words of the composer, 'a creative figure destroyed by his own ordinary nature'.

MICHAEL TÖPEL

Pinza, Ezio (Fortunato) (*b* Rome, 18 May 1892; *d* Stamford, CT, 9 May 1957). Italian bass. Having studied at the Bologna Conservatory, he made his début in 1914 in Soncino, near Crema, as Oroveso in *Norma*. After World War I he began to sing in the principal Italian houses: at Rome in 1920 as King Mark in *Tristan und Isolde*, and at La Scala, under Toscanini, from 1922 to 1924 in various roles, including Pogner, Ramfis, Colline, Raimondo (in *Lucia di Lammermoor*) and Tigellino in the première of Boito's *Nerone*. His appearance at the Metropolitan Opera as the Pontifex Maximus in Spontini's *La vestale* in 1926 began a period of 22 consecutive years as a leading bass in New York, where he sang 50 roles and became a great favourite of the public, as much for his handsome presence, engaging personality and spirited acting as for his beautiful and cultivated *basso cantante*. Besides all the main Italian bass roles (among which his Padre Guardiano in *La forza del destino* and Fiesco in *Simon Boccanegra* deserve special mention), he was outstandingly successful as Don Giovanni and as Figaro; he sang also in many French operas, occasionally essayed Wagner in German, and undertook the title role of *Boris Godunov* in Italian. Between 1930 and 1939 he sang in five Covent Garden seasons, and during the same decade he gave numerous performances as Don Giovanni and Figaro at the Salzburg Festival. After leaving the Metropolitan, at the age of 56, he began a second career in musical comedy, operetta and musical films, scoring an enormous success on Broadway in *South Pacific* (1949, Rodgers and Hammerstein). Pinza was unquestionably the most richly gifted and most accomplished Italian bass of his day, as is demonstrated by his numerous recordings, especially those made for Victor (1927–30), when his voice was in its prime.

Ezio Pinza in the title role of Mozart's 'Don Giovanni'

DESMOND SHAWE-TAYLOR/R

Pinzauti, Leonardo (*b* Florence, 17 Nov 1926). Italian music critic. He studied the violin first at the Florence Conservatory with V. Papini (diploma 1944), and continued studying the violin with Sandro Materassi and harmony and counterpoint with Roberto Lupi (1944–50). In 1950 he took an arts degree from the University of Florence in music history with Torrefranca, and then became Torrefranca's assistant (1950–53). He began his career as a music critic with the *Giornale del mattino* (1949–57), of which he became managing editor (1960–63). He became music critic of *La nazione* in 1965 and *Il resto del Carlino* in 1967; the same year he joined the editorial board of the newly founded *Nuova rivista musicale italiana*, to which he contributed a series of sympathetic interviews with contemporary composers, including Berio, Boulez and Dallapiccola. He taught history of music at the Florence Conservatory (1970–93) and was a member of the government central commission for theatre and tourism; he also acted as musical consultant for RAI television (1965–83). His main areas of interest are Italian Renaissance lute music, the restoration of instruments, Puccini, and Italian 18th-century and contemporary composers. He has received awards from the National Academy and the governments of Italy and Salzburg.

CAROLYN GIANTURCO/TERESA M. GIALDRONI

Pinzón (Urrea), Jesús (*b* Bucaramanga, 10 Aug 1928). Colombian composer. He came from a musical family and received his first degree in composition and conducting at the National University of Colombia in 1967. He was head of the music department at the University of America, Bogotá (1968–71), and directed the music department of the National Pedagogical University (1972–82). He has taught composition at the National University of Colombia (1967–91) and conducted the Bogotá PO from its foundation in 1967. An active member of the Centro de Estudios Folklóricos y Musicales of the National University (1967–70), his study of vernacular music of the Andean region is one of the first serious writings about traditional music in Colombia. His interest in indigenous music and ritual has been a constant inspiration throughout his life, as is his preference for 'endogenous' music, by which he means music composed for players who know nothing about music theory, often performed on native instruments like the marimba and bombo. He uses modern graphic notation and has created the concept of 'sonoptics', i.e. music to be seen and heard as an extension of conventional notational and improvisatory practices, a concept he discussed at an international symposium held in Rome in 1972. His multi-faceted production has been acclaimed in Sweden, Tokyo, London, Baltimore, Cuba and throughout Latin America.

SUSANA FRIEDMANN

Pio [Pius], **Francesco** (*b* Parma, probably *c*1590; *d* Parma, *c*1660). Italian composer. He was a priest. In 1621 he was a teacher at the Collegio di S Caterina, Parma, and from 1655 until his death held an ecclesiastical position at Parma Cathedral (see N. Pelicelli: 'Musicisti in Parma nel secolo XVII [part 4]', NA, x, 1933, pp.233–48, esp. 237–8). Much of his small output, which is entirely of church music, consists of double-choir works in the Venetian manner.

WORKS

Il primo libro de salmi concertati, 9vv, et non concertati, 8vv, con una messa concertata, 9vv, bc (Venice, 1621)

Liber primus motectorum, 2–5vv, bc (org) (Venice, 1624)

Liber secundus et secunda pars psalmorum, 8–9vv, bc (org) (Venice, 1625)

1 work, 1628[3]

ARGIA BERTINI

Pìobaireachd (Scots Gael.: 'piping'; from *pìobair*: 'piper', *eachd*: suffix of function). The term, or its anglicized form 'pibroch', is used in English to denote a specific category of music for the Scottish Highland bagpipes. *See* PIBROCH and SCOTLAND, §II, 6(i).

Piochi, Cristofano [Cristoforo] (*b* Foligno; *d* Siena, in or after 1675). Italian composer and teacher. In 1612 (April–August) he was organist of S Maria in Trastevere, Rome. He was *maestro di cappella* at Amelia from 6 November 1619 to 15 September 1623, and later held similar posts at Faenza and Orvieto. He was *maestro di cappella* of Siena Cathedral from 1668 to at least 1675, and during these years he ran a school for counterpoint at Siena. His three volumes of ricercares and his theoretical writing all no doubt stemmed from his teaching. His six earlier collections of music consist mainly of motets, all of them in the concertato style for small forces with continuo.

WORKS

Cantiones sacrae ... liber I, 2–4vv, bc (Orvieto, 1623); Fontes et omnia and Ave rex noster in Catalucci

Il primo libro delli madrigali concertati ... con alcune arie nel fine, 2–4vv, bc (Venice, 1626)

Sacrae cantiones ... liber II, 2–3vv, bc (Rome, 1637)

Sacrae cantiones ... liber III, 2–3vv, bc (Rome, 1651)

Motecta, liber IV, 2–4vv, bc (Bologna, 1668)

Responsoria feria quarta, quinta, & sexta hebdomadae sanctae decantenda, 4vv, bc ad lib (Bologna, 1669)

Ricercari ... utilissimi a chi desidera imparare presto a cantare e sonare, libro I, 2–3vv (Bologna, 1671)

Ricercari, libro II, 2vv, op.8 (Bologna, 1673)

Il terzo libro dei ricercari, 3vv, op.9 (Bologna, 1675)

NIGEL FORTUNE/RODOBALDO TIBALDI

Pionne (Fr.). A type of bird organ. *See* BIRD INSTRUMENTS.

Pionnier [Pyonnier, Pionerio], **Joannes** (*d* Loreto, 17 Nov 1573). French composer, active in Italy. After holding a singer's post at the Santa Casa, Loreto, for several years, Pionnier became director of the choir on 1 March 1541 and *maestro di cappella* in 1564. He retained this position until his death and was succeeded by Costanzo Porta (G. Tebaldini, *L'archivio musicale della Cappella lauretana*, Loreto, 1921).

Antonio Gardano published three books of Pionnier's motets in 1548, 1561 and 1564, of which only the first, containing 19 motets in five parts, survives. Six motets for five voices, probably duplicating Gardano's prints, and two for six voices appeared in collections between 1539 and 1558 (RISM 1539[3]; ed. in SCMot, xiii, 1993, 1550[2], 1554[10], 1555[10], 1556[8] and 1558[4]). Additional motets are found in manuscripts at *CZ-HKm*, *D-Rp*, *I-Bc*, *TVd*, *PL-WRu* and *S-Sk*. A single madrigal was included in two of Vincenzo Ruffo's madrigal books (1554[29], 1555[31]). Although Pionnier dealt competently with the problems of an imitative style in musical construction, he lacked complete compositional mastery. (There is a modern edition of *Quem dicunt homines* in Cw, xciv, 1963.)

BARTON HUDSON

Piovani, Nicola (*b* Rome, 26 May 1946). Italian composer. He studied privately and after graduating in the piano at the Milan Conservatory (1967) became a pupil of Manos Hadjidakis (1969). Of his more than 80 film scores, the first was for Silvano Agosti. A spare, personal idiom – contemporary but also suffused with archaic traces – is to be found in his work with Marco Bellochio (*Nel nome del Padre*, 1970; *Sbatti il mostro in prima pagina*, 1973; *Marcia trionfale*, 1975) and the Taviani brothers (*La notte di San Lorenzo*, 1982; *Kaos*, 1984; *Good Morning Babylon*, 1987; *Il sole anche di notte*, 1990). His scores for Fellini (*Ginger and Fred*, 1985; *L'intervista*, 1987; *La voce della luna*, 1990), however, are memorable more for the prestige they brought than for their expressive qualities. As well as other film collaborations with Sergio Citti, Mario Monicelli, Giuseppe Bertolucci, Luigi Magni, Nanni Moretti and Bigas Luna, Piovani has written a considerable amount of incidental music (for Carlo Cecchi, Luca De Filippo, Maurizio Scaparro and Vittorio Gassman) and has had great theatrical success with his *racconti musicali* on texts by Vincenzo Cerami (*La Cantata del Fiore*, 1988; *La Cantata del Buffo*, 1989). Other works include a musical, *I setti re di Roma* (1989), to a libretto by Luigi Magni, a ballet, *Fellini* (1995), further *racconti musicali*, *Il signor Novecento* (1992) and *Canti di scena* (1993), and chamber music, including an octet (*Quattro canti senza parole*), a piano trio (*Il demone meschino*), a flute and piano duo (*Ballata epica*) and a saxophone quartet (*L'assassino*). He has been awarded a Nastro d'argento.

SERGIO MICELI

Piozzi, Gabriele Mario (*b* Quinzano, Venice, 8 June 1740; *d* Dymerchion [Tremerchion], N. Wales, 26 March 1809). Italian tenor, composer and harpsichordist. Escaping from a large family, he found a patron in the wealthy Marquis D'Araciel at Milan. After travelling on the Continent he went to England, about 1776–7, where he made a great impression as a concert singer. Burney reported (*Rees's Cyclopaedia*, 1819–20) that his singing was not sufficiently strong for the theatre but that his 'exquisite' voice and style were modelled on the famous Pacchierotti (who had not yet arrived in London). For several years he was active in England as a singer, teacher and pianist, publishing during that period six collections, mostly for keyboard with accompaniments. Through his friendship with Burney, Piozzi gained access to Dr Johnson's circle where he met the family of Henry Thrale, a wealthy brewer. Piozzi then taught singing to Thrale's daughters and became a regular at social events. After Thrale's death in 1781 Piozzi became increasingly intimate with Mrs Thrale, a woman not only of wealth but also of literary accomplishments; eventually, in 1784, despite resistance from both family and friends, the two were married. Piozzi had amassed a substantial fortune in England, and with this advantageous marriage he was able to discontinue his career as a professional musician, though he occasionally performed in private concerts. After an extended wedding trip (1784–7) that included a visit to Italy, the happy couple settled in London and then at the Thrale mansion at Streatham. In 1795 they retired to their new villa 'Brynbella' in Wales. Piozzi relished his life as a country gentleman, but his last years were marred by severe attacks of gout. Both Piozzi and later his wife were buried beneath the medieval church at Dymerchion.

Piozzi's instrumental works are of only moderate interest. The sonatas are improvisatory and prolix. On the one hand, the basic ideas are highly conventional; on the other, Piozzi strained after novelty in expression, exploiting chromaticism and the dynamic nuance made possible by the piano. In the sonatas the violin is usually dispensable, especially in op.5. The quartets op.1 are essentially harpsichord concertos with alternation of tutti and solo sections.

RONALD R. KIDD

Pipa. Pear-shaped plucked lute of China and Korea. It corresponds to the Japanese BIWA and is related to the Vietnamese *đàn ty ba*.

1. The Chinese *pipa*. 2. The Korean *pip'a*.

1. THE CHINESE 'PIPA'. There are two different theories on the origin of the term *pipa*. Some Han dynasty sources state that '*pipa*' originally referred to two different plucking techniques of the right hand: *pi* meant 'to play forward' (to the player's left) with the right hand, while *pa* meant 'to play backward' (to the player's right), equivalent to the modern terms *tan* and *tiao*. But since these etymologies have not been found in any other context, and it is believed that this kind of instrument was introduced into China from a foreign country, some other scholars think *pipa* may be a transliteration of a foreign term for the instrument's name.

Pipa was a general name for various types of plucked lutes from the Han to the Tang dynasties (roughly from the 2nd century BCE to the 9th century CE), including plucked lutes with long or short neck and round or pear-shaped soundbox. According to historical literature, a long straight-necked lute called *pipa* appeared in the Han dynasty (206 BCE–220 CE). It had a round soundbox with four strings and 12 frets. Later, it was called *Han pipa*, or *ruanxian* after the name of an outstanding performer in the 3rd century BCE. The earliest image of a musician playing this straight-necked lute is on a miniature ceramic vessel dated 260 CE. The modern *ruan* is basically the same in shape.

According to a legend described in the poem *Pipa fu* by Fu Xuan (217–78 CE), another type of *pipa* called *xiantao* with a long straight neck and small round soundbox appeared even earlier. Also called *Qin pipa*, the *xiantao* ('string *tao*') was said to have been developed under the Qin dynasty (221–207 BCE) by fixing strings on to a small drum called *tao*, struck by two beads attached by strings to either side of the drum and moved by means of a long handle. But the source was written over 400 years after the Qin dynasty, and there is no supporting archaeological or iconographical evidence for the *xiantao*. Another type called the *Qin-Han pipa* or *Qin-Hanzi*, which appeared in the Sui dynasty (581–618 CE), may be seen as a variation on the straight-necked *Han-pipa*, with a smaller round soundbox and a longer neck. This is considered the ancestor of the modern *qinqin* ('Qin instrument').

The archetype of the modern *pipa*, which has a pear-shaped soundbox, was introduced into China from India in 346–53 CE, but its origin was in ancient Persia. In China this type of *pipa* was known as the *quxiang pipa* ('*pipa* with a crooked neck' – actually a short-necked lute with reversed pegbox). This instrument had four strings and four frets, and was held transversely and plucked with a plectrum. It appears in much early iconography in China, such as the celestial deva-musician playing the *pipa* in a fresco of the Northern Wei dynasty (386–534 CE) in cave no.435 at Dunhuang. During the Sui and Tang dynasties, the *quxiang pipa* was used in various courtly ensembles to accompany singing and dancing, as well as for solo music. Another similar instrument popular in courtly ensembles of the Sui and Tang dynasties was the *wuxian pipa* ('five-string pipa'), also known as *wuxian*. It was similar in shape to the *quxiang pipa*, but smaller. It is thought to have been developed in India (rather than Persia: see Lin, 1962), and was introduced to China from there in the 4th century CE. Some early iconographical representations may also been seen, such as the celestial deva-musician in a Northern Wei fresco from Dunhuang (Liu and Yuan, 1988, p.62). It disappeared gradually after the Tang dynasty. Versions of the *ruanxian*, *quxiang pipa* and *wuxian pipa* were introduced to Japan during the Tang dynasty.

After the Tang dynasty the instrument commonly known as *pipa* was the four-string *quxiang pipa*. Gradual changes occurred throughout the succeeding millennium: the playing position changed from horizontal to vertical; fingernails, real or false, replaced the plectrum; the number of frets increased from 4 to 14 or 16, and in the 20th century to 17, 24, 29 or 30. Contexts, too, changed: since the Song dynasty, the *pipa* was extensively used among folk musicians and the common people to accompany emerging genres of narrative singing and regional opera. (For living traditions *see* CHINA, §IV, 4(ii)(c).)

The back body of the modern *pipa* is made of teak and the soundboard of *wutong* wood (*Firmiana platanifolia*). The upper frets (on the neck) and the tuning pegs are of ivory, buffalo horn or wood; the lower frets (on the body) are usually of bamboo. The head of the *pipa* is slanted slightly: its middle part is always bent backwards and its top part can be bent either forwards or backwards. The head is usually in the form of a symbolic object (such as a dragon's head, a phoenix's tail or a bat's head) and its middle part is sometimes inlaid with a piece of jade for decoration. The strings were traditionally made of twisted silk and now often of metal or nylon.

A series of manuscripts dated 933 CE, found in Dunhuang at the beginning of the 20th century and now

1. Pipa (four-string lute) of China played by Tsun-Yuen Lui

(*strings*: 4th, 3rd, 2nd, 1st)

in the Bibliothèque Nationale in Paris, is considered to contain 25 melodies in *pipa* tablature, although their interpretation remains controversial. Most traditional *pipa* scores surviving today use the standard *gongche* notation. Since the 1920s *pipa* music has also been notated in the cipher notation widely adopted in China since then.

Traditionally, the range of the *pipa* is about three octaves (normally from A to f♯″ or a″) with 14 or 16 frets. The 16-fret *pipa* has two more high-pitch frets than the 14-fret one. Most of these frets produce intervals approximately equal to Western whole tones (W) and semitones (S), although two frets, the 11th and the 15th (or the 7th and the 11th lower frets), produce $\frac{3}{4}$ tones or 'neutral tones'. The scheme from the open string upwards is: W S S S W S S S W W $\frac{3}{4}$ $\frac{3}{4}$ W W $\frac{3}{4}$ $\frac{3}{4}$. Traditionally, there are several different tunings for the four open strings of the *pipa*. The most common is called *zhengdiao* or *xiaogong diao*. The intervals between the four strings are a 4th, 2nd and 4th; today the four strings are normally tuned as A, d, e, a. In this tuning, the strings on the 16-fret *pipa* have the series of pitches shown in Table 1. Although the fretting and tuning systems represent the basic pitches available on the instruments, microtonal changes of pitch of up to a semitone are often effected by pulling or pushing the string sideways. In the 1920s and 30s some musicians rearranged the frets of the *pipa* based on the 12-tone equal temperament, making a 24-fret *pipa*. Since the 1950s this kind of *pipa* has become popular, and the number of the frets increased to 29 or 30, with a range from A to d‴ or e‴. Intervals between all frets are semitones, except that between the 29th and 30th which is a whole tone. Although factory-made forms are increasingly common, traditional regional forms are still played, such as the *pipa* of *nanguan* in Fujian and that of balladeers in northern Shaanxi.

2. THE KOREAN 'PIP'A'. There were two types of *pip'a* in Korea, both now obsolete: the four-string *tang-pip'a* ('Chinese *pip'a*') and the five-string *hyang-pip'a* ('native *pip'a*', also known as *ohyŏn*: 'five strings'). According to the treatise *Akhak kwebŏm* (1493), the *tang-pip'a* was about 128 cm long and had a neck which bent backwards at the pegbox; there were four large convex frets on the neck and eight thin ones on the soundtable (fig.2). In performances of *tangak* ('Chinese music') the player used a fan-shaped wooden plectrum and only the four frets on the neck; in *hyangak* ('native music') he used finger-picks and the frets on the soundtable as well as those on the neck. Tunings were various, but an example of a *tangak* tuning is *A–d–G–g* and of a *hyangak* tuning *B♭–e♭–e♭–b♭*.

The *tang-pip'a* was used only for *tangak* during the Koryŏ period (918–1392), but in the 15th century it was adapted for *hyangak* as well. The *Akhak kwebŏm* demonstrates various tunings and modes, plus a certain number of tablature symbols; pieces notated in *pip'a* tablature occur as early as the *An Sang kŭmbo* ('An Sang's zither book') of 1572. Surviving instruments differ in a few details from the description in the *Akhak kwebŏm*.

The *hyang pip'a*, according to the *Akhak kwebŏm*, was 104 cm long and had a straight neck tapering gradually from the body. There were ten frets. Players used a pencil-shaped plectrum (*sultae*), as on the zither *kŏmun'go*, and nearly all the frets. As with the *tang-pip'a*, various tunings were used, a typical one being *A–e–e–a–c♯′*. The *hyang-pip'a* was one of the three main string instruments (together with *kŏmun'go* and *kayagŭm*) of the Unified Silla period (668–935). The Chinese *Sui shu* ('History of the Sui dynasty') indicates that the Korean ensemble at the Sui court in the late 6th century included a five-string instrument. A five-string *biwa* (*gogenbiwa*) of the 8th century, in the Shōsōin repository in Nara, Japan, fits the description of the *hyang-pip'a* in the *Akhak kwebŏm*.

The *hyang-pip'a* tradition was marginally preserved by *kŏmun'go* players until 1930, but the instrument subsequently fell into disuse.

2. *Tang-pip'a (four-string lute) of Korea, as depicted in 'Akhak kwebŏm' (1493): (a) back and front views; (b) fan-shaped wooden plectrum; (c) finger-picks*

Pipe (i) (Ger. *Pfeife*). (1) Generic term for a tube, open or stopped, of wood, metal, cane or other material and with or without finger-holes. Pipes are classified as aerophones in the Sachs–Hornbostel system and subdivided according to whether the sound is generated by an 'air reed' in which the air itself vibrates, set in motion by the player's breath (either confined air reeds as with recorders, or free air reeds as with flutes, depending on whether the player's breath is directed through a rigid channel and against a sharp edge, or not); 'lip reeds' in which the player's lips vibrate to set in motion the column of air and hence to produce a sound (as with brass instruments); or cane reeds in which a tongue of wood, cane or metal vibrates (double as with the oboe, single as with the clarinet or free as with the harmonium). Stopped pipes – those with their lower ends completely closed – sound an octave below open pipes of the same length. Open pipes overblow the 2nd harmonic, an octave above the fundamental; stopped pipes overblow the 3rd harmonic, a 12th above the fundamental. Pipes as musical instruments are of course known in all cultures from prehistoric times to the present day.

(2) Specifically, a small duct flute, usually with three holes, played with a small drum. *See* PIPE AND TABOR.

Pipe (ii). For pipes in organs, *see under* ORGAN STOP.

Pipe and tabor. A pair of musical instruments consisting usually of a three-hole DUCT FLUTE and a snared drum played together by one person chiefly to provide music for dancing (fig.1).

1. Description. 2. History.

1. DESCRIPTION. The pipe (Fr. *flute à trois trous*; Provençal *galoubet*; Ger. *Schwegel*, *Tamerlinpfeife*, *Tämmerinpfeife*, etc.) is a duct flute with three (occasionally four) holes, played with one hand. In England it is about 30 cm long, pitched in D, usually with a range of an 11th or 12th (in some instruments up to two octaves or more). The three holes allow for fingering four notes. The fundamental tones of the instrument can be sounded by blowing gently, but are not required; hence the first four degrees of the scale are produced as 2nd partial tones an octave above the fundamentals. Overblowing causes a rise of a 5th, making available the upper tetrachord of the scale (the eighth note can also be sounded as a fourth partial) and so on to complete the compass, using whichever partials speak best. The pipe is played with the left hand (the right hand holds the drumstick). The highest hole (at the rear of the instrument) is for the thumb; the other two are for the first and second fingers. The last two fingers grip the pipe at its lower extremity; the little finger can in most cases be extended to half cover the bell and thus supply the lower leading note. (Fingering charts are given in Mersenne, and Gehot.)

The bore of most modern pipes is narrow (in English pipes about 8·5 mm) to facilitate overblowing, and is usually cylindrical, though sometimes tapered to the bottom end. One example, possibly 17th-century in date, has a sophisticated bore shape of inverse conical design (17mm to 5·7mm; see Waterhouse). The scale varies in tuning but usually includes a 'neutral' 3rd (intermediate between a major and minor 3rd) and often a 'neutral' 4th that can be lowered to a perfect 4th by cross-fingering. Emission of the high notes is often improved by making the lip of the instrument of metal, and damaged or worn wooden lips are frequently replaced with metal. Larger

1. Pipe and tabor used to accompany a round dance: miniature from the anonymous Freydal MS, German, 16th century (A-Wkm PS 5073, f.112r)

and deeper pipes have existed. Vidal (1864) mentioned several sizes. Spanish tabor pipes generally have a wider bore and a more powerful tone than English and French pipes. The common Basque *txistu* (Sp. *chistu*), in G, is about 42 cm long with a 13 mm bore; its lip is a long metal plate let into the wood.

English tabor pipes, when not home-made or supplied by regular instrument makers in London, were often imported from France, the English size matching a common size for the GALOUBET of Provence. Boxwood was the usual material, but some 18th-century English-made pipes were of ivory. The manufacture of tabor pipes continues in such centres as Marseilles and San Sebastián; it was revived in England before World War II by Dolmetsch and by Louis Musical Instrument Co. Ltd (London). (Other types of three-holed pipe include ZUFFOLO and the PICCO PIPE.)

The tabor (Fr. *tambourin*) is usually a small side drum with a gut snare (*see* DRUM, §II, 3, but also TAMBOURIN DE BÉARN). The snare crosses the head that is struck, or snares may be provided on both heads. The tabor varies in shape; it may be shallow (like the English tabor in fig.2), or about as deep as it is wide (e.g. the Basque *atabal*), or very deep, with the shell twice as long as the heads are wide (the Provençal model; for illustration *see* TAMBOURIN (ii)). The first two types have existed since the Middle Ages, the last from the 15th century. The tabor is slung from the wrist or shoulder of the player's left arm and is beaten by a stick held in the right hand. In Provence it is regarded as important to strike the snare itself, to produce a continuous droning sound underlying the beaten rhythm.

2. HISTORY. A reference in the *Ars musica* of Egidius de Zamora (*c*1270), added to a discussion of the tympanum, may be an early mention of the pipe and tabor: 'If a pipe [*fistula*] is joined thereto, it renders the melody sweeter'. Iconography of this period shows a short, fat pipe, in

2. Pipe and tabor, English, 19th century (Victoria and Albert Museum, London)

contrast to its later elongated form. It has been postulated that this resembled the later *flabiol* of Catalonia (Montagu). A poem by Colin Muset (13th century) mentions the 'flaihutel' played 'avec le tabor', while the 13th-century *Roman de Cléomadés* mentions 'flauteors a Il dois', presumably referring to the two fingers used in playing. The term 'flageol' was also used from the 13th to 15th centuries; at the wedding of Charles the Bold in 1468, one of the musicians took up 'un tabourin et un flagol' in the course of a comic pantomime. The English expression 'taborer' may have frequently denoted a player of the pipe and tabor, as it later did in, for example, William Kemp's *Nine Daies Wonder* (1600), an account of how the famous actor morris-danced to Norwich accompanied by his 'taborer' Thomas Slye, who is shown in a woodcut (fig.3) with a long tabor pipe (a type also illustrated in Arbeau, 1588).

Dance music was always the pipe and tabor's principal function, as is shown by many old miniatures. Two particularly good medieval scenes of people dancing to it are reproduced by Gérold (*Histoire de la musique*, Paris, 1936, pp.288, 328). It is also shown being used to provide music for jugglers and performing animals, and being played in the military bands of noblemen at tournaments and other occasions; the tabor is often clearly shown being beaten on the snare. In the 16th and 17th centuries the pipe and tabor remained popular and widespread, economically providing a one-man band for dances. Arbeau gave some tunes with their correct tabor beatings. Both the main sources of information about instruments at that time – Praetorius and Mersenne – suggest that the pipe and tabor was then specially well handled in England. Three examples of tabor pipes were found in the excavations of Henry VIII's battleship, the *Mary Rose* (Palmer). Praetorius described the three-hole pipe and

3. Pipe and tabor: title-page of William Kemp's 'Nine Daies Wonder' (1600)

said that it is played in conjunction with a tabor 'by some Englishmen'; it seems that in Germany the pipe and tabor had by that time been replaced by fifes and drums at weddings and other occasions. Mersenne declared that he had heard John Price get a range of three octaves out of the pipe.

The pipe did not escape the 16th-century habit of making treble-to-bass sets for every instrument, as recorded in several German court inventories of the time. In 1596, for example, the Archduke Ferdinand possessed at Schloss Ambras (Innsbruck) 'Flauti mit clainen drümblen zu gebrauchen. 1 pasz. 3 tenor. 1 discant'. Praetorius listed a descant (47 cm long, range *d'* to *e'''*), tenor (61 cm, *g* to *a''*) and bass (70 cm, with a brass crook as in a bass recorder, range not shown), and included scale drawings of the descant and bass, and of a shallow tabor. A bass pipe in the museum of the Brussels Conservatory is about 75 cm long with a 17·5 mm bore and pitched in C, a 9th below the usual pipe. Mersenne said that consorts of three-hole flutes were not much used, and after his time they seem to have vanished altogether.

For the rest of its history the pipe and tabor was relegated to the rural environment where it may still occasionally be heard. In Oxfordshire, where it was known as 'whittle and dubb', it was the normal accompaniment to the Whitsuntide morris dancing until superseded by the violin or the concertina at the end of the 19th century. The Oxfordshire instruments resembled the set in fig.2. When George Butterworth combed the area for morris dances in 1912 he found only one pipe and tabor, in the possession of an elderly man of Bicester who was able to play *The Maid of the Mill* and *Shepherd's Hey* on it. In the second half of the 20th century, as a result of a renewal of interest in morris dancing and the resumption of the manufacture of the metal three-hole pipe, the pipe and tabor also saw a revival.

In France the pipe and tabor is still used in Provence and in Gascogne. In the Basses-Pyrénées a local substitute for the tabor is the *tambourin de Béarn*, also called *tambourin à cordes*, an oblong wooden box with six gut strings which are beaten with a stick as if they were a drumhead. The strings are said to be tuned alternately to the tonic and the dominant of the key of the pipe. In Basque cities, dances such as the aurresku are often accompanied by a band of pipe (*txistu*) and tabor (*tamboril* – small drum, or *atabal* – bass drum) players supported by a side-drum player. In some arrangements the *txistu* harmonizes tunes in 3rds and a bass line is supplied by the *silbote* ('big whistle'; an instrument known only from the beginning of the 19th century), which is pitched a 5th below the *txistu*. The *silbote* player does not have a drum; the other pipers mark the main rhythm on their tabors while the independent side-drum player beats more subtle rhythms. The effect recalls that of a drum and fife band (*see* BASQUE MUSIC). The simple pipe and tabor, with a pipe about 40 cm long, is found throughout western Spain (as the *pito* or *gaita*, the latter not to be confused with a bagpipe of the same name in north-west Spain, and *tambor*; *see* SPAIN, fig.5), and Portugal (as the *flauta*) from Salamanca and Miranda do Douro as far south as Huelva and the southern border of Alentejo. The instruments are used in fiesta dances and processions to shrines. In Catalonia (as *flabiol*), and sometimes in the Balearic Islands, in Castile and in the Minho, the pipe is considerably shorter than a normal

tabor pipe (about 20 cm long) and has four or five holes in front and two behind. It is played by shepherds and boys, often without a drum, using both hands. If a tabor is used, the left hand covers three holes in front and the upper thumb-hole, while the upper surface of the little finger covers the lower thumb-hole. The first six or seven notes of the scale are made as fundamentals with the help of cross-fingering, which is feasible since the pipe is so short. For the *sardana* bands (or *coblas*) the *flabiol* is provided with three keys, to assist in playing in different tonalities, and is accompanied by a small *tamboret* attached to the player's arm.

Varieties of pipe and tabor are also found in Latin America. The Colombian *conjunto de gaitas* is an ensemble of two *gaitas* (duct flutes), a *tambor mayor* and a *llamador* (single-headed drums) and a maraca (*see* COLOMBIA, fig.3). The player of the *gaita macho*, which has only two finger-holes, also shakes the maraca. The Tucano Indians of the Colombian Amazon region play an instrument in the form of a turtle-shell; the shell is grasped by the calf and thigh under the bent knee and is rubbed at the waxed end with the palm of the hand. Often one man plays both the turtle-shell and a panpipe together. Musicians in the Altiplano of Bolivia play several pipe and tabor combinations; an example is the use of a small drum with the *waka-pinkillo* (a pipe with two holes at the front and one at the back) played for the *waka-waka*, a Spanish dance miming bull-fighting. The *los sonajeros* Conquest dance of Mexico may also be accompanied by pipes and tabors (*see* MEXICO, fig.6).

In eastern Europe some three-hole pipes are used in traditional music, for example in Slovakia (with the three holes in front) and in Russia (with two holes in front, one behind) where they are made as a pair tuned a 4th apart, to be played by one person. But these pipes are never combined with a drum and it is unlikely that they have any historical connection with the tabor pipe.

ANTHONY C. BAINES/HÉLÈNE LA RUE

Pipegrop [Pipgrop, Pipgroppe], **Heinrich.** *See* BARYPHONUS, HENRICUS.

Pipelare, Matthaeus (*b c*1450; *d c*1515). South Netherlandish composer. He was active in Antwerp but left there to become Master of the Choristers for the Confraternity of Our Lady at 's-Hertogenbosch, remaining there from the spring of 1498 until about 1 May 1500. His name indicates that either he or a forebear played woodwind instruments, perhaps as a town piper. In the words of Ornithoparchus, as translated by John Dowland in 1609, Pipelare was one of several composers whose works 'flow from the very fountaine of Art'.

Pipelare wrote in almost all the forms of his day, and his style is characterized by its wide diversity, ranging from a dense polyphony, as in the first section of the St John Credo, to a homophonic style, as in *Vray dieu d'amours*. He approached the style of Pierre de La Rue in the sombre melancholy of some of his works, such as parts of the *Missa 'Mi mi'*, but such other compositions as the chanson *Morkin ic hebbe* are gay and light. Two characteristics of his style are the frequent use of syncopation and sequence.

The *Missa 'Floruit egregius infans Livinus'* is in an early style. The cantus firmus, which migrates freely from voice to voice, employs altogether 20 chants for St Livinus. All movements except the Kyrie conclude with the same musical section in triple metre to produce a final 'refrain' reminiscent of Faugues. The third Agnus Dei of the second *Missa sine nomine* is noteworthy for an altus part consisting only of the note A, which is symbolically notated. The *Missa 'L'homme armé'* contains some of his most exciting writing, building up to the grandiose final Agnus Dei. The *Missa 'Dicit Dominus'* is a study in the complexity of rhythmic structure: the cantus firmus appears in various mensurations conflicting with those of the other parts.

The *Missa 'Fors seulement'*, with its rich sonorities, is primarily a cantus firmus mass with the famous melody from Pipelare's own chanson (second setting) rhythmically differentiated from the other parts. On the other hand, all the parts of the first *Missa sine nomine* are so permeated with the pre-existing material that it can be called an example of 'saturation' technique. Sequence and unpretentious singable lines characterize the *Missa 'Johannes Christe care'/'Ecce puer meus'*; the texture of this mass is *a* 3 since the cantus firmus is absent much of the time. This work and the St John Credo were probably written in 1498 or 1499. Pipelare was a master of large complex structures, but that he did not need complicated organization to bring out his finest writing is nowhere more obvious than in his *Missa de feria*, which though simple in style contains some of his most memorable music.

Pipelare's motets show the same diversity of style as his masses. The *Salve regina* and *Ave Maria ... virgo serena* display an early style in their use of short notes in syncopated rhythms. There is a more careful declamation of the text in *Memorare mater Christi* (closely modelled on Josquin's *Stabat mater*) and the *Magnificat*, in which the composer allowed the voices to move within carefully considered vertical sonorities. Here, especially in the *Magnificat*, he looked to the future, not only in his careful treatment of dissonance but also in his sense of balance both among the voice parts and in the phrase structures.

Among his Flemish chansons, *Een vrolic wesen* seems intended as a solo with instrumental accompaniment, as was an earlier setting by Barbireau. Of the three or possibly four French chansons, there are two settings of

Fors seulement, one version based on Ockeghem's famous chanson and a second on a new tenor melody. The second version was extremely popular, to judge both by the many manuscripts and prints that contain it and by the many compositions that in turn were based on it.

WORKS

Edition: *M. Pipelare: Opera omnia*, ed. R. Cross, CMM, xxxiv (1966–7) [C]

MASSES

Missa de feria, 4vv, C ii (paraphrase and c.f. from Gregorian masses XV and XVIII)
Missa 'Dicit Dominus', 4vv, C ii (c.f. ?T from polyphonic composition in *A-Wn* 11883)
Missa 'Floruit egregius infans Livinus', 4vv, C ii (c.f.: text in honour of Livinus, patron saint of Ghent)
Missa 'Fors seulement', 5vv, C ii (c.f. T of his own chanson, second setting)
Missa 'Johannes Christe care'/'Ecce puer meus', 4vv, C iii (c.f. seq 'Johannes Christe care' and ant 'Ecce puer meus' in honour of St John the Evangelist; Gl partly reconstructed in modern edn)
Missa 'L'homme armé', 4vv, C iii (c.f. popular tune)
Missa 'Mi mi', 4vv, C iii (Ag has material from Gregorian Ag, Mass X)
Missa omnium carminum, 4vv, MS lost in World War II
Missa sine nomine (i), 4vv, C iii (c.f. and paraphrase)
Missa sine nomine (ii), 4vv, C iii (c.f.)
Missa, 8vv, MS lost in World War II
Credo de Sancto Johanne evangelista, 5vv, C ii (c.f. ant 'Occurit beato Johanni ab exilio')

MOTETS

Ave castissima, 4vv, C i (text: incipit only)
Ave Maria ... virgo serena, 5vv, C i (paraphrase of seq melody; Ct ii reconstructed in modern edn)
Exortum est in tenebris (Ps cxi.4) [= Fors seulement], 4vv, C i
Hic est vere martyr, 4vv, C i (survives only in kbd intabulation)
Laudate, pueri, Dominum, 4vv, 1538[8], ed. H. Albrecht (Kassel, 1959) [= Hosanna of Missa sine nomine (i)]
Magnificat, 4vv, C i (alternatim with piainsong, 3rd tone)
Memorare mater Christi, 7vv, C i (for the feast of the Seven Sorrows of the BVM; c.f. T of Urreda's Nunca fué pena mayor)
Salve regini, 5vv, C i (alternatim with plainsong)
Sensus carnis mors est [= Ag II of Missa 'Mi mi'], 3vv, C i (text: paraphrase of Romans viii.6)
Virga et baculus tuus (Ps xii.4), 2vv, C i

SECULAR

Een vrolic wesen, 4vv, C i (Barbireau's Sup in Sup)
Fors seulement (i), 4vv, C i (Ockeghem's Sup in the A)
Fors seulement (ii), 4vv, C i (the basis for Pipelare's mass)
Ic weedt een molenarinne, 4vv, C i (paraphrase; based on a folksong)
Mijns liefskins bruyn ooghen, 4vv, C i (survives in 3 transpositions)
Morkin ic hebbe, 4vv, C i (text: incipit only)
Vray dieu d'amours, 4vv, C i (survives in 2 versions)
Vray dieu que pene m'esse, 4vv, C i (also attrib. Compère and Gaspart; probably not by Pipelare)

RONALD CROSS

Piperinus [Pfaefferli], **Christoph** (*b* Berne; *d* Basle, 1565). Swiss clergyman and music teacher. In 1541 he served as a minister's assistant in Interlaken. On 5 November 1543 he enrolled at Basle University where, between November 1546 and summer 1547, he gave private music lessons to Basilius Amerbach, son of the Basle humanist Bonifacius Amerbach. By 1547, Piperinus left Basle for Burgdorf, and from 1552 to 1555 he served as a clergyman in Bueren an der Aare. He apparently returned to Basle for a brief visit in 1559 and died of the plague in 1565.

Piperinus's activities as a music teacher are documented in extraordinary detail in four manuscripts, housed today in the University Library of Basle (*CH-Bu* F IX 32–5, F X 5–9, F X 22–4 and kk IV 23–7). They were compiled by Piperinus solely for the purpose of teaching the 'art of singing' to Basilius Amerbach. Collectively, they document Piperinus's teaching methods, reveal the repertory that he felt appropriate for the 13-year-old to learn and show the musical progress that Basilius would have made over a six-month period. Piperinus's teaching methods encompassed reading and copying music as well as singing music to solmization syllables. His pedagogical repertory included international as well as local polyphony; lieder, chansons, motets, *Magnificat* settings, hymns and secular Latin pieces by such composers as Sermisy, Janequin, Willaert, Senfl and Johannes Wannenmacher. Piperinus also worked as a music copyist; the two surviving manuscripts of Hans Buchner's *Fundamentum* and most of Buchner's organ compositions were copied by him.

JOHN KMETZ

Pī phāt. Classical instrumental ensemble of THAILAND, consisting of both melodic and rhythmic percussion instruments and an aerophone (oboe or flute). Functionally, the *pī phāt* performs the highest classes of compositions, such as extended suites and virtuoso pieces, for serious occasions such as the 'teacher-greeting' ceremony *wai khrū*, funerals and Buddhist rituals. The *pī phāt* also accompanies *khōn* (masked theatre), *lakhōn* (dance theatre) and *nang yai* (large shadow theatre).

The essential *pī phāt* ensemble consists of the higher-pitched xylophone *ranāt ēk*, the lower-pitched circular gong-chime *khǫng wong yai*, *pī* (the quadruple-reed oboe that gives its name to the ensemble) plus *ching* (a pair of small cymbals) and one or two drums: *taphōn*, *klǫng sǫng nā*, or *klǫng khāēk*. This basic group, called *khrūang hā* ('five instruments'), may be expanded through the addition of the lower-pitched xylophone *ranāt thum*, circular gong-chime *khǫng wong lek* and one or both of the metallophones *ranāt ēk lek* and *ranāt thum lek*, as well as various rhythmic percussion. There are principally three kinds of *pī phāt* in use today: the loud, hard-mallet ensemble *pī phāt mai khāēng* including the quadruple-reed oboe *pī*, the soft-mallet ensemble *pī phāt mai nuam* which includes both the two-string fiddle *sǫ ū* and *khlui* (flute) instead of oboe, and the 'Mon' ensemble *pī phāt mǫn*, which is distinct from the others. Whereas the *pī phāt mai khāēng* plays the highest class of repertory, the *pī phāt mai nuam* plays lighter, more tuneful compositions. The *pī phāt mǫn*, while allegedly of Mon origin, is actually played by Thai musicians primarily for funerals.

Whereas the usual circular gong-chimes are laid out horizontally, those of the Mon ensemble are U-shaped and stand vertically (for illustration *see* GONG-CHIME, Table 1). In addition the Mon ensemble has an oboe distinguished by its deep pitch and large, loosely-attached bell (*pī mǫn*) similar to the *hnè* of Myanmar and may add a set of seven tuned drums (*pōeng māng khǫk*) which has a melodic function and is hung on the inner wall of a circular frame. Other kinds of *pī phāt* ensembles formerly in use are now either extinct or rarely encountered.

The music of the *pī phāt* is perhaps the most challenging to listen to in Thailand's classical repertory owing to its predominantly motivic character. Though the most basic form of the composition is played by the larger circular gong-chime, listeners tend to focus on the more active higher-pitched xylophone and oboe parts; the former plays continuous octaves without evidence of phrasing. Even though general listeners in Thailand may have difficulty relating to the music, the sound of the *pī phāt* is associated with the country's most sacred rituals, and most acknowledge that the *pī phāt* represents Thai classical music in its highest form.

TERRY E. MILLER

Pipkov, Lyubomir (Panayotov) (*b* Lovech, 6/19 Sept 1904; *d* Sofia, 9 May 1974). Bulgarian composer and conductor; son of Panayot Pipkov. He studied at the Sofia State Music Academy, graduating in 1926, and then in Paris at the Ecole Normale (1926–32) under Dukas (composition), Léfébure (piano) and Boulanger (music history). After graduating he returned to Sofia and worked at the National Opera, first as répétiteur, then as chorus master and finally as director (1944–7). In 1948 he was appointed professor of vocal ensemble and opera at the Sofia State Academy. He co-founded the society Contemporary Music in 1933, was founder of its successor, the Union of Bulgarian Composers, and from 1945 to 1952 he served as secretary of the Bulgarian Choral Union. He was director of the festival March Musical Days in Russe, and of Lilac Musical Days in Lovech. From the mid-1960s he was a member of the ISME.

The author of celebrated works of the 1920s and 30s, Pipkov was one of the most important representatives of the second generation of Bulgarian composers; as such he was a founder of a national style. His musical language evolved naturally through successive stages. In the early 1920s he made his début with chamber pieces in the style of Chopin, Schumann, Debussy and Ravel, while in the First String Quartet (1928, the first also in Bulgaria), having mastered the principles and forms of the European tradition, he moved to embrace Bulgarian folk music. During the remaining Paris years he took on board new genres while endorsing a typically Bulgarian epic sense of drama, an example being *Yaninite devet bratya* ('Jana's Nine Brothers', 1919–32), a work that was in effect the first Bulgarian classical opera. Upon his return to Sofia, Pipkov quickly established himself as a writer, critic (his article 'Za Balgarskiyat muzikalen stil' was something of a manifesto for the society Contemporary Music) and conductor, as well as composer. His vocal-orchestral *Svadba* ('Wedding'), completed in 1935, marks the beginning of the cantata in Bulgarian music, while the equally innovative First Symphony served to summarize the achievements of his first period.

The second phase in his output spans the 1940s and the first half of the 50s. His epic dramatic style is developed and perfected, particularly in the opera *Momchil* (1939–43), and in Symphony no.2 this gives rise to his most accomplished orchestral writing yet. At this juncture in his career Pipkov extended his teaching activities and assumed a higher public profile, and as an adjudicator and representative of the Union of Bulgarian Composers he travelled extensively throughout Europe.

In addition to their expressiveness and strong sense of drama, the works from the mid-1950s onwards convey the spirit of optimism. This is particularly true of *Oratoriya za nasheto vreme* ('Oratorio for our Time') and *Priglusheni pesni* ('Muted Songs'). The Fourth Symphony (1968–70) is highly individual, while the piano piece *Proletni priumitsi* ('Spring Caprices', 1971–2) revisits compositional ideas from earlier works.

As a whole, the operas and orchestral works have qualities which are akin to the realism of Shostakovich, Bartók and Britten.

WORKS
(*selective list*)

DRAMATIC

Yaninite devet bratya [Yana's Nine Brothers] (op, N. Veselinov and Pipkov), op.17, 1929–32, Sofia, National, 1937
Momchil (op, K. Radevski, after S. Zagorchinov: *Den Posleden, Den Gospoden* [The Last Day, the Day of Our Lord]), 1939–43, Sofia, National, 1948
Antigona '43 (op, V. Bashev and P. Panchev, after Sophocles), op.63, 1961–2, Ruse Opera, 1963
Film scores: Trevoga [Trouble], op.29, 1948–50; Septemvriitsi [The Septembrists], op.35, 1952–4; Zemya [The Earth], op.41, 1956; Komandirat na otryada [Group Commander], op.45, 1958–59; Stublenskite lipi [The Linden Trees of Stublena], op.58, 1960; Tsarska milost [The Mercy of the Tsar], op.55, 1961–2; Legenda za Paisii [A Legend of Paisii], op.62, before 1973
Incid music

VOCAL

Choral: Svatba [Wedding] (cant., N. Furnadzhiyev), op.10, mixed chorus, orch, 1931–5; Oratoriya za nasheto vreme [Orat for our Time] (V. Bashev), op.61, B, spkr, mixed chorus, children's chorus, 1959; Cant. (P. de Ronsard, F. García Lorca, R. Alberti and others), op.64, S, B, chbr orch, 1963–4; 4 Madrigals (Bulg. poets), op.67, mixed chorus, 1967–8; Dyavolsko darvo [The Devil's Tree] 3 folksongs, op.76, mixed chorus, 1971; Priglusheni pesni [Muted Songs] (M. Tsvetayeva) 4 songs, op.80, female chorus, 1972
Choral songs: Na nivata [In the Field], 1937; Proleten vyatar [A Spring Breeze], 1938; Zhalta peperuda [Yellow Butterfly], 1940; Shumete debri i balkani [Make the Mountain Trees Whisper], 1944; Nani mi nani Damyancho [Sleep Damyancho Sleep], 1948; Tsarevitsa ranna [An Early Corn], 1948; Pesen za malkiya chirak [Song for the Little Apprentice], 1959
1v, ens: 4 Folksongs, op.5, 1v, fl, vc, pf, 1928; Haydushka Planina [The Haidouk Mountain] (after 5 folk songs, op.13, 1v, fl, 2 vn, 2 va, vc, db, pf, perc, 1937; 5 narodni pesni [5 Folksongs], op.18, high v, chbr orch, 1938
Solo songs (1v, pf): 5 pesni, op.4, 1928–9; 7 narodni pesni, op.36, 1948–49; 7 pesni, opp.46 and 51, 1950–60

INSTRUMENTAL

Orch: Sym. no.1, op.22, 1937–40; Prolet nad Trakiya [Spring in Thrace], op.16, chbr orch, 1938; Vn Conc., op.43, 1948–50; Geroichna uvertyura [Heroic Ov.], op.37, 1949; Patuvane iz Albaniya [Journey though Albania], op.38, str, 1949–52; Pf Conc., op.48, 1952–4; Sym no. 2, op.47, 1953–5; Sym.-Conc., op.56, vc, orch, 1953–63; Sym. no. 3, op.65, tpt, str, perc, 2 pf, 1965; Cl Conc., op.70, 1966; Sym. no. 4, op.74, str, 1968–70
Chbr and solo: Str Qt no.1, op.3, 1928; Conc., wind, perc, pf, 1929; Sonata, op.7, vn, pf, 1929; Pf Trio, op.8, 1930; Pf Qt, op.20,

1938; Str Qt no.2, op.31, 1948; Str Qt no.3, op.66, str qt, timp, 1965; Sonata, op.73, vn, 1969

Pf: Pogrebeniye [Funeral], 1921; Sonata, a, 1921–3; Septemvriiska prelyudiya 1923 [Prelude for September 1923]; Pesni bez dumi [Songs without Words], 1926; Poyema, 1926; Balgarska syuita, op.2, 1928; Yunosheski sbornik [Works for Young People], op.14, 1936–7; Pastoral, op.24, 1944; Starinen tants [Dance of Old], op.26, 1946; Metroritmichni kartini i studii [Metrorythmical Parts and Pieces], opp.69 and 77, 1966–72; Proletni priumitsi [Spring Caprices], op.78, 1971–2; Ot yedno do petnadeset [1 to 15], op.81, 1973; Detski radosti [The Children's Joy], 1973–4

IVAN HLEBAROV

Pipkov, Panayot (*b* Plovdiv, 21 Nov 1871; *d* Sofia, 25 Aug 1942). Bulgarian composer. As a child he studied the violin and sang in Baidanov's choir. In 1893 a scholarship enabled him to study for two years at the Milan Conservatory. Thereafter he returned to Bulgaria to work as a choral and orchestral conductor in Ruse, and from 1905 until his death he was active in Sofia as a teacher, actor, bandmaster, composer, chorus master of the Sofia National Opera, collaborator on a humorous newspaper and writer of poetry and plays.

Pipkov left a large number of choral songs, many for children, but he is notable above all for his small piano pieces, the first Bulgarian contributions to the genre. His very popular choral hymn *Varvi, narode vasrodeni* ('Go, Enlightened People') is sung throughout Bulgaria each 24 May, Slavonic Literature Day.

Pippo del Violoncello. *See* AMADEI, FILIPPO.

Pique (Fr.). *See* ENDPIN.

Pique, François-Louis (*b* Roret, nr Mirecourt, 1757; *d* Charenton St Maurice, nr Paris, 26 Oct 1822). French violin maker. He was an exact contemporary of Nicolas Lupot; the two were friends and business associates, and such is the similarity of their work that it is often confused. After serving an apprenticeship with Saunier at Mirecourt, Pique moved to Paris where he settled first in the rue Coquillière, near St Eustache; he moved to the rue de Grenelle-St-Honoré in 1798, and finally to the rue des Deux-Ecus. In 1794 Lupot left Orléans to join him, staying four years before opening his own business. The pattern of Pique's violins differs slightly from Lupot's and tends to be a little oversized. He had a liking for fronts of broad grain, and his scrolls are comparatively unimpressive. How much he influenced Lupot and how much it was the other way round is a matter for speculation, but the history of violin making in France probably owes more to Pique than is usually acknowledged. (*VannesE*)

CHARLES BEARE/SYLVETTE MILLIOT

Piquer (Fr.). A term meaning 'to dot' in the sense of NOTES INÉGALES or, as a type of bowing, to detach or separate. According to Loulié (*Elements*, Paris, 1696), *piquer* or *pointer*, applied to a passage of quavers written as equal ('in any time signature, but especially in triple time'), meant that the first quaver was to be played much longer than the second so that the first quaver 'ought to have a dot'. The result is evidently patterns of dotted quavers followed by semiquavers. On the other hand, Brossard (*Dictionaire*, 1703) wrote that *picqué* or *pointé* meant about the same as spiccato or staccato, which to Brossard meant to play the notes detached or separated. He did not mention Loulié's dotted quaver–semiquaver pattern in this connection. *See* BOW, §II, 2(vii); and POINTER.

DAVID D. BOYDEN

Piquigny, Nicholas. *See* PYKINI.

Pirchner, Werner (*b* Hallitirol, 13 Feb 1940). Austrian composer and jazz musician. Self-taught as a composer and vibraphone player, he followed the latest trends in jazz music as a youth. Later influences included the theories of Schoenberg, and the music of composers from Bach, Schubert and Bartók to Thelonious Monk and John Cage. After arranging music for the Austrian armed forces' dance band, he became a freelance composer and performer. Co-founder of the Pirchner-Pepl-JazzZwio (1975–85) with the guitarist Harry Pepl, he has also appeared with the Oscar Klein Quartet, Mumelter's Concertodrom, Austria Dei, the Vienna Art Orchestra, Eisenbahner-Musik Innsbruck, the Lauren Newton Quartet and other performers and ensembles. He began to compose music for classical musicians in 1981. His sound design for Austrian Radio/Ö 1 was completed in 1994.

Pirchner's music projects a state of uncertainty. Mourning and melancholy never appear unambiguously and a suggestion of subversive sadness lingers even when there is a pretence of happiness. His work represents a fragment of culture not only against the apparent culture of the bourgeoisie, but also against the smugness of a provincial, patriotic, pseudo-popularism. Unlike many contemporary composers, Pirchner has not asked himself whether what he has done is new; instead, in the interest of self-criticism, he has taken what was already in existence, subjected it to a process of alienation in a highly original, oddly bizarre fashion and thereby held a mirror up to his

country and his region. In his music, seriousness and entertainment are not incompatible opposites. As Harry Larcher noted in a radio broadcast: 'Rarely has a musician, a composer so self-consciously positioned himself between every category of music, the only place where the spirit can still move freely and unsupported by dogmatic allegiance'.

Pirck [Birk, Birckh, Birck, Pirckh, Pürk, Pürck], **Wenzel Raimund (Johann)** (*b* Leopoldstadt, Vienna, bap. 27 June 1718; *d* Leopoldstadt, 17 July 1763). Austrian composer, organist and teacher. He spent his entire career at the Viennese court. From 1726 to 1739 he was a *Hofscholar*; his teachers included Matteo Palotta. On 6 February 1739 he succeeded Georg Reutter (i) as court organist, and he held this position until his death. He also taught music – in particular, keyboard playing – to the archdukes; Christoph Sonnleithner was another of his pupils. In his upbringing and in the style of his music he was a typical product of the imperial court, but copies he made of keyboard works by Handel show the breadth of his musical interests. As Kirkendale has shown, the solid learning that informs his more austere pieces, as well as his predilection for fugues in multi-movement instrumental works, may have influenced the musical tastes of Emperor Joseph II. His output has clearly not survived complete and it has not yet been systematically studied, especially as regards its importance for the Viennese pre-Classical style.

OTTO BIBA

Pires, (Luís) Filipe (*b* Lisbon, 26 June 1934). Portuguese composer and pianist. From 1946 to 1953 he studied the piano with Lúcio Mendes and composition with Artur Santos and Jorge Croner de Vasconcelos at the Lisbon Conservatory. From 1950 he has pursued a prominent career as a pianist in Portugal and later abroad. From 1957–60 he studied in Hanover, on a government grant, with Winifried Wolf (piano) and Ernst-Lothar von Knorr (composition). He then taught composition at the Oporto Conservatory (1960–70). Meanwhile, he worked as a critic and gave conferences and courses on analysis. During the 1960s he attended the Darmstadt summer courses and studied 12-note composition in Berlin with Kroellreuter (1964) and electronic music in Paris with Pierre Schaeffer (1970–72). From 1972–5 he taught composition, analysis and electronic music at the Lisbon Conservatory, of which he was also director. From 1975–9 he worked as a music specialist for the International Secretariat of UNESCO in Paris, and also in various private and state institutions. Since 1993 he has been professor of composition at Oporto Conservatory. He has received numerous composition prizes in Portugal and abroad.

The music of Pires's early period combines traditional formal structures with modal, 12-note and, since 1954, atonal elements arrived at through a progressive use of chromaticism. From 1958 onwards his music gradually evolved towards a 12-note style. In the 1960s he strove to extend his serialism to duration and dynamics, and explored combinations of timbre, permutations and variable and aleatory elements in relation to the form. In the 1970s he began to compose taped music using natural sources of sound. His interest in non-European cultures is evident in his use of hybrid scales and modes, heterophony and diverse musical quotations. From the 1980s onwards, his music has also had minimalist tendencies.

ADRIANA LATINO

Pires, Maria-João (*b* Lisbon, 23 July 1944). Portuguese pianist. She first appeared in public at the age of four, and between 1953 and 1960 studied at the Conservatório Nacional in Lisbon with Campos Coelho and Francine Benoit. At 18 she won a scholarship to study in Germany, first at the Musikhochschule in Munich with Rosl Schid and then in Hanover with Karl Engel. In 1970 she won the Beethoven Bicentennial Competition in Brussels and commenced an international career. She made highly acclaimed recital débuts at the Queen Elizabeth Hall in London in 1986 and Carnegie Hall, New York, in 1989. But long periods of silence (notably between 1978 and 1982) have reflected her need for stocktaking and her dislike of the exigencies of a modern concert pianist's life. An avid chamber music player, Pires has toured extensively with the French violinist Augustin Dumay, and in 1994 formed a trio with him and the cellist Jian Wang. Her numerous recordings include two complete sets of Mozart piano sonatas and many of his piano concertos, much Chopin (for whom she shows a special affinity) and discs of Bach, Schubert and Schumann. With Dumay she has recorded chamber music by Mozart, Beethoven, Brahms, Grieg, Franck, Debussy and Ravel. All Pires's performances are distinguished by her crystalline technique, spontaneous poetry and profound, impassioned musicianship.

BRYCE MORRISON

Pires, Vasco (*fl* Coimbra, 1481–1509). Portuguese composer. He was appointed a singer at Coimbra Cathedral on 1 April 1481. In 1509 he was described as 'the bishop's singer' and held a prebend at S João d'Almedina. In the sale of some cathedral property on 20 December 1547 he is mentioned as a deceased *mestre de capela*. There are two extant works by him, a four-part *Magnificat quarti toni*, even-numbered verses only (*P-Cug*, choirbooks 12 and 32) and a three-part alleluia, also in the fourth tone (*P-Cug*, choirbooks 9 and 12; ed. in PM, ser.A, xxxvii, 1982). The textless alleluia was the first of a long series of similar pieces written in Portugal: these all lack text but were therefore adaptable to any feast.

ROBERT STEVENSON

P'iri. Small, cylindrical double-reed pipe of Korea. There are three main types: *hyang-p'iri* ('native *p'iri*'), *se-p'iri* ('thin *p'iri*') and *tang-p'iri* ('Chinese *p'iri*'); the *hyang-p'iri* is sometimes called *sagwan* or *tae-p'iri*. All three types are made of bamboo, use oversize bamboo reeds and have eight finger-holes; they are distinguished by size, timbre, tessitura and repertory. In addition to these three types, there are countless folk instruments with great differences in size, numbers of holes, and playing techniques.

The *hyang-p'iri* is about 27 cm long with a shaved bamboo double reed, itself over 7 cm long and more than 1 cm wide. The first finger-hole is in the rear, and the instrument has a range of less than two octaves, overblowing not being used. The *hyang-p'iri* has a loud, rough and nasal timbre, and in ensembles it is always the lead instrument. It is used both in court music (such as the ensemble piece *Sujech'ŏn*) and in folk music (shaman instrumental ensembles and the virtuoso solo genre *sanjo*). There is a system of onomatopoeic notation using the nasal consonant *n* with various vowels (*na*, *nu*, *nŏ* etc).

The *se-p'iri* is somewhat shorter and more slender than the *hyang-p'iri* but similar in range and construction. Its tone is much gentler than either of the other two *p'iri*, and it is therefore reserved for ensembles which accompany singing (e.g., lyrical *kagok* or *sijo* poetry chanting) or which use the soft Korean string instruments (as in the 'string version' of the suite *Yŏngsan hoesang*). Its use is limited to aristocratic genres.

The *tang-p'iri* is the same length as the *se-p'iri* but is considerably thicker, being made of dark and aged bamboo with prominent nodes. Its bore is the largest of the three types of *p'iri*, and the thumb-hole is the second (not the first) of the eight holes. The *tang-p'iri* is considered the hardest to play and overblowing at the 11th is used to obtain three notes in the high register. Its tone is more strident than that of the *hyang-p'iri*, and it is restricted to court music, both *tangak* ('Chinese music') and *hyangak* ('native music').

All three *p'iri* have a wide dynamic range and are highly expressive. Subtle gradations of pitch, as well as the wide vibrato characteristic of Korean music, may be obtained by varying the lip pressure on the reed, the air pressure and the position of the reed in the mouth.

The *p'iri*, which bears a close relationship to the Japanese HICHIRIKI and the Chinese *guan*, is considered Central Asian in origin, from the ancient state of Kucha, now in western China. The name *p'iri* is used to describe instruments in a Korean ensemble at the court of the

Chinese Sui dynasty (581–618 CE). Korean sources indicate that the *p'iri* was in use at the Korean court by 1076, and 20 *p'iri* were included in a gift of instruments from the Song Chinese emperor in 1114.

The Chinese treatise *Yueshu* (1103) indicates that the *p'iri* (Chin.: *bili*) had nine finger-holes, but the *Akhak kwebŏm* (1493) observes that all the necessary pitches may be obtained with only eight. The Korean instruments have subsequently retained the eight-hole configuration, while the Japanese *hichiriki* still has nine.

ROBERT C. PROVINE

Piriou, Adolphe (*b* Morlaix, 7 Sept 1878; *d* Paris, 3 Feb 1964). French composer. The son of a pharmacist of Scottish origin, he studied for five years at the Ecole Supérieure de Pharmacie in Paris before leaving in order to devote himself to music. He studied the violin with Joseph Debroux and Lucien Capet, and then composition with his brothers-in-law Pierre and Aymé Kunc in Toulouse, where the latter was director of the Conservatoire. On returning to Paris he completed his studies with D'Indy and Sérieyx, and was advised by Florent Schmitt. His compositions won several prizes, and he was active as a music critic and writer (he contributed to *Cobbett's Cyclopedic Survey of Chamber Music*), and as a researcher and producer for French Radio.

Piriou derived his chief inspiration from his native Brittany, which he celebrated in several of his works. Trained in the school of D'Indy, he did not always avoid a longwindedness which sometimes stifled poetic and melodic inspiration. The most original part of his work is in his symphonic compositions and his remarkable ballet with choruses, *Le rouet d'Armor* (1922–3), which skilfully integrates many traditional Breton songs and dances into its colourful language.

WORKS
(*selective list*)

Stage: Le rouet d'Armor (légende chorégraphique, 2, M. Geistdorfer), op.20, 1922–3, Paris, 1936; Court-circuits . . . lumière (comédie lyrique, 3, A. Henry and J. Wanerdo), op.53, 1939–47, unperf; La Charlezenn (légende lyrique, 3, Piriou and Henry), op.55, 1939–47, unperf; Les esprits de Garonne (poème musical et chorégraphique, 2, A. Berry), op.63, 1951–4, unperf; Dionysos et la mer (sym. lyrique et chorégraphique, A. Moralès Nadler), op.64, 1952, Antigua, 1957

Orch: 3 contes, op.6, 1911; Au pied d'un vieux calvaire, op.11, 1912; Au pays de Komor, orch suite, op.18a, 1920 [see Vocal and Choral: Komor]; Sinfoniale (Sym. no.1), op.32, 1932–3; Par les landes fleuries (Sym. no.2), op.46, 1944–6; Sym. no.3, op.65, 1943

Inst: Sonate, a, op.4, vn, pf, 1908–31; A la belle saison, op.19, pf, 1910–32; 3 contes, op.6, pf, 1911; Jeux d'enfants petits et grands, op.14, pf, 1913; Str Qt, g, op.21, 1923–30; Pavane pour Mélisande, op.22, pf, 1928; Scherzo-danse, op.23, pf, 1928; 3 pièces, op.37, 4 sax, 1935; Divertissement, op.47, 4 cl/4 sax, 1938; Aria et final, op.48, ob, cl, bn, 1938

Vocal and Choral: Cornouailles (grande fresque musicale), op.12, solo vv, chorus, orch, 1912–32; La nativité de la très sainte Vierge (petit orat.), op.16, S, chorus, wind, 1919; Komor (conte musical, C. Leconte de Lisle), op.18, solo vv, chorus, orch, 1920; Neiges et flammes (G.L. Garnier), op.33, 1v, orch, 1933–4

Songs (1v, pf): Heures d'été (A. Samain), op.1, 1905–6; Dans l'ombre des légendes (F. Ménez), op.10, 1912; Chansons marines (C. Dervenn), op.49, 1937; Efflorescences (L. Marschutz), op.51, 1940–41; La danse (J. de Lassus), op.68, 1955–6

JACQUES TCHAMKERTEN

Piron, (Charles) Alexis (*b* Dijon, 9 July 1689; *d* Paris, 21 Jan 1773). French dramatist. After studying law at Besançon, in 1719 he came to Paris where he began a long and successful association with the Fair Theatres. His first work produced there, the monologue *Arlequin Deucalion* (1722), brilliantly flouted the ban on spoken dialogue imposed by the official theatres and immediately established his reputation. In several *opéras comiques* of the 1720s he collaborated with composers of the stature of Rameau (*L'Endriague*, 1723; *L'enrôlement d'Arlequin*, 1726; *La P[ucelage], ou La rose*, 1726; *La robe de dissension*, 1726) and Royer (*Le fâcheux veuvage*, 1725; *Crédit est mort*, 1726). Their newly composed music not only relieved the staple diet of traditional melodies that was still the norm at the Fairs but also, in its 'operatic' style, acted as a clever foil to the *doubles entendres* and the farcical, episodic nature of the plays themselves. Other plays included music by L'abbé (*l'aîne*) (*Le mariage de Momus*, 1722; *Tirésias*, 1722; *L'âne d'or*, 1725) and Voisin (*L'âne d'or*; *Les chimères*, 1725). The playwright probably introduced Rameau to several of his future librettists, among them Fuzelier, who also worked at the Fair Theatres.

Piron's plays for the Comédie-Française – one of which, *Les courses de Tempé* (1734), involved a further collaboration with Rameau – were more coolly received, though the comedy *La métromanie* (1738) was an outright and enduring success.

GRAHAM SADLER

Pironkov, Simeon (Angelov) (*b* Lom, 18 June 1927). Bulgarian composer. He studied composition with Hadjiev and Stoyanov at the State Music Academy, Sofia, graduating in 1953. Before becoming a freelance composer (1962), he worked as a violinist and conductor. He was later appointed associate professor at the Higher Institute of Theatrical Arts and in 1980 became vice-president of the Union of Bulgarian Composers. In 1985 he was awarded the Herder Prize. His marked intellectual background has led him to adopt ideas found in avant-garde music, though with restraint and always from a philosophical perspective. His writing for films and the theatre has helped shape a laconic and structurally clear musical expression. The orchestral *Noshtna muzika* ('Night Music', 1968) is representative of the so-called Bulgarian neo-romanticism, which began with Nenov and continued in the work of Aleksandar Kandov. The

Bulgarian folk influences in *Night Music* signify a way of combining the experience of the individual with that of the contemporary age. Moral and philosophical questions are preferred subjects in his stage works.

MAGDALENA MANOLOVA

Pirot, André. See PIRRO, ANDRÉ.

Pirouette. The term used by Mersenne in *Harmonie universelle* for the turned wooden component mounted on a conical brass tube which is inserted into the upper end of a shawm and receives the double reed (*see* SHAWM, §1). It functions as a support for the lips, allowing the reed to vibrate freely inside the player's mouth, facilitating embouchure technique. It was also used on the earlier type of RACKET and on the 18th-century *bason d'amour* (*see* HAUTBOIS D'ÉGLISE. The French term, which Mersenne claimed was used by makers, became universally adopted by modern historians before a 17th-century English term 'fliew' (flue) came to notice in James Talbot's MS treatise of *c*1695 (*GB-Och*). In modern Catalonia, where shawms are still played, the corresponding term is *tudél*, also meaning a bassoon crook.

ANTHONY C. BAINES

Piroye, Charles (*b* ?Paris, 1668–72; *d* ?Paris, 1717–30). French composer, organist and harpsichordist. A pupil of Lully and Lambert, he served from 1690 to 1712 as organist of the Jacobins and from 1708 to 1717 at St Honoré. After leaving St Honoré he seems to have spent the remainder of his life as a harpsichord teacher. In 1732 he was mentioned by Titon du Tillet as one of the 'most able organists recently deceased', so the claim in the publisher's preface to his *Pièces choisies* that 'his compositions have acquired for him a well established reputation and his learned and delicate way of playing the organ and harpsichord bring each day renewed applause' is not without corroboration. Yet in the *capitation* lists of 1695 Piroye is taxed in the second of three classes, a step below such masters as Couperin, Marchand, d'Anglebert and Grigny. He was among the organists and harpsichordists who had to defend their profession against the onerous claims of the corporation of dance musicians in a dispute which dragged on from 1692 to 1773.

Piroye's works, though not numerous, cover a much broader range than is usual with French organists. His *Pièces choisies* are quite unlike other French organ music of the period, being clearly theatrical in nature. The titles – *La paix, L'allegresse* etc. – suggest divertissements, and the musical styles are those of the dance, with rhythms of the chaconne, gavotte, gigue and so forth. The textures, however, are closer to organ music than to typical harpsichord style. They are all in the form of multi-sectional 'dialogues' between different choirs of the instrument. According to Jean Bonfils (*MGG1*), the chromaticism and unconventional approach to form in *Jephté* suggest the influence of M.-A. Charpentier more than that of Lully and Lambert.

WORKS

Jephté (tragedy, 3), 1703, *F-Pn*
Messe de M. Biroat ('plain-chant musical'), *Pn*
Cantique pour le temps de noël, S, bc (Paris, 1703); ed. E. Borrel (Paris, 1922)
Le retour d'Eurydice aux enfers, S, 2 vn/fl, bc, intended as an afterpiece to Clérambault's cant. 'Orphée'
3 livres d'airs sérieux et à boire (Paris, 1695–7)
9 airs in Recueil d'airs sérieux et à boire de différents auteurs (Paris, 1695[3]–1724)
Pièces choisies ... tant pour l'orgue et le clavecin, que pour toutes sortes d'instruments de musique (Paris, 1712/*R*); La béatitude (inc.), ed. F. Raugel, *Les maîtres français de l'orgue aux XVIIe et XVIIIe siècles*, ii (Paris, ?1951)

DAVID FULLER

Pirro, André(-Gabriel-Edme) (*b* St Dizier, Haute-Marne, 12 Feb 1869; *d* Paris, 11 Nov 1943). French musicologist and organist. After studying with his father Jean Pirro, the local organist, he attended Franck's and Widor's organ classes at the Paris Conservatoire as a listener (1889–91); at this time he was organist and *maître de chapelle* at the Collège Stanislas. He also studied law at the Sorbonne while making a private study of music technique, and later attended the arts faculty at Nancy (1898–9). Subsequently he took the doctorat ès lettres at the Sorbonne in 1907 with an important dissertation on Bach's aesthetic. On the foundation of the Schola Cantorum (1896) he became a member of the directorial committee and professor of music history and the organ; after a period as organist at St Jean-Baptiste-de-Belleville (1900–04) he taught at the Ecole des Hautes Etudes

(1904–14). His career reached its climax with his appointment as Rolland's successor as professor of music history at the Sorbonne (1912–37), where in 1920 he established the first practical music university course in France. His pupils included Bridgman, Fédorov, Hertzmann, Machabey, Pincherle, Plamenac, Rokseth and Thibault.

Pirro's early interest in organ playing led him naturally to Bach as the subject of his first book, *L'orgue de Jean-Sébastien Bach*, which provides a valuable examination of Bach's output in relation to that of his precursors. His outstanding *L'esthétique de Jean-Sébastien Bach* attempted to define the symbolism of the music and earned him commendation from Schweitzer.

With three other books Pirro became established as a pioneer of modern French musicology: *Les clavecinistes*, *Schütz* and *Dietrich Buxtehude*, a figure that had attracted his interest during his work on Bach's predecessors. Pirro's numerous articles on early music include studies of the notation and performance of 15th- and 16th-century music, the frottola, Frescobaldi, 17th- and early 18th-century German music and several accounts of French organists; these show his awareness of the necessity for precise documentation of what was then largely uncharted material. His last and greatest work, *Histoire de la musique de la fin du XIVe siècle à la fin du XVIe* is an object lesson in scholarship, being packed with material gained at first hand or checked from reliable sources, and informed by keen critical insight.

G.B. SHARP/JEAN GRIBENSKI

Pirrotta, Nino [Antonino] (*b* Palermo, 13 June 1908; *d* Palermo, 23 Jan 1998). Italian musicologist. He studied music first at Palermo Conservatory and then from 1927 at Florence Conservatory (organ and organ composition diploma, 1930), and took a liberal arts degree with a thesis in art history at the University of Florence (1931). After a brief period as a radio organist he taught music history and worked as librarian at the Palermo Conservatory (1936–48), later becoming chief librarian of the Conservatorio di S Cecilia, Rome (1948–56); he was a founder (1951) and vice-president of the IAML (1951–4). In 1954–5 he was visiting professor at Princeton University and also lectured at UCLA (summer 1955) and Columbia University (1955); from 1956 to 1972 he was professor at Harvard University, where he was also chairman of the department (1965–8). He returned to Italy in 1972 to take up an appointment as professor of music history at Rome University. He was a member of the American Academy of Arts and Sciences (from 1967), the Accademia Nazionale di S Cecilia and the Accademia Nazionale dei Lincei, as well as honorary member of the AMS, the IMS, the Royal Musical Association and corresponding fellow of the British Academy. A council member for Harvard Publications in Music (1968–72), he received honorary

doctorates from Holy Cross College (1970), Chicago University (1975), the University of Cambridge (1985), Princeton University (1987) and the University of Urbino (1996). He was awarded the Feltrinelli prize from the Accademia di Lincei in 1983.

Pirrotta's interest in musicology was stimulated by a request from Ettore Li Gotti, professor of philology at the University of Palermo, to collaborate with him on a study of Sacchetti and the music of his period; for this research (published 1935) Pirrotta taught himself the notation, theory, forms and various other aspects of 14th-century Italian music. His next significant publications (delayed by the war) included an examination of French influence on Italian music of about the same period, and a study of the 14th-century madrigal and caccia. With Li Gotti he examined the newly discovered Lucca manuscript; this led him to an important account of Ciconia (then little known) and his style in relation to his Italian contemporaries. Paolo da Firenze, another composer represented in the manuscript, also became the subject of an independent study. As a result of these investigations he began to edit *The Music of Fourteenth-Century Italy* (1954–64). His writings on the music of the Ars Nova exhibit a patient logic and clarity of thought that characterize all his work: while never refusing to admit the existence of other points of view, his intellectual and musical honesty often led him to adopt a conservative (and thus often wholly independent) position. In many of his studies (e.g. 'Music and Cultural Tendencies in 15th-Century Italy', 1966) Pirrotta used his wide cultural knowledge and informed understanding of humanist sources to illustrate his analysis of the texts and his account of music's place in society. Breadth of understanding and freshness of approach also characterized his study of 17th-century opera; 'Early Opera and Aria' (1968) is an excellent disentanglement of the many interrelated applications of early monodic style. His work on the connections between *commedia dell'arte* and opera further demonstrated his ability to recognize relationships between the various traditions he examined. His articles have been reprinted in four different collections (see 1984, 1987 and 1994).

Pirrotta's thorough knowledge of so many periods (not only of Italian music but other areas of Italian culture as well) made him highly influential in the formation of several prominent American musicologists, and in Italy his careful, methodical approach greatly benefited young scholars. He was honoured with three Festschriften: *In cantu et in sermone: for Nino Pirrotta on his 80th Birthday*, ed. F. Della Seta and F. Piperno (Florence, 1989); *Ceciliana per Nino Pirrotta*, ed. M.A. Balsano and G. Collisani (Palermo, 1994); and 'A Memorial Gathering for Nino Pirrotta', *Studi Musicali*, xxviii (1999). Five issues of periodicals were dedicated to him: *RIM*, x (1975); *MD*, xlix (1975); *Ricercare*, x (1998); *Avidi lumi*, i (1998); and a section of *Studi musicali*, xxviii (1999), 43–63.

CAROLYN GIANTURCO/TERESA M. GIALDRONI

Pirumov, Aleksandr Ivanovich (*b* Tbilisi, 6 Feb 1930; *d* Moscow, 20 July 1995). Russian composer. He studied the piano with Vissarion Shiukashvili at the Music School in Tbilisi. From the 1950s he lived in Moscow; he graduated from the class of Kabalevsky at the Moscow Conservatory (1956) and completed his postgraduate studies in 1960. From 1962 he taught composition and counterpoint at the Moscow Conservatory. He was made Honoured Representative of the Arts of Russia in 1983.

Initially Pirumov worked principally with instrumental genres and quickly established himself as a composer with a refined technique and an original style based on the unique synthesis of Armenian folk idiom and contemporary European concert music. He composed several set pieces for the International Tchaikovsky Competition – Prelude and Toccata for the second competition (1962) and Scherzo for the fifth (1974) – and for the All-Union Competition of Young Performers he composed *Kontsert-variatsii* (1972). Shostakovich had a high regard for Pirumov's String Quartet no.2, which was presented as his diploma work on graduation from the Conservatory.

Echoes of Armenian choral songs can be discerned as early as the cantata *Dvadtsat' shest'* ('Twenty-Six', 1956); later, the oriental theme manifests itself in the composer's frequent use of poetry from the East (Rabindranath Tagore, Abulkosim Lakhuti, Avetik Isaakian, Ashot Grashi, Rasul Gamzatov) and in the liberal sprinkling of national tunes and rhythms (e.g. the *Lezghinka* as thematic material). The Second String Quartet and the Third Symphony in particular quote traditional melodies, the latter from the *Sayat'-Nova* collection of songs. Other characteristics include the use of exotic instruments such as the *Duduk*, *Saz* and *Tār*, and choruses based on the verse-refrain form more commonly associated with folksong. The colourfulness, the picturesqueness and the reliance on folk dance genres in his symphonies suggest a link with the music of Khachaturian. But, as distinct from the latter, Pirumov is predisposed towards epic profundity, and towards lucid, lyrical meditation.

WORKS
(*selective list*)

INSTRUMENTAL

Orch: Sym. no.1, 1956; Sym. no.2, 1963; Sym., str, perc, 1964–5; Sym. no.3, str, 1980; Kontsert-variatsii, pf, orch, 1972; Scherzo, 1974; Conc., ob, str, 1986
Chbr: 4 str qts: no.1, 1954, no.2, 1955, no.3, 1959, no.4, 1967; Sonata, vn, pf, 1979; P'yesï dlya ansambley goboyev [Pieces for Ensemble of Oboes]: Invention, 2 ob, Fugue, 3 ob, Prelude and Fugue on a Russ. Folksong, 3 ob
Pf: Prelude and Toccata, 1960; Sonatina no.1, 1960; Detskiy al'bom [Children's Album], 1966; Sonatina no.2, 1966; Studies, 1966; Variatsii na temu Belï Bartoka [Variations on a Theme by Belá Bartók], 1968; Voinstvennïy tanets [Martial Dance], 1968; Prelude, 1969; 24 Little Fugues, 1986
Other solo inst: 5 Preludes, org, 1967; Partita, ob, 1979
Film scores, incid music for radio plays

VOCAL

Choral: Dvadtsat' shest' [Twenty-Six] (Cant, 2, N. Aseev, A. Grashi), chorus, orch, 1956; Pis'mena [Runes] (6 poems, R. Gamzatov, trans. N. Grebnyov); a cappella chorus, 1966; 4 stikhotvoreniya [4 Poems] (A.S. Pushkin, M. Lermontov, V. Mayakovsky, Gamzatov, chorus, 1973; Dni Oktyabrya [Days of October], (orat, fragments from J. Reed: *Ten Days that Shook the World*, chorus, brass, org, perc, 1976; V pamyat' voina-brata [In Memory of a Warrior, my Brother] (Requiem, 7, A. Tvardovsky), chorus, pf, 1980
Iv, pf: Ey, chelovek! [Hey, you!] (R. Gamzatov), song cycle, Bar, pf, 1967; 2 romanca (Pushkin), 1979; 2 soneta (Shakespeare: Sonnets no.25, 71, trans. S. Marshak), 1979

Principal publishers: Sovetskiy kompozitor, Muzïka (Moscow)

JURY IVANOVICH PAISOV

Pisa. City in Italy, in Tuscany. Settled by the Romans in 89 BCE, it was one of the four medieval Sea Republics and was conquered by the Medici in 1494. Its oldest musical documents are three *Exultet* settings, two from the 11th century (*campo aperto*, almost completely diastematic) and one from the 13th (in central Italian notation). By the 11th century, the cathedral had a *canonico cantor* (later called *magister schola*), who directed the clerics in liturgical singing, and there is evidence that it had an organ by the 16th century (its bellows were restored in 1571). On 7 February 1556 the clerics' *schola cantorum* was replaced by a new *cappella* based on Flemish models. The cathedral was closed in 1595 because of a fire which apparently destroyed its library; the 17th-century inventories of the library show that during the 16th century the *cappella* repertory had included works by Willaert, Palestrina, Lassus, Marenzio and Vincenzo Galilei. The building was reopened in 1605. The cathedral organ was rebuilt, according to Banchieri (*Conclusioni del suono dell'organo*, 1609), by a 'Flemish' builder in consultation with the cathedral organist Antonio Buonavita, and Emilio de' Cavalieri. Among the *maestri di cappella* of the 17th century were Pompeo Signorucci, Vincenzo Mercanti and Teofilo Macchetti, whose musical manuscripts were acquired in 1715 by the Opera del Duomo (the administrative body of the cathedral) and whose liturgical services (mostly lost) were regularly performed. In the 18th century G.C.M. Clari and G.G. Brunetti were *maestri di cappella*; they performed works by Haydn, Cimarosa and Cherubini and their own four-part compositions with string or organ accompaniment. In the late 20th century the cathedral had a choir of 16 singers, an organist and a music director.

The Cavalieri di S Stefano, a lay order of knights, was founded by Cosimo I de' Medici in 1561. In 1571 their church (S Stefano dei Cavalieri) was consecrated and a *cappella musicale* founded; it had only voices at first but from the 17th century instruments as well. Notable *maestri* include Antonio Brunelli, G.L. Cattani and F.M. Gherardeschi. 311 volumes of music dating from the 17th century to the 19th are extant, as well as 65 volumes of chant (the earliest dated 1561). The order was suppressed in 1859 and the *cappella* disbanded, leaving only an organist. A large organ was built in 1571 by Onofrio Zefferini of Cortona, and a second and smaller one in 1618 by Cosimo Ravani. In 1733–7 A.B. della Ciaia supervised the construction of a new, grand instrument, built by the best Italian makers of the period, with 60 stops and four manuals (a fifth keyboard was a harpsichord), which became one of the most famous organs in Europe. It was modified several times (1839, 1870, 1913–14), and finally connected to the Zeffirini organ and furnished with pneumatic and electric action.

Other centres of sacred music were the church of S Caterina and S Nicola, the church of the Medici grand dukes, who spent Carnival to Holy Week in Pisa regularly from 1601 to 1625 and occasionally until 1684. They brought their Florentine musicians to participate in services at S Nicola, where until 1614 Caccini was *maestro di cappella* and his family performed; works by Peri were also heard there. The first record of secular music dates from 1588, when two 20-part madrigals by Buonavita, then organist at S Stefano, were performed for the arrival of Grand Duke Ferdinand I. The next year, for the arrival of Ferdinand's bride Christina of Lorena, there were mock battles with three pieces by Buonavita interspersed. In 1605 the grand dukes offered *giostre*, *abbattimenti d'armi*, *casi armigeri* and a *ballo martiale* to celebrate the marriage of Enea Piccolomini and Caterina Adimari, and in 1606 an *Abatimento di Diario et il finto Alessandro* with words and music by Duke Ferdinand Gonzaga was performed. Further court performances included an opera by Gonzaga (1607, in the hall of the Consoli di Mare, later the Teatro Pubblico) and C. Galletti's *L'Orindo* (1608). Antonio Pisani's cantata *Alfea reverente* (1639) was composed for the arrival of Vittoria della Rovere, wife of Grand Duke Ferdinand II. A number of court opera performances are documented from 1671 until 1701, after which there seems to have been a hiatus until Carnival 1732. The oratorio *Il martirio di San Giovanni Nepomuceno* was given in the cathedral in 1737, and another in 1761 at S Francesco; in 1790 *Debora e Sisara*, an *azione sacra* by P.A. Guglielmi, was given in the Teatro dei Nobili Fratelli Prini (opened 1771). On the whole, however, secular works seem to have dominated, many in honour of the ruling family, notably works by Brunetti in 1761 and 1766. The Teatro dei Nobili continued to operate until the last years of the century, offering two seasons of opera a year (Carnival and spring). It was later administered by the Accademia dei Costanti (1798) and the Accademia dei Ravvivati (1822); in 1878 it became the Teatro Ernesto Rossi. Operas were given up to 1900; it closed in 1930.

In 1807 an outdoor arena was built, the Teatro Diurno (the Arena Garibaldi from 1882). It was originally intended to be a racecourse, but from 1873 it also presented opera (the first being Verdi's *Il trovatore*); it closed in 1895. The Politeama, another outdoor opera theatre, opened in 1865 with Ricci's *Crespino e la Comare*; it was destroyed during World War II. The Regio Teatro Nuovo (now the Teatro Comunale Giuseppe Verdi) opened in 1867 with Rossini's *Guillaume Tell*. It has excellent acoustics, and mounts a short but popular autumn opera season. It was restored from 1985 to 1989 and reopened with the world première of Roberto De Simone's *Mistero e processo di Giovanna d'Arco*.

A Banda dei Cacciatori was founded by the Cavalieri and other Pisan noblemen in 1765; it played at ceremonies all over Tuscany. In 1803 it was reorganized as the Corpo Filarmonico degli Urbani, in 1819 as the Società Filarmonica degli Alfei, and in 1849 (as part of the Guardia Civica) as the Società Filarmonica Militare degli Alfei. From 1868 it was called the Società Filarmonica Pisana. It was still active in the late 20th century.

The first choral society, the Vincenzo Galilei Male-Voice Choir (founded 1881), was a product of the Scuola Corale. In the early 20th century it began to participate in local opera productions; it was reorganized in 1910 as the Società Corale Pisana, and in 1958, under B. Pizzi, it

won first prize in the Arezzo International Choral Competition. In 1976 it became a mixed choir. At S Nicola a children's choir, Pueri Cantores, was established in 1963, followed by a young people's choir, Coro Polifonico, in 1991. In 1973 P. Farulli organized a chorus and orchestra to perform Bach; only the choir is still active.

The first concert society, the Società Amici della Musica (1920–60), was succeeded by a section of the Gioventù Musicale (from 1959), the Goethe Institute (1961–6), the Scuola Normale (from 1967), the Associazione Pisana Amici della Lirica (from 1972) and the International Federation of Business and Professional Women (from 1978). This organization also holds a national piano competition each year. Organ concerts are given in the cathedral, where a new organ by Mascioni was inaugurated in 1981; at S Stefano; and at S Nicola, which has a three-manual Tamburini organ. The Teatro Verdi organizes an annual opera and concert season. Concerts are also given in the Aula Magna of the university, the Sala degli Stemmi of the Scuola Normale, the church of S Paolo all'Orto (restored as a concert hall in 1992) and, in summer, in Giardino Scotto, in the 'Sapienza' quadrangle of the university and in the gardens of villas on the outskirts of the city.

As early as the 11th century music was taught at the cathedral school, and from the 16th century at the church of the Cavalieri as well. The Scuola Corale was founded by the Società Filarmonica degli Alfei (1855). Because of the proximity of Pisa to the conservatory at Florence and the municipal music schools at Lucca and Livorno, there are no such establishments in the city. There are, however, two private music schools: the Scuola di Musica Giuseppe Bonamici and the Scuola della Società Filarmonica. The International Society for Music Education has a branch in Pisa. The holdings of the Biblioteca Universitaria include 323 librettos and 334 music and music-related manuscripts, several including medieval treatises. In 1987 the Associazione Toscana per la Ricerca delle Fonti Musicali was founded in Pisa; the university series Studi Musicali Toscani was founded by Carolyn Gianturco in 1993.

STEFANO BARANDONI, CAROLYN GIANTURCO

Pisa, Agostino (*fl* Rome, 1611). Italian music theorist. In Rome in 1611 he published *Breve dichiaratione della battuta musicale, opera non solo utile ma necessaria a quelli che desiderano fare profitto nella musica*. Later that year a revised and enlarged version appeared there, as *Battuta della musica … opera nova utile e necessaria alli professori della musica* (1611/*R*), as did a sonnet from the latter as *Brevissima dichiaratione della battuta della musica*. He was a priest and styled himself a 'doctor of canon and civil law, and theoretical and practising musician' on the title-page of *Battuta della musica*. Since the dedication was signed in Rome it appears that he lived there at the time.

In his manuscript *Trattato della battuta musicale* (1643), P.F. Valentini stated that 'during the year 1611 differences of opinion arose among certain virtuosos in Rome about musical beat, and books and sonnets about it were published'; Pisa's three publications were among them, and the aura of controversy no doubt accounts for the polemical tone of the two main ones. Of fundamental importance in Pisa's writings is the structure of the musical beat, in particular the establishment of its beginning and end. He cited many authors to support his point of view but his principal authority was Zarlino (*Le istitutioni harmoniche*, iii, Venice, 1558/*R*), who maintained that the beat, like the human pulse, had two movements (falling and rising) and two rests, one at the end of each movement. The beat thus begins with a falling movement and ends with the rest after the rising movement. In the introduction to *Battuta della musica* Pisa described six common erroneous views of the musical beat, which he blamed on the 'new practitioners' attempts to make the beat coincide with the rhythmic and musical accent. He could not accept that the beat should be regulated by the music but maintained exactly the opposite, that it should provide an abstract measurement to which the music must conform.

Pisa's books and ideas were widely circulated and achieved remarkable notoriety up to the end of the 17th century. Valentini explicitly criticized Pisa – whom he called Asip – on many points. Pisa is further quoted by, among others, Banchieri, G.M. Bononcini, Andrea da Modena, Zaccaria Tevo, Zacconi and even Mattheson.

AGOSTINO ZIINO (with FRANS WIERING)

Pisador, Diego (*b* Salamanca, 1509/10; *d* ?Salamanca, after 1557). Spanish vihuelist and composer. He was the eldest son of Alonso Pisador and Isabel Ortiz, whose father, Alfonso III de Fonseca, had been an enthusiastic patron

of music. Diego took minor orders in 1526 but did not become a priest. In 1532 his father took a position as administrator for the count of Monterrey in Galicia: Diego remained in Salamanca, taking his father's place as major-domo of the city as well as administering the family estate and looking after his mother and younger brother. After his mother's death in September 1550, Diego inherited the bulk of her estate. His brother contested the will; in a letter dated 13 October 1550 his father sided with Diego against his brother, urged him to marry, to sell the office of major-domo and to abandon work on his vihuela tablature. Returning to Salamanca shortly thereafter the father reversed his original position, forced Diego to leave the family home and supported the brother in his attempt to break the will. Diego obtained 30,000 maravedís from the estate on 3 August 1553, and father and son were still unreconciled in 1557.

Pisador's anthology *Libro de música de vihuela* (Salamanca, 1552/*R*1973) reveals a mediocre musician, but an educated amateur well versed in the principal musical currents of the era. The book, compiled over a 15-year period, contains 95 works including eight masses by Josquin. Also included are motets by Josquin, Gombert, Basurto, Morales, Mouton and Willaert, 22 Spanish songs and *romances*, and madrigals and *villanesche* by Arcadelt, Willaert, Fontana, Nola and Sebastiano Festa. 13 of Pisador's 26 fantasias are monothematic, while the remainder are imitative polythematic works. The best of them show considerable deftness; many are flawed by defective counterpoint and harmonic blandness, though they are elegant in form. Other original works include variations on *Conde claros* and *Guárdame las vacas*, a pavan, contrapuntal hymn settings and psalms set in *fabordón* style. The book is printed in conventional Spanish tablature using either red tablature figures or a separate staff to notate the voices to be sung by the vihuelist.

JOHN GRIFFITHS

Pisanelli, Pompilio (*b* Bologna; *d* after 1606). Italian composer. He is first recorded at the seminary of S Petronio, Bologna, where he was taught by Cimatore, the *maestro di cappella* there. The title-page of his only surviving work *Madrigali a cinque voci* (Ferrara, 1586) describes him as *maestro di cappella* at Pisa Cathedral, and in January 1599 he was appointed to a similar post at S Petronio which he retained until 31 August 1604. The records of Reggio nell'Emilia Cathedral refer to him as *maestro di cappella* from 6 August 1604, when the chapter decided to engage him while he was still in Bologna. His work at Reggio nell'Emilia met with disapproval, he was dismissed on 6 October 1606 and there is no mention of him after 17 October 1606. Eitner's claim that Pisanelli died in May 1617 aged 80 is based on an incorrect interpretation of a passage in Gaspari's *Catalogo*. Gaspari also cited another work by Pisanelli, *Himnodia totius anni* (1603), for four voices.

PIER PAOLO SCATTOLIN

Pisano [Pagoli], **Bernardo** (*b* Florence, 12 Oct 1490; *d* Rome, 23 Jan 1548). Italian composer, singer and classical scholar. He may have acquired the name 'Pisano' as a result of having spent some time in Pisa. Trained at the cathedral school in Florence, he also sang in the chapel of the church of the SS Annunziata as a student. In 1511, after being ordained a priest, he was appointed master of the choristers at the cathedral school and a singer in the chapels at the cathedral and the baptistry. He became master of the cathedral chapel less than a year later. Evidently he obtained the post through the good offices of Cardinal Giovanni de' Medici, whose family had recently been restored to power in Florence.

Shortly after the cardinal's election to the papacy as Leo X, Pisano went to Rome, where on 20 August 1514 he was appointed a singer in the papal chapel – a position he retained until his death. Leo also gave him several ecclesiastical benefices, among them canonries in the cathedrals of Segovia and Lerida and a chaplaincy in the Medici family church of S Lorenzo in Florence. From 1515 to 1519 he divided his duties between the papal and Florentine chapels, but settled permanently in Rome after the spring of 1520. During the course of a visit to Florence in 1529, while the city was in revolt against another Medici pope, Clement VII, Pisano was accused of being a papal spy. He was imprisoned and tortured before being expelled by the republican government. The incident illustrates how aware his contemporaries were of his close ties with the Medici. He also enjoyed the favour of Clement's successor, Paul III, and in 1546 served as master of his private chapel, a group of six singers including Arcadelt. He was buried in S Maria sopra Minerva, Rome.

Pisano's wide range of interests brought him into contact with some of the leading intellectual and artistic figures of the age. He was a friend of Michelangelo, the painters Bugiardini and Rustici, the poet Annibale Caro and the poet-historian Benedetto Varchi. His edition of the works of Apuleius, *Quae in toto opere continentur L. Apuleij* (Florence, 1522), was dedicated to Filippo Strozzi, husband of Leo X's niece and liberal patron of the arts. Several of his secular works are settings of poems by Filippo's brother, Lorenzo, who was also a playwright and prominent man of letters.

Pisano's settings of the responsories for Tenebrae services in Holy Week are in a simple chordal style, occasionally varied by short contrapuntal passages for two or three voices. Slow rhythms in even semibreve

motion and low tessituras are used throughout in all parts and serve to emphasize the solemn, penitential character. According to Pisano's pupil Francesco Corteccia, these works were composed during Pisano's tenure as master of the cathedral chapel. The secular pieces display two distinct styles. The earlier of these is illustrated by the strophic ballatas and canzonettas (composed before 1515), modelled on similar pieces by elder Florentine composers such as Alessandro Coppini and Bartolomeo degli Organi, with whom Pisano may have studied. The principal characteristics are a light homophonic texture, sprightly rhythms, clearly articulated phrases and some repetition of material within the fixed formal structure.

17 pieces in his later style were published by Petrucci in *Musica di messer Bernardo Pisano sopra le canzone del Petrarcha* (Venice, 1520), the first printed collection of secular music containing the works of a single composer and the first to be issued in separate, fully-texted partbooks. These works help to establish his position as a leading figure in the early history of the 16th-century madrigal. In addition to seven canzoni by Petrarch (of which only the first stanza is set), Pisano's *Musica* includes settings of the same kinds of texts favoured by the earliest madrigalists, among them single-stanza ballatas, dialogue-ballatas and madrigals. Features generally associated with the contemporary madrigal are also evident: each is vocally conceived and correct text accentuation is observed. There are a few examples of specific word-painting: Pisano was more often content with conveying the general mood of the text. He accomplished this by contrasting chordal sections with passages in imitation, by alternating short duos or trios within the four-part texture, by repeating individual words or lines of the text with or without new music and by juxtaposing and overlapping musical phrases of different length. Repetition of the last line of the text or a large part of it, a prominent feature of the early madrigal, is also found in several of these settings. Pisano's *Musica* is important because it shows that by 1520 he was writing what may properly be called madrigals. It is impossible to assess what specific influence it had on the works of the genre's earliest masters, notably Festa, Verdelot and Arcadelt, but clearly these composers, with whom Pisano was associated in the papal and Florentine chapels, were aware of his musical achievements.

WORKS

Edition: *Music of the Florentine Renaissance*, ed. F.A. D'Accone, CMM, xxxii/1 (1966) [incl. edn of all except inc. pieces and responds 1–8 for Feria V]

SACRED

Feria V in Coena Domini, responds 1–9, 4vv, *I-Fl* N: In monte Oliveti, Tristis est anima mea, Ecce vidimus eum, Amicus meus, Judas mercator pessimus, Unus est discipulis meis, Eram quasi agnus innocens, Una hora non potuistis, Seniores populi; responds 1–3, *Bc* Q 132

Feria VI in Parasceve, responds 1–9, 4vv: Omnes amici mei, Velum templi scissum est, Vinea mea electa, Tanquam ad latronem, Tenebrae factae sunt, Animam meam, Tradiderunt me, Jesum tradidit, Caligaverunt oculi mei

Sabbato Sancto, responds 1–9, 4vv: Sicut ovis, Jerusalem surge, Plange quasi virgo, Recessit pastor noster, O vos omnes, Ecce quomodo moritur justus, Astiterunt reges terrae, Aestimatus sum, Sepulto Domino

SECULAR

for 4vv unless otherwise stated

Musica ... sopra le canzone del Petrarcha (Venice, 1520), inc. [1520]

FRANK A. D'ACCONE

Pisano [Pisani], **Nicola** (*fl* Naples, 1720–38). Italian composer. He was second harpsichordist at the Teatro S Bartolomeo during the 1720s. Viviani reproduced passages from his dedication letter for the Neapolitan dialect comedy *Le mbroglie de la notte* (1720) in which, in effect, he pleaded indulgence from the cabal of critics who had recently forced the librettist A. Piscopo to retire from working for the Teatro dei Fiorentini. Besides *Le mbroglie* (N. Corvò; Collegio de' Nobili, November 1720), Pisano wrote two other *opere buffe*: *La Rina* (B. Saddumene, in dialect; Fiorentini, spring 1731) and *Climene* (C. de Palma; Nuovo, autumn 1738). A recitative and aria survive (*D-W*); works of a 'Pisani' are in the Archivio del Duomo, Rieti.

JAMES L. JACKMAN

Pisari [Piseri], **Pasquale** (*b* Rome, *c*1725; *d* Rome, 27 March 1778). Italian composer. The son of a bricklayer, he had a beautiful voice and (according to Baini) was given singing lessons by Francesco Gasparino. His excessive shyness prevented him from taking full advantage of this gift, and he turned to composition, taking lessons from Giovanni Biordi, who trained him in the style of Palestrina. From 1752 he sang bass in the Cappella Sistina, but for a long time only as a poorly paid supernumerary. Baini relates several anecdotes illustrating his extreme poverty. In 1777 a *Dixit* for four choruses (in

D-MÜs), commissioned by the King of Portugal, was performed at SS Apostoli in Rome. The king also commissioned a cycle of Proper settings for four voices and organ for the whole year. Pisari completed this large undertaking in a few months, but, perhaps worn out by it, died before receiving his payment. The settings have not survived.

Pisari closely followed the stylistic principles of Palestrina with such success that Martini called him the 'Palestrina of the 18th century'. Burney, visiting Rome in 1770, expressed great admiration for a 'mass in 16 real parts, which was full of canons, fugues, and imitations: I never saw a more learned or ingenious composition of the kind'. His psalm settings incorporate elements of *falsobordone*, but motet-like textures predominate. Effective use is made of the contrast between homophony and polyphony, and of the interaction of different choral groups. At times Pisari wrote in a more modern style, and even juxtaposed the old manner with the new. The greater part of his output is polyphonic, however, and modern features such as formal symmetry and greater emphasis on expression are completely fused with the *stile antico*.

SIEGFRIED GMEINWIESER

Pisaroni, Benedetta Rosmunda (*b* Piacenza, 16 May 1793; *d* Piacenza, 6 Aug 1872). Italian soprano, later contralto. She studied in Milan and made her début in Bergamo in 1811 in Mayr's *La rosa bianca e la rosa rossa*. After appearances in Padua, Bologna and Venice, she sang in the première of Meyerbeer's *Romilda e Costanza* (1817, Padua) and was subsequently engaged in Naples, where she created major roles in three of Rossini's operas: Zomira in *Ricciardo e Zoraide* (1818), Andromache in *Ermione* (1819) and Malcolm in *La donna del lago* (1819), repeating Malcolm in Rome (1823) and at La Scala (1824). She also sang in the première of Meyerbeer's *L'esule di Granata* (1821, Milan) and added Arsace in *Semiramide* (1824) and Tancredi (1825) to her repertory. She made her Paris début as Arsace at the Théâtre Italien (1827), and during the next three seasons sang Malcolm, Tancredi and Isabella (*L'italiana in Algeri*) there. In 1829 she appeared in the première of Carafa's *Le nozze di Lammermoor* and sang in London at the King's Theatre. She returned to La Scala in 1831, in Generali's *Romito di Provenza* and Rossini's *Bianca e Falliero*, and then retired.

She had a range of nearly three octaves but a serious illness in 1813 resulted in the loss of her top notes, and she subsequently cultivated her lower register, which increased greatly in volume.

ELIZABETH FORBES

Pisarri, Alessandro (*fl* Bologna, 1660–62). Italian publisher. He was the son of Antonio Pisarri (*d* 1650), who founded the family publishing firm in the early 1600s. Alessandro was the first to publish music, issuing ten volumes of compositions by Maurizio Cazzati between 1660 and 1662 (opp.21–30). After his death, the firm continued under the direction of the Pisarri heirs, publishing in 1689 a set of rules for members of the Accademia Filarmonica (*Ricordi per li signori compositori e per i cantori e sonatori dell'Accademia dei Filarmonici*) and in 1691 Benedetto Bacchini's treatise *De sistrorum figuris ac diferentis*.

ANNE SCHNOEBELEN

Piscator [Fischer], **Georg** (*fl c*1610–after 1643). Austrian composer and organist. He was a son-in-law of Reimundo Ballestra. He probably began his career as a choirboy in the chapel of Archduke Leopold of Tyrol at Alsace and Innsbruck. By 1622 he was an organist to the archduke, in whose service he travelled to Italy in 1625 and at whose expense he studied further in Venice and Rome between 1626 and 1628. He returned to Innsbruck and in 1630 was promoted to the position of first organist under Stadlmayr. Italian influences continued to surround him, since several composers from both the Venetian and Roman schools were employed at Innsbruck, and Archduke Leopold maintained close links with Italy. The size of the Innsbruck music chapel was gradually reduced following the death of Archduke Leopold in 1632, and in 1635 Piscator succeeded Georg Holzner as organist at the court of Maximilian I in Munich. He still held that post in 1637, when he received a gift from Ferdinand III for a composition presented to the newly crowned emperor. By 1643 he was chapel master and organist at the Schottenkirche in Vienna and a member of the city's Rosenkranz Brotherhood.

The only complete surviving collection of Piscator's music is the *Quadriga musica* (Innsbruck, 1632), a book of motets for one to four voices dedicated to Archduke Leopold. This collection includes the contents of the earlier *Concerti*, of which only a single partbook without title-page survives. Piscator's solo motets often contrast slow-moving, syllabic sections with cadential passages dominated by elaborate, written-out passaggi. While the music is thoroughly italianate, the restricted harmonic palette, asymmetrical phrases and active continuo lines recall the generation of composers after Viadana rather than more forward-looking contemporaries such as Grandi and Rovetta. The motets for two to four voices, like his two Marian antiphons (in RISM 1629[1]) display a concertato idiom, with short syllabic ideas often combined to create Monteverdian multiple-subject points of imitation. Three organ works are also preserved in an organ book from Neresheim (now in *D-Mbs*); a number of lost works are listed in a 1656 Munich inventory.

WORKS

[Concerti], 1–4vv (n.p., n.d.)

Quadriga musica, 1–4vv (Innsbruck, 1632) [incl. some works from Concerti]

2 Marian antiphons, 1629[1]

3 organ works [incl. 2 fugues], *D-Mbs* Mus. Mss. 5368

numerous lost sacred works

Pischek, Jan Křtitel. *See* PIŠEK, JAN KŘTITEL.

Pischner, Hans (*b* Breslau [now Wrocław], 20 Feb 1914). German musicologist, harpsichordist and administrator. In Breslau he studied keyboard instruments with Bronisław von Pozniak and musicology at the university, and worked as a music teacher and concert soloist (1933–9). After war service he joined the staff of the Musikhochschule in Weimar (1946–50), directed the music department of East German radio (1950–54) and held a leading post in the East German Ministry of Culture (1954–62). He took the doctorate at the Humboldt University in 1961 (*Die Harmonielehre Jean-Philippe Rameaus*, Leipzig, 1963/*R*), before becoming Intendant of the Staatsoper in East Berlin (1963). His publications include *Musik und Musikerziehung in der Geschichte Weimars* (Weimar, 1954), *Musik in China* (Berlin, 1955) and articles (mainly in programmes and daily papers) on J.S. Bach, Wagner, Brecht, Paul Dessau and the political role of culture. As a harpsichordist he played in many European musical capitals and recorded much of Bach's keyboard music, including the violin sonatas with David Oistrakh. His writings and lectures have been published in the collection, *Musik–Theater–Wirklichkeit: ausgewählte Schriften und Reden* (ed. W. Rösler, Berlin, 1979), and he has written an autobiography, *Premieren eines Lebens* (Berlin, 1986).

HORST SEEGER/R

Pišek [Pischek], **Jan Křtitel** [Johann Baptist] (*b* Mšeno, 13 Oct 1814 [not 14 Oct, which is the baptismal date]; *d* Sigmaringen, 16 Feb 1873). Bohemian baritone. He forsook the study of law for a career as a singer, making his stage début at Prague in 1835 as Oroveso in *Norma*, but was not appreciated. After appearances at Brno, Vienna and Frankfurt, he was engaged in 1884 as Court singer in Stuttgart, where he remained until 1863.

Pišek appeared in London for the first time in 1845, and took part in four concerts given by the Philharmonic Society in that season. He made further appearances with the Society in 1846, 1847, 1849 and 1853. He was very popular as a concert performer, and sang before Queen Victoria and Prince Albert in 1849. In the same year, he sang in Mendelssohn's *Elijah* at the Birmingham Festival, and also appeared in operas by C. Kreutzer and Mozart during the German opera season at the Drury Lane Theatre. His sensitive portrayal of the title role in *Don Giovanni* was highly praised. In 1865 he returned to Prague after 30 years, as Rigoletto. His wide repertory also included Mozart's and Rossini's Figaro, Don Pizarro, Spohr's Faust, Count Luna (*Il trovatore*), Enrico (*Lucia di Lammermoor*), Giorgio (*I puritani*) and the title roles of Herold's *Zampa* and Marschner's *Hans Heiling*, as well as many concert pieces and lieder.

Pišek's voice was rich and expressive over a range of two octaves, and his use of the *mezza voce* and falsetto was particularly admired. Some critics considered his singing mannered and his acting artificial and exaggerated. Berlioz (*Mémoires*), however, had a very high opinion of his talents, and considered him 'perhaps the greatest dramatic singer of the age'. He was also a talented pianist and a composer of songs.

JENNIFER SPENCER/ELIZABETH FORBES

Pisendel, Johann Georg (*b* Cadolzburg, 26 Dec 1687; *d* Dresden, 25 Nov 1755). German violinist and composer. His family came from Markneukirchen, but in 1680 Pisendel's father settled in Cadolzburg as a Kantor. Pisendel entered the Ansbach court chapel as a chorister in 1697, and six years later became a violinist in the court orchestra. While at Ansbach he studied singing with Pistocchi and the violin with Torelli. In 1709 he travelled to Leipzig, breaking the journey at Weimar where he met Bach. Pisendel studied at Leipzig University for some time and was soon accepted in musical circles there. In 1709 he performed a concerto by Albinoni (not Torelli) with the collegium musicum, and when Melchior Hoffmann embarked on a concert tour in 1710, Pisendel deputized for him both in the collegium and in the opera orchestra. The following year Pisendel visited Darmstadt; there he took part in a performance of Graupner's opera *Telemach*, but declined the offer of a permanent post at court.

From January 1712, Pisendel was employed as a violinist with the Dresden court orchestra. He took over the Konzertmeister's duties when Volumier died in 1728, the official title being conferred upon him in 1730. During the early years of his employment Pisendel made several tours in the entourage of the electoral prince, visiting France (1714), Berlin (1715) and Italy (1716–17). The Italian visit influenced Pisendel profoundly: a nine-month stay in Venice (from April 1716) enabled him to study with Vivaldi and a close friendship developed between the two musicians. In 1717 Pisendel moved on to Rome (where he took lessons from Montanari), Naples and other Italian cities before returning to Dresden that autumn. After a visit to Vienna in 1718 his tours became less frequent, but he accompanied his royal patron to Berlin (1728, 1744) and Warsaw (1734).

Pisendel was the foremost German violinist of his day. Quantz praised his interpretation of adagio movements and Hasse commented on his assured grasp of tempo. Several leading composers (Vivaldi, Albinoni and Telemann) dedicated works to him. Pisendel was also admired for his success as an orchestral director, in which his precision and thoroughness played a major part. It was said that, before the performance of a new work, he would go through every orchestral part adding detailed bowing and expression marks. Although Pisendel's duties left little time for composition his small output of instrumental music is of the highest quality. A pupil of Heinichen in composition, he also came, through his travels, into direct contact with the French and Italian styles. Italian influence predominates in the violin concertos, which are written in Vivaldian manner but with occasional traces of a more overtly *galant* idiom. The solo violin sonata (dated ?1716 by Jung), is a fine work in the German tradition and may have influenced Bach's music for unaccompanied violin. Manuscript collections in

Dresden show Pisendel to have been among the most important collectors of music in central Germany; many of the scores he owned were later added to those of the Dresden Kapelle and catalogued along with them. The most famous of Pisendel's pupils were J.G. Graun and Franz Benda.

WORKS

MSS in D-Dl

7 vn concs.: g, E♭, E♭, G, D, G, D

4 concerti grossi, 1-movt works: E♭, G, D, D; 1–3 arr. from other concs. by Pisendel, 4 an arr. of the first movt of a conc. by J.F. Fasch (Küntzel no.38)

Sinfonia, B♭; orch piece, c (a 4, but described as trio)

Sonatas, vn, bc, e, D; Sonata, vn, a

Gigue, vn, a, in Telemann: Der getreue Music-Meister (Hamburg, 1728–9)

PIPPA DRUMMOND

Piseri, Pasquale. *See* PISARI, PASQUALE.

Pising [Pisinge], **William.** *See* PYSING, WILLIAM.

Pisk, Paul A(madeus) (*b* Vienna, 16 May 1893; *d* Los Angeles, 12 Jan 1990). American composer and musicologist of Austrian birth. His teachers included Schreker (counterpoint) and Schoenberg (composition). After receiving the doctorate in musicology from the University of Vienna (1916) and a diploma in conducting from the Vienna Conservatory (1919), he served as secretary of Schoenberg's Society for Private Musical Performances (1918–21). He went on to champion contemporary music as co-editor (with Alban Berg and Paul Stefan) of the *Musikblätter des Anbruch* (1920–28), and as a founding member and secretary of the Austrian section of ISCM (1922). He was music editor of the *Wiener Arbeiter-Zeitung* (1921–34) and active in the ACA (founded in 1927). He also served as director of the music department of the Volkshochschule, Vienna (1922–34), and taught theory at the New Vienna Conservatory (1925–6) and the Austro-American Conservatory near Salzburg (1931–3).

Pisk's connections with ISCM led to acquaintances with American composers such as Cowell and Sessions. Through Frederick Jacobi, he was invited to New York to play Austrian music on CBS and hear performances, sponsored by the League of Composers, of his own works. He emigrated to the USA in 1936, where he renewed contact with Schoenberg, Milhaud and Hindemith. In 1937 he joined the faculty of the University of Redlands, California, becoming head of the music department in 1948. He was later appointed professor at the University of Texas, Austin (1951–63), and Washington University in St Louis (1963–72).

Pisk's compositions tend towards atonality, but do not employ 12-note techniques. His thematic and motivic construction reveals a concern for linear relationships that develop contrapuntally within traditional forms and procedures. Harmonies are based on intervallic structures derived from the melodic contour. Many of his works, while chromatic, employ folk melodies.

WORKS

(*selective list*)

STAGE

Der grosse Regenmacher (ballet-pantomime), 1927; Schattenseite (monodrama, 1, A. Paquet), op.25, 2 solo vv, chorus, orch, 1930–31; Ballet Music, op.32, 1934

INSTRUMENTAL

Orch: Sym. Ov., op.1, 1914; Partita, op.10, 1924; Little Suite, chbr orch, op.11a, 1932; Divertimento, op.31, 1933–5; Music for Str, op.49, 1936; Passacaglia, op.50, 1944; Buccolic Suite, str orch, op.55, 1946; Adagio and Fugue, op.63, 1948–54; Canzona, chbr orch, op.84, 1954; 3 Ceremonial Rites, op.90, 1957–8; Elegy, str orch, op.93, 1958; Sonnet, chbr orch, op.98, 1960

Chbr: Sonata no.1, op.5, vn, pf, 1921; Str Qt, op.8, 1924; Phantasy, op.13, cl, pf, 1925; Trio no.1, op.18, ob, cl, bn, 1926; Sonata no.2, op.22, vn, pf, 1927; Pf Trio, op.30, 1933–5; Sonata no.3, op.43, vn, pf, 1938–9; Little Ww Music, op.53a, ob, 2 cl, bn, 1943–5; Cortège, op.53b, brass choir, 1945; Sonata, op.59, cl, pf, 1947; Suite, op.60, ob, pf, 1947; Introduction and Rondo, op.61, fl, pf, 1948; Qt, op.72, hn, 2 tpt, trbn, 1951; Suite, ob, cl, pf, 1954–5; Ww Qnt, op.96, 1958; Trio no.2, op.100, ob, cl, bn, 1960; Envoi, op.104, ob, cl, bn, str trio, 1964; 13 Variations on an 8-bar Theme, op.107, pf, 1967; Perpetuum mobile, op.109, brass, org, 1968; Discussions, op.116, ob, cl, bn, va, vc, 1974; Brass Qnt, 1976; many other chbr works

Pf: 4 Pf Pieces, op.3, 1920; 6 Concert Pieces, op.7, 1922; Little Suite, op.11, 1922; Second Suite (Speculum), op.17, 1927; Dance Suite, op.24, 1930; Ballet Music, op.32, 1934, arr. pf, chbr orch, 1954; 5 Sketches, op.39, 1936; Death Valley Sonatina, op.49, 1942; 5 2-Part Studies on Semitone Progressions, op.65, 1949; Sesquitone Sonata, op.66, 1949; Rondo Scherzoso, op.74/1, 1951; Essay, op.74/2, 1952; Sonatina, E, op.94, 1958

VOCAL

Choral: 2 Choruses, women's chorus, orch, op.2, 1918; 3 Choruses (J.P. Jacobsen), op.19, men's chorus, 1927; Die neue Stadt, solo vv, chorus, orch, 1926; 2 Pss, op.45, men's chorus, 1939–40; 2

Choruses, op.52, solo vv, women's chorus, pf, 1944; 4 Choruses, op.71, 1950–51; 3 Mixed Choruses, op.67, chorus, pf, 1950; Sunset (E. Dickinson), chorus cycle, op.81, 1954; The Trail of Life (cant., after Amerindian poems), op.88, 2 solo vv, spkr, chorus, orch, 1956; The Prophecy of Zacharia (Bible: *Zech*), op.89, chorus, org, 1957; God's Omnipotence (Bible: *Job*), op.99, chorus, org, 1960; 2 Shakespeare Sonnets, op.103, 1964

Solo: Gesänge eines fahrenden Spielmanns (S. George), op.6, 1v, pf, 1920–21; 4 Orch Songs (G. Falke, E. Lasker-Schüler, George, A. Platen), op.4, S, orch, 1920; Der Tod (cant., C. Morgenstern, A. Adij, J. Galsworthy), op.14, Bar, orch, 1923–34; Concert Aria 'Ach, Liebe' (Byron: *Childe Harold*), op.20, Bar, orch, 1928–9; Gesang vom Rundfunk (H. Infield), 2 solo vv, chbr orch, 1929; Zwischendeck (J. Ringelnatz, B. Traven), op.23c, 1v, cl, chbr orch/pf, 1930; Campanella (cant., after 11 poems of the Monk [Luitpold]), op.28, 1v, orch, 1932; A Toccata of Galuppi (R. Browning), op.58, spkr, orch, 1947; The Labyrinth (J.L. Borges, J. Updike), 1v, pf, 1969; over 150 other songs

ELLIOTT ANTOKOLETZ

Piskáček, Rudolf (*b* Prague, 15 March 1884; *d* Prague, 24 Oct 1940). Czech composer. He studied composition and the organ at the Prague Conservatory (1903–6). At first he was a composer of serious music, such as the symphonic poem *Sardanapal* (1906), his graduation piece and his only extensive essay in this vein, and the Violin Sonata in A minor, which won the prize of the Czech Academy of Arts and Sciences. Shortly after graduating, however, he began to devote himself to operetta. He also worked in this genre as a conductor at theatres in Prague – the Pištěkova Aréna (1907), the Vinohradské Divadlo (1908–18 and 1921–5) and the Akropolis (1937) – and České Budějovice (1925–6). Of his 40 operettas those that have survived in the repertory are *Slovácká princeska* ('The Moravian-Slovak Princess', 1917), *Tulák* ('The Tramp, 1924) and *Perly panny Serafínky* ('Miss Serafínká's Pearls', 1928). In the first of these he used stylized Moravian folksongs and dances; folk music was also the subject of his non-dramatic works, which include the Fantasia for piano on Czech and Moravian songs, the piano miscellany *Květy Tater* ('Flowers of the Tatras') and miscellanies of Czech folksongs from Bechyňsko and Blaťácko for male chorus. Pieces of this type reveal Piskáček as a deft stylist. His music was published by J.K. Barvitius and F.A. Urbánek. Piskáček's brother Adolf (1873–1919) was a composer and choirmaster. (L. Pacák: *Opereta*, Prague, 1946)

OLDŘICH PUKL

Pisoni, Giovanni. *See* PICCIONI, GIOVANNI.

Pistoia. City in Italy, in Tuscany, to the west of Florence. Music was performed in the cathedral from the 12th century and a singing school for the priests was established soon afterwards. The *cappella* of 1565 had a *maestro*, six singers and two instrumentalists. A bull issued in 1669 by the Pistoiese Pope Clement IX redirected income there from a suppressed convent; from then on, the number of singers averaged about 14, with one or two organists, and a trombone player was added at the end of the 17th century. Freelance instrumentalists were employed for important occasions and some of the chapel singers doubled as string players. The Basilica di S Maria dell'Umiltà also had a *maestro di cappella* and a salaried choir who sang *laudi* on Saturdays during Lent and before Christmas.

Fetonte Cancellieri, a cathedral chorister, was first responsible for the opulent musical festival of S Cecilia in 1611, which was held for almost two centuries. His nephew Felice Cancellieri, an ex-Habsburg singer, founded the Congregazione dei Trentatrè, active by 1644, to finance music for the Oratorians at S Prospero (later renamed S Filippo Neri). Early in the 18th century up to seven oratorios were mounted each carnival season; the number had declined by mid-century, but occasional performances were given until the final suppression of 1808. Many of the city's numerous confraternities included music making and an occasional oratorio among their activities. Conspicuous sums of money went to provide secular and sacred music for the feasts of St James and St Bartholomew. The Jesuit Collegio dei Nobili, 1635–1773, attached to the church of S Ignazio (later Spirito Santo), was patronized by the Rospigliosi family; music, including music drama in honour of the patrons, was performed by the scholars.

Passion plays with music were performed in the cathedral on Good Friday from the 14th century until 1476, when they were moved to the Loggia del Giuramento in the main city square. This served as the city's only theatre until the great hall of the Palazzo del Comune opened its doors, despite much opposition from the Church, at the end of the 16th century. It was used around 1700 for musical events held for the Medici and for the

feast of St Agatha, and in the 1800s for celebratory cantatas.

The Accademia dei Risvegliati was founded in 1642 by Felice Cancellieri, who included music in their weekly meetings. The Teatro Risvegliati opened in 1694 with regular seasons of opera for the carnival and the feast of St James on 24 July; late spring and autumn seasons were added later. Concerts were held there, many given by the Accademia degli Armonici (founded in 1787), as well as occasional oratorio performances. It was renamed the Teatro Manzoni in 1864. The 50-year period from 1871 saw lively operatic activity under Vittorio Bellini. After World War II, with easy travel to Florence, few productions were mounted.

The private theatres of the nobility housed music drama in the 17th century, while the popular Teatrino del Corso was active in the 18th. The Arena Matteini (later called the Politeama and Politeama Mabellini) was first used as an open-air venue in 1855. Rebuilt as an opera house a few years later, it staged both opera and operetta until destroyed by fire in 1943.

The city has spawned many famous performers and composers, most of whom made their reputations outside Pistoia. The cathedral music school was important in the training of singers, especially the early 17th-century castratos. The Accademia degli Armonici helped start a music school (now the Scuola di Musica Mabellini) in 1858 to provide members for the chorus and orchestra of the theatre; the school was active throughout the 20th century.

The city was home to the Tronci family of organ builders, active from about 1750 until well into the 20th century. They worked alone and in collaboration with the Agati. A school of organ builders and an organ school, the Accademia dell'Organo, still flourish. Although the city is now culturally dependent on Florence, the open-air jazz festival held each summer in the Piazza del Duomo is of international standing.

JEAN GRUNDY FANELLI

Pistocchi, Francesco Antonio Mamiliano ['Il Pistocchino'] (*b* Palermo, 1659; *d* Bologna, 13 May 1726). Italian composer and singer. He was a child prodigy, singing in public at the age of three and publishing his first work, *Capricci puerili*, at the age of eight. His father Giovanni was a violinist in the *cappella musicale* at S Petronio, Bologna, from 9 September 1661. In May 1670 Francesco was employed there occasionally as a singer and in 1674 he was given a regular position as a soprano. However, because of their frequent absences both he and his father were dismissed in May 1675. Within ten years he had embarked on a brilliant career as a contralto, performing on various Italian and German stages. From 1 May 1686 to 15 February 1695 he was in the service of the court at Parma. In 1696 he became Kapellmeister at Ansbach to the Margrave of Brandenburg-Ansbach (some of his letters to whom are in *D-BAa* 2006). In May 1697 he went with Giuseppe Torelli to Berlin at the request of the Electress Sophia Charlotte but returned to Ansbach early in 1698. At the end of 1699 he and Torelli moved to Vienna, and in the autumn of 1700 he was in Bologna, where he performed in several churches. Between 1701 and 1708 he was occasionally engaged to sing at S Petronio, Bologna, in the newly reconstituted *cappella musicale*. In 1702 he was named *virtuoso di camera e di cappella* to Prince Ferdinando de' Medici of Tuscany. As a contralto Pistocchi was active in the principal Italian theatres. In 1675 he was the subject of a sonnet, *Ai numi dell'Adria*, published in Ferrara.

Although Pistocchi's operatic career ended about 1705, he continued to sing for several years at functions in various Bolognese churches. He was famous as a singing teacher, and Antonio Bernacchi, A.P. Fabri, Antonio Pasi, Gaetano Berenstadt and G.B. Martini were among his pupils. In 1708 and 1710 he served as *principe* of the Accademia Filarmonica, of which he had been a member since 1687. In 1709 he took holy orders and in 1714 was named honorary chaplain to the Elector Palatine Johann Wilhelm. In November 1715 he became a member of the Congregation of the Oratory at Forlì.

Pistocchi's art of singing probably centred on his ability to ornament, both melodically and rhythmically. Tosi thought him the best singer of all time, with impeccable taste and the ability to teach the beauties of the art of singing without departing from the established tempo. Burney related the story (perhaps legendary) that he ruined his soprano voice by dissolute living, was reduced to being a copyist and while thus employed learnt counterpoint and became a proficient composer. Several years later, according to Burney and others, he recovered his voice, which had by then changed to contralto.

As a composer Pistocchi is notable for melodic elegance and colourful harmony, especially in his treatment of chromaticism. Burney singled out his dramatic recitative in the oratorio *Maria Vergine addolorata* and noted his use of a wide dynamic range in which 'all degrees of the diminution of sound' are used. His letters to Perti (*I-Bc* K.44, P.143–6) also reveal him as an astute critic of music.

WORKS

DRAMATIC

music lost unless otherwise stated

Il Leandro (op, C. Badovero), Venice, Riva delle Zattere, 15 May 1679 [probably by Pistocchi; another version as Gli amori fatali, Venice, S Moisè, Jan 1682, definitely by Pistocchi]

Sant'Adriano (orat), Modena, 1692, *I-MOe*
Il Narciso (pastorale, A. Zeno), Ansbach, Hoftheater, March 1697
Maria Vergine addolorata (orat), Ansbach, 1698; 1 aria ed. in *BurneyH*, ii, 589
Le pazzie d'amore e dell'interesse (op), Ansbach, Hoftheater, 16 June 1699
Le risa di Democrito (op, N. Minato), Vienna, Hoftheater, 17 Feb 1700; part of Act 2, *A-Wn*
La pace tra l'armi, sorpresa notturna nel campo del Piacere (cant.), Ansbach, 5 Sept 1700
I rivali generosi [Act 2] (op, Zeno), Reggio nell'Emilia, Pubblico, April 1710 [collab. C. Monari and G.M. Cappelli]
Il sacrificio di Gefte (orat), Bologna, Madonna di Galliera, 1720
I pastori al Presepe (orat), Bologna, Oratorio di S Filippo Neri, 25 Dec 1721
Davide (orat), Bologna, Madonna di Galliera, 19 March 1721
Duet from Bertoldo, *D-Bsb*

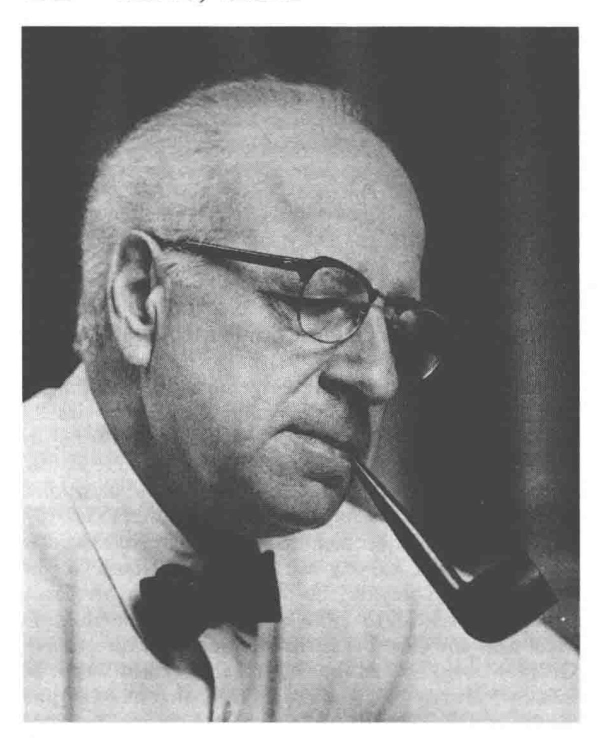
ANNE SCHNOEBELEN

Piston (i). In brass instruments, the moving component in the many types of valve described generically as 'piston valves' (*see* VALVE (i)). In French the term designates the entire piston valve, hence *cor à pistons* (valved horn), *cornet à pistons* etc. After 1850 the cornet itself became commonly known among musicians in France, Germany and eastern Europe as 'piston' and was so named in scores, even though in the last two areas the cornet usually had rotary valves, which have no pistons. A later term, 'jazz-piston', was used in central Europe to denote the B♭ trumpet when built with piston (Périnet) valves. 'Piston' has also been used in connection with certain duct flutes on which the note is changed by means of a sliding plunger instead of by finger-holes, for example, the SWANEE WHISTLE. This principle is widely known in Europe and Asia.

ANTHONY C. BAINES/EDWARD H. TARR

Piston (ii). In organs, a button placed above or below the manuals or above the pedal-board, controlling pre-set combinations of stops. The mechanism facilitates rapid changes in registration.



ANTHONY C. BAINES/EDWARD H. TARR

Piston, Walter (Hamor) (*b* Rockland, ME, 20 Jan 1894; *d* Belmont, MA, 12 Nov 1976). American composer and teacher. His family was largely of English origin, though his paternal grandfather, Antonio Pistone, an Italian seaman, arrived in Maine from Genoa. In 1905 the family moved from Rockland, Maine, to Boston, where Piston, after concentrating on engineering in high school, studied art at the Massachusetts Normal Art School (1912–16). It was there that he met his future wife, the painter Kathryn Nason. Largely self-taught as a musician, he earned money playing the piano and violin in dance bands. From 1917 to 1921 he also played the violin in orchestras and chamber ensembles under the direction of Georges Longy. When the USA entered World War I, he quickly learnt to play the saxophone so that he could join the Navy Band. During his service in the Navy, he learnt to play other band instruments as well.

Piston entered Harvard in 1919 as a special music student; he enrolled formally in 1920 and graduated with honours in 1924. His teachers included A.T. Davison and Edward Burlingame Hill, among others. From 1921 to 1924 he conducted the Pierian Sodality, Harvard's student orchestra. He pursued further studies with Dukas, Boulanger and Enescu at the Ecole Normale de Musique (1924–6), where he played the viola in the school orchestra. His two earliest extant works, Three Pieces for the flute, clarinet and bassoon (1925) and the Piano Sonata (1926), reveal the influences of Boulanger and Dukas, respectively. The lean counterpoint of the former reveals a neo-classical elegance related to the styles of Stravinsky and Hindemith, while the romantic grandeur of the latter suggests an affinity with Brahms and Franck. In subsequent scores, such as the Flute Sonata (1930), Piston merged these two aesthetics, forging a conservative modernist style of his own.

Upon his return to Boston in 1926, Piston joined the music department at Harvard, a position he held until his retirement in 1960. He did most of his composing during the summer months, which he spent on a dairy farm in Woodstock, Vermont. His occasional attempts at descriptive music, such as *Tunbridge Fair* for symphonic band (1950) and *Three New England Sketches* for orchestra (1959), took rural New England as their subject. Even in his more abstract works, his syncopated rhythms, austere textures and clipped forms bespoke a special attachment to that part of the country. 'Is the Dust Bowl more American than, say, a corner in the Boston Athenaeum?' he asked. 'Would not a Vermont village furnish as American a background for a composition as the Great Plains?'

Finding an early advocate in Koussevitzky, Piston's first works for orchestra were commissioned by the Boston SO (although Koussevitzky handed over the baton to the composer for their premières). Piston eventually wrote 11

Walter Piston

works for that ensemble, as well as fulfilling commissions from the major orchestras of New York, Philadelphia, Cleveland, Dallas, Louisville, Minneapolis and Cincinnati, among others. Copland also helped to bring him to national attention by featuring his music at Yaddo and the New School for Social Research, and by declaring him in 1936 'one of the most expert craftsmen American music can boast'. He also earned the admiration of numerous other composers, including Igor Stravinsky, Ernst Krenek, Roger Sessions, Howard Hanson, Virgil Thomson and Elliott Carter, for whom in 1946 Piston offered 'hope that the qualities of integrity and reason are still with us'.

Piston's mastery took many forms, including a meticulous hand that allowed his publisher, AMP, to publish his scores in facsimile. (He penned all but one of the illustrations to his *Orchestration* text as well.) Intimately familiar with instruments and possessing a phenomenal ear, he worked primarily at a desk, scoring his music as he composed it, rather than beginning with a piano reduction. His masterful orchestrations emphasize clarity and brilliance as opposed to novelty and effect. Along with a compelling sense of form, he also displayed a dazzling handling of canon, invertible counterpoint, melodic retrograde and inversion, and other contrapuntal techniques. The traditional forms of sonata, rondo, variation, fugue and passacaglia acquired a distinctive lucidity and compression in his hands. One can readily discern in his music an engineer's concern for formal precision, a painter's care for colouristic detail and a violist's attention to inner voices. 'Melody and tonality are extended to allow for all sorts of new sounds and new rhythms', observed William Austin of the Fourth Symphony, 'but melody and tonality organize the whole in essentially the same way they do in Mozart's world, as they rarely do in ours.' While some thought the reserved quality of his music a limitation, his admirers extolled not only his impressive technical skills, but the 'longing tenderness' of his slow movements and the 'sparkling gaiety' of his scherzos.

Having absorbed Schoenberg's 12-note method as early as the Flute Sonata (1930) and having composed a strict (albeit tonal) 12-note work as early as the *Chromatic Study on the Name of Bach* for the organ (1940), Piston initially established a reputation as a composer's composer. Some of his more accessible efforts in the late 1930s and early 40s, notably *Carnival Song* for chorus (1938), the ballet suite from *The Incredible Flutist* (1938) and the *Second Symphony* (1943), however, found favour among the concert-going public. The Symphony no.4 (1950) and the Symphony no.6 (1955) became particular favourites. As he made more extensive use of the 12-note method in the 1950s and especially the 1960s, his music became more chromatic and dense. These late works were also more adventurous formally, featuring complex one-movement designs, rather than his more traditional three- and four-movement forms.

A relatively slow worker, Piston joked that it took him an hour to decide upon a note and another hour to decide to erase it. He produced about one work a year, the eight symphonies and five string quartets representing the heart of his achievement. During his last two decades he produced a series of concertos (although not necessarily titled as such) for the viola (1957), two pianos (1959), the violin (1960), the harp (1963), the cello (1966), the clarinet (1967), the flute (1971) and string quartet (1976). He often composed with the capabilities and traits of particular players, ensembles and even halls in mind, and these works are no exception. Some of them were written for such celebrated virtuosi as Accardo, Zabaleta and Rostropovich; others were undertaken for distinguished members of the Boston SO, such as the flautist Doriot Anthony Dwyer and other friends. All attest to his great knowledge of instrumental technique.

As a teacher, Piston was the acclaimed author of a series of texts: *Principles of Harmonic Analysis* (Boston, 1933), *Harmony* (New York, 1941), *Counterpoint* (New York, 1947) and *Orchestration* (New York, 1955). Translated into numerous languages, the latter three were among the most esteemed and widely used books of their kind. The harmony texts in particular initiated a modern era of music theory, in which theoretical principles derived 'from the observation of musical practice', as David Thompson has noted. These texts also shed new light on the relationship between harmonic root movement and rhythmic structure, and between orchestration and form. In his occasional critical essays, Piston wrote thoughtfully on subjects such as the music of Roy Harris and the limitations of the 12-note method. Elliott Carter, Leroy Anderson, Arthur Berger, Gail Kubik, Irving Fine, Gordon Binkerd, Ellis Kohs, Leonard Bernstein, Robert Middleton, Robert Moevs, Harold Shapero, Allen Sapp, Daniel Pinkham, Noël Lee, Billy Jim Layton, Claudio Spies, Samuel Adler, Frederic Rzewski and John Harbison, who numbered among his students at Harvard, benefited not only from, in Bernstein's words, his 'non-pedantic approach to such academic subjects as fugue', but from close familiarity with his finely crafted music. Although he encouraged them to find their own way, many of these composers show his stylistic influence, especially in matters of contrapuntal finesse and textural clarity.

Piston's achievements were recognized by Pulitzer prizes for the symphonies nos.3 and 7, a Naumburg Award for the Symphony no.4 and New York Music Critics' Circle awards for the Symphony no.2, the Viola Concerto and the Fifth String Quartet. He was elected to the National Institute of Arts and Letters in 1938, the American Academy of Arts and Sciences in 1940, and the American Academy of Arts and Letters in 1955. He also received a Guggenheim Fellowship, the Coolidge Medal and numerous honorary doctorates. In addition, the French government bestowed upon him the decoration Officier of the Ordre des Arts et des Lettres.

Pitch. The particular quality of a sound (e.g. an individual musical note) that fixes its position in the scale. Certain sounds used in music that occupy no particular scale position, such as those produced by cymbals or the side drum, can be said to be of indefinite pitch. Pitch is determined by what the ear judges to be the most fundamental wave-frequency of the sound (even when, as for example with difference tones, this is an aural illusion, not actually present in the physical sound wave). Experimental studies, in which listeners have been tested for their perception and memory of pitch differences among sounds with wave-frequencies known to the experimenter, have shown that marked differences of timbre, loudness and musical context affect pitch, albeit in relatively small degree. But long-term memory, called ABSOLUTE PITCH, enables some people to identify the pitch of sounds quite apart from their contextual relation to other sounds. Such aspects of pitch are discussed in PSYCHOLOGY OF MUSIC, §II, 1.

Pitch is expressed by combining a frequency value (such as 440 Hz) with a note name. *a′* = 440 Hz is a pitch, as is *g′* = 440. If *g′* is 440, in equal temperament, then *a′* will be 494 Hz; if *a′* = 440, *g′* will be 392 Hz. Frequencies and pitches by themselves are simply natural phenomena; it is only when they are connected to pitch standards that they take on a musical dimension. A pitch standard is a convention of uniform pitch that is understood, prescribed and generally used by musicians at a given time or place. The statement '*Cammerton* was at *a′* = 415', for example, combines the name of a pitch standard (*Cammerton* or 'chamber pitch') with a note-name (*a′*) and a frequency (415 Hz). Over the last 400 years in Europe, the point that has been considered optimal for pitch standards has varied by about six semitones, depending on time and place.

This article discusses the pitch standards that have been used in various places and periods in Europe. The concept of pitch standards and attempts to measure pitch systems in non-Western music are also discussed.

I. Western pitch standards. II. Non-Western and traditional concepts.

I. Western pitch standards

1. Introduction: historical pitch standards. 2. History of European pitch standards since the late 16th century: (i) Italy (ii) France (iii) Germany (iv) J.S. Bach (v) The Habsburg lands (vi) England (vii) Classical pitches, 1765–1830 (viii) Pitch standards since *c*1830.

1. INTRODUCTION: HISTORICAL PITCH STANDARDS. Pitch standards were not an issue until voices and instruments began playing together. Singers performing *a cappella* found their pitch according to the compass of a given piece and the range of their voices. Consorts of instruments were tuned together, but only in reference to themselves. Until the second half of the 16th century, the only instrument that was played in church music was the organ (which even then played only *alternatim* passages). When secular instruments such as the violin and cornett finally entered the church, pitch standards had to be agreed upon. But the universal standard that we now take for granted was not yet necessary, and different standards operated side by side. In effect this practice survives today in so-called TRANSPOSING INSTRUMENTS such as horns, saxophones and clarinets. An 18th-century hautboy at Cammerton was a whole tone or minor 3rd below the organ at Cornet-Ton, just as a modern clarinet in B♭ or A is a whole tone or minor 3rd below a' = 440. The only difference is that today the existence of a single standard (a' = 440) is assumed, so some instruments are thought of as 'transposing' and others 'in concert pitch'.

As instruments (particularly wind instruments) travelled, they took their pitches with them. In the 16th and early 17th centuries wind instrument making was highly centralized: the best woodwinds came from Venice, the best brass from Nuremberg. The resulting consistency in pitch over large parts of Europe compared strikingly to the fragmentation that occurred during the Baroque and Classical periods. Since about 1830, with the standardization of the Industrial Revolution, deviations in pitch standards have again become relatively small (which is probably why it was possible eventually to agree on a universal standard at the International Standardizing Organization (ISO) meeting in London in May 1939, confirmed in 1953. There had been international meetings in 1834, 1858, 1862 and 1885, and laws fixing pitch have been passed in Italy in 1887, 1936 and 1888). The present level is about the same as it was in Beethoven's day.

There is little evidence to support the theory that differing pitches were the result of local length standards. Organ builders speak of '5 ⅓′ pitch' and so on as if pitch and length were almost synonymous, but such terms are not always meant literally. The known length standards of a number of European cities bear no obvious relation to their pitch standards, and some cities, like Nuremberg, show an almost continuous range of pitches, depending on the period. Many makers also copied instruments from other places.

It is rarely possible to generalize about pitch standards. Even when the exact period and location are known, different kinds of music often had their own standards (reflected in names such as 'opera pitch', 'chamber pitch' and 'choir pitch'). Although the levels shifted with time, the breaks were rarely clean, so older standards overlapped with newer ones.

Among the most important early writings on pitch history were those by the 19th-century English philologist and mathematician Alexander Ellis. He provided a great quantity of raw data but, lacking a body of practical knowledge of how music had been performed in the past, he was able to give little indication of how it had been used by musicians. Many of Ellis's pitches, calculated to a tenth of Hertz, appear to be more accurate than a careful reading of his text allows, and most later writers have accepted them too literally. It was the 20th-century American musicologist Arthur Mendel who clarified the way musicians thought about pitch, as a series of standards that sometimes related to each other in transposable intervals (Chorton was a major 2nd above Cammerton, for instance). He also emphasized the importance of both place and date in discussing standards. Despite Mendel's rigorous approach to the subject, however, he gave few absolute values for the relative standards he discussed, and those that he gave were usually conditional. Thus, between the extremes of Ellis's pitch frequencies without names and Mendel's pitch standards without values, performing musicians found little practical guidance.

Until the latter part of the 20th century, in fact, there was no great urgency to know the absolute Hertz values of historical pitches. As a practical matter they affected only singers, who whenever they sang with instruments either accepted the standard a' = 440 or persuaded the instrumentalists to transpose for them. The increase of performances on period instruments led to wider acceptance of the possibility of using pitches different to the modern standard, and to a realization that the sonorities and playing techniques of period instruments depended on their pitch levels. It thus became vital to know the performing pitches of works such as the cantatas of J.S. Bach, in which the original parts to the same piece were sometimes written in different keys (see §3(iv) below).

As the techniques of playing, making and restoring early instruments have become better understood, they have provided an important new source of empirical information on pitch that, if carefully approached, enables us to make plausible reconstructions of pitch levels as far back as the late Renaissance. The instruments that yield the most reliable historical pitch data are those that are hardest to alter: cornetts, early flutes, recorders, clarinets and organs. Other instruments are too flexible to be used as direct evidence: pitch estimates based on vocal ranges and string tension, for example, have proven unreliable except as corroboration of other kinds of evidence (written descriptions, musical notation, records of travelling musicians, etc.). Some early pitchpipes and tuning-forks survive, but it is difficult to know whether, when and how most of them were used. A few individual instruments (often organs) still exist whose pitches not only survive but were described at the time they were built. Other instruments can plausibly be associated with named pitch standards (for instance, recorders made in Leipzig with Bach's Cammerton). However, a number of factors can distort pitch evidence, such as the context in which each instrument was used, temperature (which is important for organs but is solved by a warm-up period on woodwinds), physical alterations, wood shrinkage, nominal pitch (e.g. whether the instrument is in F at a' = 440 or in G at a' = 392), location and date of manufacture, temperament, quality of information and modern assumptions about technique. The sections that follow are based on a study of the pitches of 1,194 original instruments that give plausible information, reported in Haynes, 1995.

Musicians today, playing music from a vast range of times and places, normally identify pitch standards by Hertz values. This convention breaks down when a' = 415, for instance, is used in a generic sense to mean all pitch frequencies from, say, a' = 410 to 420 Hz. A pitch standard is a musical rather than an acoustical unit, however; in terms of single cycles per second pitch changes

radically during concerts, but is nevertheless acceptable to those listening. Hertz values are too specific to represent pitch standards; in fact, our vocabulary lacks a terminology appropriate to this subject. In this article pitches are identified by note names: a' = 440 (or thereabouts) is given as A+0; a semitone lower as A–1; a major 2nd above as A+2, and so on. This system helps to visualize transpositions, which are an integral factor in the discussion of pitch, and accommodates the physical reality that although they start by tuning in the same frequency, most instruments are not tuned to an exact Hertz value but rather to a pitch standard. These standards are identified by semitones, a tolerance of half that size (i.e. plus or minus a quarter-tone, or 50 cents) being understood.

2. History of European pitch standards since the late 16th century.

(i) Italy. *Mezzo punto* and *tutto punto* were the names of pitch standards associated with the cornett, violin and organ in northern Italy from about 1580 to the end of the 17th century. *Mezzo punto*, clearly the more common level, was at $a' \approx 464$ (A+1), *tutto punto* was at $a' \approx 440$ (A+0). Church choirs of the period usually performed at A–1, a pitch known as *tuono corista*. Certain soft-voiced instruments such as transverse flutes and mute cornetts were also associated with this pitch. Organs were most often tuned at *mezzo punto* for playing with instruments, and organists transposed down a major 2nd when accompanying singers. Because temperaments and fingering technique made semitone transpositions impractical, wind players may have owned several instruments pitched in consecutive semitones, allowing whole-tone transpositions in various combinations to produce any required scale.

String players probably tuned up or down in order to play in reasonable keys. Most string instruments made in Cremona were probably designed to be played at *mezzo punto* or *tutto punto*. Antonio Barcotto (1652) wrote: 'Organs that are high work well with lower voices and violins, which are for this reason more spirited. The lower-pitched organs . . . do not work as well with violins as the high organs'. The gut strings used on the larger sizes of violin could probably have been tuned at least as high as A+1; smaller violins (which were especially popular in the 17th century) could go a semitone higher. Instrumental music was thus performed at A+1 or, less commonly, A+0; music involving choirs was at A–1 or, less commonly, at A+0.

By the 18th century, *mezzo punto* at A+1 was generally being called *corista di Lombardia*; it was the normal pitch of church organs in Venice until about 1740, when the organ maker Pietro Nachini began using A+0 (*tutto punto*), which then became known as *corista Veneto*. Although A–1 was used in Venetian opera in the early part of the century, it was A+0, apparently regarded as a compromise, that was to remain the principal pitch in Venice throughout the century, and which was adopted as the standard instrumental pitch, firstly in Vienna, and then all over Europe by the end of the 18th century. San Petronio in Bologna, which had been at *mezzo punto* since 1531, moved down to *corista Veneto* in 1708. Thus, the 20th-century pitch standard of a' = 440 may ultimately be descended from *corista Veneto*.

Tuono corista at A–1 still had currency in northern Italy during the 18th century; surviving Italian woodwinds were made at this level (as well as A+0). J.M. Anciuti and Carlo Palanca, who were among the important makers, made flutes with alternate joints at both levels, as well as individual recorders at each. Naples and Florence were generally associated with a pitch at A–1 during much of the 18th century.

In Rome, organs were generally at A–1 in Palestrina's time. But about 1600, evidently for the sake of the new castratos, church organs were lowered to A–2 (about a' = 384). One source called this pitch *corista di S Pietro*. Some Roman organs stayed at this level until late in the 19th century. Evidently, strings also played at this low pitch. Hautboy parts written by Handel and Antonio Caldara in Rome are notated a major 2nd lower than those for the rest of the orchestra, indicating that the hautboys involved were pitched a major 2nd higher. The principal hautboist for most or all these pieces was Ignazio Rion, who had come from Venice (where he had taught at the Ospedale della Pietà along with Vivaldi). Rion was evidently playing an hautboy at *corista Veneto*, while the other instruments (led by Arcangelo Corelli) were at A–2.

(ii) France. Mersenne wrote that a normal pitchpipe was tuned to *ton de chapelle*, presumably the pitch associated with church organs and choirs. The known pitches of most large organs built in France before 1680 range from a' = 388 to a' = 396 (A–2); this was the principal level associated with organs in France right into the 19th century. According to Mersenne's dimensions and illustrations of the 1630s, French wind instruments (which in this period never played in church) were at a level similar to the Italian *mezzo punto* (A+1). In France it was called *Ton d'écurie*, and woodwinds continued to be made to it until the 18th century (hence the C-hautboys that appear to be 'in D' and the F-recorders 'in G'). But most woodwinds were played at two other pitch standards: *Ton de l'Opéra* and *Ton de la chambre*. The orchestra of the new Opéra, created in the second half of the 17th century, adopted the singer's *Ton de chapelle* at A–2, and called it *Ton de l'Opéra*. To include winds in the new orchestra required that they be fundamentally redesigned, since (among other reasons) up to that time they had functioned separately in consorts at A+1. Pitch at the Opéra was fixed by the repertory: as long as works by Lully continued to be performed, a change in *Ton de l'Opéra* would have affected voice ranges and was therefore out of the question. The Opéra may have owned its own instruments and lent them to its players.

Several authors described two separate instrumental pitches in France from the late 17th century. In 1698, Georg Muffat reported one called 'ordinaire' and another approximately a semitone lower that he associated with 'Teatralischen Sachen'. Guillaume-Gabriel Nivers in 1683 also distinguished 'Ton de la Chambre du Roy' from *Ton de chapelle* a semitone lower. This *Ton de la chambre*, or 'court' pitch, seems to have been $a' \approx 404$ (A–1½); it is the pitch of many surviving French woodwinds of the period, of some organs, and of many French folk instruments. The name *Ton de la chambre* was used by other writers, including Loulié (1696) and Brossard (1703). Joseph Sauveur measured the pitches of harpsichords in 1700 and 1713 at $a' \approx 404$. This level is observable in France from about 1680 to 1800, although its period of importance was the reign of Louis XIV. The same frequency was dominant in England in the same period, and was known there as 'consort-pitch'.

There is evidence that all the royal organs (and some others as well) were raised from *Ton de chapelle* (A–2) to *Ton de la chambre* at A–1½ in the 1680s. This may have occurred because court musicians regularly performed in the royal chapels. Organs in other churches did not need to be changed in pitch to accomodate other instrumentalists, since there was a general interdiction on 'symphonists' playing in church (and when on special occasions they did, they usually came from the Opéra). Later in the 18th century the royal organs (like the one in the chapel at Versailles) were tuned back down to A–2. The organ at St Gervais, for example, where François Couperin was organist, was built in 1601 at A–2, and was raised a semitone in 1676 by Alexandre Thierry, organ maker to the King. In 1768 it was lowered to its original pitch of A–2. Thus all of Couperin's music, written either for St Gervais or the royal organs, and all his chamber music written for the court, was probably conceived at *Ton de la chambre* (A–1½).

Many woodwinds from Couperin's period survive at A–2 as well, and not all of them could have been used in the *Opéra* orchestra. Both A–1½ and A–2 were evidently current. Starting in the second decade of the 18th century French woodwinds began to be made at another somewhat higher pitch: a' = 410–415, or A–1. The term *Ton de la chambre* is not mentioned in later French sources. In 1737, Jacques Hotteterre was using *Ton ordinaire* for instrumental pitch (presumably A–1).

Pitch standards, like other aspects of French music making, changed rapidly after the death of Louis XIV in 1715. A–1 apparently became the predominant woodwind pitch until the 1740s, but this was the period when Italian style overwhelmed the traditional French, and *corista Veneto* came in at the same time; flutes were already appearing at A+0. In 1752, Quantz reported that Parisian pitch was 'beginning almost to equal that of Venice', and in 1757 J.F. Agricola spoke of 'französischen Stimmung' (by which he meant $a' \approx 390$) as a thing of the past. French flutes at A–2 no longer appeared after about 1770. From the time woodwinds at A+0 became common, they may have been used as transposing instruments at the Opéra (within the prevailing standard of A–2. Although this is mere speculation, that would explain the extreme sharp keys and difficult high notes in the woodwind parts to Rameau's operas starting in the 1740s.). The Concert Spirituel was also known for its high pitch. A number of well-known wind soloists from abroad played there starting in the 1730s, and may have influenced pitch through the instruments they brought with them.

By the 1760s *Ton de chapelle*, which had been ambiguous during Louis XIV's reign, was again fixed at its old level of A–2. But both Dom Bedos de Celles and Rousseau reported that *Ton de l'Opéra* was no longer stable, being raised and lowered a quarter-tone or more, depending on the ranges of voices. Repertory also played a part: Lully's works now began to undergo major revisions and additions which may have affected the ranges required from the singers and thus influenced their pitch preferences. The works of Lully and Rameau were still being performed in the early 1770s, but Gluck's 'reform operas' began in 1774, and from 1778 new and old operas were performed alternately. It was probably this state of affairs that the first bassoonist at the Opéra, Pierre Cugnier, described in 1780:

> Bassoons that are made in the proportion of eight feet reduced to four, according to the old system of manufacture, are appropriate for playing in cathedrals, where ordinarily the pitch of the organ is very low, as was that of the *Eglise des Innocents* and is still *Ste Chapelle* at Paris and the *Chapelle du Roi* in Versailles. These bassoons can still be used in the Paris *Opéra*, where one changes pitch when the solo voice parts are lower or less high; so that there are of necessity some problems with intonation caused by the difficulty (one can even say the impossibility) of playing in tune with an instrument that is too high or too low.

In the same year that Cugnier's comments were published, an anonymous tract gave the pitch of the Opéra as $a' \approx 404$, or A–1½, which was probably preferred for the newer repertory.

(iii) Germany. The detailed pitch information in Praetorius's *De organographia* of 1618 is pivotal, looking back on the practices of the end of the 16th century and forward to the situation of German musicians confronted with the arrival of the new French orchestral instruments in the later 17th. But (although Praetorius was not confused) his terminology is confusing. He called his reference pitch *CammerThon* (which he used to mean 'secular instrumental pitch' at A+1), but its frequency was quite different from that of 18th- century *Cammerton*. Praetorius used *ChorThon* to mean 'church organ pitch'. Earlier this pitch had been a tone lower than his *CammerThon*, thus A–1, and in certain places, he said, it still was. But *ChorThon* was in process of changing in Praetorius's day. He explained that organs had gradually risen in pitch 'about a tone' until they too were at *CammerThon*. This is why Praetorius was inconsistent in his meaning of the term *ChorThon*, sometimes equating it to *CammerThon* and sometimes making it a major 2nd below it. (Fortunately, he reserved *CammerThon* as his unmoving reference, although he gave it other names as well, like *rechte Thon* and *Cornettenthon*.) Praetorius described with approval the situation in Prague:

> Normal modern pitch, to which nearly all of our organs are now tuned, is there called *CammerThon* . . . *ChorThon*, however, which is a whole tone lower, is used only in the churches, primarily for the sake of the singers . . . as it allows their voices to bear up longer, and saves them from becoming husky from working at high pitch.

Evidence from the Habsburg lands confirms his description, *ChorThon* being the usual term for a pitch a 2nd below A+1 (*Zinck-Thon* or *Cornet-Ton*) until at least the time of Janowka (Prague, 1701; see §I, 2(v) below). Praetorius also appears to have been describing a corollary to the system used in northern Italy, in which the organist transposed down a whole step (to *tuono corista* or A–1) from a high instrumental pitch (A+1) for the sake of the singers. The parallel is underlined by Praetorius's use of the phrase '*Chöristen- oder Chor*Thon'.

Another aspect of Praetorius's pitch information that has led to confusion is his scale diagram of a set of organ pipes, or *Pfeifflin zur Chormass*, whose principal purpose, he explained, was to indicate the pitch level of his *CammerThon*. This diagram has been the subject of considerable debate, but it is now generally agreed that it, like other indications (including extant original wind instruments of the period), shows a level at A+1 (Myers, A1997, and Koster, D forthcoming). Praetorius's *CammerThon* was thus parallel to the most common pitch in Italy at the same time, *mezzo punto*.

In the latter part of the 17th century developments in France inspired a revolution in the instrumentarium in Germany. The new designs of woodwinds were tuned a

tone or more below most German organs. For various practical reasons, neither the organs nor the woodwinds could adapt to each other's pitch for a period of several generations. As secular instrumental music gradually came to dominate music making, however, so did its pitch. Thus Praetorius's *CammerThon* effectively swapped its meaning with that of *Chorton* (which continued to mean 'church organ pitch'). Jakob Adlung in 1768 referred to this confusion, writing that 'organs are tuned to *Chorton*, as it is now called, which is 1 or 1½ tones higher than *Cammerton*. Formerly it was the reverse, and *Cammerton* was higher than *Chorton*; organs were tuned to what was then called *Cammerton*'. Thus the approximate frequencies of established German pitch standards (A+1 and A–1) were not altered by the musical revolution caused by the arrival of French orchestral instruments, but their names were interchanged.

In the new configuration, transposition became necessary when organs played with other instruments. Vocal parts could be notated at either standard. In some cases, it was simpler (as for Bach at Weimar) to notate the voices with the organ, since the strings were still tuned high. As time went on, it became more common to write voice and string parts at the new low *Cammerton* (as Bach did at Leipzig), leaving only the organ and the brass (the latter representing a stronghold of tradition) at *Chorton*.

The older instruments in the German 17th-century tradition did not vanish immediately. The *chorist-Fagott* or *deutsche Fagott* (i.e. the curtal) long continued its traditional role in providing discrete accompaniment to choirs, and traditional shawms were played well into the 18th century. These instruments were pitched at Praetorius's old high *CammerThon* at A+1. But since the word *Cammerton* was now associated with a low pitch, 'deutsche' (e.g. *deutsche Schalmey*) gradually developed a secondary connotation as an indication of instruments at high pitch. Just as the term 'French' before an instrument's name (*französische Schalmei*), or the use of the French name itself (*Hautbois*) was a sign of an instrument in *Cammerton*, the word 'deutsche' was used to indicate an instrument at A+1 (*see* SHAWM, §4).

We are fortunate in having the original frequencies of at least 36 German organs whose pitch standard was also identified by name:

There are 13 examples of *Cornet-Ton* within a narrow and specific range, averaging *a′* = 463. This level agrees well with the pitch of surviving cornetts.

There are 11 examples of *Chorton*, as high as *a′* = 487 and as low as *a′* = 437 (i.e. A+0, A+1, A+2). They average, however, *a′* = 467.

There are two examples of *Chormass* at *a′* = 489 and *a′* = 466. (*Chormass* is a term frequently encountered in the 17th century and less in the 18th; it was evidently synonymous with *Chorton*).

Cammerton (ten examples) is also consistent and averages *a′* = 416. This level compares well with woodwind pitch between 1680 and 1770.

From this it can be seen that *Chorton* in the 18th century could have been any pitch from A+0 to A+2. 18th-century *Cornet-Ton*, by contrast, was relatively specific and consistent in frequency. Cornetts were commonly used as a reference for pitch frequency in Italy, Germany and the Habsburg lands. Cornetts made in Germany in the 16th and 17th centuries range in pitch from *a′* = 450 to *a′* = 480, but most are close to *a′* = 465.

Praetorius used *CammerThon* and *Cornettenthon* synonymously in the early 17th century. But while the names *CammerThon* and *ChorThon* traded places between the 17th and 18th centuries, *Cornet-Ton* (*Cornettenthon*) remained at the same level, since cornetts did not change in pitch from the 16th to the 18th centuries. *Cornet-Ton*, then, was equivalent to the early 17th-century *CammerThon*, but by the 18th century it had become a specific kind of *Chorton*.

The words *Cornet-Ton* and *Chorton* sounded so similar, and the concepts they denoted overlapped so closely, that it would be surprising if they had not sometimes been confused. *Chorton* was variously described as different from, lower than, and equal to *Cornet-ton*. Because *Chorton* was a general concept rather than a specific frequency, there are a number of references to a 'gewöhnlichen (ordinairen) Chortone' and 'hohe Chortone'. The 'gewöhnlichen' was a whole-tone above *Cammerton* (which was A–1). *Hohe Chorton* was found in the extreme north of Germany: Buxtehude's organ at the Marienkirche, Lübeck, was in *hoch-Chorton* and pitched at A+2. About a third of the surviving organs by Arp Schnitger are at A+2 (the others are at A+1). Organs at A+2 were used to accompany congregational singing in churches that did not use other instruments.

There were those who preferred the sound of organs at *Chorton* (in its general sense) over *Cammerton*. But the most important reason for making high-pitched organs was the expense: a lower pitch required extra pipes at the bottom of each stop, and being the longest pipes they used the most tin. The new organ built in Bach's Thomaskirche in Leipzig in 1773 was still at *Chorton*. By the beginning of the 19th century most organs were built in *Kammerton* (as it was then usually called), although in Saxony in the early 19th century an organ pitch of A+1 was still common.

Cammerton was associated with secular music; in the 18th century it was the usual pitch of instruments other than the organ and brass. Eventually many organs adopted *Cammerton*, which was more convenient when playing with other instruments. As noted above, nine 18th-century German organs at *Cammerton* survive, all at A–1 (which we can assume represented its normal frequency). There were other, lower species of *Cammerton*: the family of *tief-Cammertons*, including *Opera-Ton* and *französischer Thon*. These levels were all approximately a minor 3rd below A+1 and are thus difficult to keep distinct. The existence of *ton de la chambre* in France at A–1½ was probably the root cause of the confusion, since this frequency fell between the levels at A–1 and A–2 that were transposable on most German organ keyboards. The *Cammerton* levels at A–2 and A–1½, being common French pitches, probably came in when the first French woodwinds arrived in the 1680s. But A–1 must also have been current by the 1690s, as a stop in the Jacobikirche organ, Hamburg (Schnitger, 1693), was at *a′* = 408, a minor 3rd below the rest of the organ at *a′* = 489.

Praetorius documented the use of a pitch a minor 3rd below his *CammerThon* (at A+1) that was used, he said, 'a great deal in different Catholic chapels in Germany'. So the level at A–2 was not a complete innovation in Germany with the arrival of French instruments. Indications for *tief-Cammerton* in wind parts disappear after the mid-1720s, though German woodwinds were still made at A–2 until at least 1770.

The parts and occasionally the scores to German music of the early 18th century (such as works for organ and other instruments) that involved the simultaneous use of two and sometimes three different pitch standards were normally notated in different keys. In transposing, composers were obliged to consider a number of interrelated practical factors: the technical effects on different kinds of performers, changes of sonority, key and its relation to affect, and temperament. The effect of transposition on voices was a primary consideration. The tone qualities of the different vocal registers were consciously distinguished until the Classical period, and breaks from chest to head voice, which generally occur at specific frequencies, were avoided. Register placement is obviously shifted by transposition. Transposition could also turn a high tenor part into one for falsettist (countertenor) by changing its range.

Although string instruments were also sensitive to changes of pitch and key, some or all the individual strings were regularly retuned as much as a whole step up and down in the 18th century; examples are found in works by Biber, Kuhnau, Bach and Mozart. Many string instruments then in use had been made in an earlier period when standard instrumental pitch was A+1; they were often tuned up to *Cornet-ton* in the early 18th century.

When parts were not in the appropriate key, organists were expected to transpose at sight. Woodwinds were less flexible. Their fingering system limited them to keys with no more than four sharps or flats, and each tonality had an associated character, technique and intonation. Some woodwinds like the traverso and hautbois d'amour were specialists in sharp keys, while others like the recorder and bassoon tended towards flats.

Temperament was a consideration for the fixed-pitch instruments such as keyboards and lute; melody instruments made ad hoc tuning adjustments as needed. Transpositions of a semitone were impractical in meantone, but when the intervals involved were the major 2nd and minor 3rd, and a so-called 'regular' meantone was used (i.e. one in which all the 5ths but one were tuned the same), intervals were virtually identical in standard tonalities.

(iv) J.S. Bach. Throughout his career, Bach worked with instruments at *Cornet-ton* (A+1) and various levels of *Cammerton*, although his method of notating their parts was different in each of the places he worked. The most complex situation was at Weimar. The organ in the court chapel where Bach was Konzertmeister was documented as in 'Cornet Thon'. During the first year he wrote cantatas, Bach wrote parts for a single 'Oboe' notated a major 2nd above the other parts (organ, voices and strings). The strings must therefore have been tuned up to *Cornet-ton*, and the 'Oboe' must have sounded a tone below the organ (and therefore at the higher level of *Cammerton*, A-1). But the 'Oboe' disappeared at the end of 1714, to be replaced by an instrument Bach consistently called an 'Hautbois', whose parts now differed a minor 3rd from the organ and strings. From this time, Bach also notated certain other instruments at the interval of a minor 3rd, like the 'Basson' and 'Flaut' (recorder). Since the organ stayed at A+1, these instruments must have been at *tief-Cammerton*, or A–2. All the remaining works written for the Weimar chapel show this relationship.

The parts to Bach's music written at Cöthen, on the other hand, are in a single key; presumably all the instruments were at the same pitch. But there is reason to think the prevailing pitch at Cöthen was a form of *tief-Cammerton*, either A–1½ or A–2. The voice ranges of cantatas written there are unusually high, and when he used material from Cöthen later at Leipzig, Bach sometimes performed it at '*tief-Cammerthon*'. The problematic trumpet part to the second Brandenburg concerto would be significantly easier on an instrument at *tief-Cammerton* instead of A–1.

At Leipzig, the performing materials for most of Bach's vocal works indicate that the strings, voices and woodwinds were at *Cammerton* and the organ and brass were a major 2nd higher. Bach's predecessor, Johann Kuhnau, had specified in 1717 that the pitch of the organs at the Thomas- and Nicolaikirchen was *Cornet-ton*. But Kuhnau had used figural instruments at intervals of both a 2nd and a minor 3rd below *Cornet-ton*, 'depending', he said, 'on which is most convenient' (i.e. which pitch would yield mutually satisfying keys). He had woodwinds available, in other words, at both normal *Cammerton* and at *tief-Cammerton*. Since tonalities with open strings were preferable on the string instruments, and appropriate tonalities were critical for the unkeyed woodwinds, the presence of woodwinds tuned a semitone apart was extremely practical: it offered Kuhnau a choice of more combinations of keys in which to compose.

During Bach's first year and a half at Leipzig, he took advantage of this option by writing several cantatas at *tief-Cammerton*: nos.22, 23, 63 and 194, and also the first version of the *Magnificat*. (Cantatas nos.22 and 23 were his trial pieces and were performed together; Cantata no.63 had been conceived some years earlier, probably for performance at *tief-Cammerton*, and in Leipzig was performed on the same day as the *Magnificat* – which, with Cantata no.194, had antecedents in Cöthen.) The last known date that Bach used the *tief-Cammerton* option with his regular winds was 4 June 1724. He revised the *Magnificat* for a performance in the 1730s, transposing it from E♭ to D, probably because *tief-Cammerton* woodwinds were no longer available. Questions of notation and transposition caused by pitch differences affect the following works by Bach: BWV12, 18, 21, 22, 23, 31, 63, 70*a*, 71, 80*a*, 106, 131, 132, 147*a*, 150, 152, 155, 161, 162, 172, 182, 185, 186*a*, 194, 199, 208 and 243*a*. Most but not all these questions are addressed by the *Neue Bach-Ausgabe* (for a detailed discussion, see Haynes, A1995).

(v) The Habsburg lands. The description Praetorius gave of pitch relations in Prague (see §I, 2(iii), above) applied to Vienna as well. There, *ChorThon* (at A–1) was the pitch of church music and was a tone lower than *CammerThon/Cornettenthon* (at A+1). 70 years later Muffat, writing in 1698 for the Habsburg emperors, used the same concepts to describe French pitch:

> The pitch to which the French usually tune their instruments is a whole tone lower than our German one (called *Cornet-Ton*), and in operas, even one and a half tones lower. They find the German pitch too high, too screechy, and too forced. If it were up to me to choose a pitch, and there were no other considerations, I would choose the former [of the French pitches], called in Germany old *Chorton*, using somewhat thicker strings. This pitch lacks nothing in liveliness along with its sweetness.

Writing in Prague in 1701, T.B. Janowka still used Praetorius's terminology; he called the higher pitch *Zinckthon* and associated the lower one, *Chor-Thon*, with the new French and Italian wind instruments (which he

considered to be 'ex B', i.e. in B♭). The older Praetorius-style pitch names persisted well into the 18th century in the Habsburg lands, though by mid-century the terminology began to reverse itself as it had done 50 years earlier in northern Germany. The nomenclature, though not the musical practice, was in direct opposition to the usage in northern Germany at the same time.

The Habsburg court was strongly influenced by northern Italy, and many of its important musicians were Italian. Since instrumental pitch in Venice was normally A+0, it is not surprising to observe *Cammerton* move up a semitone already in Fux's time. By the period 1740–70, if not before, woodwinds being made in Vienna were at *a′* ≈ 430–435. In the same period, there are steady reports of organs being tuned down a semitone to A+0, and a number of new ones were also built at this level. In both cases, the influence of Venice was probably responsible (see §I, 2(i), above).

(vi) England. Various kinds of evidence suggest that at the beginning of the 17th century the primary English church standard was known as 'Quire-pitch', and that its level was *a′* ≈ 473, i.e. between A+1 and A+2. Instruments like recorders, cornetts and sackbuts were generally pitched a semitone lower than Quire-pitch (Q–1, *a′* ≈ 448; cf. Praetorius: 'The English pitch, however, is a very little lower [than *CammerThon* at *a′* ≈ 464], as the instruments made in that country show, for instance cornetts and shawms'). Viol consorts, at Consort-pitch, were another whole-step lower at Q-3, or *a′* ≈ 400.

Very few church organs escaped destruction during the Civil War and subsequent Commonwealth (1642–60). At the Restoration the instruments and pitches from before 1642 were temporarily re-established and a number of new organs were built. The newer French woodwinds that came into fashion in the 1670s and their pitch of A–1½ (*Ton de la chambre*; it was conveniently compatible with Consort-pitch at Q–3) eventually became important enough that organs had to be rebuilt or replaced at lower pitches in order to play with other instruments. English organs whose pitches have survived are thus almost always at Quire-pitch, a semitone, or a whole tone below it (*a′* ≈ 473, *a′* ≈ 448 or *a′* ≈ 423). The lowest of these levels, *a′* ≈ 423 or Q–2, became the dominant organ pitch in England in the 18th century and into the 19th, identified at least once as 'Chappell-pitch'; when it was later adopted by orchestral instruments in about the 1730s, it was called 'new Consort-pitch'. The other two higher levels vanished during the course of the 18th century. Handel often played an organ built in 1708 by Bernard Smith at the chapel of St James's Palace; this instrument was at *a′* = 466 (A+1).

Old consort pitch at Q–3 or *a′* ≈ 400 is represented by woodwinds made by Peter Bressan, Joseph Bradbury, Thomas Cahusac and Thomas Stanesby jr, and by at least one chamber organ attributed to Smith. That it probably extended backwards to the early 17th century is indicated by Praetorius ('Formerly in England . . . most instruments were made to sound a minor 3rd lower than our present-day *CammerThon*') and suggested by the fact that chamber and house music actually flourished during the Interregnum (its pitch therefore remaining unchanged). It is also likely that this was the pitch used by Blow and Purcell when they wrote for wind instruments. It is known that the pitch of the opera orchestra at the Queen's Theatre where Handel produced his first operas was a quarter-tone higher than *Ton d'Opéra* in France; this would put it at Q–3/A–1½. By the early 1720s, Handel was probably using A–1, which was standard opera pitch on the Continent. His later oratorios were probably performed at 'new Consort-pitch', or Q–2 (*a′* ≈ 423); the famous tuning fork left by Handel in 1751 at the Foundling Hospital is at *a′* = 422½.

Not all instruments fit into the Quire-pitch grid. The consorts of foreign musicians maintained by Henry VIII played as separate units, for instance, and had no need to conform to organ pitch standards. The organ and cornetts at Christ Church, Oxford, were at A+2 and A+0 respectively. While the quire pitch system was generally valid for all instruments until the first quarter of the 18th century, it began losing importance with the influx of Italians like Giuseppe Sammartini and their instruments at A–1 and A+0. In the period 1730–70 both new Consort-pitch at Q–2 (*a′* ≈ 423) and A+0 (*a′* ≈ 435) began to appear in woodwinds. By 1770 there were almost no woodwinds at the older Consort-pitch (Q–3); Q–2 was still present but most woodwinds were at A+0 (which was by then common in Venice, Paris, Vienna and much of Germany). Only organs retained the last vestige of the Quire-pitch grid, the majority being tuned to Q–2.

(vii) Classical pitches, 1765–1830. By the last part of the 18th century church organs throughout Europe tended to be in different pitches than orchestral instruments. Organs were generally pitched as they had been a century before, which, in relation to other instruments, made them too high in Germany and too low in France and England.

The two principal orchestral pitches were A–1 and A+0, and in the course of the Classical period the latter (more accurately *a′* = 430–440) become predominant, although the process of change was gradual and not universal. A+0 was already the predominant instrumental pitch in Venice at the beginning of the 18th century, in Vienna and Prague about 1740, in London and Rome by about 1770, in France about 1780 (officially in the 1790s) and in northern Germany at the beginning of the 19th century.

The Classical period was characterized by minor pitch differences of about a comma (a ninth of a whole-tone or about 21 cents) that could be accommodated on woodwinds by using alternate joints or tuning slides. Each theatre in Vienna and Paris, for instance, had its own slightly different pitch until the 1820s. Multiple joints were usually numbered from lowest to highest, and today often only one joint with a higher number remains; this is an indication that pitch was generally on the rise, since the lower-pitched joints were probably laid aside and eventually separated from the instruments.

In northern Italy at the end of the 18th century wind players were evidently getting their instruments from abroad; many woodwinds by Augustin and Heinrich Grenser are found now in Italian collections. Grensers are normally at about *a′* = 433, a pitch observed in Venice throughout the century. Although the *corista di S Pietro* at A–2 was maintained on organs at the Vatican until late in the 19th century, at the end of the 18th there were reports of woodwinds in Rome at about the same level as Venice. By this time, A+0 had come to be called *coristo Lombardo* and was considered normal in most parts of Italy, including Naples.

In France *Ton d'Opéra*, which had been at A–2 in mid-century (since the traditional repertory, including Lully's works, was still on the boards), began fluctuating between A–2 and A–1½ in the 1770s as a result of reforms and changing repertory. Harpsichords and woodwinds in France varied between A–1 and A+0, the latter predominating by the 1780s. They were sometimes classified according to their pitches as 'modern' (i.e. at A+0) or 'ancien' (A–1). The Concert Spirituel regularly featured soloists from abroad and had a reputation for a high pitch, probably A+0 ($a' \approx 435$). At the end of the century this pitch, called *Ton d'orchestre*, was officially adopted in Paris by the new Conservatoire. Many of the best woodwinds were shortened at this period, in the hope that they could be retained. The rationalist mentality of the age did not eliminate small variations in pitch standard, as the multiple joints of instruments made at the time testify. Even the *Opéra* was eventually forced to adopt *Ton d'orchestre*, though the poor showing of the singers of the time who attempted the earlier repertory was blamed on the raised pitch level. Charles Delezenne (1854) reported pitches at various theatres in Paris in 1823 as $a' = 424$, 428, 432 and, in 1834, 440.

The Italian influence on pitch throughout Europe was reinforced by the dynamism of the so-called 'Wiener Klassik'. By the second third of the century performances in Vienna were generally at $a' \approx 430$–435. Pitch remained at this level in Viennese instrumental, dramatic and much church music until the end of the century. Prague and other cities in the Habsburg empire were probably at the same pitch, since the court and many musicians circulated frequently. The latter part of the century saw much coming and going of wind players between Vienna and other places, suggesting a general agreement on pitch: famous soloists would not have switched instruments or set-ups merely for the sake of fluctuating pitch standards.

Reports in the 1770s compared Berlin's low pitch with the high one in Vienna. In some parts of northern Germany A–1 remained the standard until at least 1832. In Dresden, the famous *Cammerton* organs by Silbermann were probably responsible. It may also be that when A+0 became the general European standard, A–1 survived in many places because it had become a church pitch. Not only had organs been made to it in the mid-18th century, but being a whole tone below A+1, it remained more practical than A+0 for transpositions with older organs. Dresden was also a principal woodwind-making centre, and surviving instruments from there are at both A–1 and A+0 (the latter apparently for export). Berlin may have remained low as a result of the lingering influence of Frederick the Great's court (being a flautist, Frederick favoured a low pitch). A general pitch reference in Saxony at this time was the organ at the Nicolaikirche Leipzig, at A–1 (although flutes were made there at both A–1 and A+0).

(viii) Pitch standards since c1830. Since the early 19th century orchestral instruments have evolved through small adaptations rather than revolutionary new designs. As a result, fluctuations in pitch standards have been relatively minor. The mean pitch in Europe in 1858, when the *diapason normal* ($a' = 435$) was promulgated in France, was about $a' = 446$, just as it is today. The universal standard $a' = 440$ established in 1939 was no less artificial and unrealistic.

Historically, as we have seen, pitch has fluctuated both up and down. Present-day pitch is noticeably lower than Victorian England's 'sharp pitch' of $a' = 452$. Pitch at La Scala was at that same level in 1867, up from $a' = 450$ in 1856. In Vienna a generation after Mozart's death pitch seems to have been somewhat lower, at $a' = 440$–445. Thus almost from the beginning singers have been obliged to perform the music of Mozart and Verdi at a level several Hertz higher than the composers intended. At present pitch appears once again to be on the rise from a theoretical (and rarely used in orchestras) $a' = 440$ to as high as $a' = 450$. From a broader perspective these vacillations can be seen as temporary departures from a remarkably stable norm.

II. Non-Western and traditional concepts

1. Pitch standards. 2. Pitch systems.

1. PITCH STANDARDS. The earliest information of interest regarding musical pitch is the discovery of 65 clapperless two-tone bells unearthed among 7000 items of funerary goods from the tomb of Marquis Yi, of the Zeng state (*d c*433 BCE) at Zuizhou in China (*see* ZHONG, §2). Bell chimes were apparently restricted to the highest ranks of nobility and could apparently be used to play pentatonic music in a variety of keys. Though bronze bells, stone chimes and ocarinas have been found dating from as early as the second millennium BCE, the importance of the Zeng bells lies in the inscriptions on many of them, for they document the names of standard pitches (*lü*) belonging to each of the different states throughout the domain, that is the pitch to which instruments in offical ensembles would be tuned (*see* CHINA, §II, 4). Subsequently standard pitch in China came to acquire a symbolic and cosmological importance and to be related to other official standards of measurement for length, capacity and weight as manifested in the length and diameter of official pitch pipes. Other traditions may, like the Chinese, have inspired a considerable body of theory concerned with intervals, tunings and temperaments but seem to have shown less concern for absolute pitch standards.

Attention to pitch standards is not confined to literate societies and a standard is likely to be required for any ensemble which includes one or more instruments which are difficult to retune. Clearly ideal vocal ranges will have an impact on the choice of pitch for fixed pitch instruments in ensembles that incorporate the voice. This is still the case, for example, in the performance of Indian classical music where the system tonic pitch *sa* will be selected by the singer to suit his or her own preferred vocal range and other instrumentalists involved in the performance will tune their instruments up or down accordingly or select the most appropriate instrument from a range (flute players, for instance, will carry with them a number of differently pitched flutes). The introduction of factory-made harmoniums has had less effect on South Asian pitch standards than might have been expected, though all harmoniums are assumed to be of the same pitch. Harmonium players also learn to perform in different 'keys' when accompanying the voice so as to suit the preferred choice of pitch for *sa*. This is often centred on or around C for male singers and A or A♭ for female singers. A common way of referring to pitch levels is by specifying the corresponding black or white key on a harmonium. Thus in North India a *tablā* (whose pitch range is limited to a minor 3rd) may be described as *kāli pānc* ('black five', i.e. the fifth black key from the left hand side of the harmonium) which means it is suitable for use at or near the pitch level of D♯.

Apart from harmoniums made for the Indian market, since the mid-19th century other Western instruments and ensembles (accordions, pianos and wind bands, for example) have found a place in the musical practice of other nations and peoples and, as a result, Western pitch standards have come to be adopted. In Japan, where

issues of pitch as well as interval structures dominated the work of early scholars, even traditional ensembles have accommodated to a Western pitch norm during the 20th century. The most traditional of instruments, the *shakuhachi* flute, which was formerly of a standard pitch resulting from a standard length of 54·5 cm, is now made in 12 different sizes equivalent to the pitch of the 12 Western semitones so that any one flute can be chosen to suite the 'key' of a modern ensemble, obviating the need to shade tones which could conflict with the desired tonal effect. Modern European pitch pipes were introduced in Japan around 1920.

In the Arab world European pitch standards are also used. In Cairo, for example, classical musicians in the present day use *a'* = 440 as a standard, though a respected Egyptian musician writing at the beginning of the 20th century indicated that the standard was *a'* = 435 (al-Khulaʿī in his 1904 *Kitāb al mūsīqi al-sharqi*). Classical ensembles in Cairo today recognize two tunings, the lower of which gives *b'* as 440 and which involves violinists and *ʿud* players in tuning down a whole step while *nāy* (flute) players select a larger flute. However, as they get older, singers often prefer ensembles to tune down, sometimes as much as a minor 3rd.

2. Pitch systems. Towards the end of the 19th century European comparative musicologists became keenly interested in the pitch systems of non-Western peoples, believing that research in this area would help them with their theories on the origins and development of music. Stumpf and his younger colleague Hornbostel wrestled with related concepts such as *Tondistanz* (interval, see Abraham and Hornbostel, 1926), *Helligkeit* (brightness) and *Tonigkeit* (tone quality or chroma). Stumpf made use of tuning measurements supplied by Alexander Ellis who published mathematical descriptions of various non-Western scales such as the roughly equidistant five-tone Javanese *sléndro* and the Thai equidistant seven-tone scale. For this Ellis had invented the cents system which divided the equal-tempered semitone interval into 100 cents for purposes of accurate comparison of interval size. His essay 'On the Musical Scales of Various Nations' has long been considered a landmark in the development of comparative musicology because it was first to show that a great variety of pitch systems have evolved throughout the world including equal-tempered five- and seven-note scales. The usefulness of his detailed measurements, however, which were derived from work with museum instruments, including gongs and xylophones of doubtful quality and condition, has since been questioned (Schneider, 1990).

Benjamin Ives Gilman pioneered similar work in the USA, making recordings during expeditions among Zuñi and Hopi Indians to understand their pitch systems; he also recorded a Javanese gamelan and other musical traditions that were featured in the World's Columbian Exposition in Chicago in 1893.

The early researchers depended on subjective pitch matching of instrumental and vocal tones with sounds produced from devices such as tuning forks and monochords and faced different problems from those confronting later researchers who used electronic equipment such as the strobocom (Jones) and the melograph (Seeger and Hood). Electronic instruments work by isolating and measuring the lowest pitch (or fundamental) of any musical sound and the problem here is that psychologists have shown that fundamental frequency cannot be assumed to equate with perceived pitch. Schneider has pointed out that this especially applies to measurements taken from 'inharmonic' instruments such as gongs and xylophones rich in partials that do not bear a simple frequency relationship to the supposed fundamental. He further augues that a complex of tones (timbre) influences the experience of pitch and this seriously complicates the investigation of pitch systems, especially those where the indigenous musicians and theorists (if any) have not articulated their knowledge of the system other than through performance or tuning of instruments.

So-called equidistant or near equidistant scales have presented special problems to researchers since scales of fixed pitch instruments frequently did not achieve theoretically equidistant standards when measured and researchers were left with the problem of deciding if deviations from the norm were musically significant to the musicians and what degree of tolerance in tuning one should allow for. There is some evidence for suggesting that there is a greater degree of tolerance of pitch deviation in the case of musical systems employing large scale steps (such as an anhemitonic equipentatonic scale with steps of 240 cents) than in those traditions using semitones. For instance a Ganda harp or xylophone (Uganda) might be assumed to be tuned to a theoretically equidistant pentatonic scale, yet when measured incorporates steps as small as 200 cents or as large as 280. The problem then remains to discover if these larger and smaller intervals are an essential part of the scalic system or if they are to be disregarded because they are not conceived as different from other intervals which come closer to the equidistant norm (Cooke). Ellis was perhaps the first to face such a problem when a Thai xylophone, whose pitches he had measured, did not turn out to be equidistant. He simply constructed an equidistant seven-note scale on his bichord and asked Thai musicians to compare this scale with the scale derived from the xylophone. The musicians unanimously declared the first (exactly equidistant) scale to be good and the scale derived from the xylophone to be out of tune. He was able to conclude that 'The ideal Siamese scale is, consequently, an equal division of an Octave into seven parts, so that there are no Semitones and no Tones, when the instrument is properly tuned' (p.1105).

Even supposedly well-tuned musical instruments do not necessarily provide all the information one needs about a pitch system, for like the scale of the pianoforte, the tunings may be a compromise and the 'ideal' pitches are more likely to be found from variable pitch instruments or from the singing voice. Futhermore, instruments may provide more pitches than are actually utilized in performance: for instance the *khene* (mouth organ) of Laos is tuned to a diatonic scale but is used to produce basic pentatonic systems.

One cannot assume that pitch systems do not change through time. Berliner, for example (1978, pp.60–61), observed that *mbira* players of Zimbabwe changed the tunings of their instruments and cited the example of the musician Mude who over a period of several years used five different tunings with his group and how he liked to sing with different *chunings* 'for a change'. Berliner added, 'While I would have liked to have been able to posit a theory of Shona *mbira* tuning ... the complexity of the matter makes it premature at this time'. With the increasing globalization of musical culture the Western

pitch system is impacting on many non-Western systems. Keeler (*GEWM*, p.390) reported that when the piano was first introduced to Myanmar (Burma) in the 19th century, the white keys were retuned to a Burmese scale for accompanying singers and other instrumentalists, but that this practice has since been abandoned. There are many other examples of the increasing acceptance of Western scales: much has been written about the problems of the *pélog* and *sléndro* scales of Indonesian gamelans over the past century, yet it has also been noted that 'the Indonesian National Anthem, all patriotic school songs and virtually all popular music use the Western Diatonic Scale' (Perlman and Krumhansl, 100). A similar situation exists in many other cultures.

At the end of the 20th century acoustical measurement of vocal and instrumental scales and melodies has been aided by the use of computer programs which can sample frequency over a period of several seconds or more which allows the averaging of frequencies to ascertain the most significant in determining the pitch areas of a musical system. Such work is being supplemented with intra-cultural and cross-cultural tests of musical cognition and perception in the effort to better comprehend the pitch systems. Awareness of issues such as categorical perception of pitch classes and tuning tolerance are being built into experiments and careful observations of tuning processes seek to understand better the ideal scale or most 'comfortable' temperament that an instrument tuner may be aiming at. Nevertheless, the exploration of non-Western musical pitch systems continues to pose challenging problems.

For more information on individual pitch systems refer to individual country articles.

BRUCE HAYNES (I), PETER R. COOKE (II)

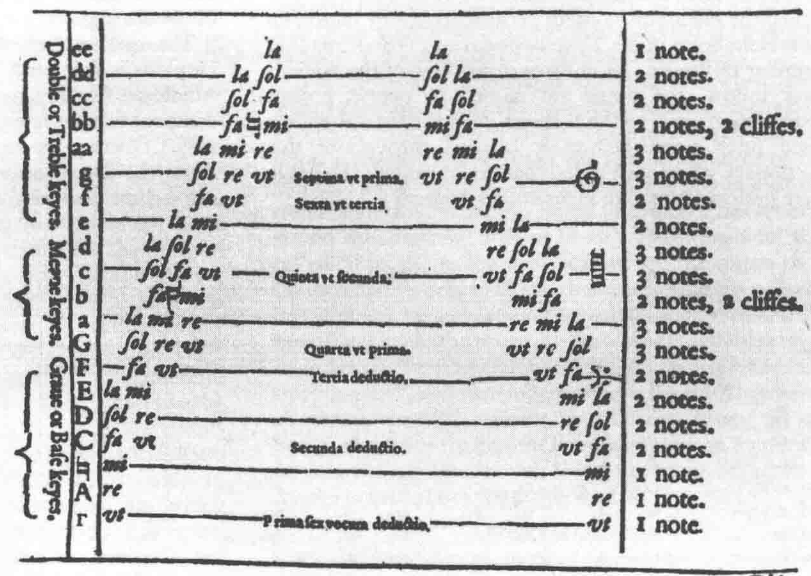
Pitch class. The type of a pitch. Pitches belong to the same class if they have some relation – for example, the octave relation – of compositional or analytical interest. This relation is called an 'equivalence' because, in the context of a particular description of musical structure, pitches in the same class are interchangeable, or equivalent.

Different equivalence relations, each associated with a distinct theory of music, give rise to different kinds of pitch class. Where pitches related by octave transposition are considered equivalent, as in chords described by the theory of harmonic inversion, one may speak of an 'octave-equivalence pitch class'. Thus letter-names, possibly modified by accidentals, such as C, C♯, D♭, D and E𝄫, all denote different classes of pitch. 12-note equal temperament, commonly used to model highly chromatic music, induces another equivalence relation, the enharmonic, and an 'enharmonic-equivalence pitch class' includes all the pitches played on the same key of an equal-tempered keyboard.

In SET theory, pitch classes are defined by both these equivalence relations, so that there are just 12 pitch classes, corresponding to the notes of the chromatic scale, often numbered from 0 to 11. The choice of which pitch class to call 0 is a matter of convention or expedience. The commonest conventional choice is C, in which case C♯ is 1, D is 2 and so on. Or, if the music under consideration is a 12-note serial piece, 0 could stand for the first pitch of the row in its prime or initial statement. Thus each pitch class in a 12-note row denotes one of many possible pitches, related by octave or enharmonic equivalence, all of which are equally appropriate as far as the identity of the row is concerned.

Other kinds of equivalence relations are possible. Division of the octave into more or fewer than 12 equal parts, as in some microtonal and diatonic systems, will yield more or fewer than 12 pitch classes. Compositions – especially of electronic music – can also be made to project an equivalence among pitches related by intervals other than the octave, an equivalence that can be reinforced by the way in which harmonic spectra are constructed.

JOHN ROEDER



Pitch nomenclature. The naming and definition of a particular pitch or class of note. In Western tonal music 12 classes of note are distinguished and may be further defined by their octave. The following discussion describes the systems of pitch nomenclature currently used in Western music and traces their historical development. For systems used by non-Western cultures, *see* NOTATION, §II, 2–4; *see also* GREECE, §I, 6.

The names most commonly used today are those based on the seven notes of the octave, further modified by the addition of accidentals. In English and German practice the letters of the alphabet form the basis of the nomenclature, A–G being used in the former and A–H in the latter. In French, Italian and Spanish the names are ultimately derived from the Guidonian hexachord (see below). In German, suffixes are added to the letter to denote sharp, double sharp, flat and double flat, whereas English, French, Italian and Spanish add the usual words for sharp, flat and so on to the basic name (Table 1).

The origins of modern pitch nomenclature lie in the scale or gamut of Guido of Arezzo (*c*991–2; *d* after 1033), which is set out conveniently in a diagram in the first lesson of Thomas Morley's *Plaine and Easie Introduction to Practicall Musicke* of 1597 (see illustration; *see also* HEXACHORD; SOLMIZATION). In this system notes of different octaves are in many cases distinguished by different names: for example D *sol re* and d *la sol re*. This terminology occurs not only in musical writings but (in

though I were a childe.

Ma. I will do so, and therefore behold, here is the Scale of Musicke, which wee terme the *Gam*.

Guido of Arezzo's scale, or gamut, as set out by Morley in his 'Plaine and Easie Introduction to Practicall Musicke' (1597)

the 17th and 18th centuries) also in the writings of the 'natural philosophers' who were Fellows of the Royal Society, such as John Wallis and Robert Smith (iii). In it may be sought the origin of the distinctions between notes of different octaves through the use of upper- and lower-case letters, duplicated letters and so forth, which occur in later, more extended pitch nomenclatures.

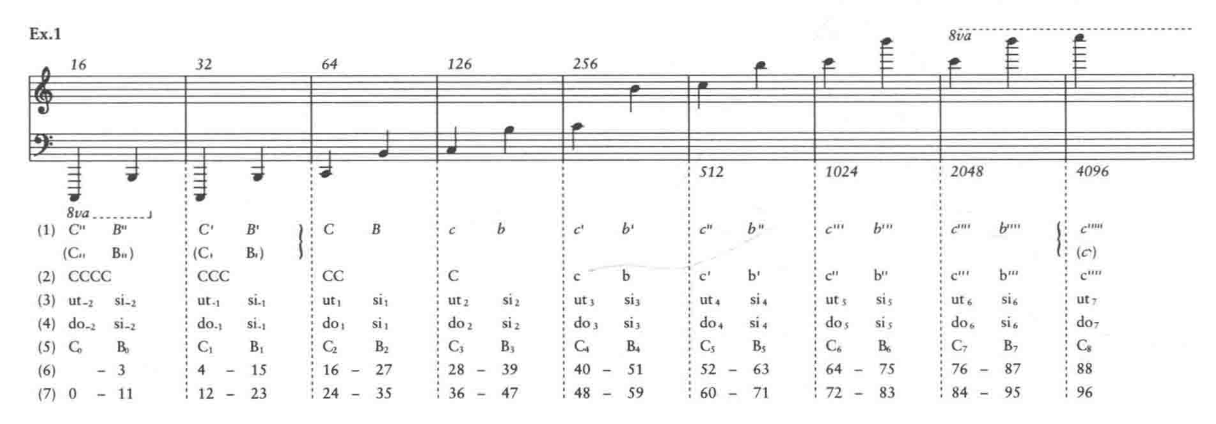
In this article (and this dictionary as a whole) *italic* letters are used exclusively with application to pitches as shown in ex.1 line (1). Except in the discussion of other pitch nomenclatures, non-italic capital letters denote pitch classes, not specific pitches.

In Morley's diagram the letters in the left-hand column run by octaves from A to G and from a to g, and continue from aa. In this particular diagram they differ from the letters used in later systems, which run upwards by octaves from each C; yet the terminology of the gamut is the key to such systems of nomenclature, of which the seven most generally encountered in the 20th century are shown in ex.1. (There is one partial exception to this rule of octaves starting with C, in the bass notes of line (2) of ex.1 as applied to the earlier organs.) The first two have been the most important in Britain; the last two are technical methods of designating pitches for instruments tuned in equal temperament. The figures standing above or below each C on the staves at the head of the table in ex.1 give an approximate value, in vibration cycles per second (or Hertz: Hz), for the vibration frequency corresponding to each. More exactly they are the frequencies of each C of the so-called 'philosophical pitch', built up by octaves from an initial frequency of 1 Hz, which makes middle C correspond to 256 Hz (*see* PITCH).

No attempt will be made here to catalogue all the systems of pitch nomenclature used by different writers, most of which are for specialist use or variants of established systems. The apparent confusion is clarified by some acquaintance with their history and by their relationship to the nomenclature of the gamut.

The following explanatory comments on the various schemes set out in ex.1 are numbered to correspond with the lines of the table.

(1) The pitch designation on which this is based is often called the Helmholtz system because its use by Hermann von Helmholtz in his *Tonempfindungen* (1863) made it familiar in Britain. As in three if not four of the systems that follow, the notes are named in octave groups extending from C to the B above. As it is the most widely used pitch nomenclature it is used throughout this dictionary when such a designation is wanted: the usage here prefers *C'* (etc.) to Helmholtz's original *C*ˌ.



(2) This line of ex.1 really groups together, because they are in general consistent, three more or less separate English systems.

The middle portion of the nomenclature in this line was used by Robert Smith (iii) in his *Harmonics* (1748). By this date a pitch classification using C, c, c', c″ and so on had come into use in England, though its use may not have been at all general. This scheme used C for the note called C *fa ut* in the gamut, and c for middle C, which was called c *sol fa ut* in the gamut. Logically there is much to be said for this system. For since very high and very low notes are the natural extremes in music there would be some advantage in taking middle C as a starting point, and using capital letters for all notes below it and lower-case for all above. On the other hand, the Helmholtz system, not used for organs in Britain, would seem to be more logical for organs, for it would be based on C as the bottom note of an 8′ stop on the manuals. This indeed was its origin in Germany, as is indicated by Helmholtz. The reason why the Helmholtz designations differ from those of this English system, which had a less technical origin, is to be found in that fact.

The use of repeated letters in the left-hand part of line (2) extending downwards through three octaves from the C in the bass staff, is now commonly employed by English organ builders for specifications. Like the names C and c in the middle of the line, the capital C used here is evidently derived from the names given to C in the gamut. Interesting light is thrown on the development of the nomenclature used by English organ builders by the historical section of Hopkins's article 'Organ' in the first edition of this dictionary. If two things are remembered, there is no difficulty in fixing the pitches intended by Hopkins by the designations he used or quoted. First, the number of notes in each organ stop gives a definite indication of its compass. Thus an interval of two octaves and a 5th, say from 'fiddle G to D in alt', the compass Hopkins gave for the Swell in the organ of St Mary Redcliffe, Bristol, 1726, would contain 32 notes (for 'in alt', see below). Secondly, an open pipe of 8′ nominal length would sound CC, one of 16′ nominal length would sound CCC, and one of 12′ nominal length would sound FFF a 4th higher.

The earliest English organ specification recorded by Hopkins is that for a 'payer of organs' for the parish 'of Alhalowe, Barking, next ye Tower of London', 1519. The compass was to be from 'dowble *Ce fa ut*', which shows why CC would be two leger lines below the bass staff. From the specifications as a whole it is clear that, for some three centuries, the sequence in this organ nomen-

Ex.1

clature was CC, DD, EE, FF, G, A, B, C and so on, and in it the point of change from capital to lower-case letters as shown in Morley's diagram of the gamut is shifted down by a whole tone. The reason is evident. It was inconvenient to use GG for *Gam ut* which originally used the Greek capital gamma. So G was used instead. The specification for the Swell in the organ for St James's, Bermondsey, 1829 (see *Grove 1*), ran from 'Gamut G', which is an octave higher than GG on the Great, as is shown by the number of notes in the two organs, 47 and 59 respectively, both rising to F in alt (*f‴*). Also GGG on the pedals of this organ used a pipe of nominal length 21⅓′, a 4th below the 16′ CCC. To take the change of lettering between FFF♯ and GG was important in the older organs, in which the manuals usually ran down to GG, a note between CCC and CC, and not, as we might expect, above CC. Today, when the manuals always run down to CC, the old point of change loses its significance. The modern English organ-builder commonly speaks of the succession of C's in the keyboard of full compass, with 61 notes (five octaves), as Bottom C (CC), Tenor C (C), Middle C, Treble C, High C (C in alt) and Top C (C in altissimo) and the necessity to distinguish in lettering between FFF♯ and GG does not arise. (Another system calls them respectively Great C, Small C, One-line C, Two-line C and so on; an octave below Great C is Contra C.)

Were a writer on organs today to use the upper part of the nomenclature in line (2), they would (or should) denote the pitches shown. This upper portion of the system was used in the 20th century by some carillon makers and bell-founders. Its immediate source is probably a modern authority, but its ultimate source may be the older English pitch designations used by Robert Smith. It is consistent with the English organ builders' method of naming pitches, though the scale of a carillon seldom goes below G of the organ builder's system (G *sol re ut*, Fiddle G, or *g*). This appears to be an isolated example of the use of Robert Smith's nomenclature today. There is no system of pitch definition in use among English makers of wind instruments; no need for one arises in practice.

(3) This line is the pitch nomenclature in use in France. Its origin lies in the gamut, and the names for notes between *ut* and *si* will be clear from the octave shown in ex.2. With the development of the leading-note in

Ex.2

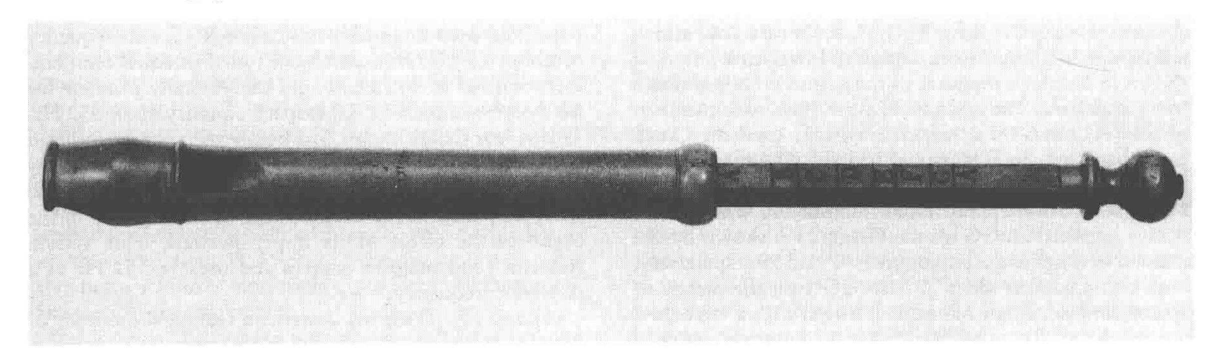
European music a name was needed for it, and *si* was adapted from the initials of Sancte Ioannes in the Latin hymn from which Guido took his names for the notes of the hexachord. As in the corresponding German system, shown in line (1) of ex.1, this scheme begins with the bottom C of the organ manual – as *ut*. The rather clumsy ut_{-1} and ut_{-2} are therefore used for the notes one and two octaves lower respectively. Some academic musicians and physicists have tended to replace ut_{-1} by ut_0, and ut_{-2} by ut_{01}.

(4) This line of ex.1 gives the pitch nomenclature in use in Italy. It differs from the French system only in substituting for *ut* the more singable name *do*, which appears to have replaced *ut* in countries other than France.

(5) This is a pitch nomenclature that has been adopted in the USA for scientific work. It starts with C_0 as the lowest C that the human ear can perceive as a musical tone. The deepest audible tone normally has a frequency of about 20 Hz. An instrument tuned in equal temperament with *a′* at 440 Hz would theoretically produce for the deepest sound of a 32′ stop a frequency of 16·352 Hz. This is less than a major 3rd below the sound produced by 20 Hz; no human ear will ever hear a deeper C. Many people cannot hear a pure tone corresponding to 16 Hz; what they hear in the deepest note of the 32′ stop in the organ is the effect of its upper partials. This system reckons frequencies in octaves and uses 16·352 Hz as a reference frequency.

(6) and (7). These are American technical methods of defining the notes of keyboard instruments tuned in equal temperament. They are pitch designations only in a narrow sense. In (6) the black and white keys of the piano are numbered consecutively, upwards, the bottom note A being numbered 1. (7) also numbers by the semitones of equal temperament, beginning with the C of the extreme left of the table in ex.1 as 0. In this system, the pitch class C is consequently numbered in multiples of 12, and so *c′* becomes 48. Other notes which are known by the same letter add constant numbers to these multiples of 12, for example, G always adding 7 and A always adding 9. Thus *a′* is 48 + 9 = 57. This system of numbering is called 'semitone count' (SC). These nomenclatures, like so many others, are confusing in their similarity.

'In alt' is a term used to describe notes in the octave immediately above the top line of the treble staff – those running from *g″* to *f‴*. Notes in the next octave (*g‴* to *f⁗*) are called 'in altissimo'. The term is derived from the Italian *in alto*, 'high'. It was used by Thomas Morley in his *Plaine and Easie Introduction*, but not in its precise modern sense: he used 'in alt' to mean 'an octave higher' (and 'in base' to mean an octave lower).



Later the term was limited to notes which lay above the gamut. Morley had explained that when Guido enlarged the scale from 15 to 20 notes the result was to 'fill up ... the reach of most voices'. And while he taught Philomathes that 'there can be no note given so high, but you may give a higher, and none so lowe, but that you may give a lower', he added that his scale consisted of but 20 notes 'because that compasse was the reach of most voyces, so that under *Gam ut* the voice seemed as a kind of *humming*, and above *E la* a kinde of constrained skricking'.

It is therefore a reasonable inference that when notes were required to describe the high pitches reached by good sopranos the term 'in alt' was employed to describe notes an octave higher than the top seven notes of the gamut, f *fa ut* to ee *la*. The note on the top line of the treble staff which had no name in Guido's hexachords would thus become 'f *fa ut* in alt'. That very note was called 'F in alt' in the specification for the organ in St James's, Bermondsey, 1829, already quoted. This doubtless explains an ambiguity that writers have noted in the use of 'in alt'. In the usage just indicated it would refer to an octave of notes beginning with F on the top line of the treble staff, *f″*, and running up to E on the third leger line, *e‴*. But in the 19th century, as musicians forgot the old nomenclature of the gamut, there would be an increasing tendency to use 'in alt' with the meaning we began with, for the octave above the treble staff.

LLEWELYN S. LLOYD/RICHARD RASTALL

Pitchpipe by Christophe Delusse, Paris, 1772 (Musée de la Musique Paris, no.E.308, C.742)

Pitchpipe (Fr. *flûte d'accord, diapason*; Ger. *Stimmpfeife*; It. *corista a fiato*). A term used for various aerophones designed to give standard pitches to singers or to aid tuning an instrument. Originally it referred to a 'piston flute' (*see* SWANEE WHISTLE, consisting of a recorder head fitted with a movable wooden plunger or piston on which a scale of notes with a range of about one octave was marked. Bédos de Celles (1766–78, p.35) described 'Un Tuyau de ton' as 'a small flute used to give the pitch to the organ and other instruments. It is made of hardwood, such as boxwood, green or black ebony, ivory . . .. Along the plunger, pitches are marked that correspond to a well-tuned organ at the proper pitch'.

Pitchpipes operate on the same level of accuracy as recorders, with a pitch tolerance of about 15 cents. They are important sources of information on earlier pitch standards, since they give names for each of the notes they produce, they are often stamped by the maker, and they sometimes include a date. The spacing of their scales also indicates what kinds of tuning systems were used in practical, everyday music-making. Numerous sources indicate that pitchpipes rather than tuning-forks were normally used as tuning devices for vocal and instrumental ensembles and keyboard instruments until the beginning of the 19th century. Pitchpipes were described by Mersenne (1636–7, p.169), William Turner (i) (1697), Mattheson (1721, p.428), Tans'ur (1746, p.57) and others. Mendel (p.82) cities a pitchpipe which Handel 'constantly carried with him'.

Pitchpipes were often used to fix the pitch of keyboard instruments. Couchet provided his customers with a 'fluijtien' ('little flute') with which to tune his harpsichords. J.C. Petit advised that for tuning the harpsichord the first note should be 'true to the Flute. It should be a small, square Pipe, with which Organ-builders take the fixed Tone to tune the Organ' (*Apologie de l'excellence de la musique*, London, *c*1740). Pitchpipes were described as commonplace for tuning pianos in the *Clavier-Stimmbuch* by Gall (first name unknown) published in Vienna in 1805, but by 1827 they had been replaced by tuning-forks, according to Kiesewetter (*AMZ*, xxix, cols.145–56).

A number of early pitchpipes have survived. Three that are preserved at the Musée de la Musique, Paris, are especially interesting. One, probably made after 1711, gives 'Ton de l'opera' as *a'* = 394 and 'Plus haut de la chapelle a versaille' as *a'* = 407. Another is believed to be by the maker Dupuis (*fl* 1682) and is pitched at about *a'* = 391. The third, made in the late 18th century by Christophe Delusse (no.E.244, C.743), gives two sets of pitches, neither named, at *a'* = 395 and *a'* = 419. Such small 'pocket' pitchpipes should not be confused with the *Stimmpfeife* used by organ makers and described by Adlung (1758; see also Barbour, pp.85–7). The latter were usually larger metal affairs and were blown through the organ's wind-channel. Modern free-reed pitchpipes made of metal (often cased in plastic), which give a series of discrete pitches, are still much-used by students and amateurs.

BRUCE HAYNES

Pitfield, Thomas B(aron) (*b* Bolton, 5 April 1903; *d* Bowden, Cheshire, 11 Nov 1999). English composer, teacher, poet and visual artist. He left school unwillingly at the age of 14 to work as an apprentice in an engineering factory. During this period he took private harmony, piano and cello lessons, before abandoning a career in engineering to enrol at the RNCM (1924). Among his earliest published compositions were *Prelude Minuet and Reel* for piano (1931) and a Piano Trio (1931–2), both published by Oxford University Press. On the recommendation of Hubert J. Foss, OUP commissioned Pitfield to produce book illustrations, including a cover for the first edition of Britten's *Simple Symphony*. In 1931 he obtained a scholarship to study at the Bolton School of Art as a teacher of art and cabinet-work, and after qualifying took various teaching posts in the Midlands. During World War II he was a conscientious objector and composed a song for the Peace Pledge Union. From 1947 to 1973 he taught composition at the RMCM, where his students included McCabe, Ogdon, David Ellis, John Golland and Ronald Stevenson. Pitfield's writings on music include *Musicianship for Guitarists* and *Musicianly Scale Practice* (London, 1959 and 1962, respectively).

As a composer Pitfield was self-taught, though he was given early advice by Eric Fogg. He writes in a melodically fresh and delicate diatonic style, with Gallic wit, baroque figuration and tinges of Delian harmony. Though most pieces in his substantial output are miniatures, he has successfully maintained a larger span in works such as the Piano Concerto no.1 and the sonatas for violin and oboe. His music is predominantly light – many works exhibit a sense of humour – but a deeper vein is explored in some of his songs and chamber works. A stylistic trait is the use

of irregular time signatures, particularly 7/8, while his melodies make frequent use of folk material.

WORKS
(*selective list*)

Stage (librettos by Pitfield unless otherwise stated): The Elm-Spirit (ballet), perf. 1934; The Rejected Pieman (ballet), perf. 1936; Maid of Hearts (ballet), perf. 1937; The Hallowed Manger (nativity play, 1), 1950–51; The Barnyard Singers (children's op, 2, R. Foster) (1954); Adam and the Creatures (morality play, 1), 1967; Coney Warren (children's comic operetta, 1), 1971; St Columba in Iona (morality play, 1), 1981–82

Orch: Pf Conc. no.1, 1946–7; Sinfonietta, perf. 1947; Theme and Variations, str, 1948; Fantasia, vn, orch, 1953; Ov. on North Country Tunes, 1953; Concert Ov., perf. 1957; Concerto Lirico, vn, orch, 1956–58; Pf Conc. no.2 'The Student', 1958; Concertino, perc, orch, 1961; Ruminations, pf, str, perf. 1970; Conversations, cl, hp, str (1970); Fl/Rec Conc., str, 1985–6; Bucolics, perf. 1991

JOHN B. TURNER

Piticchio, Francesco (*b* ?Palermo; *fl* 1760–1800). Italian composer. He is sometimes said to have been born in Rome, but this seems to result from the confusion of him with the contemporary Roman composer Pietro Paolo Piticchio, some of whose music has also been attributed to Francesco. About 1760 he was a *maestro di cappella* in Palermo. In 1778 he collaborated with Giuseppe Gazzaniga on a comic opera in Rome. His opera *Didone* was performed in Palermo in 1780, followed by a comic opera in Rome in Carnival 1781 and an oratorio in Venice later that year. He then went to Germany as *maestro al cembalo* of an Italian opera company. For about two years, probably from 1782, he was at Brunswick, in 1784–5 at Dresden and in 1785 at Madrid. He spent the years 1786–91 in Vienna and then apparently returned to Italy. In Naples in 1798 he had an opera performed at the S Carlo, the libretto of which describes him as *maestro di cappella* to the hereditary princess. He probably accompanied the royal family when it fled to Palermo to escape the Revolution of 1799, since he composed there an occasional cantata, *La concordia felice*, to celebrate the return of the king and Nelson from their visit to Naples after the revolution had been put down.

Gerber thought highly of Piticchio's operas, calling him a 'passionate and highly expressive' composer, a judgment that has been echoed by later lexicographers. However, to Da Ponte, who collaborated with him on an opera in Vienna, he was a 'maestro bestia' and 'a man of very little intellect and of the most limited musical gifts'. According to Da Ponte, Joseph II held a similar opinion.

RON RABIN

Pitoni, Giuseppe Ottavio (*b* Rieti, 18 March 1657; *d* Rome, 1 Feb 1743). Italian composer and writer on music. According to Chiti he was taken to Rome by his parents at the age of 11 months, attended Pompeo Natali's music school at the age of five and sang at S Giovanni dei Fiorentini when he was eight and soon afterwards at SS Apostoli. When he was still very young he became a pupil of Francesco Foggia. In 1673 he became *maestro di cappella* at Monterotondo, near Rome. The following year he went to Assisi Cathedral, where he devoted himself to studying the works of Palestrina. In 1676 he became *maestro di cappella* of Rieti Cathedral and from 1677 until his death he held a similar post at the collegiate church of S Marco in the Palazzo Venezia, Rome (during this time he also held several other appointments in Rome). From 1686 until his death he lived at the Collegio Germanico and directed its church music, which at that time was performed at S Apollinare. From 1694 to 1721 he worked for the chapter of S Lorenzo in Damaso, where from at least 1696 to 1731 he was also responsible for the performances promoted by the music-loving Cardinal Pietro Ottoboni. In 1709 he declined to succeed Alessandro Scarlatti as *maestro di cappella* of S Maria Maggiore, but he was *maestro di cappella* of S Giovanni in Laterano from the previous year until 1719, when he took up a

similar post at the Cappella Giulia at S Pietro. He was also employed as a musician at other churches. He was several times first guardian of the Congregazione di S Cecilia, Rome.

Pitoni was an exceedingly prolific composer of church music and was greatly respected in Rome. His music is fundamentally in the Palestrina tradition but contains elements of the concertato and polychoral styles (even four-part works by him were sung by two separated choirs). He frequently distinguished in his titles between the *stile concertato* and the *stile pieno*, the latter denoting the *stile antico*. Organ accompaniments are optional only in a number of four-part *stile pieno* compositions. The pure counterpoint that informed his early works gradually disappeared until, by about 1720, his music was predominantly chordal, with only vestiges of counterpoint. The *stile pieno*, used primarily for penitential liturgical works, reappeared, however, after 1730. In the four-part concertato works solo sections are clearly contrasted with choral sections that include parlando tuttis. After about 1720 solos also appeared in the masses in place of concertato sections for several voices. Concertante instrumental parts were sometimes added. Notable features of Pitoni's polychoral music are its brilliant counterpoint, the exchange of melodic material between voices, and the use of alternating choirs. From 1724 this style is less important in his output, though Chiti reported that at the end of his life he was working on, but was unable to complete, a mass for 12 choirs. Most of his numerous Office hymns are simple monodic or four-part settings, but the psalm settings include works for 16 voices; in many of the psalms a solo voice is contrasted with the ripieno choir.

Pitoni was also a writer on music theory and history. His *Notitia de contrapuntisti*, an important early landmark in music lexicography, provides much useful and otherwise unobtainable information (not always accurate) about, in particular, earlier practitioners in the traditions of church music which he cultivated so assiduously himself.

WORKS

almost all with continuo

SACRED

1 ps in 1683[1]

1 motet, 2vv (Rome, 1697)

SIEGFRIED GMEINWIESER

Pitra, Jean Baptiste (*b* Champforgueil, nr Autun, 1, 12 or 31 Aug 1812; *d* Rome, 9 Feb 1889). French Benedictine scholar. Ordained in 1836, he joined the Solesmes brotherhood in 1841 under Abbé Guéranger, and after his profession of faith in 1843 was appointed prior of St Germain-des-Prés in Paris; while there he assisted Migne with the Latin and Greek patrologies. Between 1845 and 1850 he travelled extensively, seeking in particular Greek and Latin manuscripts for the Solesmes library; many of the texts were later published in *Spicilegium solesmense* (1852–8/*R*). During a visit to St Petersburg (1860) he rediscovered the metric and strophic structure of medieval Greek liturgical poetry; the results, announced in 1863, were published in his now celebrated study *Hymnographie de l'église grecque* (Rome, 1867). He was made a cardinal in 1863 and appointed librarian of the Vatican libraries in 1869. An authority on the canon law of the Eastern Churches, he published *Juris ecclesiastici Graecorum historia et monumenta* (Rome, 1864–8/*R*) and collections of early Christian literature (*Analecta sacra spicilegio solesmensi parata*, Paris, 1876–91/*R*). While it is true that FRANZ JOSEPH MONE was already aware of the principles of structure of Greek verses, it is not proven that Pitra knew these results and claimed the discovery for himself. Pitra's explanation is much more methodical and clearer than Mone's, and his findings were better disseminated.

MILOŠ VELIMIROVIĆ

Pitschner, Gregor. *See* PESCHIN, GREGOR.

Pitt, Percy (*b* London, 4 Jan 1869; *d* London, 23 Nov 1932). English conductor, composer and manager. He studied with Reinecke and Jadassohn in Leipzig and with Rheinberger in Munich. In 1896 he became accompanist, organist and celesta player for the Queen's Hall concerts conducted by Henry Wood, but in 1902 made a decisive switch to opera with an appointment as musical adviser to the Grand Opera Syndicate which ran Covent Garden. The title of musical director, to which he was advanced in 1907, in fact gave him little more than the function of coach, assistant conductor and consultant, but it placed him centrally in the politics of opera. Pitt was the close ally of Hans Richter in the latter's performances of the *Ring* in English at Covent Garden (1908–9) and shared Richter's disappointment that the further establishment of an English repertory was frustrated by the management. On Richter's nomination, Pitt had already become the first English conductor at Covent Garden during the 'grand season' with Poldini's one-act *Der Vagabund und die Prinzessin* (1907). He also conducted *Don Giovanni* in 1909 (with McCormack as Ottavio) and Sullivan's *Ivanhoe* (1910). In Beecham's 1919–20 season at Covent Garden, Pitt conducted *Khovanshchina*, *Pelléas et Mélisande* and other works, and on the subsequent financial collapse of Beecham's operatic enterprise it was Pitt who became artistic director of the succeeding British National Opera Company from 1922 until 1924. From 1922 he was also musical adviser to the newly formed BBC, a post which became a full-time musical directorship from 1924 until he was succeeded by Boult on his retirement in 1930. He conducted the first of the BBC's public symphony concerts at the Central Hall, Westminster, in February 1924, having previously conducted the broadcast of parts of *Die Zauberflöte* from Covent Garden on 8 January 1923. Under Pitt's leadership, the future tone of the BBC's musical enterprise was established.

In earlier years Pitt had a good reputation as a composer. Tetrazzini sang a song he wrote for her, *Sérénade du passant*, at her first Queen's Hall appearance in 1917. His other works include a *Ballade* for violin and orchestra (composed for Ysaÿe), a clarinet concerto and a variety of stage music.

ARTHUR JACOBS

Pittanus [Pitanus, Pittach], **Friedrich** (*b* Frankfurt an der Oder, *c*1568; *d* in or after 1606). German composer and clergyman. He attended the local school, where he was taught by Gregor Lange, and in the winter term of 1578 he matriculated at the local university, where he later studied music and theology. On 8 February 1591 he was appointed Kantor of the Marienkirche, Frankfurt an der Oder, but he carried out his duties less satisfactorily than had been hoped, and as early as the beginning of March 1593 he was replaced by the more substantial figure of Bartholomäus Gesius. According to the title-page of a wedding song by him of 1595, he was then a musician at Bernau, near Berlin, and he appears still to have been there in 1599. Shortly afterwards he became a preacher not far away at Grimnitz, near Eberswalde. Most of his music is either lost or inaccessible. He published *Sacrae cantiones* (Frankfurt an der Oder, 1590), for five and six voices, a volume that possibly helped him to his first appointment as Kantor. It seems to have been followed by only a few isolated occasional pieces including the five-voice *Ein Hochzeit gesang ... dem Friedrich Hartmann* (Frankfurt an der Oder, 1595) and *Epithalamium in honorem nuptiarum ... Caspari Ottonis medicinae doctoris* (Frankfurt an der Oder, 1606), for six voices, while in manuscript there is an organ tablature version of a five-part motet, *Quare tristis*, which may be from his 1590 print (in *PL-PE* 305; facs. in AMP, iii, 1965, pp.58–9; extended incipit in AMP, i, 1963, p.97); a few sacred songs by him were formerly in the Stadtbibliothek, Elbing (new Elbląg).

Pittar, Fanny Krumpholtz. English composer. Daughter of Anne-Marie Krumpholtz (*see* KRUMPHOLTZ family, (3)).

Pittel, Harvey (*b* Great Falls, MT, 22 June 1943). American saxophonist. He studied with Kalman Bloch and Franklyn Stokes and from 1961 to 1965 attended the University of Southern California, where he obtained his doctorate in music education. Further studies were with Frederick Hemke at Northwestern University (1965–6) and with Joseph Allard (1966–9) while he was in the US Military Academy Band. In 1970 he won a silver medal at the Concours International in Geneva. He made his solo début with the Boston SO in Ingolf Dahl's Saxophone Concerto (1971); his recital début was in 1973 at Carnegie Recital Hall. He has performed with major orchestras in the USA and Europe. In 1972 he formed a saxophone quartet; he has also performed in a trio consisting of saxophone, piano and cello. Among the premières he has presented are those of Berio's *Chemins II b/c*, Babbitt's *Images* and Chihara's Saxophone Concerto. Pittel has taught at the University of Southern California, California State University (Fullerton and Long Beach campuses), Boston University, the Mannes College and, from 1980, the University of Texas, Austin. He has also held workshops at the Aspen Music School and the Berkshire Music Center.

SORAB MODI/R

Pittman, Josiah (*b* London, 3 Sept 1816; *d* London, 23 April 1886). English organist and church musician. The son of a musician, Pittman learnt music from an early age, later studying the organ with S.S. Wesley and the piano with Moscheles. Appointed organist of Christ Church, Spitalfields, at the age of 15, he held similar posts at Tooting (1833) and Sydenham (1835). In 1852, when the Benchers of Lincoln's Inn first elected to introduce a choral form of service in their chapel, Pittman was appointed organist with the task of forming a professional choir of men and boys. Under his leadership a new tradition was created, and Pittman composed many services and anthems for use there; the choir soon earned for the chapel a high position in the ranks of London's 'musical' churches. At a time when the movement to introduce surpliced choirs was arousing wide controversy, Pittman published *The People in Church* (1858), a treatise on the musical privileges and duties of a congregation. The book reflected the seriousness and enthusiasm with

which he regarded his own duties; but that high-mindedness was to bring about his downfall. Called upon to include the tune 'Helmsley' in the chapel service during Advent, 1864, Pittman objected to its secular origin. When his objection was overruled, he rashly parodied the tune at the organ during the service and was promptly dismissed. Thereafter he held the post of accompanist at Her Majesty's Theatre (1865–8) and at the Royal Italian Opera, Covent Garden (1868–80).

Pittman was among the first to introduce Bach's 'pedal' fugues to English audiences; and he achieved note as a lecturer on music at the London Institution. His other publications include *The People in the Cathedral: a Letter to the Very Revd Henry Hart Milman* (1859), *Songs of Scotland* and *Songs from the Operas*. He was co-editor with Sullivan of the Royal Edition of Operas, and made an edition of Callcott's *Grammar of Music*.

BERNARR RAINBOW

Pittsburgh. City in western Pennsylvania, USA. It was founded in 1758 as a military settlement. The earliest musical heritage was English, but from the start of the 19th century important contributions were made by Welsh and German immigrants. The Welsh brought their singing festivals, known as *cymanfa ganu*, and in 1807 the American artist Samuel H. Dearborn founded the Apollonian Society, devoted to performing popular songs and marches of the day, as well as the music of Mozart and his contemporaries. From 1820 Handel's choruses were regularly performed, and most musical instruments were available after 1830. Choral singing became quite popular, although in Presbyterian churches the presence of choirs and instruments was a matter of controversy through much of the 19th century.

The best-known native composer of the 19th century was Stephen C. Foster (1826–64). An active musician after the Civil War was P.L.C. Tetedoux, a singing teacher and former pupil of Rossini, who organized a Cantata Society that performed sacred works. In the 1890s the industrialist Andrew Carnegie presented Allegheny (which became part of Pittsburgh in 1906) with a library and a music hall containing a large Roosevelt organ. The renovated Carnegie Music Hall (cap. 1972), part of Carnegie Institute in the city's Oakland district, remains the chief venue for chamber music and recitals. The music division of Carnegie Library (founded 1938) is a rich collection that is still the city's major resource for these materials. Among the other wealthy families who have contributed significantly to Pittsburgh's cultural life in the 20th century are the Fricks, the Heinzes, the Mellons and the Scaifes.

1. Orchestras. 2. Opera. 3. Chamber and choral music. 4. Music education. 5. Broadcasting.

1. ORCHESTRAS. The first ensemble in the city that endured for more than a couple of concerts was the Pittsburgh Orchestral Society, organized and conducted by Gottlieb A. Anton (1854–6). Ad hoc ensembles and visiting orchestras performed during the following decades, until the city's first permanent professional orchestra, the Pittsburgh Orchestra, was established in 1895. Conducted by a local organist named Frederick Archer, the Pittsburgh Orchestra – which developed into the present Pittsburgh SO – gave its first concert in the new Carnegie Music Hall on 28 February 1896. Victor Herbert (1859–1924) was the first to be named music director, a post he held from 1898 to 1904. Herbert was succeeded by Emil Paul until 1910, when financial problems arose and the board disbanded the orchestra. It was not until 1926 that the orchestra was reorganized as the Pittsburgh SO, performing in the 3750-seat Syria Mosque (built 1916), and not until 1930 that a new music director was named: the Pittsburgher Antonio Modarelli (1927–37). Subsequent music directors have been Fritz Reiner (1938–48), William Steinberg (1952–76), André Previn (1976–85), Lorin Maazel (1988–96) and Mariss Jansons, who took over in 1997. In September 1971 the orchestra moved to the 2856-seat Heinz Hall, an elegantly converted 1920s cinema which it owns. Under Maazel's leadership the orchestra achieved international status, with numerous recordings, successful tours to several continents and an ever-growing endowment. Its regular season in Heinz Hall is 22 weeks long, plus seven weekends of Pops concerts. Marvin Hamlisch, composer of *A Chorus Line*, was appointed principal Pops conductor in 1995.

In 1945 Marie Maazel (mother of the conductor) founded the Pittsburgh Youth Symphony, which is conducted by one of the Pittsburgh SO's resident or associate conductors. A second professional orchestra, composed of local union members, now plays for the Pittsburgh Opera, Pittsburgh Ballet and the Civic Light Opera Association (which presents Broadway musicals) as well as several smaller local ensembles.

The Pittsburgh New Music Ensemble, founded by the composer and conductor David Stock in 1976, performs a wide range of contemporary repertory, commissions new works and has been enormously successful in increasing awareness of contemporary music among conservative Pittsburgh audiences. Stock resigned as music director at the end of the 1998–9 season and was succeeded by Pittsburgh-born Gil Rose in August 1999.

2. OPERA. The first opera given in Pittsburgh was an English version of Rossini's *Il barbiere di Siviglia* by the visiting Francis Courtney Weymyss Troupe on 16 April 1838, but opera did not flourish in Pittsburgh until 1873, when the Frohsinn Society gave Flotow's *Alessandro Stradella* (in German) to much acclaim. In 1874 the Gounod Club performed another of Flotow's operas, *Martha*, in its first operatic series. While famous opera companies (including the New York Metropolitan Opera) visited the city regularly on their tours in the early 20th century, the first permanent professional organization, Pittsburgh Opera, was not established until 1939. Richard Karp, a German viola player who came to the USA to escape Nazi oppression and played in the Pittsburgh SO under Reiner, directed the opera company from 1942 to 1975, when illness forced him to step down in favour of his daughter, Barbara. Cincinnati Opera director James DeBlasis became artistic adviser after Karp resigned following a disagreement with the board in 1979, remaining in that position until Tito Capobianco was appointed general director in 1983. Capobianco increased the budget and production values, especially after the company moved into the state-of-the-art Benedum Center – another renovated cinema – in October 1987. A reorganization took place in 1997, when Capobianco's title was changed to artistic director and Mark Weinstein was brought in for the newly created post of executive

director, to take up the administrative responsibilities Capobianco had relinquished. Capobianco retired from Pittsburgh Opera at the end of the 1999–2000 season. Weinstein was appointed general director.

With few exceptions, Pittsburgh Opera sticks stubbornly to the most familiar repertory. Contemporary operas, American works, even most of the German repertory, have been ignored. *Der Rosenkavalier* did not reach Pittsburgh until 1995. The gap has partly been filled by the Opera Theater of Pittsburgh, an enterprising small company operated on a shoestring budget by former Metropolitan Opera mezzo-soprano Mildred Miller Posvar, who founded the troupe in 1978. It was known until 1987 as Pittsburgh Chamber Opera. Dedicated to promoting young professional singers in standard and modern repertory, the company tours with educational projects in addition to its performances at home. Jonathan Eaton succeeded Posvar as director in August 1999.

3. CHAMBER AND CHORAL MUSIC. Jenny Lind gave concerts in Pittsburgh in 1851. Today the Y Music Society has the city's oldest recital series, which since 1926 has brought in first-rank artists, from Nathan Milstein and Marian Anderson to Vladimir Feltsman and Itzhak Perlman. The Pittsburgh Chamber Music Society, founded in 1961, offers six concerts each year by well-known ensembles. The Tuesday Musical Club presents free recitals by entry-level performers in the élite, exclusive spaces of the Frick Art Museum. Early music is well served by the Renaissance and Baroque Society, which has developed one of the area's most faithful and enthusiastic followings.

One of the earliest choral societies in the area was the Teutonia Männerchor, formed in 1854. Numerous other singing societies soon arose. The Mozart Club (1879–1919), founded and directed by James Knox Polk McCollum, presented oratorios and other large-scale choral works. The oldest choral society still functioning in Pittsburgh is the Mendelssohn Choir, founded in 1908. Under its music director Robert Page it is the official choir of the Pittsburgh SO, but also gives a three-event subscription series of its own. Other thriving choral groups include the Bach Choir (founded 1934) and the Pittsburgh Camerata, an *a cappella* chamber choir.

4. MUSIC EDUCATION. The earliest music teachers and performers in Pittsburgh were trained in England. Peter Declary, who arrived in Pittsburgh in 1799, was the city's first teacher of music, while William Evens, a native of Sussex who came to Pittsburgh from Philadelphia in 1811, opened a singing school soon afterwards. He also amassed Pittsburgh's first collection of music scores, histories, theory books and biographies, but was a reluctant lender who allowed few people access. His collection eventually went to the Carnegie Library.

Pittsburgh was one of the first American cities to introduce music into schools (in 1844). Will Earhart, who became music director for the Pittsburgh Public Schools in 1912, produced a widely read report, 'Music in the Public Schools', that strongly influenced music education at this level.

The city's three universities all offer strong undergraduate and graduate courses in music. The state-related University of Pittsburgh is strongest in musicology and composition, while Carnegie Mellon University and Duquesne University (affiliated with the Roman Catholic Church) have extensive courses for performance and music education. All have faculty and student recital series, chamber music, orchestral and choral ensembles, opera workshops and contemporary music groups that perform regularly on their respective campuses and explore repertory more adventurous than do the area's commercial organizations.

5. BROADCASTING. Pittsburgh was an early centre in the development of radio and the home of KDKA, one of the first commercial radio stations in the USA. KDKA was the first to produce a choral broadcast (by the Westinghouse Community Chorus, in 1922) and the first to have its own orchestra, also in 1922. Pittsburgh's arts radio station, WQED-FM, broadcasts classical music for a large part of every day. Some of its programmes are locally produced and feature local performers. It is associated with the public television station WQED-TV.

IDA REED/ROBERT CROAN

Pitz, Wilhelm (*b* Breinig, 25 Aug 1897; *d* Aachen, 21 Nov 1973). German chorus master and conductor. He served as a violinist in the Städtisches Orchester at Aachen from 1913, then in 1933 became chorus master of the Aachen Städtische Oper (with Karajan as musical director) and director of the municipal choir. From 1947 to 1960 he was first conductor of the opera. Karajan's recommendation led to Pitz's appointment as chorus master of the Bayreuth Festival on its postwar reopening in 1951. The remarkable standards he achieved there led Walter Legge to invite him to London in 1957 to build a chorus to partner the Philharmonia Orchestra. The Philharmonia Chorus, a predominantly amateur organization, supported by a few professionals, soon acquired a first-class reputation. After the Philharmonia Orchestra ceased operations and the New Philharmonia Orchestra was established in 1964 the chorus was similarly renamed the New Philharmonia Chorus. Pitz continued as its director until retiring through ill-health in 1971. He occasionally appeared as conductor in his own right, but his special fame arose from the quality of his choral preparation for the concerts and recordings of Klemperer, Giulini and others, and for Bayreuth, from which he also retired in 1971. He was made an honorary OBE in 1969 and held the Grosses Verdienstkreuz of the German Federal Republic.

ARTHUR JACOBS

Più (It.: 'more'). An adverb used in music particularly for tempo adjustments: *più mosso*, 'faster'; *più animato*, 'more animated'; etc.

Pius, Francesco. *See* PIO, FRANCESCO.

Piuttosto (It.: 'rather', 'somewhat'). An adverb used in music in such contexts as *allegro piuttosto presto*, 'lively and fairly fast'.

Piva (i) (It.: 'bagpipe'). An Italian dance of the 15th and 16th centuries. Perhaps originally a peasant dance to the accompaniment of bagpipes, it is described in 15th-century dance manuals as the fastest variety of the courtly

Ex.1 Dalza: *Piva* (for lute) (Suite no.6); Petrucci: *Intabulatura de lauto* (Venice, 1508)

bassadanza. Its steps were twice as quick as those of the bassadanza proper and were enlivened by leaps and turns. By about 1450 it had gone somewhat out of fashion, though occasionally a few bars of it were included in ballo melodies as a contrast to their more sedate sections (*see* BALLO and BASSE DANSE).

The term reappears in early 16th-century sources as the title of a lute dance in quick triple time. The first seven of the nine suites in Dalza's *Intabulatura de lauto* (Venice, 1508) consist of a pavan, saltarello and piva. These dances are very repetitive but have no clearly defined sectional form. The piva is the fastest of the three, usually being notated in *proportio tripla*. In the last two suites the final dance is called 'spingardo': nevertheless these two spingardos and the pivas of the sixth and seventh suites all begin with the same tune (ex.1). Dalza's book also contains a saltarello and piva for two lutes, in which, bagpipe-like, the second lute is restricted to a tonic chord ostinato. What is probably the earliest source of Italian keyboard dances (*I-Vnm* ital.iv.1227, dating from *c*1520) opens with a *Padovana in piva* ('Padoana in the style of a bagpipe dance'). An isolated piva occurs in the *Intabolatura di lauto libro nono il Bembo* of Melchiore de Barberiis (Venice, 1549).

Piva torta (It.). *See* CRUMHORN.

Pivoda, František (*b* Žeravice, nr Hodonín, 19 Oct 1824; *d* Prague, 4 Jan 1898). Czech singing teacher and composer. He was first taught music by his elder brother in Bučovice, and continued his education in Brno (1839). In 1844 he moved to Vienna, completing his musical studies and establishing himself as a teacher of singing, piano and theory. He began to compose and publish songs, and acquired a knowledge of Italian singing methods from Giovanni Basadonna. He also developed an interest in politics and Czech nationalism; he participated in and organized soirées (including amateur theatre productions and concerts) involving Czech artists, and was active in the 1848 uprisings. After settling in Prague in 1860, Pivoda directed his energies towards the development of Czech musical culture. He became popular as a singing teacher and song composer, and was a prolific writer and critic. He was co-founder of several musical institutions, including the Umělecká Beseda (1863) and the Prague choral society Hlahol (1861). In 1869 he established a successful singing school, where many prominent Czech singers were taught. He published many locally influential Czech songbooks and textbooks, in particular his *Nová nauka zpěvu* ('New singing manual', Prague, 1879).

Despite his many positive contributions to the development of Czech music, Pivoda was primarily responsible for the vitriolic disputes over aesthetics which affected Czech musical life in the 1870s. A staunch conservative, he was implacably opposed both to the music of Wagner and to the basic principles of Wagner's reforms. This drew him into conflict with Smetana, as he failed to understand that his contemporary was not striving to write in an openly Germanic, Wagnerian style, but in a patriotic Czech spirit inspired by Wagnerian precepts. He vigorously criticized many of Smetana's later works, especially *Dalibor*, and succeeded in splitting Prague musical circles into two irreconcilable camps. In later years his opposition became irrelevant and, except for his teaching works, his influence and importance diminished. His own compositional output (see complete list in Horák) included many slight piano works, choruses, and over 150 German and Czech songs. The latter, predominantly cast in a simple, folk-like style, remained popular well into the 1880s.

KARL STAPLETON

Pivot. A chord (or a note) having different harmonic (or melodic) functions in two different keys, this property being used to effect a smooth transition from one key to the other. Pivot chords are therefore fundamental to the concept of modulation (*see* MODULATION (i)). In moving from F major to C major, for instance, a D minor chord can be used as a pivot, since it functions as VI of F major and II of C major (Beethoven, Pastoral Symphony, bars 53–66 of first movement). More distant modulations may be effected by the use of such chords as the diminished 7th or the Neapolitan 6th. Another type of chord frequently used as a pivot is the APPLIED DOMINANT. 'Pivot' can also describe a note that belongs, either literally or enharmonically (*see* ENHARMONIC), to the tonic triads of two juxtaposed keys and is exploited melodically in such a way that this relationship is made clear. In Chopin's Second Scherzo op.31, F is the fifth scale degree of B♭ minor (bars 1–48) and third of D♭ major (bars 49–132). D♭, in turn, serves not only as the key note of D♭ major but also – spelt as C♯ – as the third degree of A major (bars 265ff).

WILLIAM DRABKIN

Pixell, John Pryn Parkes (*b* Birmingham, bap. 12 Nov 1725; *d* Edgbaston, bur. 4 Aug 1784). English song composer. He was educated at the King Edward School, Birmingham, and Queen's College, Oxford, where he probably developed his interest in music from the weekly concerts presented by William Hayes. In 1750 he was appointed vicar of St Bartholomew's, Edgbaston, where he remained for the rest of his life. He printed two books of songs: *A Collection of Songs with their Recitatives and Symphonies for the German Flute, Violins, etc., with a Thorough Bass for the Harpsichord* (Birmingham, 1759) and *Odes, Cantatas, Songs, etc., divine, moral, entertaining*, op.2 (Birmingham, 1775). The first has the distinction of having its title-page and list of subscribers (342) printed by the eminent John Baskerville. The books contain 44 songs for high voice, with a range of obbligato instruments including horns, oboes, flutes, organ, bassoon and even pipe and tabor, which probably reflects the instruments available at the various local music societies that subscribed to Pixell's work (Lichfield, Oxford, Coventry, Gloucester, Stourbridge and three in Birmingham). The songs, ranging from strophic ballads to psalms and to cantatas with chorus, display competence though no particular originality. A manuscript song, 'Seek ye not these paths to view' (in *GB-Bp*), although tentatively dated ?1820, is thought to have been by Pixell and may in fact be an autograph.

ROBERT SPENCER

Pixérécourt, René Charles Guilbert de (*b* Nancy, 22 Jan 1773; *d* Nancy, 25 July 1844). French librettist and dramatist. Son of a nobleman, he intended to become a lawyer, but his plans were interrupted by the French Revolution and he fled to Germany in 1789. By 1793 he had returned to Nancy, then moved on to Paris, where he began writing plays and librettos. Not until 1797 did one of his works reach the public: *Les petits auvergnats*, at the Théâtre de l'Ambigu-Comique which, along with the Porte-St-Martin and Gaîté theatres, was always eager to produce his melodramas once their appeal was clear.

Throughout the 1820s and into the 30s Pixérécourt continued to write melodramas, *opéras comiques* and other stage works; at the same time, he held government posts and was director of the Opéra-Comique (1822–7). He took over the administration of the Gaîté, but in 1835 fire destroyed this house, along with many of his manuscripts, and he was forced to sell his country estate and his considerable library in order to survive financially. He retired and returned to Nancy later that year. His total output for the stage, including the works that were not performed, reached 120 pieces.

Dubbed 'the Corneille of the Boulevards', Pixérécourt was practically the inventor, and certainly the codifier, of the popular French stage form *mélodrame*. Noted for its stock characters, complex plots, sensationalism, startling *coups de théâtre*, scenic virtuosity and a strongly moral outlook, the *mélodrame* flourished in the early decades of the 19th century. Pixérécourt built a catalogue of nearly 60 such plays, beginning in 1798 with *Victor, ou L'enfant de la forêt* (originally intended as an *opéra comique*), developing an international reputation. He also wrote comedies, tragedies, vaudevilles, *féeries*, pantomimes and the librettos of some 21 *opéras comiques*. However, he did not emerge in the front rank of librettists for two reasons: his *opéras comiques*, though skilfully written, are quite conventional; and he seldom had the opportunity to collaborate with a really first-rate musician. Yet he certainly was not ignorant of the dramatic potential of music, for he worked a great deal of it into his melodramas. His most frequent collaborators in that genre were Louis Alexandre Piccinni and Adrien Quaisain. In both dramas and librettos he saw himself as a successor of Sedaine.

Though Pixérécourt's melodramas are best known for the influence they exercised on Romantic drama, they were no less influential on the genre that came to be known as French grand opera. Pixérécourt planned innovatory *mises en scène* and more modern approaches to staging than had been used at the Opéra, and called for ballets with authentic period and national dress. Along with these features, the melodramas' frequent historical associations, their use of tableau-like scenes (especially at the ends of acts) and their lavish, highly contrasting sets clearly affected the character of the new style of opera. Also, like French grand opera, Pixérécourt's dramas were ensemble pieces requiring careful preparation and well-rehearsed stage business. Though he was often accused of treating his actors like slaves, his precise, finely honed productions won praise even from those who were not fond of their crowd-pleasing qualities. In addition, many of the Opéra's finest designers, choreographers and dancers in the 19th century first worked with Pixérécourt at the boulevard theatres, where they were encouraged to develop ideas that were to become the hallmarks of French grand opera.

WORKS SET TO MUSIC

OPÉRA COMIQUE LIBRETTOS

Jacques et Georgette, 1793, not set; *Marat Mauger*, comp. unknown, 1794; *Le mannequin vivant*, Gaveaux, 1796; *Les petits auvergnats*, Morange, 1797; *Les trois tantes*, Solié, 1797; *Victor, ou L'enfant de la forêt*, Solié, 1797 (planned as oc, but perf. the following year as spoken melodrama); *La forêt de Sicile*, Gresnick, 1798; *Léonidas*, Persuis and Gresnick, 1799; *La musicomanie*, Quaisain, 1800 (It., Carafa, 1806); *Le petit page* (with L. T. Lambert), R. Kreutzer and Isouard, 1800; *Le chansonnier de la paix*, 1801; *Flaminius à Corinthe* (with Lambert), Kreutzer and Isouard, 1801; *Marcel, ou L'héritier supposé*, Persuis, 1801; *Quatre maris pour un*, Solié, 1801; *Raymond de Toulouse*, C. G. Foignet and F. Foignet, 1802; *Avis aux femmes*, Gaveaux, 1804; *Koulouf, ou Les chinois*, Dalayrac, 1806; *La rose blanche et la rose rouge*, Gaveaux, 1809 (It., Mayr, 1813); *Ovide en exil*, Hérold, 1818; *L'amant sans maîtresse*, García, 1821; *Le pavillon des fleurs*, Dalayrac, 1822

PLAYS ON WHICH OPERAS HAVE BEEN BASED

L'homme à trois visages (1801): T. S. Cooke, *c*1813, as Rugantino, or The Bravo of Venice

Tékéli, ou Le siège de Montgatz (1803): Hook, 1806, as Tekeli, or The Siege of Montgatz

La forteresse du Danube (1805): Hook, 1807, as The Fortress

Les mines de Pologne (1805): Hook, 1808, as The Siege of St Quintin, or Spanish Heroism

La cisterne (1809): Donizetti, 1822, as Chiara e Serafina

Marguerite d'Anjou (1810): Meyerbeer, 1820, as Margherita d'Anjou

La fille de l'exilé (1819): Donizetti, 1827, as Otto mesi in due ore, ossia Gli esiliati in Siberia

KARIN PENDLE

Pixérécourt Chansonnier (*F-Pn* fr.15123). *See* SOURCES, MS, §IX, 8.

Pixies, the. American rock band. It was formed in 1986 in Boston by Black Francis (Charles Michael Kittridge Thompson IV; *b* Long Beach, CA, 1965; vocals and rhythm guitar), Joey Santiago (*b* Manila, Philippines, 10 June 1965; lead guitar), Kim Deal (Mrs John Murphy; *b* Dayton, OH; bass and vocals) and Dave Lovering (*b* 6 Dec 1961; drums). Although they never attained widespread commercial acceptability, their importance, like that of the Velvet Underground 20 years before, lies in the succession of American bands formed in their wake. The Pixies played a blend of uncompromising minimalist rock interwoven with surprising and memorable surf-guitar figures. Francis's hoarse, screaming vocal style was instantly recognizable, and by the release of *Doolittle* (4 AD, 1989), which contained *Debaser* and the minor UK hit single *Monkey Gone to Heaven*, they had emerged as one of the most important bands of their day. Their music played heavily with distortion, dynamics and tempo, and can best be described as 'proto-grunge'. In Francis, the Pixies possessed a songwriter who, with his sense of the absurd, captured perfectly the disenfranchisement of American youth of the 'pre-slacker' generation. The huge success of Nirvana's Seattle sound of the early 1990s was a direct consequence of the Pixies' work in the 1980s. The Pixies disbanded in 1992, with Black Francis (now under the pseudonym of Frank Black) embarking on a solo career and Kim Deal continuing her work with the Breeders. A Pixies retrospective, *Death to the Pixies* (1997), reaffirmed their enduring influence.

DAVID BUCKLEY

Pixinguinha [Vianna Filho, Alfredo da Rocha] (*b* Rio de Janeiro, 23 April 1897/8; *d* Rio de Janeiro, 17 Feb 1973). Brazilian composer, flautist, saxophonist, arranger and bandleader. His father was an amateur flute player and cultivator of the old *choro*. Around the age of ten Pixinguinha played the *cavaquinho* and accompanied his father, who also taught him the flute. He participated in carnival band parades (1911–12), played in night clubs and in the orchestra of the Rio Branco cinema, specializing in musical comedies and operettas. His talents as a flautist were widely recognized and through this he formed his first significant group, Os Oito Batutas, with other important musicians of the period, such as Donga, China and Nelson Alves. Originally including flute, three guitars, singer, *cavaquinho*, mandoline, tambourine, *reco-reco* and *ganzá*, they were presented at the Cinema Palais in 1919 with a typically national repertory that included waltzes, polkas, tangos, *maxixes*, *choros*, *modinhas* and sambas. Within three years the group toured the major cities of southern and north-eastern Brazil, and finally abroad in Paris (1922) and Buenos Aires, also recording works by Pixinguinha, Donga and others.

In 1928 he co-organized the Orquestra Típica Pixinguinha-Donga, mostly for studio work, recording the famous *samba-choro*, *Carinhoso*. After working as an arranger for the Victor Talking Machine of Brazil (1929), he organized the Guarda Velha (1931) from leading Brazilian instrumentalists, and with whom he achieved his best work as a band leader, providing a coherent and effective ensemble structure while allowing room for solo virtuoso display. The band recorded dozens of albums and backed major popular stars of the period, such as Carmen Miranda, Mário Reis and Sílvio Caldas.

Pixinguinha's own compositions number about 140 pieces, mostly *choros*, *polcas-choro*, sambas and a few carnival marches and waltzes, some of which won widespread popularity from the 1920s to 50s. He contributed substantially to the development of a genuinely national popular music and to an increased instrumental sophistication in orchestration and band arrangement.

GERARD BÉHAGUE

Pixis. German family of musicians.

(1) Friedrich Wilhelm Pixis (i) (*b* Lambrecht, 17 May 1755; *d* Vienna, 28 Feb 1820). Organist and composer. He moved to Mannheim in 1771, where he probably studied with Georg Joseph Vogler. In 1790 he was appointed church organist and teacher, following his father, Johann Friedrich Pixis (1735–1805), and between 1790 and 1795 he is also believed to have taught at the Mannheim court. From about 1797 he undertook extensive concert tours with his family, throughout Germany and to Scandinavia, St Petersburg and Warsaw, where his two child prodigy sons, (2) Friedrich Wilhelm (ii) and (3) Johann Peter, attracted much attention and became known in musical circles as 'the Pixis brothers'. Towards the end of 1806 he settled in Vienna. Of his compositions, only a small number of piano trios, two sonatinas for piano and two volumes of organ preludes are extant.

(2) Friedrich Wilhelm Pixis (ii) (*b* Mannheim, 12 March 1785; *d* Prague, 20 Oct 1842). Violinist and composer, elder son of (1) Friedrich Wilhelm Pixis (i). He studied first with his father, and by the age of seven had attracted attention as a pianist. He soon concentrated on the violin, however, and studied with Heinrich Ritter and Fränzl-Schüler Luci, before his rapid progress led to study with Ignaz Fränzl. After the successful début of both sons at Mannheim, Friedrich playing the violin and his brother the piano, their father took them on tour in 1796. They travelled first to Karlsruhe and Stuttgart, then to Göttingen, Cassel, Brunswick, Celle, Bremen and Hamburg. During their two-month stay in Hamburg in 1798 Friedrich studied with Viotti, who was so impressed that he wrote duets for him. During their tours Friedrich also performed four-hand piano works with his brother. They subsequently visited Hanover, Leipzig, Berlin and Dresden, and then travelled in Poland, Russia and Denmark. After his return to Mannheim Friedrich was a member of the electoral chapel orchestra until 1806, when the family moved to Vienna so that the brothers could finish their musical training and meet the composers who lived there. Pixis gave concerts in Vienna and further studied music theory and compositions with Albrechtsberger. In 1807 he gave acclaimed performances with his brother in Carlsbad and Prague, and became increasingly drawn to the musical life of Prague. In 1808 he directed quartet programmes there, based on the model of Schuppanzigh in Vienna. In 1810 he became professor at the Prague

conservatory, succeeding Heinrich Dionys Weber, and conductor of the theatre orchestra. Pixis was a renowned teacher and is credited as the founder of the Prague violin school. His pupils included Josef Slavík, Raimund Dreyschock, Kalliwoda, Carl Maria von Bocklet, Moritz Mildner, Johann Kra'l and Michael Kolesvovsky. As a composer he was little known except for one violin sonata; he also wrote a violin concerto and variations for violin and orchestra on *War's vielleicht um eins*. Anna, the elder daughter of his first marriage, was a successful pianist in Prague.

(3) **Johann Peter Pixis** (*b* Mannheim, 10 Feb 1788; *d* Baden-Baden, 22 Dec 1874). Pianist and composer, younger son of (1) Friedrich Wilhelm Pixis (i). Like his brother, (2) Friedrich Wilhelm (ii), he was first taught by his father. He became famous as a pianist at a very early age through his concert tour with his brother and the favourable publicity it received. In addition to being an excellent pianist he accompanied his brother on the cello and played the violin. When the brothers returned to Mannheim after their tour Johann Peter also studied composition. During the summer of 1807 in Carlsbad, he began to perform his own compositions, as his brother had done before him. In 1808 he joined his family in Vienna, where both brothers studied with Albrechtsberger and Johann Peter met Beethoven, Meyerbeer and Schubert. Apart from the war years of 1809–12, he lived in Vienna until 1823. In Vienna he was active as a pianist, teacher and composer; he appeared in concert with various violinists, including his brother in 1816 in Prague, Franz Pechatschek in 1817, and Joseph Boehm in 1818 during a tour to Italy. His attempts to establish himself in Vienna as an opera composer (*Almazinde* and *Der Zauberspruch* were performed in the Theater an der Wien in 1820 and 1822 respectively) proved unsuccessful. His greatest success as a pianist and composer came during his second tour with Boehm in 1823, and his reception in Paris in particular persuaded him to move there permanently in October 1824.

In Paris Pixis met Alexander von Humboldt, Heine, Cherubini, Moscheles, Liszt, Halévy, Berlioz and Rossini. He was regarded there as one of the best piano virtuosos and teachers; many of his works were published in Paris. In 1828 he travelled to England with Henriette Sontag, whom he had met in Vienna. By 1834 his career as a composer and virtuoso was coming to an end, and he devoted himself principally to the career of his foster-daughter (4) Francilla Pixis; they went on concert tours together throughout Europe. In 1840 he moved to Baden-Baden, where he had inherited a house in 1834. In Baden-Baden he taught the piano and, from 1846, promoted the career of his nephew (5) Theodor. He remained there for the rest of his life.

At the height of his career (*c*1818 to the early 1830s) Pixis was a pianist of the first rank. Like Moscheles, Czerny and Kalkbrenner, he exploited the increasing technical resources of the instrument, with subtle differentiation of tone colour, a variety of attack and articulation, with contrasts between lyrical *cantabile* and boldly dramatic playing, and between delicacy of touch and fuller orchestral textures. Pixis was commercially aware, and published many works in popular genres of the time, often utilizing a style of piano writing that was brilliant but technically accessible. His works on a larger scale embody some Romantic characteristics, including tonal flexibility and variety of colour, within a generally conservative formal outline. His Piano Concerto in C op.100 shows the influence of Weber in its instrumentation and of Hummel in its pianistic figuration. Pixis wrote several sets of variations on operatic themes; with Liszt, Thalberg, Henri Herz, Czerny and Chopin he contributed one variation to the *Hexaméron*, a set of variations on a theme from Bellini's *I puritani*. In the 19th century one of Pixis's most frequently performed compositions was the concert rondo op.120, *Les trois clochettes*.

T. Wye (Frankfurt, 1980); 3 Str Qts, F, c, G, op.69 (1824); Grande Sonata concertante, f♯, vn, pf, op.62 (1825); Pf Qnt, d, pf, vn, va, vc, db, op.99 (?1827); Introduction and Rondo, A, fl, pf, op.102 (1829); 8 pf trios, opp.75, 76, 86, 95, 118, 129, 139, 147; other works

2 pf: Rondo hongrois, E, op.33 (?1819); Variations militaire, op.66 [also for 2 pf, orch/str qt]; Variations brillant, D, op.112 (1829) [also for pf 4 hands]

Pf 4 hands: marches, polonaises, waltzes, variations, other works

Pf solo: 4 sonatas: e♭, op.2, E♭, op.3 (1811), c, op.10 (1815), E♭, op.85 (1826); many variation sets on opera themes, folksongs etc.; 1 variation in Hexaméron [with Liszt and others]; rondos, incl. Les trois clochettes, E, op.120 [also for pf, vn/str qt/orch]; polonaises, fantasias, waltzes, écossais, caprices, other dances and character-pieces

1v, pf: German folksongs, other songs

(4) **Francilla Pixis** [Franziska Helma Göhringer] (*b* Lichtenthal in Baden, 15 May 1816; *d* ?1888). Contralto, foster-daughter of (3) Johann Peter Pixis. At the age of 15 she was placed by her family in the care of Johann Peter Pixis, who had recognized her vocal gifts. Pixis was her principal teacher, although she studied further with Josephine Fodor-Mainville, Henriette Sontag, Rossini and Paer. She made her concert début in London in 1833 and her stage début in Karlsruhe the following year, and she undertook extensive concert tours with her foster-father. She received exuberant praise from the *Neue Zeitschrift* and was particularly successful in Naples and Palermo. After her marriage to a Sicilian Count in 1843 she continued to give concerts, but after the birth of her son in 1844 and poor performances during the carnival operas of 1846 in Cremona, she withdrew from the stage. Her voice was powerful and sonorous, free from strain at louder dynamics and, when required, softly beautiful. Among her most renowned roles were Amina (*La sonnambula*), Romeo (*I Capuleti e i Montecchi*), Norma, Rosina (*Il barbiere di Siviglia*) and Gabriella (Mercadante's *Gabriella di Vergy*). Pixis conceived his operetta *Die Sprache des Herzens* for her, and Pacini wrote for her the leading role in his *Saffo* (1840).

(5) **Theodor Pixis** (*b* Prague, 15 April 1831; *d* Cologne, 1 Aug 1856). Violinist, son of (2) Friedrich Wilhelm Pixis (ii) from his second marriage. He studied

the violin first with his father and then at the Prague Conservatory with Moritz Mildner. In 1846–7, while giving concerts in Paris, he met Vieuxtemps, with whom he studied further. He continued to tour successfully, and from 1850 taught at the Rheinische Musikschule in Cologne. According to Ludwig Bischoff, his playing had a pure, noble and full tone, with astonishing confidence in double stopping and grace and tenderness in ornamentation. He was renowned for his memory and sight-reading ability. Always physically weak, he died of a heart attack at the age of 25. His few compositions, including fantasies for violin and piano on opera themes and other popular melodies, remain unpublished.

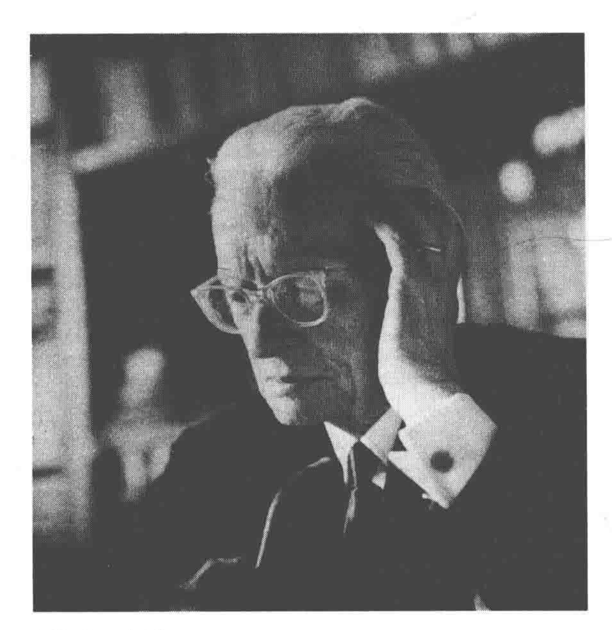
GAYNOR G. JONES/LUCIAN SCHIWIETZ, STEPHAN D. LINDEMAN

Pizarro, Artur (*b* Lisbon, 17 Aug 1968). American pianist of Portuguese birth. He studied with Sequeira Costa in both Lisbon and America and triumphed in the International Vianna da Motta Competition (Lisbon, 1987), the Greater Palm Beach International Competition (Florida, 1988) and in the Leeds International Piano Competition (1990), where his fine tone and effortless command were revealed notably in Chopin's op.25 Etudes. Since making his London début at the Wigmore Hall in 1988, he has given recitals in Japan, Australia and the USA, appeared with many of the world's leading orchestras and conductors and performed a wide variety of chamber music. His enterprising recorded repertory ranges from music by Liszt and Rachmaninoff to Skryabin (the complete mazurkas as well as the Piano Concerto and 24 Preludes op.11), Kabalevsky, Shostakovich, Milhaud, Rodrigo and Voříšek. He has also recorded a two-piano recital of Spanish music with Sequeira Costa.



BRYCE MORRISON

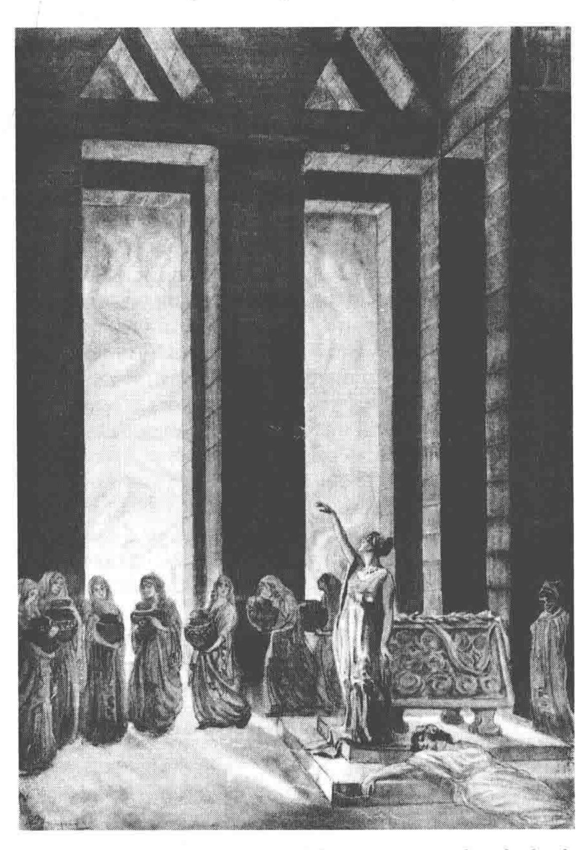
Pizzetti, Ildebrando [Parma, Ildebrando da] (*b* Parma, 20 Sept 1880; *d* Rome, 13 Feb 1968). Italian composer, conductor and critic. He was the most respected and influential of the more conservative Italian musicians of his generation.

1. LIFE. The son of a piano teacher, Pizzetti spent most of his childhood (from 1884) in Reggio Emilia. While at school there he showed less inclination towards music than towards the theatre, writing plays for casual performance among his schoolmates. In 1895, however, he entered the Parma Conservatory, where he studied under Telesforo Righi, a modest but outstanding teacher of harmony and counterpoint, and gained his composition diploma in 1901. Meanwhile he became conversant with 15th- and 16th-century Italian instrumental and choral music performed and expounded by Giovanni Tebaldini, one of the pioneers of Italian musicology, who directed the conservatory from 1897 and took a personal interest his development. Pizzetti's leanings towards the theatre by no means diminished, and he grew more and more anxious to compose an opera. Various early attempts, mostly unfinished, already showed his preference for heroic subjects, exalted romantic characters and large-scale construction.

In 1905, having read part of the prologue to D'Annunzio's *La nave* (then a work in progress), Pizzetti formed a close friendship with the poet, who invited him to write incidental music for the play as it was completed, and nicknamed him 'Ildebrando da Parma' (a pseudonym which appears on the covers of several of Pizzetti's early published compositions). Their collaboration culminated, in 1909–12, in *Fedra*: D'Annunzio wrote the original spoken version of this tragedy with the idea already in mind of adapting it as a libretto for Pizzetti. Meanwhile the composer, who had lived by giving private lessons and by acting as assistant conductor (1902–4) at the Teatro Regio di Parma, was appointed to teach harmony and counterpoint at the Parma Conservatory (1907) and then at the Istituto Musicale (later Conservatory) of Florence (1908). During this period he published an article in the *Rivista musicale italiana* on his music for *La nave* (xiv, 1907, pp.855–62) and another on Dukas's *Ariane et Barbe-bleue* (xv, 1908, pp.73–111). His years in Florence, where he lived from 1908 until 1924 (becoming the conservatory's director in 1917), were decisive: the city's keen intellectual and cultural life contributed much to his artistic ripening. This was the time of the famous Florentine periodical *La voce* (1908–16), round which gathered many influential Italian philosophers, writers and other artists: Pizzetti became personally associated with De Robertis, Prezzolini, Papini, Soffici, Bastianelli and others, and himself wrote for *La voce*, *Il marzocco* and the newspapers *Il secolo* (Milan) and *La nazione* (Florence). That he was by nature more conservative than some other 'vocians' is, however, shown by his perplexity and disorientation when he attended the première of *The Rite of Spring* in 1913, by the speedy break-up of his collaboration with Bastianelli in editing the anthology–periodical *Dissonanza* (founded in 1914 and discontinued after only three numbers), and by his largely nominal links with Casella's Società Italiana di Musica Moderna (1917–19).

In later life Pizzetti increasingly withdrew from 'advanced' musical circles, until 1932 he joined with Respighi, Zandonai and other reactionaries in signing a notorious manifesto, published in several Italian newspapers, attacking the more forward-looking trends of the time and recommending a return to tradition (he later, at least partly, recanted). Meanwhile he had become director (1924) of the Milan Conservatory, whence he moved in

1. *Ildebrando Pizzetti*



1936 to Rome to take the advanced composition course at the Accademia di S Cecilia (president, 1947 to 1952; retired 1958). He conducted more often from about 1930 onwards, in the Americas as well as in Europe, and continued also to write music criticism – notably in *La rassegna musicale* (1932–47) and the *Corriere della sera* (from 1953). He remained active well into the 1960s.

2. WORKS. In Italy critical attention has tended to focus especially on Pizzetti's operas, and it was certainly in that direction that his greatest ambitions lay, although he also wrote much instursmental music and some fine choral works and songs. After the preliminary gropings of his unpublished juvenilia he formulated, about 1908, a basic set of musico-dramatic principles (first alluded to in his article on Dukas' *Ariane et Barbe-bleue* which thereafter, to a greater or lesser degree, conditioned his entire operatic output. The exception is *La sacra rappresentazione di Abram e d'Isaac*, whose uncharacteristically self-contained lyrical 'numbers' reflect the work's origin in incidental music to a play. Otherwise (obviously in extreme reaction against the melodic indulgences of Mascagni and Puccini) all Pizzetti's operas, from *Fedra* to *Clitennestra*, systematically set out to avoid self-sufficient lyricism, except (as in the beautiful 'Trenodia per Ippolito morto' in *Fedra* or Mara's song near the end of Act 1 in *Debora e Jaele*) when choral groups or individuals are actually depicted as singing songs.

The bulk of Pizzetti's operatic vocal writing consists, rather, of a continuous flexible arioso, sensitive to every nuance of the text and governed by the natural rhythms of the Italian language – the 'Pizzettian declamation' which has been the subject of so much Italian critical discussion, favourable and unfavourable. Although the shade of Wagner can sometimes be perceived in the background, the main models for this arioso are non-Germanic: on the one hand Pizzetti was obviously far from indifferent to the methods of *Pelléas et Mélisande*, and, on the other, there are recurrent signs of his sympathy with the Florentine monodists and the recitatives of Monteverdi. The result has a distinctive physiognomy and can be intensely expressive, despite a serious risk of monotony in the less inspired scenes, notably those where Pizzetti's characters show a weakness for prolonged ethical discussion.

An outstanding feature of most Pizzetti operas (and the main saving grace of some of the weaker ones) is his richly imaginative, often highly dramatic choral writing. The first act of *Debora e Jaele* in particular – taking more than a hint from *Boris Godunov* – brings the chorus right into the foreground as a complex multiple protagonist whose powerful presence tends to dwarf the individual characters. This probably remains the most intense and moving act in any Pizzetti opera, even if the elegiac last act of *Fedra* is of comparable stature in its more restrained, contemplative way. *Fedra* was written to a libretto by D'Annunzio, a shortened version of his play of the same name. The intricate verbosity of the text undeniably gives rise to occasional longueurs. Moreover Pizzetti's orchestral fabric may at times seem grey. Yet it fuses linear chromaticism and modality into an individual synthesis; while the volatile heroine, and her impact on the other characters are powerfully embodied inthe subtly moulded freely declamatory writing.

None of the later dramatic works can quite equal *Debora e Jaele* and *Fedra*, the two major achievements of Pizzetti's early maturity, although the austere, intermittent intense *Lo straniero* is still worthy of attention. So is the more colouful and theatrical effective *Fra Gherado* – though parts of it show clear signs that his operatic methods were degenerating into routine. By the 1930s

2. *Sacrifice of the beautiful slave girl from Pizzetti's 'Fedra', finale of Act 1, La Scala, Milan, 1915, with Salomea Krusceniski as Phaedra: design by I. Bompard from 'L'illustrazione italiana' (28 March 1915)*

Pizzetti had become so hidebound by his own theories and his lack of stylistic self-renewal that the imaginative tension of his operas was being seriously undermined. Only after the war did the situation show signs of improving again, notably in the better – especially (once again) choral – parts of *Ifigeuia*, *Assassinio nella cattedrale* and to a lesser extent *La figlia di Iorio*. This partial recouvery was undoubtedly helped by happy choices of subjects and texts. Nowhere is this more the case than in *Assassinio* for T.S. Eliot's great play, upon which the work is based, contained several elements that were likely to bring out the best in Pizzetti: plentiful choruses; a central character tormented by moral dilemmas; ethical discourses controlled by a literary talent greater than the composer's own elevated atmosphere in a religious context. The opera has been highly successful in Italy, and has had some currency abroad.

Immediately after Pizzetti's operas in order of importance stand his choral works and other vocal compositions, which may, indeed, in the long run prove more durable, though obviously less ambitious. His studies of Renaissance polyphony had made him conscious, from his student days, of the rich expressive possibilities inherent in pure vocal counterpoint; these he explored in an important series of pieces for unaccompanied voices, ranging from the beautiful choruses in the music for *La nave* to the *Due composizioni corali* of 1961. The free re-creation of Renaissance styles in 20th-century terms, seen in these pieces, sometimes shows striking parallels with the more archaic aspects of Vaughan Williams; it is significant that the fine *Messa di requiem* is almost exactly contemporary with the English composer's G minor Mass, which it in some ways resembles. In Pizzetti's songs, too, it is possible to detect archaic influences, interacting with others of later origin (here too Musorgsky and Debussy were among his main recent models). The structures, without being strophic, are nevertheless unified, in many of the best songs, by a recurrent germinal phrase round which the music has taken shape. Good examples of the kind range from the early *I pastori*, one of Pizzetti's freshest and most justly popular creations, to the *Due poesie di Ungaretti* and the best of the *Altre cinque liriche*.

As he grew towards maturity, a more dramatic conception became discernible in some of his more elaborate songs, a culminating point being reached in the *Due liriche drammatiche napolitane*, in which the operatic methods of *Debora* are foreshadowed in miniature. Moreover, a similar evolution is evident even in his instrumental music, from the frankly lyrical outlook of the First String Quartet and the *Tre pezzi* for piano (closely akin, in their expressive worlds, to *I pastori*) to the far more dramatically conceived Violin and Cello Sonatas, with a return to a more lyrico-dramatic manner in the Trio in A and the Second String Quartet. Noteworthy in these instrumental works is the vocal nature of many of the themes, some of which seem to suggest a sung text: this is strikingly the case in the slow movement ('Preghiera per gl'innocenti') of the Violin Sonata, one of the most nobly expressive movements in the violin and piano literature. Despite the promise of the three early preludes *Per l'Edipo re di Sofocle*, in which the composer's personal voice is already clearly audible, Pizzetti's orchestral music does not, on the whole, reveal him at his best. Nevertheless the colourful incidental music for D'Annunzio's *La pisanelle* (best known now through the popular concert suite) reveals that the rather grey, drab orchestral palette of so many of his other works, including most of the operas, was the result of deliberate choice rather than inability to do otherwise.

WORKS

OPERAS

Sabina (1, A. Beggi), 1897, unperf., destroyed
Romeo e Giulietta (1, Pizzetti, after W. Shakespeare), 1899–1900, unperf., destroyed apart from 3rd orch int
Il Cid (2, Beggi, after P. Corneille and G. de Castro y Bellvis), unpef., destroyed
Lena (Beggi), 1904 [unrealized project]
Aeneas (prol., 3, Beggi), 1904–7 [sketches only]
Fedra (1, Pizzetti and M. Silvani, after Euripides), 1907–8, inc., unpubd

DRAMATIC

Fedra (3, G. D'Annunzio, after Euripides and Senera), 1909–12, Milan, Scala, 20 March 1915
Gigliola (3, after D'Annunzio: *La fiaccola sotto il moggio*), 1914–15, inc., unpubd
Debora e Jaele (3, Pizzetti, after Bible: *Judges*), 1915–21; Milan, Scala, 16 Dec 1922
La sacra rappresentazione di Abram e d'Isaac (1, O. Castellino, after F. Belcare), 1917–28, Perugia, Morlacchi, 2 Oct 1937 [based on incid music, 1915–17]
Lo straniero (2, Pizzetti), 1922–5, Rome, Opera, 29 April 1930
Fra Gherardo (3, Pizzetti), 1925–7, Milan, Scala, 16 May 1928
Orsèolo (3, Pizzetti), 1928–3; Florence, Comunale, 4 May 1935

GUIDO M. GATTI, JOHN C.G. WATERHOUSE

Pizzi, Emilio (*b* Verona, 1 Feb 1861; *d* Milan, between 19 and 28 Nov 1940). Italian composer. Some sources state that he was born in February 1862. He began his studies in 1869 at the Istituto Musicale in Bergamo; he then studied at the Milan Conservatory (1881–4) under Bazzini and Ponchielli before working in London (1884–97, and from 1900). From 1897 to 1900 he was in Bergamo as *maestro di cappella* at S Maria Maggiore and director of the Istituto; in later life he returned to Italy, eventually retiring to a rest home in Milan.

Pizzi's operas were performed throughout Europe, and one, *Gabriella* (1893), commissioned for Adelina Patti, opened in Boston. His musical style was excessively eclectic. *The Bric-a-brac Will* (1895, London) was a comedy-drama in the popular Gilbert and Sullivan manner; *La Rosalba* (1899, Turin), to a libretto of Luigi Illica, had Puccini-like melodies; and *La vendetta* (1906, Cologne) was a Corsican tragedy of the *verismo* type, with musical rhetoric to match. His chamber music was very popular, particularly the *romanze*; the style is simple and clear, almost trivial. The sacred works are less important; his *Ultimo canto* won sixth prize at the Steiner contest in Vienna (1896).

MARVIN TARTAK

Pizzicato (It.). A direction to pluck the string(s) of a (generally bowed) instrument with the fingers. It is normally abbreviated 'pizz.'. In Tobias Hume's *The First Part of Ayres* (1605) instruction is given in 'The Souldiers Song' to 'Play three letters with your Fingers', and in 'Harke, Harke' to 'Play nine letters with your finger'. Another early indication is found in Monteverdi's *Combattimento di Tancredi e Clorinda* (1624), in which the players are asked to put the bow aside and 'pluck the strings with two finger'. Heinrich Biber, in the string accompaniment to the 'Nightwatchman's Call' (1673), writes 'Testudine: ohne Bogen'. 'Testudine' (It. *testuggine*: 'tortoise') can also mean the shields used by soldiers in battle: perhaps Biber wanted to imitate the sounds of clashing shields. He also called for what can be interpreted as a snap pizzicato in the violone part of the Battalia. He says that the string must not be struck by the bow but plucked strongly by the right hand, probably imitating a cannon shot. Other early examples require that, for example, the violin be put under the right arm and plucked like a guitar (Carlo Farina: *Capriccio stravagante*, 1627) or that the player play 'senz'arco' with 'the tip of the finger' (J.J. Walther: 'Capriccio X', *Hortulus chelicus*, 1688). In *Musick's Recreation on the Viol, Lyra-Way* (3/1669) John Playford said that plucking with the left hand is called the THUMP. Leopold Mozart (*Versuch einer gründlichen Violinschule*, 1756) devoted a long paragraph to defining pizzicato and explaining how it is to be played, and wrote that 'the strings are plucked with the index-finger or with the thumb of the right hand'; the thumb should be used only when 'whole chords are to be taken in one'.

In orchestral music, pizzicato was relatively uncommon before the Classical era, though Bach frequently used it to accompany the voice or to accompany a solo instrument in concerto slow movements. There are many examples of it in Haydn's symphonies and other music of the Classical era, and composers naturally came to use it in operas to imitate a plucked instrument, for example Mozart in *Die Entführung aus dem Serail* (Pedrillo's 'Im Mohrenland', to imitate his guitar) or in *Don Giovanni* to represent the serenade ('Deh vieni alla finestra'). Its truly dramatic use in orchestral music, however, had to await the age of Beethoven; notable examples are the passage linking the third and fourth movements of his Symphony no.5 or the concluding pages of the Allegretto of his Symphony no.7. Particularly striking later uses of pizzicato in orchestral music must include the Scherzo of Tchaikovsky's Fourth Symphony, where the strings are exclusively pizzicato, and the thrummed pizzicato accompaniment to the cadenza in Elgar's Violin Concerto.

Paganini was the first composer to make extensive use of left-hand pizzicato (usually indicated by a +); he asked for it either simultaneously or in alternation with bowed notes (e.g. in the 24th Caprice). In their cello and violin methods, Jean-Louis Duport (*Essai sur le doigté du violoncelle*, 1806) and Baillot (*L'art du violon*, 1834) wrote of both left- and right-hand pizzicato, as did Galamian in his method (*Contemporary Violin Technique*, 1962). Extensive use was made of both in early 20th-century music, including Bartók's striking use of pizzicato slides and a hard pizzicato in which a string is snapped back onto the fingerboard, a device indicated by the sign: ♁

Brahms, in his Cello Sonata op.99 (4th movement, bars 128ff) asked for a slurred pizzicato, which is achieved by stopping a string firmly with the left-hand finger (or leaving it open), plucking that string with the right hand and then removing or putting down another finger on the same string. The two notes are thus successively produced, but both must be within the compass of the player's hand or a slide effect would result. Multiple stop pizzicatos are normally played from the bottom string to the top, though in some cases, for example where there are repeated chords (as in Bartók's *Music for Strings, Percussion and Celesta*), alternate bottom-to-top and top-to-bottom may be indicated, usually by upward and downward arrows (though the signs for up- and down-bow have occasionally been used for this).

In jazz and dance-band music of the 20th century, the double bass part is often pizzicato throughout, sometimes requiring such techniques as 'slapping' the string. Other special pizzicato effects used in 20th-century music include plucking with the fingernail, to produce a rather sharp sound, or plucking close to the bridge which produces a dry sound lacking in resonance.

See also VIOLIN, §I, 5(iii)(f) and, for the use of the term as applied to guitar playing, PUNTEADO.

SONYA MONOSOFF/R

Pizzini, Carlo Alberto (*b* Rome, 22 March 1905; *d* Rome, 9 Sept 1981). Italian composer and conductor. He studied in Rome with Dobici and Respighi, and took his diploma in composition at the Bologna Conservatory in 1929. In 1931 he took the postgraduate course in composition at the Accademia di S Cecilia in Rome with Respighi, and won the prize of the Ministero della Pubblica Istruzione as his best pupil. He worked as a musical administrator and was musical inspector at the Società Italiana degli Autori ed Editori; from 1938 onwards, he was employed by the RAI, where he was involved in exchanges with foreign countries and was head of the inspectorate of orchestras and choruses. At the same time he pursued an active career as a conductor both in Italy and abroad. He was a member of the Accademia Filarmonica di Bologna.

As a composer, Pizzini demonstrates a clear dependence on the stylistic model of Respighi, revealed in his harmonic language, a propensity for descriptive and richly coloured instrumental forms, and a broad, fluid melodic manner. The symphonic poem inspired by nature is the genre he found most congenial, and the one he turned to most frequently after an initial interest in neo-classical chamber works. He also wrote incidental music, and music for radio, television and film.

WORKS

(*selective list*)

Stage: Dardanio (fiaba teatrale, 3, E. Curto), Rome, 1928

ANTONIO TRUDU

Pizzoni, Giovanni. See PICCIONI, GIOVANNI.

Pizzuto, Filippo (*b* Valletta, Malta, 29 Jan 1704; *d* ?Italy, after 1740). Maltese composer and singer. At the age of nine his singing and musical ability won him the salaried position of 'diacono di mezza tavola' at the conventual church of the Order of St John, Valletta. Seven years later he was in Naples studying at the Conservatorio di S Onofrio with Porpora, Ignazio Prota and Francesco Feo. When Pizzuto returned to Malta in April 1728 he joined St John's prestigious *cappella di musica* as a tenor and composed at least three Calendimaggio cantatas: *Il promoteo*, 1734, *La virtù in gara*, 1735, and *Dialogo musicale*, 1737. These are his only known works, and although only the texts survive (in Valletta, National Library of Malta) they indicate a significant talent since only leading composers were selected to compose the annual cantata for performance on the eve of Mayday, solemnly ritualized by the Order throughout the 18th century. Around 1740 Pizzuto left Malta, probably for Italy, but nothing more is known about him.

JOSEPH VELLA BONDIN

Pla (Agustín). Spanish or Catalan family of oboists and composers. There is some confusion about the precise authorship of their works, as in the sources the first name is rarely specified. About 70 works survive, but if lost works (mentioned in concert notices and catalogues) are taken into account the total would probably surpass 100. Works that were published include five sets of sonatas (1 for 2 fl/vn/ob, hpd/vc (London, 1754); 1 for 2 vn/ob/fl/p-ardessus de viole, b (Paris, 1759); 1 for 2 ob/vn/fl, b (London, ?1770); 1 for 2 fl/vn, b (London, ?1770); 1 for 2 fl/vn (London, ?1770)), a set of six duets (2 vn (London, ?1773)), and a concerto (2 fl/ob, orch (London, n.d.)); manuscript works are to be found in various European locations (*CH-E*, *Zz*; *D-KA*, *Rtt*; *E-Mm*, *Mn*, Aránzazu Monastery; *H-KE*; *I-CDO*, *Gl*, *Mc*, *PS*, *TRa*, Udine, Count Federico Ricardi's private collection; *S-Skma*). Almost all the extant instrumental works found outside Spain are in sources attributed, with spelling variants, to 'Sig.[r] Pla' or 'Sig.[rs] Pla's'; in the latter cases (1) Juan Bautista Pla and (3) José Pla may have been joint composers. 19th-century attribution of some manuscript works specifically to Juan or José is probably hypothetical. Attributing and dating of the works is further complicated by Juan and José's frequent re-use of material: they would insert old movements into new sonatas, combine movements from existing works to form new pieces, rework old themes, and adapt concertos for performance as sonatas and vice versa. They may also have borrowed from (2) Manuel Pla's compositions. As regards orchestral and vocal music by 'Pla' in Spanish manuscript sources, other than those cited above, attribution is even more hazardous, as other 18th-century musicians with this surname are recorded in Spain.

Generally the Plas' instrumental works are in the italianate *galant* style of the period, with transitional elements. Structural weaknesses are offset by melodic charm and vivacity. A solo sonata and various concertos preserved in manuscript were obviously written for virtuoso players, whereas most of the printed works are

suitable for amateurs. Performances, reprints and manuscripts dating from the 1770s, 80s and even as late as the early 19th century, particularly in England and Germany, testify to the music's continued popularity.

(1) **Juan Bautista** [Joan Baptista] **Pla** (*fl* 1747–73). Probably the eldest of the three Pla brothers, he was a member of the Royal Guards band and played in Madrid court opera productions before travelling abroad. He was at the Portuguese court between 1747 and 1751, in Paris from 1751 to 1752, and in London from 1753 to 1754. From 1754 to 1767 he is recorded as being at the Duke of Württemberg's court, with visits to Italy and Paris in 1762–3. By 1769 he was back in London, and from 1769 to 1773 he was bassoonist at the Portuguese court. He was greatly attached to his younger brother (3) José Pla, who accompanied him abroad and played in concerts with him. The sweetness and brilliance of their playing, their precision and empathy, were highly praised wherever they went. Juan was also a virtuoso salterio player. His compositions include five sonatas (in *I-Gl*), two concertos and at least one Italian aria (mentioned in *Mercure* de France, May 1752 and Dec 1763).

(2) **Manuel Pla** (*b* Torquemada; *d* ?Madrid, 13 Sept 1766). Brother of (1) Juan Bautista Pla. He appears to have spent all his life in Spain. He was an instrumentalist in the Royal Halberdiers band and at Descalzas Reales, Madrid. He played in some court opera performances and deputized in the royal chapel. José Teixidor considered that Manuel, who was also an excellent keyboard player, was more proficient than his brothers as an oboist and composer. He listed among his works 'sinfonías, conciertos, tríos, duetos; salmos, misas, Salve Regina, Stabat Mater; zarzuelas, serenatas, oratorios sacros, villancicos, tonadillas, arias, cantadas y tríos en español', and stated that he set the main scenes of Metastasio's operas and wrote some complete stage works, both serious and comic. Manuscript music survives (in *E-Mn*) for religious plays and for entr'acte pieces composed by M. Pla or Sr Plà. These works, dated between 1757 and 1762, may all be safely attributed to Manuel. The vocal material is workmanlike and typical of its milieu. His six violin duets enjoyed popularity beyond his native country; sources survive in Switzerland, Italy, England and Spain.

(3) **José Pla** (*b* 1728; *d* Stuttgart, 14 Dec 1762). Brother of (1) Juan Bautista Pla. He was younger than Juan, contrary to information published by and reproduced in later biographies. When only 16 years of age he played in a Madrid court opera production. He performed in 1751–2 with Juan at the Concert Spirituel and at court in Paris, where he also played the violin, and in 1753–4 in London. He then returned to Spain for a few years during which he occasionally deputized in the royal chapel. In 1759 he rejoined Juan in Germany, where he died three years later after returning from a visit to Italy. He composed both instrumental and vocal works, and a *Stabat mater* (1756) that can be attributed to him is still extant (in Aránzazu Monastery, Spain).

BERYL KENYON DE PASCUAL

Placker, Christiaan de (*b* Poperinge, nr Ypres, 19 June 1613; *d* Antwerp, 20 Jan 1691). Flemish poet and composer. He entered the Jesuit order as a novice at Mechelen on 27 September 1639. For some time he taught humanities and from 1649 until 1690 was a missionary in the Reformed north Netherlands. In support of his missionary work he published *Evangelische leeuwerck, ofte Historie-liedekens, op de evangelien der Sondagen, evangelische levens der heyligen, Passie ons Heeren Jesu Christi, ende sommige evangelische deughden* (Antwerp, 1667, rev. 2/1682–3), a book of spiritual songs to Dutch texts, of which he himself was the author. In the first edition he referred the reader for the sources of the melodies to well-known songs from the Dutch, Italian, Latin and French repertory. This was common practice at that time, but in the two-volume second edition the music of the borrowed melodies is added; there are also two of his own melodies, for the songs *Den mensch zijnd'in ervelicke zonde* and *Zaligh die weet hier den tijdt van zijn leven*.

GODELIEVE SPIESSENS

Placuzzi, Gioseffo Maria (*b* Forlì; *fl* 1667–82). Italian composer and organist. His op.1 identifies him as a native of Forlì, a university graduate in minor orders, and a member of an unspecified academy; op.2 states that before 1682 he was organist at Forlì Cathedral. Two dedications in op.1 to violinists from S Petronio in Bologna suggest possible connections there. This set includes the only Bolognese trio sonatas before Corelli to begin consistently with a slow introduction, but the number of movements remains unstandardized. The presence of *arie* is another conspicuous Bolognese trait. Op.2 retains the old-fashioned format, consisting mainly of single dances and balletto–corrente pairings.

Suonate a 2–5, 8, op.1 (Bologna, 1667)

Il numero sonoro modolato in modi armonici et aritmetici di balletti, correnti, gighe, allemane, sarabande e capricci, 2 vn, b (spinetta/violone)/1 vn, con una sinfonia, 2 vn, op.2 (Bologna, 1682)

PETER ALLSOP

Plagal cadence [Amen cadence] (Fr. *cadence plagale*; Ger. *plagale Kadenz, unvollkommene Kadenz*; It. *cadenza plagale*). A CADENCE consisting of a subdominant chord followed by a tonic chord (IV–I), normally both in root position.

Plagal mode (from Gk. *plagios*, Lat. *plagalis* or *plagis*). Any of the church modes whose AMBITUS, or range, includes the octave lying between the 4th below and the 5th above its FINAL. The term is thus applied to the four even-numbered modes of Gregorian chant (2, 4, 6 and 8), each of which takes its name from the corresponding odd-numbered mode, with the addition of the prefix 'hypo-': HYPODORIAN, HYPOPHRYGIAN, HYPOLYDIAN and HYPOMIXOLYDIAN; the ambitus of each of these is about a 4th lower than that of its corresponding AUTHENTIC MODE, the term with which 'plagal mode' is contrasted.

The earliest definition of the term is given in Hucbald's *De harmonica* (?*c*880; *GerbertS*, i, 116): 'The plagal, however, descends to the 4th [below its final] and rises as far as the 5th [above]'. In later modal definitions this general rule was extended to include the 6th above the final and the 5th below, except for the Hypolydian mode, where the 5th below the final *f* is not perfect and the 4th below, *c*, remained the lower limit.

The word 'plagalis' has a precise equivalent in the term 'plagios', which refers to the four lower-lying *echoi* in Byzantine modal theory.

HAROLD S. POWERS

Plagge, Wolfgang (*b* Oslo, 23 Aug 1960). Norwegian composer and pianist. A child prodigy, he won the Norwegian national championship for young pianists in 1971 and made his début as a pianist one year later. He started to compose at the age of five and first had his work published aged 12. He studied the piano with Robert Riefling and Jens Harald Bratlie in Norway and with Yevgeny Koroliev at the Hochschule für Musik und Theater in Hamburg, from which he graduated in 1983. He later studied composition with Øistein Sommerfeldt and Johan Kvandal in Norway and in Hamburg with Ligeti and Werner Krutzfeldt. Through his teachers in Hamburg, Plagge came into direct contact with the East European musical traditions of the 20th century, which have considerably influenced his music. He is especially inspired by neo-classical composers such as Prokofiev and Stravinsky, his musical style being characterized by an expanded tonal harmony and brisk, complex rhythms. Plagge has toured continental Europe as pianist and as composer a number of times, and he receives commissions regularly from Norway and abroad.

Plagiarism. *See* BORROWING, §9.

Plainchant [plainsong] (from Lat. *cantus planus*; Fr. *plainchant*; Ger. *Choral*; It. *canto plano*). The official monophonic unison chant (originally unaccompanied) of the Christian liturgies. The term, though general, is used to refer particularly to the chant repertories with Latin texts – that is, those of the five major Western Christian liturgies – or in a more restricted sense to the repertory of Franco-Roman chant (GREGORIAN CHANT). A third meaning refers to a style of measured ecclesiastical music, often accompanied by a bassoon, serpent or organ, cultivated in Roman Catholic France during the 17th to 19th centuries (*see* PLAIN-CHANT MUSICAL). This article is concerned with the chant of the Roman and derived rites considered historically, including its place within Christian chant as a whole and its relationship to the liturgy that it serves.

1. INTRODUCTION: CHANT IN EAST AND WEST. The roots of the liturgical chant of the Christian Churches lie partly in established Jewish Synagogue practice of the apostolic period, partly in new developments within early Christianity itself and partly in pagan music at the diverse centres where the first churches were established (*see* CHRISTIAN CHURCH, MUSIC OF THE EARLY, and JEWISH MUSIC, §II). Three centres exercised primary influence, Jerusalem, Antioch and Rome, and Constantinople, established as the eastern capital of the Roman Empire in the 4th century, became a fourth. In the centuries after the Edict of Milan (313), when freedom of Christian worship was sanctioned, there developed distinct families of Eastern and Western (Latin) rites, each local rite having its own liturgy and music. The music can be studied, however, only where notation permits: notation appears nowhere before the 9th century, and precise representation of pitch is not found in liturgical books until the 11th century.

The chief representative of the Eastern liturgies is the Greek rite of Constantinople (*see* BYZANTINE CHANT). This seems to have developed from Antiochean and Palestinian elements; it may have been subject also to Roman influence, since it was due to Rome that the ancient site of Byzantium was endowed with a new imperial status. From the 10th century, many manuscripts provide evidence of the Byzantine rite and its music; by the 13th century, the full repertory of Byzantine chant

had been copied in a notation as unambiguous as the notation for Western Gregorian chant of the same period. The repertories of other Eastern rites, however, can be studied only through literary and liturgical documents and from modern practice (on the assumption that some aspects of early practice have filtered down through oral tradition). This is true of the historically influential Syrian rites and the old Palestinian (Melkite), Nestorian and Chaldean rites (*see* SYRIAN CHURCH MUSIC) as well as the Coptic rite (*see* COPTIC CHURCH MUSIC). The Georgian rite is in some respects the best evidence of early liturgical and musical practice at Jerusalem; noted Georgian hymn collections survive from the 10th century, but their notation is incomplete and transcription is problematic (*see* GEORGIA, §II). The Armenian rite has similar noted manuscripts from the 13th and 14th centuries, and the Ethiopian rite from the 14th century (*see* ARMENIA, §II, and ETHIOPIA, §II). The Constantinopolitan liturgy and its music were taken over *en bloc* by the Slavs in the late 9th century; very full noted traditions survive from the 11th, 12th and 13th centuries, and for a time these reflected the Byzantine tradition quite faithfully. After the 13th-century Mongol invasions the Slavonic tradition became less dependent on the Byzantine Church (*see* RUSSIAN AND SLAVONIC CHURCH MUSIC).

In the Latin liturgies it became common to preserve the chant through notation. Of the medieval chant repertories of Italy, three survive complete: the Gregorian (still the official chant of the Roman Catholic Church), Old Roman and Ambrosian (*see* AMBROSIAN CHANT; GREGORIAN CHANT; and OLD ROMAN CHANT). The origins of the Gregorian are obscure; although it bears the name of GREGORY THE GREAT (590–604), it is no longer thought that this repertory represents Roman chant at the time of his papacy. It may represent a Roman recension of chant of the late 7th century or early 8th, or a Frankish recension of a Roman repertory carried out in the late 8th and early 9th centuries with the addition of some local obsolescent Gallican elements (*see* GALLICAN CHANT). The Old Roman chant poses a related problem. It survives only in five manuscripts from the 11th century to the early 13th from Rome and its environs. No other chant dialect appears in Roman manuscripts before the 13th century. Old Roman is variously viewed as the stylistic forerunner, in part, of the Gregorian repertory; or, in a refinement of this view, as the normal, older usage of Rome that survived in the region of Rome even after the newer Gregorian usage had spread throughout Western Europe; or, on the contrary, as a chant dialect reserved for papal ceremonial while the Gregorian was used in ordinary celebration; or as a late, stylistically degraded outgrowth of the Gregorian repertory. The complex history of the Roman rite and its music, and the problematic relationship between the Gregorian and Old Roman repertories are discussed below (§2(ii)).

The third substantially surviving medieval Italian repertory is the chant of the region of Milan, called Ambrosian after the 4th-century bishop of that city (*see* AMBROSIAN CHANT). Ambrosian chant is in use at Milan to the present. There are fragmentary remains of two other Italian repertories. The more substantial of these, dating from the 10th, 11th and 12th centuries, comes from the Beneventan zone of south Italy, which stretches across the peninsula from Naples and Monte Cassino in the west to Bari in the east and even reaches across the Adriatic to the coast of Dalmatia (*see* BENEVENTAN CHANT). From north-east Italy there are isolated 11th- and 12th-century survivals of a chant repertory that may have had considerable importance, since what is preserved comes from Ravenna (*see* RAVENNA CHANT). A centre for similar developments may also have been the influential patriarchate of Aquileia-Grado further to the north-east (*see* AQUILEIA). All these five medieval Italian dialects, but particularly the amply preserved Gregorian, Old Roman and Ambrosian, share some basic musical material. Corresponding chants in the various liturgies are melodically related. Thus in some instances an 'old-Italian' chant layer can be discerned behind the stylized regional variants. The recovery of this layer constitutes one of the major challenges in plainchant study.

As part of the movement towards political and liturgical unification begun in regions ruled by the Carolingians in the mid-8th century, all the local musical rites except the Ambrosian were progressively suppressed in favour of the Gregorian. Of the once-flourishing Gallican chant sung throughout Merovingian Gaul and elsewhere in the Frankish kingdoms, only isolated traces survive in manuscripts dating from the 9th to the 12th centuries. Some Gallican material, however, may have been perpetuated in the Gregorian tradition, particularly among its alleluia verses, offertories, processional antiphons (*see* LITANY, §I, 3(iii), and PROCESSIONAL) and Ordinary chants. The Mozarabic (Old Spanish) rite developed in the Visigothic kingdom in early medieval Spain from the end of the 5th century and continued to flourish in Christian communities during the period of Arab dominance from 711 until its suppression in favour of the Gregorian liturgy in 1085 (*see* MOZARABIC CHANT).

Table 1 presents a comparative synopsis of the principal chants of the Mozarabic, Roman and Ambrosian Masses (items in parentheses are sung infrequently).

TABLE 1: Principal chants of the Mozarabic, Roman and Ambrosian Masses

Mozarabic rite	*Roman rite*	*Ambrosian rite*
	(*a*) LITURGY OF THE WORD	
Praelegendum	Introit	Ingressa
(Gloria)		
Trisagion	Kyrie	
Benedictiones	Gloria	Gloria (Laus missae)
Prophecy		Prophecy
Psalmo: Clamor		Psalmellus
Epistle	Epistle	Epistle
	Gradual	
	Alleluia	Hallelujah
Threnos (Lent)	Tract (Lent)	Cantus (Lent)
Preces	Sequence	
		(Antiphona ante evangelium)
Gospel	Gospel	Gospel
		(Antiphona post evangelium)
Laudes (Alleluia)		
	Credo	Symbolum
	(*b*) MASS OF THE FAITHFUL	
Sacrificium	Offertory	Offertorium
	Sanctus	Sanctus
	Agnus Dei	
Antiphona ad pacem		
Antiphona ad confractorium		Confractorium
Antiphona ad accendentes		
	Communion	Transitorium
	Ite missa est	Benedicat

The music of one other main Western rite, the Celtic, is almost completely lost. This rite developed principally in Ireland after the missionary work of St Patrick in the 5th century. Its early liturgy was very similar to that of the Gallican Church, and like the Gallican rite it varied from centre to centre. The Visigothic Church is also thought to have influenced the character of the Celtic liturgy. From the second half of the 7th century, however, the Church of Rome began to exert considerable influence in Ireland, as it did in Anglo-Saxon England at the same time, and the liturgy became increasingly romanized. By the time Irish notation first appeared, at the beginning of the 11th century, Roman plainchant had extinguished the native Celtic music (*see* CELTIC CHANT).

2. HISTORY TO THE 10TH CENTURY.

(i) The early centuries. Consolidation of liturgical practices and the systematic compilation of lists of prayer formularies (*libelli missarum*) for local use in the Western Church began during the 4th, 5th and 6th centuries. This process is manifest in the oldest surviving Mass book of the Western liturgies, the so-called Leonine Sacramentary (also known as the Verona Collection: *I-VEcap* LXXXV (80); ed. Mohlberg, D1956), composed during the first quarter of the 7th century. As far as is known, this fragment containing 1331 collects and other prayers is a composite collection of Roman *libelli missarum* assembled for use at Verona some time between about 560 and 600. Most of its material is attributed to the work of earlier popes: Damasus (pontificate 366–84), Leo I (440–61), Gelasius I (492–6) and Vigilius (537–55). Although the prayers collected in the Leonine Sacramentary were clearly composed for specific feasts, there is no evidence to suggest that they were used as a Proper of the Mass, that is, specific formularies created for and permanently assigned to individual dates in the liturgical year; rather, the celebrant could choose from a *libellus* a variety of prayers relevant to each feast or he could compose his own. There is also some evidence that the texts of non-biblical chants were composed on a similarly ad hoc basis. Consequently, in the absence of any Proper for the texts of the Eucharist there could be no Proper for the music. References in medieval literature to the institution by various popes of 'chants for the liturgical year' probably refer to the collection and arrangement of *libelli* and should not be interpreted as evidence for the development of a musical Proper. McKinnon (F1995, pp.201–02) has argued that a Proper repertory could have been created only by a group of cantors devoted to the cultivation and preservation of chant; the single group of this kind known to have existed in the Western Church before the Carolingian era is the Roman Schola Cantorum, founded probably in the second half of the 7th century. According to McKinnon, the chants of the other major Western liturgies were performed by soloists who largely improvised the melodies they sang, although the simple chants sung by the congregation must have had fixed melodies.

Most of what is known about the early history of the music of the Divine Office comes from the surviving Latin monastic *regulae* ('Rules'), which began to appear in the late 4th century and usually contain descriptions of the cursus – the division of the Psalter throughout the week. Among the most important pre-Carolingian *regulae* were the 5th-century *Instituta* of Cassian, used at Lérins; the early 6th-century *Regula magistri*, written for an unknown monastery near Rome; the Rule of Benedict of Nursia, composed sometime between *c*530 and *c*560 for the abbey of Monte Cassino (see Forman and Sullivan, F1997); the *regulae* of Caesarius, bishop of Arles (*c*470–542); and those of Columbanus (*d* 615), the Irish monk and founder of Luxeuil and Bobbio. Before the 9th century, monasteries in Francia were free to choose or compile their own Rule and the singing of the cursus varied from community to community. During the reign of Louis the Pious (814–40), however, a series of decrees were issued, imposing on Frankish communities the Rule of Benedict and the canonical Rule of Chrodegang. Although none of these *regulae* describes the actual sound of monastic chanting, they reveal that all full members of the community were expected to know the entire Psalter by heart and to participate in the singing of the Office, which included both choral and solo chanting. However, some Rules, notably the *Regula Benedicti*, state that the solo psalmody should not proceed by order of seniority of the monks, as was the case in many monasteries, but that only those who were able to edify the listeners should be permitted to chant.

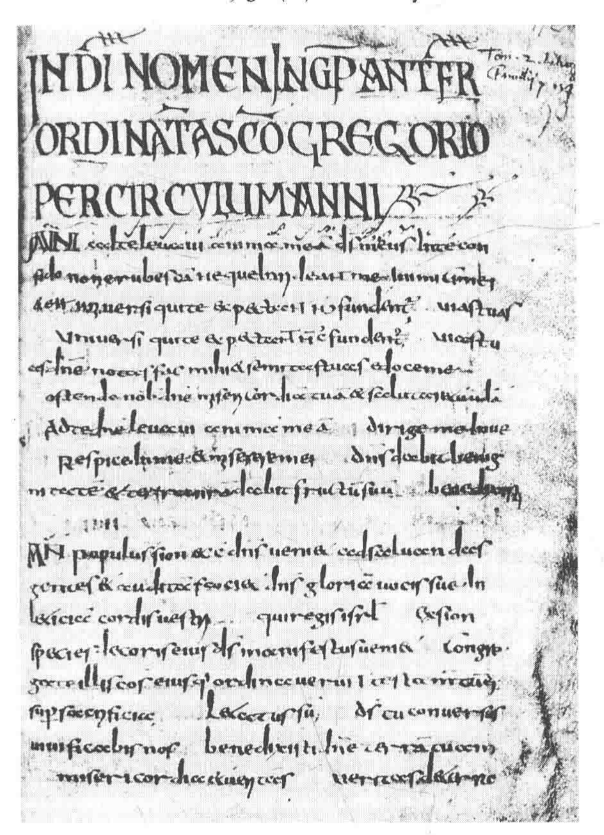
Before the the mid-8th century, when the Carolingians assumed political power in the Frankish lands, the liturgical practices of the Western Churches were very diverse. Although the pope held authority over doctrinal matters, he exercised no jurisdiction over the manner in which worship was conducted outside the Roman Church. Even within separate kingdoms liturgical uniformity was unusual; the Gallican rite, in particular, embraced many local traditions. Only in the Visigothic Church in the second half of the 7th century did the bishops of Toledo assume authority over the Old Spanish liturgy and demanded uniformity of worship throughout the kingdom. The Anglo-Saxon Church established by Augustine of Canterbury in 597 is thought to have used a mixture of rites derived mainly from the Irish, Gallican and Roman Churches (Cubitt, F1996), but by the mid-8th century uniformity of liturgy was demanded by the archbishop of Canterbury. At the Council of Clovesho in 747 it was declared that the Anglo-Saxon Church should follow the same liturgy as practised in Rome. In particular, the Anglo-Saxons revered Gregory the Great as the founder of their Church, and by the 8th century they also regarded him as the source of their liturgy. The emulation of the Roman rite by the Anglo-Saxons is particularly significant for the history of Western plainchant, for it is clear that their desire for conformity with Rome was not limited to the texts of the rite but also extended to its music, although it is impossible to judge the extent to which such ideals were enforced in practice. Furthermore, it is likely that the legend of Gregory the Great as the author of the chant repertory which bears his name may have its origins in the English Church (Hiley, C1993, pp.506–07).

(ii) The origins of Gregorian chant. A fundamental policy of the early Carolingian monarchy, one that began under Pippin the Short (751–68) and continued first under Pippin's son Charlemagne (768–814) then under Charlemagne's son Louis the Pious and his grandsons Lothar, Pippin and Charles, was the reform of ecclesiastical discipline and the imposition of religious unity among the Franks and their subject peoples. An important means by which the Carolingians pursued their ideal of religious unity was through the promotion of uniformity in worship. They aimed to replace the diverse Gallican

traditions by a single rite – that of the Roman Church (see Vogel, F1965 and 1966).

The first attempt to standardize the liturgy of the Frankish Church occurred during the reign of Pippin the Short and was probably implemented under his direction. A new sacramentary was issued that had been created from a mixture of Gallican and Roman elements; this type of Mass book is known as the '8th-century Gelasian' or the 'Frankish–Gelasian' Sacramentary. One of its earliest surviving examplars is the Gellone Sacramentary (*F-Pn* lat.12048; ed. Dumas, D1981), probably copied between 790 and 800 at Meaux for Cambrai Cathedral, but given to the abbey of Gellone in 807 (see Gamber, D1963, 2/1968, no.855; and Moreton, D1976). Although copies of the 8th-century Gelasian Sacramentary were disseminated widely and rapidly, their presence only exacerbated the liturgical confusion in the Carolingian Church. Under Charlemagne, therefore, a second sacramentary was declared the standard Mass book of the Frankish Church. In order to give his liturgical reforms more authority Charlemagne asked the pope for a pure ('inmixtum') copy of the sacramentary of Pope Gregory. The book sent by Pope Hadrian I (772–95), which arrived in Francia some time between 784 and 791, was deposited in the palace library as an exemplar from which further copies could be made. Although the original manuscript of the sacramentary, known as the 'Hadrianum', is no longer extant, a single early copy of it survives in the sacramentary of Cambrai (*F-CA* 164), written in 811 or 812 under the direction of Hildoard of Cambrai (see Gamber, op. cit., no.720). This manuscript carries the title: 'In nomine Domini. Hic sacramentorum de circulo anni exposito a sancto Gregorio papa Romano editum ex authentico libro bibliothecae cubiculi scriptum' ('In the name of the Lord. This copy of the sacramentary for the liturgical year composed by Saint Gregory, the Pope of Rome, was written using the exemplar of the authentic book of the palace library').

The Hadrianum, however, proved to be unsatisfactory in two respects. First, it was clearly not the 'pure', authentic text of Gregory the Great that Charlemagne had requested, for it included a number of formularies added since the death of Gregory I in 604, of which the latest were added during the pontificate of Gregory III (731–41). Secondly, the Hadrianum was a papal sacramentary, that is, a book containing the prayers recited by the pope at stational masses, and as such it gave no formularies for the Sundays after Epiphany, Easter and Pentecost, neither did it provide prayers for the special liturgies for funerals, votive masses etc. These apparent lacunae in the sacramentary decreed to be the Frankish standard were filled only during the reign of Charlemagne's son, Louis the Pious (814–40), when Benedict of Aniane (*c*750–821), an Aquitanian monk and architect of many of Louis' church reforms, completed his supplement to the Hadrianum (see Wallace-Hadrill, F1983, pp.258–303; Vogel, B1966, Eng. trans., pp.79–92), with the missing material compiled from other sacramentary texts; some uniquely Gallican feasts and services were also included. Benedict not only carefully distinguished his own work from the text of the original Hadrianum but also distinguished between the prayers he thought were composed by Gregory the Great and those that were later Roman additions. Several Carolingian manuscripts of the supplemented Hadrianum are extant, notably *F-AUT* 19 copied around 845 in Marmoutier near Tours.



The Hadrianum and its supplement did not immediately replace the other sacramentaries still circulating in Francia in the early 9th century, but it eventually supplanted the other texts to become the standard Mass book of the Frankish Church and was the sacramentary known to the most important liturgical commentators of the 9th century, including Amalarius of Metz (*c*775–*c*850) and Walahfrid Strabo (*c*805–49). (For an edition of the Hadrianum and its supplement, see Deshusses, F1971–82.)

Although most of the documentary sources for the Carolingian Church reforms concern the romanization of the sacramentary and the other liturgical texts, there is also evidence that the same ideals shaped the development of plainchant under the early Carolingians. The earliest descriptions of the reform of chant were written during the reign of Charlemagne, but several of them date the beginnings of the policy of replacing Gallican melodies with those of Rome to the reign of Pippin, in particular to the visit of Pope Stephen II to Francia in 752–4. According to Paul the Deacon (*c*783) Bishop Chrodegang of Metz (742–66), who had escorted Pope Stephen to Francia in 752, began to instruct his clergy at Metz in the Roman manner of chanting (*PL*, xcv, 709). Chrodegang also established a stational liturgy based on the papal rite and formed a schola cantorum to perform the chant (Andrieu, F1930); this was probably the first such choir to be introduced into Francia (see McKinnon, F1995). Pippin's brother, Bishop Remedius of Rouen, also taught his clergy Roman chant. A letter from Pope Paul I (MGH, *Epistolae*, iii, 1892, pp.553–4) written in 761/2 describes how Remedius's monks were unable to learn Roman chant fully from Simeon, a member of the Roman Schola Cantorum, before he was recalled to Rome, and how Remedius then sent his monks to Rome to continue their instruction in the Schola itself. Pope Paul also sent Pippin two Roman chant books, an 'antiphonale' and a 'responsale' (see MGH, *Epistolae*, iii, 1892, p.529); neither one is extant.

Under Charlemagne a number of royal decrees promoted and enforced the Roman rite and its chant throughout Francia. The most important was the *Admonitio generalis* issued in 789 which stated that all the clergy should learn and practise the Roman chant correctly in conformity with Pippin's attempt to abolish the Gallican chant for the sake of unanimity with the Roman Church (MGH, *Capitularia*, i, 1883, p.61). In order to further knowledge of Roman chant scholae cantorum were established in several cathedrals and monasteries and royal envoys (*missi*) were sent to churches to ensure that the liturgy and its chant were correctly performed.

While the texts of the Roman liturgy could be introduced into Frankish churches by the dissemination of manuscripts, the learning of Roman chant must have been a much more difficult process, for without notation music could only have been transmitted orally. This raises several important questions about the success of Frankish attempts to introduce Roman chant and the nature of the relationship between the music sung in Rome in the late 8th and early 9th centuries and that sung in Francia at the same time.

The Carolingian belief that Gregory was the source of their chant was stated at the head of the earliest extant

1. *8th- or 9th-century gradual without melodies, Codex Blandiniensis from the region of Ghent (B-Br lat.10127–44, f.90r)*

Frankish chant book, the Mont Blandin Antiphoner (*B-Br* lat.10127–44, ff.90–115; see Gamber, D1963, 2/1968, nos.1320, 856), a gradual copied in about 800, later owned by the abbey of Mont Blandin near Ghent (fig.1). The same belief was also enshrined in the hexameter verses that prefaced many medieval chant books, among the earliest of which is the Monza Cantatorium (*I-MZ* CIX; ed. Hesbert, D1935/*R*, p.2), probably copied in about 800 in north-east France: 'Gregorius praesul meritis et nomine dignus ... composuit hunc libellum musicae artis scholae cantorum in nomine Dei summi' ('Bishop Gregory, worthy in his merits and name ... composed this little book of the art of music for the Schola Cantorum in the name of the highest God'; see Stäblein, F1968). By the middle of the 9th century the legend of Gregory I's composition of the Roman chant repertory had spread from Francia to Rome itself: a letter from Pope Leo IV written in the 850s threatened an abbot with excommunication if he and his monks did not perform the chant handed down by Pope Gregory I (MGH, *Epistolae*, v, 603). Later in the 9th century John the Deacon (*b c*824; *d* before 882), a monk of Monte Cassino, wrote a *Vita sancti Gregorii* (*c*873–5; *PL*, lxxv, 60–242) at the request of Pope John VIII (872–82) in which Gregory I was presented as the composer of Roman chant. By the time the Hartker Antiphoner was copied (*c*980–1011) the legend had developed into the story that the melodies of plainchant were dictated to the Pope by the Holy Spirit in the form of a dove (fig.2; on the development of the legend see Treitler, I1974, and Hiley, C1993, pp.503–13).

Present-day scholars have rejected this image of Gregory as composer of plainchant. Van Dijk (G1961) proposed that the reform of the Roman liturgy by Pope Gregory II (715–31) had been mistakenly attributed to Gregory I by his Carolingian apologists, a theory also explored by Stäblein (F1968). There is no evidence contemporary with Gregory I to suggest that his contribution to the liturgy amounted to much more than the writing of some prayers and perhaps the compilation of a *libellus missarum*, and none of the accounts of Gregory's life written before the Carolingian era mentions any particular interest in music. Schmidt (F1980), however, concluded that it was possible that Pope Gregory's involvement was greater than current scholarship gives him credit for.

Contemporary with the belief that Gregory the Great was the source of Carolingian chant are a number of writings indicating that the repertory performed in Francia during the 9th century was not the same as that sung in Rome. When Amalarius of Metz revised the antiphoner in the 830s he found that there were differences between the texts and *ordo* sung in Rome and those performed in Metz; Walahfrid Strabo (*d* 849) accepted that elements of the Gallican chant were still present in the so-called Roman rite of the Frankish Church. John the Deacon, the Roman author of the *Vita* of Pope Gregory the Great noticed differences between the music of the Franks and that sung in Rome and accused the 'barbaric' Gauls and Germans of being incapable of learning Roman chant. Notker Balbulus (*c*840–912) of St Gallen responded in an account written some time between 883 and 885: he accused the Romans of deliberate attempts to sabotage the reform of Frankish chant during the reign of Charlemagne by teaching the northern cantors incorrect melodies (see Van Dijk, 'Papal Schola', F1963).

2. *The legend of Pope Gregory the Great depicted in the Hartker Antiphoner, c980–1011 (CH-SGs 390–391, f.X; from PalMus, 2nd ser., i, 1970)*

Unfortunately there is no means of directly comparing the music sung in Rome with that sung in Francia during the Carolingian era. Notation developed in Francia in the 9th century and fully-notated chant books are known only from the end of that century; notated books from Rome, however, survive only from the 11th century onwards. The repertory notated in the Frankish chant manuscripts is known as GREGORIAN CHANT and is clearly closely related to that preserved in the Roman manuscripts, but there are sufficient differences between the two for the Roman repertory to be recognized as a variant tradition, commonly known as OLD ROMAN CHANT. Stäblein (G1950) was the first to emphasize the importance of this music, although it was already known to Mocquereau (PalMus, 1st ser., ii, 1891/*R*) and Andoyer (G1911–12, pp.69, 107). Since the 1950s several theories have been advanced to explain the relationship between the Gregorian and Old Roman chants and to address the question of how successful the Franks were in importing Roman music.

Some scholars have argued that both repertories were sung in Rome. Stäblein thought that the Old Roman chant was that sung in Rome at the time of Gregory the Great and that the Gregorian chant developed from it during the papacy of Vitalian (657–72), the probable founder of the Schola Cantorum. The liturgist Van Dijk, however, suggested that the differences in the Gregorian and Old Roman music reflected the existence of two different rites in Rome from the time of Vitalian: the Gregorian repertory being the chant of the papal rite and the Old Roman that of the urban churches ('Gregory the Great', F1963). Smits van Waesberghe offered a variant of this theme: the Old Roman chant was the original repertory of the Roman Church and the papal chapel and the Gregorian was a development of it that emerged during the 7th century in the basilical monasteries. The theories of Van Dijk and Smits van Waesberghe make several assumptions: that the music of these repertories changed little between their creation and the date they were first notated; that the Frankish adoption of Roman chant was limited to only one of the co-existent repertories in Rome; and that the Carolingians were on the whole successful in reproducing the original melodies. Hucke, on the other hand, pointed to the accounts of contemporary writers such as John and Deacon and Notker and argued that the Gregorian chant resulted from the imperfect transmission of the music sung in Rome to Frankish cantors at the end of the 8th century and the virtual separation of the two repertories from around 800 when Charlemagne decreed that all Frankish cantors were to learn the 'Roman' rite from the schola cantorum at Metz (MGH, *Capitularia*, i, 1881, p.121). (For further details of the theories *see* OLD ROMAN CHANT, §2).

These widely differing theories concerning the origins of Gregorian chant reveal just how little is known about plainchant during the early Middle Ages. The relationships between different chant traditions are obscure, and very little is understood about the processes involved in the creation of melodies, how and by whom they were performed, and how they were transmitted. Of particular importance is the question of the degree to which melodies were fixed. Many of the arguments have centred on the nature of the Roman Schola Cantorum and the role it played in the creation and maintenance of Roman chant. Its precise origins are obscure; traditionally, its foundation was ascribed to Gregory the Great, a view maintained by Van Dijk ('Gregory the Great', F1963), but this theory is now generally rejected. The earliest clear evidence for its existence appears only at the end of the 7th century, in the biography of Pope Sergius I (*d* 701) in the *Liber pontificalis* (ed. Duchesne, F1886–92), which describes how the young Sergius was handed over to the *prior cantorum* for training. The Schola Cantorum is now generally thought to have been established some time in the second half of the 7th century (McKinnon, 'The Eighth-Century Frankish-Roman Communion Cycle', F1992; Dyer, F1993). By the time *Ordo romanus I* (ed. Andrieu, F1931–61/*R*, ii, 67–108) was composed, probably at the beginning of the 8th century, the structure of the Schola was firmly established. According to this *Ordo* it was led by the *primicerius* (or *prior*), whose duties included beginning and ending the chants of the liturgy, and three other sub-deacons known as the *secundus*, *tertius* and *quartus* (also called the *archiparaphonista*); the other adult members of the Schola, probably clerics in minor orders, were called *paraphonistae*, and the young pupils the *paraphonistae infantes*. The exact size of the Schola Cantorum is not known. (*See also* SCHOLA CANTORUM (i)).

The Roman Schola Cantorum is the only institution dedicated to the teaching and performance of chant known to have been formed in the West before the Carolingian era. Research by McKinnon ('The Eighth-Century Frankish-Roman Communion Cycle', F1992) suggests that it was largely responsible for the formation of the musical Proper in the Roman rite and the development of a high degree of melodic fixity in the Roman repertory. According to McKinnon the Roman musical Proper emerged quickly over a few generations beginning sometime in the second half of the 7th century and continuing into the early 8th, the reign of Pope Gregory II (715–31) being particularly significant. The idea of a fixed melodic repertory, therefore, developed in Rome and was later adopted by the Carolingians when they began to replace the Gallican chant with the chant of the Roman Schola Cantorum. The earliest fully notated chant books, all of which were written in Francia, display a remarkable uniformity in the plainchant melodies sung throughout the Frankish Church. The variants that these manuscripts contain, though persistent, are not significant enough to detract from the overall impression of a high degree of melodic fixity in the Gregorian repertory.

A peculiar feature of Gregorian chant is its adherence to a system of classification by which chants are categorized within eight modes according to musical characteristics irrespective of their liturgical function. Although the theory of the eight modes, as it developed from the 9th century onwards, classifies melodies by their cadence note (final), ambitus and reciting note, mode also carries implications of melodic idiom, characteristic turns of phrase, which defy easy theoretical definition. Such melodic characteristics were sometimes represented in theoretical writings and in tonaries by a set of eight short melodic phrases associated with syllables such as *noeanne*, *noeagis* etc., probably borrowed from Byzantine chant (see Bailey, L1974). While the word 'tonus' was at first preferred for this complex of meanings, 'modus' gradually became more usual ('tonus' referring to the harmonic interval, especially in polyphony) (*see* Atkinson, L1987 and 1995). A distinction is still commonly made between

the theoretical concept of 'mode' and the formulas for singing psalm verses or responsory verses, usually called 'tones'.

The first concrete evidence for the classification of Gregorian chants in eight tones or modes is the fragmentary Tonary of St Riquier, *F-Pn* lat.13159, ff.167–167*v* (see Gamber, D1963, 2/1968, no.1367; and Huglo, D1971, pp.25–6), dating from just before 800 and contained in the Psalter of Charlemagne copied at the abbey of St Riquier in northern France. The modal system already existed at an earlier date, however, in the Eastern Churches. It was taken up by the Franks at the time of the establishment of Gregorian chant in Francia, presumably from Byzantine practice. Apart from the earlier evidence for the *oktōēchos*, Aurelian of Réôme (*fl* 840s) says that it was adapted from the Greeks, as are also the Latin names given to the modes (*protus authentus/plagalis* etc.). (*See* MODE, §II; OKTŌĒCHOS; and PSALM, §II, 6–7.)

It is probable that the classification of the repertory according to melodic type aided the efforts of Frankish cantors to learn and perform the new repertory, particularly the psalmodic chants in which the mode of the antiphon determined the tone of the psalm verse. The composition of tonaries (liturgical books listing chant incipits classified according to the eight modes; *see* TONARY) containing a large number of chants indicates that such books served as a reference tool for cantors, for example the Carolingian Tonary of Metz compiled in the first half of the 9th century (*F-ME* 351; ed. Lipphardt, L1965). However, it is clear that the development of the system of the eight modes also served a theoretical purpose as early as the reign of Charlemagne. The Tonary of St Riquier was probably designed as a didactic or theoretical text, for only a few chants are classified according to their modes and not all of the chant types listed (introits, graduals, alleluias, offertories and communions) contain psalm verses. It is likely that this tonary was written to demonstrate that the whole of the repertory conformed to the system. The same belief is found in many of the early medieval treatises on music theory, beginning with the anonymous work known as the *De octo tonis* which formed the basis of part of Aurelian of Réôme's *Musica disciplina* (*c*840–50). With the composition of the anonymous treatise *Alia musica* in the second half of the 9th century the eight modes were identified (erroneously) with the seven octave species of ancient Greek theory. The authentic modes were the Dorian, Phrygian, Lydian and Mixolydian; and the plagal the Hypodorian, Hypophrygian, Hypolydian and the Hypomixolydian.

Although the Carolingians were convinced that their so-called Roman chant conformed to the system of the eight modes, the evidence of the notated melodies and several theorists shows that the Gregorian repertory was not originally composed in accordance with such a system. There is no evidence that the eight modes were recognized in Rome until Gregorian chant was introduced there. A significant number of Gregorian melodies are classified differently in different places and at different times, and some chants display a kind of modal ambiguity that was frequently a problem for medieval theorists. The conviction that this system encapsulated an ideal state of the repertory, however, was so strong that theorists often 'corrected' chants or sections of chants to bring the 'corrupt' melodies into line with the appropriate mode; in fact, most such melodies probably belonged to a stratum of Gregorian chant that was in use before the establishment of modal theory. This process of 'correction' may account for some of the differences between the Gregorian and Old Roman repertories.

(iii) The origins of plainchant notation. Few present-day scholars of medieval music would disagree with the premise that early chant melodies dating from before the time of Pippin (751–68) were transmitted from generation to generation by oral methods alone. Isidore of Seville, writing in the first half of the 7th century, said that music had to be memorized because there was no means of writing the sound, and there is no evidence that music notation existed in the medieval West before the Carolingian era. The melody for the prosula *Psalle modulamina* in *D-Mbs* Clm 9543 (see ex.2 below) is possibly the earliest datable example of medieval notation (see Levy, F1995, esp.172, n.5). The chant is followed in the manuscript by the colophon of the scribe Engyldeo, known to have been a cleric at St Emmeram in Regensburg between 817 and 834 (see Möller, *La tradizione dei tropi liturgici*, M1985 and 1987, pp.279–96), and Bischoff (F1940) believes the notated piece to be in his hand, although this has not been universally accepted.

The earliest unambiguous evidence of the use of notation occurs in the *Musica disciplina*, a treatise written in the 840s by Aurelian of Réôme. Examples of neumes are rare before the appearance of fully notated chant books for the Mass at the very end of the 9th century (for a checklist of 9th-century notated manuscripts *see* NOTATION, §III, 1, Table 2). Fully notated antiphoners containing the music for the Office did not appear until a century later. Some have argued that a large number of 9th-century notated sources have been lost and that the writing of music was therefore much more widespread than the surviving evidence suggests. Levy, in particular, has suggested that fully notated chant books existed as early as the reign of Charlemagne and that these were kept in the palace library, together with the Hadrianum and other liturgical texts, as the authoritative exemplars for the teaching of chant (I1987). In Levy's view this exemplar was central to Charlemagne's policy of transmitting Roman chant accurately throughout Francia. However, no direct evidence for such a manuscript survives, and most scholars believe that the scarcity of notation before the turn of the 10th century is a true reflection of how little notation was used during the 9th century (Corbin, J.i 1977; Hughes, I1993, pp.65–6).

The notation found in the early chant books is neumatic, that is, it represents the outline of a melody without specifying the intervals or pitches. Cantors had first to learn a melody by oral methods before they could read it in the notation. The main purpose of such notation was to serve as a reminder of the melody, and the earliest notated chant books were probably used for reference rather than performance. Although specific pitch notations were developed by theorists in the second half of the 9th century, the notation of exact pitch in chant books was not used until the 11th century when several different methods appeared. Heighted point neumes are found in notated chant books from Aquitaine in the early 11th century, and an alphabetic system of defining pitch is found in the Dijon Tonary (*F-MOf* H 159) and some manuscripts from Normandy and England. At the same time Guido of Arezzo propagated the use of the staff with coloured lines or clefs to designate F and C. The

development of notations that specified pitch should not be regarded as an 'improvement' on the earlier neumes but as evidence of the changing relationship between the performance and notation of liturgical music and the methods used in teaching and learning plainchant.

Attempts to recover the rhythmical traditions of the 8th, 9th and 10th centuries remain highly speculative. A few neume systems contain special signs thought to be indications of rhythm: St Gallen neumes and those from Laon contain significative (or 'Romanus') letters and supplementary signs (*episemata*), some of which concern the rhythm of the melody, but the exact interpretation of these signs is unclear. Some scholars have suggested that Gregorian chant was performed according to the quantities employed, for example in Latin metrical verse; others, including the monks of Solesmes, believe that the chant was more basically sung in equal notes but with rhythmic nuances.

As with many other aspects of early chant history, the origins of plainchant notation are obscure. A number of different explanations concern the shape of the neumes. Some scholars maintain that neumes are graphic representations of cheironomic gestures – the movement of the precentor's hands as he directed the singers (see Mocquereau, PalMus, 1st ser., i, 1889/*R*; Huglo 'La chironomie médiévale', I1963). Others believe that Western notation was derived from Byzantine ekphonetic notation, a system used to direct the recitation of lections. Another group has suggested that the neumes owe their form to the accents of classical prosody, whether directly from manuals of Latin grammar or indirectly via Byzantium (see Atkinson, I1995). Treitler (I1982; 'Reading and Singing' and 'Die Entstehung', I1984) has proposed that neumes developed from the various punctuation signs – question marks, points, commas etc. – employed by Carolingian scribes to aid readers in the delivery of texts. However, it may be that none of these theories alone can adequately account for the shape of the neumes and that Carolingian notation evolved independently of any pre-existent source (*see* NOTATION, §III, 1).

Most scholars would hold that the extant varieties of Carolingian notation all derive from a common origin, but they disagree as to the exact nature of this origin. Some argue in favour of a single primitive system of neumes as the source of all the later notations; others consider it more likely that the diversity evident in the extant neumatic systems arose from a set of commonly held concepts about the function of notation and how musical sounds should be represented (Hughes, I1987; Arlt, *Musicologie médiévale: Paris 1982*, J.i 1982). It is certain, however, that neumes were subject to considerable change and adaptation in different Frankish centres throughout the 9th century. The three earliest extant notated graduals, all written around 900 (*CH-SGs* 339 from St Gallen, *F-CHRm* 47 from Brittany; *LA* 239 from Laon), display neumes of different shapes, and several other notational types appear in 10th-century manuscripts. Early notations are generally defined according to their geographical origin: Lotharingian, Breton, Aquitanian, central French, German, Anglo-Saxon, Beneventan and north Italian. The St Gallen and French notations are sometimes called 'accent' or 'stroke' notations, in which one pen-stroke may represent several notes; Aquitanian, Breton and Lorraine notations are termed 'point' neumes, because almost every note is indicated by a separate dot or dash.

Despite the different origins of early notated chant books and the variation in the styles of neumation, the most remarkable feature of the melodic repertory is its uniformity. Variants in the melodies are generally minor and were probably caused by differing opinions about how the melodies were to be sung rather than by scribal error (see Hughes, I1987; I1993). The same variants are often found in groups of manuscripts copied in the same region.

The transition from an oral tradition to the earliest types of written plainchant notation and the role of notation in maintaining the uniformity of the tradition during the 9th century are the subject of considerable debate. Levy's argument for the existence of a notated exemplar during the reign of Charlemagne assumes that the melodic repertory was largely fixed by the end of the 8th century. This assumption is supported by Hughes (I1987, esp. 377), but whereas Levy argues that the uniformity in the manuscripts resulted from the use and copying of notated chant books, Hughes maintains that the chant had acquired a fixed melodic form well before the appearance of the earliest surviving notated manuscripts and that cantors were capable of performing almost all their chants from memory with very little variation. Treitler and Hucke, however, have argued that performance of the Gregorian repertory was not necessarily frozen into uniformity by the advent of notation. In the era of oral transmission cantors would have 'reconstructed' chants at each performance according to their knowledge of traditional forms and melodic materials. To some extent this would continue to be true when notated books were available for reference (see Hucke, I1980, p.466).

3. SOURCES.

(i) Common types of liturgical book. The determined efforts by medieval scribes to make records of the liturgy according to some kind of orderly plan paradoxically led to an almost endless diversity. Balboni's attempts (see D1961 and 1985) to classify liturgical books by general type, though admirable, failed to deal adequately with the books' internal differences. Diversity among the original medieval sources, however, does not necessarily imply disorder (a confusion that can easily occur when such a multiformity is viewed from the perspective of modern liturgical books): it is rare to find an unsystematic anthology of liturgical music (see Huglo, D1988).

Four general categories of plainchant book may be distinguished: the Mass book, the Office book, books containing 'paraliturgical' chants and didactic books. The principal types of chant book for the Mass are the gradual and the noted missal. Office chants are found in the antiphoner and in the noted breviary with psalter and hymnal. Chants to be performed during liturgical processions were commonly included in Mass books at the appropriate place in the liturgical year. In the Later Middle Ages they were frequently collected in a book of their own, the processional. Later medieval forms, which have largely fallen from use, are the paraliturgical chants (various chants consisting of musical and/or textual additions to the established liturgy): tropes, sequences, prosulas, *sequentiae* and *versus*. These occur in several configurations: in separate volumes (e.g. troparia, sequentiaria, versaria); in distinct sections within medieval Mass books; or inserted either singly or in groups within

individual Mass Propers. The tonary and certain kinds of abbreviated gradual and antiphoner are pedagogical directories that assisted the cantor in the proper selection and performance of chants.

Other types of liturgical directory prominent during the Middle Ages were the ordinal (*Liber ordinarius*) and the *Consuetudines monasticae* (for modern editions of the latter see Hallinger, Q1963–). The ordinal was a code of rubrics and incipits of formularies, chants and readings, and indicated the order for celebrating the services in a particular church or monastery. The *Ordines romani* (ed. Andrieu, F1931–61/*R*), a collection of 50 formerly independent *ordines*, the earliest of which dates from the early 8th century, are a particularly valuable source of evidence for the development of the Romano-Frankish rite. The monastic customaries include regulations concerning chanting by monks in both liturgical and non-liturgical contexts. Such ordinals and customaries have come to play an increasingly important role in plainchant research (see Angerer, Q1977; Fassler, Q1985; Foley, Q1988; Vellekoop, D1996).

See also LITURGY AND LITURGICAL BOOKS, §II, and articles on individual books.

(ii) Manuscripts: dating, origin and distribution. Only a small proportion of the medieval sources that once existed are extant today; many manuscripts have been lost to war, fire, water and, in some cases, deliberate destruction. Books containing the texts or music for liturgies that were no longer practised were often neglected, which explains why so few books of the Gallican rite survived the imposition of the Gregorian liturgy. The books of some ecclesiastical centres have been preserved in greater numbers than others. St Gallen, Limoges, Rouen and Benevento, for example, are still represented relatively fully by manuscript sources, but only a handful of early musical sources has survived from such major medieval religious establishments as Cluny, Camaldoli, Nevers, Tegernsee, Metz, Corbie, St Albans, Gorze and Nonantola. The survival of pre-Albigensian musical treasures from churches in southern France, such as Arles, Narbonne, Carcassonne, Albi, Toulouse, Rodez, Aurillac, Béziers, Moissac, Bordeaux and Tulle, can be attributed more to their luxuriant decoration than to their musical and liturgical content. In England and Scandinavia the systematic destruction of 'popish' books during the Reformation is well known.

Establishing an uncontested origin or date for some medieval liturgical manuscripts is, on occasion, virtually impossible. One of the most important advances relating to these problems was the realization that the series of alleluias used at Mass for the 23 Sundays after Pentecost frequently adhered to established local traditions that had persisted for decades or even centuries (Frere, D1894, p.l; Beyssac, D1921). For example, a given set of post-Pentecostal alleluias in manuscript 'x' of known origin may closely match a series in manuscript 'y', thus strongly suggesting that both sources were copied for a specific church, although the manuscripts may have been copied decades apart.

Three 11th-century series of post-Pentecostal alleluias are shown in Table 2. The St Denis (Paris) series was firmly implanted by the mid-11th century (see the eight manuscripts cited by Robertson, D1991, p.106). That used by the Augustinians (Canons Regular) at the abbey of St Victor in Paris is based on the gradual *F-Pa* 197, ff.80*v*–104*v*, dating from 1270–97, and the St Victor ordinal, *Pn* lat.14452, ff.64–83*v*, dating from about 1200 (see the manuscript descriptions in Fassler, Q1993). The Cluniac series is taken from the 11th-century Cluniac gradual *F-Pn* lat.1087, f.87ff.

Even after centuries of obscurity, chant books in private possession have continued to come to light, including the Cadouin collection (see Corbin, D1954), the gradual of St Cecilia di Trastevere (Hourlier and Huglo, G1952), the Weingarten Troper (Irtenkauf, D1954), the Nevers Troper (Huglo, M1957), the Wolffheim Antiphoner (Emerson, D1958–63), the St Albans Miscellany (Hartzell, D1975), the Mont-Renaud Antiphoner (PalMus, 1st ser., xvi, 1955–6) and the Feininger collection (Gozzi, D1994).

4. BASIC REPERTORY. Hesbert's *Antiphonale missarum sextuplex* (D1935/*R*), an edition of the Monza, Rheinau, Mont-Blandin, Compiègne, Corbie and Senlis graduals, is the principal documentary means of determining the size and content of the Gregorian Mass repertory performed in the Carolingian Church. In these late 8th- to early 10th-century sources the number of chant texts (any instances of musical notation are additions) agrees closely with the contents of the 11th-century noted gradual from St Gallen, Switzerland, *CH-SGs* 339 (facs. in PalMus, 1st ser., i, 1889/*R*), which was surveyed by Peter Wagner (C2/1901, i, 205) (Table 3).

Comparable statistics for the size and nature of the Gregorian Office repertory are not yet available. The documentary basis of all Office studies is the earliest source *F-Pn* lat.17346, ff.31*v*–107, a complete Office antiphoner from Compiègne in France, dating almost certainly from 877 (see Huglo, D1993); this unique antiphoner contains a hybrid collection of older liturgical formularies plus newly composed Offices from northern France. From that time to the 16th century a huge number of special Offices were composed in honour of local saints, such as St Thomas of Canterbury, St Louis IX, king of France, or St David, patron of Wales (see Hughes, O1983).

TABLE 2: Post-Pentecostal alleluia cycle

	St Denis	*St Victor*	*Cluny*
1.	In te Domine	Deus judex	Deus judex
2.	Diligam te	Diligam te	Diligam te
3.	Venite exultemus	Domine in virtute	Domine in virtute
4.	Confitemini Domino	In te Domine	In te Domine
5.	Qui timent Dominum	Eripe me	Omnes gentes
6.	Domine refugium	Te decet hymnus	Te decet
7.	Omnes gentes	Attendite popule	Attendite
8.	Quoniam Deus magus	Exultate Deo	Exultate Deo
9.	Qui sanat	Domine Deus salutis	Domine Deus
10.	Letatus sum	Domine refugium	Domine refugium
11.	Paratum cor meum	Venite exultemus	Venite exultemus
12.	Exultate Deo	Quoniam Deus	Quoniam Deus
13.	Dominus regnavit	Dominus regnavit	Confitemini
14.	Jubilate Deo	Confitemini	Paratum cor
15.	Domine deus	Paratum cor	Redemptionem
16.	Laudate Dominum	Redemptionem	Qui timent
17.	Deus judex	Qui timent Dominum	Laudate Dominum
18.	Qui posuit fines	Laudate Dominum	De profundis
19.	Adorabo ad templum	Dextera Dei	Confitebor tibi
20.	Attendite popule	De profundis	Lauda anima mea
21.	Te decet hymnus	Lauda anima mea	Qui sanat
22.	De profundis	Qui sanat contritos	Lauda Jerusalem
23.	Dextera Dei	Qui posuit fines	Qui posuit fines

Biblical texts, particularly the Psalter, formed the basis of worship in the Western Churches, although some liturgies admitted a greater number of non-biblical texts than others. Various Latin translations of the psalms existed during the early Middle Ages, producing variations in the texts of chants. The Roman Psalter remained the version used in the Roman Church until the 16th century. The Gallican Psalter, one of the several translations produced by St Jerome, was favoured by the Gallican Church and declared to be the official version of the Frankish Church by Charlemagne. It forms the principal source of Gregorian psalmody, but many Gregorian psalmic texts also derive from the Roman Psalter, thereby proving their Roman rather than Frankish origin. (For a study of these early psalters and the readings of chant texts, see Dyer, F1984; *see also* PSALTER, LITURGICAL).

Most biblical chant texts are rather brief excerpts taken directly from the scriptures; others, such as the communion *Videns Dominus flentes sorores Lazari* for Friday of the fourth week in Lent (*John* xi.33, 35, 43–4, 39), are made up from several passages; and some are paraphrases of the scriptures. The predominance of biblical texts in the basic repertory of Mass chant Propers (about 630 melodies in *CH-SGs* 339) is shown in Table 4 (after Wagner, C2/1901, i, 205).

Chants not normally using biblical texts include many Office antiphons, processional antiphons, Ordinary chants, creeds, acclamations, *preces*, litanies, *historiae* or special Offices for local saints, hymns, sequences and most tropes. Accounting for the textual variants between chant books is a problem sometimes encountered in plainchant research; some of the variation can undoubtedly be attributed to the transmission of distinctive biblical readings belonging to local traditions (for examples *see* GALLICAN CHANT, §5).

The oldest stratum of Gregorian chant may have consisted of a nucleus of about 630 melodies, but so far it has been virtually impossible to estimate the total number of chants used in conjunction with all the medieval Western liturgies. However, it is possible to draw some general conclusions from data collected from a variety of repertorial surveys (the figures cited below should nevertheless be treated with caution).

An extensive index listing about 11,000 chant incipits of the Gregorian repertory based on 19 sources, including modern published chant books, five manuscripts and several scholarly studies, was compiled by Bryden and Hughes (B1969). Scholars collecting and studying the Ordinary chants of the Mass have identified (discounting variants and transpositions) 226 Kyrie melodies (Landwehr-Melnicki, K1955/*R*), 56 Gloria melodies (Bosse, K1955), 230 Sanctus melodies (Thannabaur, K1962) and 226 Agnus Dei melodies (Schildbach, K1967). Comparable melodic surveys have been made of other classes of

TABLE 3: Numbers of chants in the original Gregorian repertory

	Hesbert (texts only)	*CH-SGs 339 (with melodies)*
Introits	152	149
Graduals	128	118
Alleluias	100	95
Tracts	18	20
Offertories	108	102
Communions	151	147
Total	657	631

TABLE 4: Sources of texts of the early Gregorian chant repertory *in CH-SGs 339*

	Book of Psalms	*Elsewhere in the Bible*	*Non-biblical*
Introits	102	41	6
Graduals	104	13	1
Alleluias	70	14	11
Tracts	17	3	0
Offertories	82	16	4
Communions	64	80	3
Total	439	167	25

chant: 410 alleluia melodies to about the year 1100 (Schlager, K1965), 110 offertory verses (Ott, K1935) and 732 prosulas to Office responsories (Hofmann-Brandt, M1973).

A vast number of Latin versified texts were set to a repertory of well-known hymn tunes; Stäblein (K1956/*R*) published 557 melodies from ten medieval hymnals and other sources. As for the paraliturgical genres, Van Deusen (M1986) drew attention to over 1400 sequence melodies and 3000 sequence texts in 1400 major extant sources – the sheer quantity of manuscripts containing the sequence is itself testimony to the genre's importance and longevity; Blume published the texts of 495 tropes to the Ordinary of the Mass (AH, xlvii, 1905/*R*) and 786 tropes to Proper chants of the Mass (AH, xlix, 1906/*R*); Weiss (M1970) edited 352 introit trope melodies from twelve 10th- and 11th-century manuscripts from southern France.

Hesbert's monumental comparison of 12 secular and monastic antiphoners from the central Middle Ages (CAO, vii–xii, 1963–79) emphasizes the complexity of the sung Office liturgy. The manuscripts that he collated contain about 185 invitatories, 4300 antiphons, 1900 responsories and 325 versicles. It must be kept in mind, however, that these numbers would increase dramatically if all the known metrical and non-metrical chants from special Offices for local saints venerated throughout

Ex.1 Melodic style in Gregorian chant

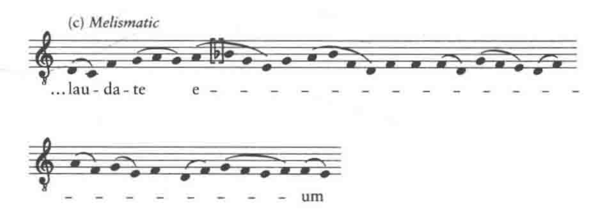


TABLE 5: The 11th-century Gregorian eight-mode system

No. of mode	Name in authentic-plagal terminology	Greek name	Final note	Ambitus	Reciting-note
1	Authenticus protus	Dorian	*d*	*d–d′*	*a*
2	Plagalis protus	Hypodorian	*d*	*A–a*	*f*
3	Authenticus deuterus	Phrygian	*e*	*e–e′*	*b* or *c′*
4	Plagalis deuterus	Hypophrygian	*e*	*B–b′*	*a*
5	Authenticus tritus	Lydian	*f*	*f–f′*	*c′*
6	Plagalis tritus	Hypolydian	*f*	*c–c′*	*a*
7	Authenticus tetrardus	Mixolydian	*g*	*g–g′*	*d′*
8	Plagalis tetrardus	Hypomixolydian	*g*	*d–d′*	*c′*

Western Europe were taken into consideration. In addition, a series of antiphoners frequently containing items not found in CAO have been edited in the CANTUS series (see Collamore and Metzinger, *The Bamberg Antiphoner*, D1990; Olexy, D1992; Steiner, D1996). Randel (H1973) indexed approximately 5000 musical items of the Mozarabic rite, including many hymns that presumably had sung texts but for which the manuscripts do not provide notation.

5. Style.

(i) Melody. From a purely formalistic and stylistic standpoint, plainchant melodies of all types, both liturgical and paraliturgical, may conveniently be separated into three classes according to the ornateness of their melodies: syllabic, neumatic and melismatic. In the first group each individual syllable of the text is normally set to one note; in the second, small clusters of two to ten or so notes may accompany a syllable; chants in the third group are essentially neumatic in style, but with florid passages embedded in them (in rare cases a single syllable may be sung to several hundred notes) (see ex.1).

Each liturgical category of chant is in general characterized by a specific melodic type. Scriptural readings, prayers, litanies, Glorias, sequences, creeds, psalms, antiphons, short responsories (*responsoria brevia*), most hymns, salutations and doxologies are normally syllabic. The principal neumatic categories are tropes, introits, Sanctus and Agnus Dei melodies and communions. Graduals, Kyries, alleluias, tracts, offertories, the Great Responsories (*responsoria prolixa*) and *preces* are neumatic types that often contain extensive melismas.

It would be quite wrong, however, to suppose that the relatively simple syllabic chants invariably belong to a stratum of music historically older than the neumatic and melismatic melodies. The degree of melodic complexity is determined much more by the musical competence of the performer(s) involved: priest, congregation, trained schola or soloist(s).

(ii) Form. Another common means of distinguishing plainchant melodies is by their internal musical structure. Three main forms are usually cited: chants sung to reciting notes or recitation formulae; repetitive and strophic forms; and a wide variety of 'free' forms.

Collects, Epistles, Gospels, prefaces, short chapters, doxologies and a variety of blessings and salutations are generally chanted isosyllabically on a monotone, their total length and phrase structure being determined by the text. More elaborate varieties of these liturgical recitatives are introit verses, communion verses, psalms and canticles, which are also sung to a monotone but with the beginning, middle and end of each verse punctuated by brief intonation, flex, mediant and cadential formulae in the manner of simple psalmody.

Two classes of chant, the hymn and the sequence, are well known for their distinctive formal structure and repetitive types of melody. The hymn is a strophic form in which, for example, each four-line stanza of the traditional iambic dimeter or octosyllabic text is sung to the same melody. Sequences are characterized by a striking form of coupled melodic phrases (strophes), frequently, but not always, paired in series (*ABBCCDD* etc.).

Peter Wagner (*Einführung*, iii, C1921/*R*) and, following him, Apel (C1958) made a distinction between 'gebundene' and 'freie Formen'. By 'gebunden' ('bound', 'tied') Wagner meant a type of delivery that remained constant whatever text was being sung, as for prayer, lesson and psalm tones (Apel: 'liturgical recitative'). The 'freie Formen' (Apel: 'free forms') were those where the melody would differ substantially from piece to piece (as in introits, graduals, alleluias, tracts, offertories and communions). The currency that the word 'free' thus gained may have contributed to an impression that the chants lack shape and sense, which is far from being the case. Their internal structure is largely determined by the syntactical structure of the text, reflected, for example, in the deployment of cadences. Many within a particular type are linked to each other by common melodic formulae. Many alleluias contain internal repetition.

(iii) Modality. From the standpoint of musical analysis, modality is probably the single most homogeneous feature of Gregorian plainchant. This sense of uniformity has been greatly enhanced through the assignation of mode numbers to melodies in modern chant books published since 1905, even though some of the designations conflict with the testimony of early treatises and tonaries. Melodies are classified according to their final cadence notes and the range or ambitus of their melodies. (The reciting note or tenor of simple psalmody could also be added to the classification.) When this system reached its maturity in the 11th century, medieval theorists normally assigned an ambitus of an octave to each mode, whose position was determined by the final cadence note of the mode. Among the four authentic modes the lowest note of the ambitus was the final note; among the plagal modes the ambitus began five semitones below the final note (Table 5). Some chants, particularly if they are in a plagal mode, do not cadence regularly but are considered to be transposed and to end on an alternative final note. This transposition was done 'not in order to bring them into a more convenient range, but because of the intervallic structure of the melody' (Apel, C1958), particularly if, for example, both B♭ and B♮ were required by the same chant.

See above §2(ii); *see also* Mode, §II.

(iv) Performance. The plainchant repertory is frequently divided into three general families according to the manner of performance: antiphonal chants, sung by two

alternating groups of singers; responsorial chants, sung by a soloist (or soloists) in alternation with the choir; chants sung entirely by the celebrant, the soloist or the choir. According to present practice, the psalms, antiphons, invitatories, introits and communions are sung antiphonally by two semichoruses; the Great and short responsories, gradual, alleluia and offertory are sung responsorially; the collects, prefaces, Pater noster, various salutations and doxologies etc. are among the solo chants sung or intoned directly by the Mass celebrant. Considered more closely from a historical perspective and not simply from the basis of modern usage, this seemingly orderly classification is subject to many exceptions and conjectures. For example, some scholars consider the offertory an antiphonal chant; others believe it was responsorial. Hucke (K1970, pp.193–4) admitted three forms: an antiphonal type, a responsorial type and a middle or 'mixed' type. Later, Dyer (K1982, p.30) concluded that there is no evidence whatsoever to support the commonly held view that the offertory's mode of performance changed from responsorial to antiphonal: 'Neither the *Ordines romani*, the medieval liturgists and music theorists (with the possible exception of Aurelian), nor the Gregorian tonaries imply anything other than a responsorial refrain with a few verses. None of them regard the offertory the way they do the antiphonal chants of the Mass, the Introit and Communion'.

It is almost axiomatic that over the centuries performing practice was to some extent modified. Originally, choral antiphons appear to have been sung as a refrain between the verses of the Office psalms, but they have now disappeared. The introit, formerly a processional psalm, was sung antiphonally either by two semichoruses or by a lector and cantor. During the reign of Pope Leo I (440–61) the gradual was still a full psalm, but by the 6th century the text had probably been reduced to a single verse with an elaborate melody sung by a soloist. Even the grand counter-movement of 10th- and 11th-century liturgical expansion, the age of troping and Cluniac prolixity, was short-lived. By the mid-13th century the ornate melismatic verses of the offertory and the psalm verses of the communion had virtually disappeared, except in most German sources.

The performance of the principal Mozarabic chants – the antiphons, responsories, *psalmi*, *clamores*, *threni*, *laudes* and *vespertini* – has been reviewed at length by Randel ('Responsorial Psalmody', H1969), and some of his interpretations differ from those advanced by Brou and by Brockett. There is disagreement, for example, over whether the responsory was sung by one, two or three soloists, by three choirs, or by a combination of soloists and choir (see Brockett, H1968, p.141); on the other hand, a passage in the second prologue of the 10th-century León Antiphoner (*E-L* 8; see Brou and Vives, H1953–9) provides almost indisputable evidence that the Mozarabic antiphon was sung by two alternating choirs (see Randel, op. cit., 87).

The performance of Ambrosian chant in Milan towards the beginning of the 12th century is well documented (see Weakland, H1966/*R*; and Borella, H1964, pp.141ff). The duties of singers at the Ambrosian Mass and at Vespers and the manner of performing various chants are described in the ordinal of Beroldus (ed. Magistretti, H1894/*R*) written shortly after 1125 and in the chronicle of Landulphus senior (*c*1085).

See also PERFORMING PRACTICE, §I, 2(i). For more detailed discussion of the various Mass and Office chants see their individual articles.

6. Expansion of the repertory.

(i) Trope. In its common generic sense, troping designates the intercalation or addition of music or texts, or both, to pre-existing chants. Specific musical forms associated, correctly or mistakenly, with troping are the trope, prosula and sequence. It is advisable, however, to distinguish them according to clear liturgical and compositional criteria. In particular, not all can be regarded as additions to already existing chants. The notion of 'a single, clear explanation ... for the confusing wealth of musical forms introduced in the 9th- and 10th-centuries ... a ruling idea of a process whereby all medieval music was necessarily and intimately tied to preexisting materials' is illusory (Crocker, M1966).

The group of scholars at Stockholm University working on the Corpus Troporum project proposed that tropes added to the Gregorian repertory be divided into three categories: 'logogene', in which a verse (or 'element') of chant was inserted before or between the phrases of a pre-existing chant; 'melogene', in which a newly composed text was set to the notes of a previously vocalized melody, one syllable per note; and 'meloform', or pure, wordless melismas, attached to the cadences of chants (usually the introit and Gloria). Logogene tropes are most commonly found with the introit and Gloria, but also with the offertory and communion; their texts frequently point up the the theme of the feast day, to which the texts of the parent chants often bear a less tangible relationship, and the added verses generally respect the melodic style and tonality of the parent chant. Melogene tropes are most commonly found with the alleluias and offertory, frequently also with the Office responsory.

The survey by Odelmann (M1975), while revealing much variety in medieval practice, makes it clear that the term 'tropus' was used primarily to refer to the logogene category, and this nomenclature is retained here. An added text of the melogene type was usually referred to as a 'prosa' or 'prosula' (see §6(ii) below). The *sequentia* sequence (also sometimes called 'prosa') is a largely self-contained liturgical genre with its own independent musical form (for separate discussion see §6(iv)).

The texts of trope verses for introit, offertory and communion that have been edited in the series Corpus Troporum (by 1999 only those for Christmas, Easter and Marian feasts had appeared), from manuscripts mostly of the 10th to 12th centuries from all over Europe, already number many hundreds. Since the manuscript sources are highly variable in their selection of verses and in variant readings, musical editions have tended to concentrate on small groups of sources from particular areas (Aquitaine: Weiss and Evans; Benevento: Planchart; Nonantola: Borders). Gloria tropes have been studied by Rönnau, Falconer and others, but are not yet available in substantial numbers in modern editions.

After the 12th century, the logogene type of trope rapidly fell out of use, but a late and rather special example of it lived on: the famous Marian trope 'Spiritus et alme' to the Mass Gloria (see Schmid, M1988). Literary devices such as simple rhyme ('Christe'/'Paraclete', 'Patris'/'Matris') and the matching of syllables helped bind its six lines to the older Mass text. The melody of the parent Gloria text is still in use as Vatican/Solesmes Gloria IX (*GR* A.i 1908). The oldest known copy is found in *F-R*

U.158, ff.40–40*v*, which is noted with 11th-century Norman neumes (see Hesbert, D1954, p.64 and pls.lxiv–lxv) (fig.3):

> Domine Fili unigenite, Jesu Christe,
> (1) 'Spiritus et alme orphanorum Paraclete',
> Domine Deus, Agnus Dei, Filius Patris,
> (2) 'Primogenitus Marie, virginis matris',
> ... suscipe deprecationem nostram
> (3) 'Ad Marie gloriam',
> ... Quoniam tu solus sanctus,
> (4) 'Mariam sanctificans',
> Tu solus Dominus,
> (5) 'Mariam gubernans',
> Tu solus altissimus
> (6) 'Mariam coronans',
> Jesu Christe

The duality of thought in the trope, acclaiming the Trinity and the Blessed Virgin Mary, was imitated by subsequent medieval and Renaissance composers. For example, the fourth, fifth and sixth phrases were joined to a troped Sanctus (from Marxer, R1908, p.105):

> Sanctus, Pater omnipotens, 'Mariam coronans',
> Sanctus, Filius unigenitus, 'Mariam gubernans',
> Sanctus, Spiritus Paraclitus, 'Mariam sanctificans',
> Dominus Deus Sabaoth [etc.]

In yet another adaptation, the 'Spiritus' lines were taken apart and interlaced into another poetic text (from Bukofzer, M1942, 165–6):

> 'Mariam' matrem gratie,
> Rex regis regni glorie,
> Matrem pie 'sanctificans'.
> 'Mariam' sine crimine,
> Omni pleni dulcedine,
> Virgo matrem semper verans
> Matrem Filio 'gubernans' [etc.]

3. Perhaps the oldest version of the Gloria trope 'Spiritus et alme', noted with 11th-century Norman neumes (F-R U.158, f.40r)

In an anonymous three-part doubly troped polyphonic Gloria from Italy, the 'Spiritus' trope appears to have gained the status of an accepted Gregorian text, for it is combined with the tetrameter trope 'Clementie pax baiula' (PMFC, xii, 1976, no.9, pp.30–37):

> Domine Fili unigenite, Jesu Christe.
> 'Spiritus et alme orphanorum Paraclete'
> Ex Patre semper genitus,
> Per flamen dulcis halitus,
> Ut flos novus est editus,
> Virga Jesse fecundata.
> Domine Deus, Agnus Dei, Filius Patris.
> 'Primogenitus Marie, virginis matris'
> Agnus Dei pacificus,
> Ysaac risus celitus [etc.]

On 8 August 1562 bishops at the Council of Trent declared that references to the Virgin Mary in the Trinitarian Gloria in excelsis were particularly inappropriate (*Concilium tridentinum*, viii: *Actorum*, ed. S. Ehses, Freiburg, 1919, p.917, lines 28–30), and the trope, in any form or context, was deleted from the liturgy.

The oldest reference to Kyrie tropes was once thought to be that by Amalarius of Metz in the third edition (*c*832) of his *Liber officialis* (iii; see Hanssens, F1948–50, ii, 283):

> Ac ideo dicant cantores:
> Kyrie eleison, Domine pater, miserere,
> Christe eleison, miserere, qui nos redemisti sanguine tuo, et iterum:
> Kyrie eleison, Domine, Spiritus Sancte, miserere.

However, Jonsson (M1973) has shown convincingly that these interpolations have nothing to do with tropes but are exegetical comments by Amalarius on the Trinity.

Although a number of logogene-type trope verses were composed for the Kyrie, principally in the area of southern Germany (see Bjork, M1980), the genesis of many other Kyries with Latin verses presents special difficulties. These are the Kyries where the Latin verses have the same melodies as the Greek acclamations, and, moreover, where they seem to add text to the melody on the principle of one syllable per note. In other words, they look like melogene-type prosulas. Since the earliest sources (mainly Aquitanian) of these pieces already contain the Latin verses, it cannot be proved that the melody existed before the Latin verses were composed, that is, they may well have been conceived simultaneously (see Crocker, M1966, p.196; and Bjork, K1976). The designations 'trope' and 'prosula' are, therefore, both misleading from a historical point of view; the compositions are a special festal type of Kyrie with Latin verses. (*See also* KYRIE ELEISON and TROPE (i).)

According to the *Liber pontificalis*, a biographical history of the popes in Rome (see Noble, F1985), the Agnus Dei was introduced into the Mass as a separate chant, unconnected with the Gloria in excelsis, by Pope Sergius I (687–701), and was sung by both clergy and congregation at the rite of the Fraction (breaking of the bread). Later 8th- and 9th-century accounts state that it was sung by the Schola Cantorum and performed during the Kiss of Peace.

In his study of this Ordinary chant, Atkinson (M1975) regarded the earliest verses as distinctive tropes added to the ancient text: 'one can, without hesitation, speak of the Agnus Dei *and* its tropes, even with regard to its earliest settings'. His chronological categories take into consideration a hypothesis advanced by Huglo (M1975).

According to this theory, which has since become central to many early chant studies, the regionalization of the early trope repertory reflects the political division of the Carolingian Empire from about 843 (the Treaty of Verdun) to shortly after 870 (the Colloquy of Meersen). Agnus tropes found in both East and West Frankish manuscripts, which display few variant melodic readings, represent the oldest layer (before 850); a second group of trope texts found in both regions but set to different melodies was written between 850 and 875; a third class was written after 875, and these tropes are restricted to one of the two geographical zones. The appearance of poetic and symmetrical texts is characteristic of 10th-century troping techniques.

The terms 'farsing' and 'glossing' have also been used as synonyms for troping (*see* FARSE). 'Farsa' often occurred in connection with a special type of troping used in the Epistle in some of the festal liturgies of the Christmas season (New Year, Epiphany etc.; see §6(v) below). Here verses of the lesson alternated with phrases borrowed from pre-existing chants (sequences, hymns etc.). The terms were also employed for certain 'troped' devotional songs popular especially in Bohemia during the 14th and 15th centuries (see Göllner, S1988).

See also TROPE (i).

(ii) Prosula. A prosula is a text added syllabically to a pre-existing melisma. One of the oldest recorded examples is *Psalle modulamina*, in *D-Mbs* Clm 9543, f.119*v*, for the alleluia with verse *Christus resurgens*; this alleluia is not to be found in the earliest graduals (see Hesbert's *Antiphonale missarum sextuplex*, D1935/*R*, 102–03) or in the late 9th-century full gradual-antiphoner *F-AI* 44, but is now assigned to the fourth Sunday after Easter. The manuscript *D-Mbs* Clm 9543 may be the oldest datable source of neumatic notation. For each note of the original melody a syllable of new text is provided, the complete alleluia text being itself incorporated, syllable by syllable, in the new prosula. A transcription (by Richard Crocker) of *Psalle modulamina* is given in ex.2 (the words in capitals represent the text of the original verse).

More common than the texting of a complete melody in this fashion was the texting of individual melismas within a chant, particularly those of the alleluia, offertory verse and the Great Responsories (*responsoria prolixa*) of the Office. (See, respectively, Marcusson, M1976; Hankeln, O1998; Hofmann-Brandt, M1973.) Since many such melismas display an internal repeat structure (e.g. *AABBC*), the result may resemble a miniature sequence. In many cases these small sequence-like compositions may have been newly composed as a unit, rather than having originated in the texting of a pre-existing melisma.

A substantial collection of 91 alleluia, offertory and responsory prosulas is found in *F-Pn* lat.1118, ff.115–31, an Aquitanian troper dating from 985–96 (see Steiner, M1969). In prosulation the neume forms of the original melismatic notation, particularly such integral binary and ternary combinations as the *quilisma*, *podatus*, *cephalicus* and *epiphonus*, were often separated, in a somewhat unorthodox manner, into individual notes, and each component note of the neume was assigned a text syllable. Evidence of this splitting can be observed in the alleluia prosula *Laudetur omnis tibi caterva* (ex.3) from *F-Pn* lat.903, the gradual-troper-proser of St Yrieix-la-Perche, near Limoges (see PalMus, 1st ser., xiii, 1925/*R*, p.173, lines 6, 8–10).

The dual notation (melismatic/texted) of prosulas has raised many questions about the method of performance: simultaneous or alternatim (see, for example, Hofmann-Brandt, M1973, pp.148–9; Kelly, M1974; More, P1965–6, pp.121–2). The same question has been raised in connection with sequences, which in most early sources were also set out in both melismatic and texted form.

See also PROSULA.

(iii) Melisma. Since the presence or absence of responsory melismas is somewhat variable in the manuscript tradition, it is not always clear whether they were there from the beginning (whatever that may mean) or additions to a parent responsory. Some appear to have led a semi-independent life, as in the case of the famous 'threefold melisma' (the 'neuma triplex' or 'trifarium neuma') described by Amalarius of Metz in his *Liber de ordine antiphonarii* (18; see Hanssens, F1948–50, iii, 56). According to Amalarius this neumed melisma (see Kelly, M1988) originally belonged to the Christmas responsory *In medio ecclesiae* (CAO, iv, 1970, no.6913) for the feast of St John the Evangelist (28 December), but singers of his day, the 'moderni cantores', transferred it to the Christmas responsory *Descendit de caelis* (ibid., no.6411), which ended with the phrase 'lux et decus universae fabricae mundi'. Prosulation of the last two words of the triple melisma, 'fabrice mundi', and one of its associate texts, *Facinora nostra relaxari mundi gloriam*, that is, the addition of words to the interpolated neumed melodic melisma, may already have begun in the late 9th century.

Added melismas of a different sort are to be found as embellishments of numerous introits and Glorias, above all in early manuscripts from St Gallen (*CH-SGs* 484 and 381; see Huglo, M1978; and Haug, *Cantus planus IV*, M1990). Many of these, too, were texted by the customary method, one syllable for each note of the melisma.

(iv) Sequence. The term 'sequentia' is used here to refer to the textless melismas of varying length and melodic complexity designed to replace the repetition of the liturgical JUBILUS of the alleluia of the Mass with a more extended melody: alleluia–jubilus–verse–*sequentia*. There is controversy as to whether such melodies were actually performed as textless melismas, or whether they were texted from the beginning – the state in which they are known from the late 9th century onwards. The earliest references to such melodies do indeed imply a textless state. The oldest record occurs in the Codex Blandiniensis of the end of the 8th century (ff.114*v*–115; for manuscript details see §2(ii) above; see also Hesbert, D1935/*R*, 198), where six alleluia incipits – *Jubilate Deo*; *Dominus regnavit*; *Beatus vir*; *Te decet hymnus*; *Cantate Domino canticum novum*; *Confitemini Domino* – are followed by the rubric 'cum sequentia'. Writing between two and four decades later, Amalarius of Metz (*Liber officialis*, iii, 16; see Hanssens, F1948–50, ii, 304) alluded to the *sequentia* as 'jubilatio quam cantores sequentiam vocant' ('this jubilatio which the singers call a sequentia'). The term also appears in the late 9th-century *Ordo romanus V* (see Andrieu, F1931–61/*R*, ii, 215). Again, Amalarius (*Liber de ordine antiphonarii*, 18; see Hanssens, op. cit., iii, 56) related that when the pope celebrated Easter Vespers the alleluia was adorned with verses and *sequentiae*; such melodies do indeed survive in sources of Old Roman chant, and much longer ones in Ambrosian alleluias (see Bailey, H1983). Most interesting are the canons of the Synod of Meaux in 845, which not only mention the

sequentia as a solemn part of the alleluia but also forbid the addition of texts ('quaslibet compositiones, quas prosas vocant') (see *Liturgische Tropen*, M1983–4, p.vii).

Only one surviving manuscript of the 9th century, *F-AUT* S28 (24), transmits *sequentiae* in musical notation, but the texts that Notker of St Gallen composed to sequence melodies – some 40 texts to 33 different melodies – afford at least partial evidence of what melodies were known in the late 9th century (Notker's work was completed in 884). Exactly which melodies were known to Amalarius or the delegates to the Synod of Meaux has not been determined; those cited in the Blandiniensis can be identified with reasonable certainty. But the balance of the evidence seems to favour the existence of at least a moderate number of untexted *sequentiae* early in the 9th century, the practice of texting them already being known by the middle of the century. (*See also* SEQUENTIA.)

The sequences found in manuscripts from the early 10th century onwards are usually transmitted in both melismatic and texted forms. It is, however, difficult to say exactly how many of the melodies thus recorded date back to the early 9th century. Some may have been relatively recently composed as a unity, that is, text and music being conceived simultaneously. Crocker in particular (M1973) has stressed this view of the genre; indeed, he would argue that most if not all of the sequences that

Ex.3 *Laudetur omnis tibi caterva* (*F-Pn* lat.903)

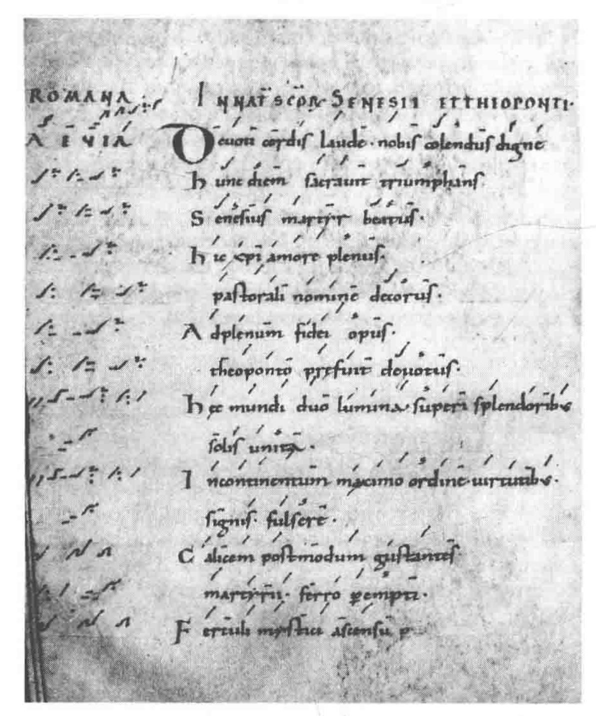
have come down to us were texted from the start. At the same time, a few notated collections of sequence melodies survive without any texts. For example, *F-CHRm* 47, dating from about 900, is the oldest; *CH-SGs* 484 is a St Gallen melody collection, copied in the second quarter of the 10th century; and in the late 11th century, most sequences at Cluny (among other places) were still sung without texts. The fact that very many sequence melodies were texted more than once also shows that to some extent the melodies were regarded as independent musical entities. A famous account of the composition of texts for sequence melodies is to be found in the 'proemium' that Notker of St Gallen wrote for his sequence collection. In early French and English sources it was customary to copy sequence melodies in one part of a manuscript, their texts in another. A peculiarity of many early sources is the names given to the melodies (different names in different areas). Some relate to alleluia verses, others (in French sources) to sequence texts, while many are colourful appellatives whose meanings seem quite obscure, such as *Metensis*, *Aurea*, *Planctus cigni* and *Ploratum* (fig.4).

Planchart (*Recherches nouvelles sur les tropes liturgiques*, M1993, pp.371–2, n.5) has underlined the confusion in terminology that exists between the terms *sequentia* and *prosa*:

> The problems are as old as the repertory itself in that, west of the Rhine, the purely melodic addition to the alleluia was called *sequentia*, and the text to the *sequentia* – and by extension the entire piece – was called *prosa*. East of the Rhine, *sequentiae* were virtually never copied as separate pieces, instead they were entered in the margin of the texts to which they were sung, which were provided with no music other than the marginal *sequentiae*. The singer had thus the possibility of singing the melody with or without words. East Franks used the term *sequentia* for the entire combination of words and music. Independent *sequentiae* were all but unknown in Italy, where virtually all manuscripts transmit the text with the music set directly above it. Yet, the Italians adopted the West Frankish terminology, where the text with its music was called *prosa* or prose, and the purely melodic work was called *sequentia*.

The sequence was the single most important genre with an independent musical structure to emerge during the 9th century. Its normal position within the Mass was between the alleluia verse and the reading of the Gospel. In its standard form it is a syllabic chant consisting of a series of paired verses (e.g. *ABBCCDD* etc.), each line of a pair usually having the same number of syllables and the same musical phrase. The strophes vary in length, long ones being frequently placed in immediate contrast next to shorter ones. A distinct modal relationship often exists between the final note of the composition and its many internal cadences. The origin of the sequence's distinctive double-verse structure is not clear. De Goede (M1965, pp.lix–lx), Stäblein (M1978) and other scholars have discussed a small group of topical songs dating from between approximately 840 and 880 in a similar double-versicle form, but the verse structure of these pieces is quite different from that of the sequence and they are not liturgical compositions. As Huglo and Phillips (M1982) assert:

> There is no need to insist further that the identification of these texts as 'archaic sequences' rests on questionable grounds. Aspects of their text structure, content, and early manuscript tradition simply do not support a ninth- and tenth-century function as sequences of the mass. It is our twentieth-century approach to the music of that era which is the principal difficulty here. We know nothing of the early use of these texts, and most seem to have been of very limited dispersion.



The parallel structure characteristic of normal sequences occurs in a Gallican preface for the Easter Vigil, the *contestatio Quam mirabilis sit*, which is made up of 25 double and triple strophes. This *contestatio* is found in a 7th- or 8th-century leaf in the Escorial Library (*E-E*). According to Levy (M1971, p.59), however, the piece was probably sung to a flexible recitative and not to an already existing melisma. A small number of sequences in the early sources are much shorter than the majority and lack the parallel versicle structure. These short 'a-parallel' sequences (surveyed by Kohrs, M1978) appear to be associated with less important feasts.

From the 11th century, other styles were cultivated based on a new approach to rhyme and accent. By the end of the 12th century fully rhymed sequences in regular accentual verse were already entering the repertory in large numbers. The regularity of the texts made it possible to use different pre-existing melodies for the same text, while the usual process of contrafacture, providing new texts for established melodies, continued as before. Many texts composed by the Parisian canon Adam of St Victor (*fl* first half of the 12th century) gained special popularity. (For a discussion of the Victorine sequences used in Paris, see Fassler, M1993).

See also SEQUENCE (i).

(v) Conductus, versus, cantio. A number of 12th- and early 13th-century sources contain Latin songs, variously named conductus or *versus*, mostly in accentual, rhyming verse, which exhibit strophic and refrain forms of the utmost variety and inventiveness. The manuscripts fall into two groups. Song collections with relatively little indication of the liturgical function of the songs are *F-Pn* lat.1139, 3719 and 3549 (from Aquitaine; many songs set polyphonically), *GB-Lbl* Add.36881 (from ?France; many polyphonic), *Cu* Ff.i.17 (from ?England; many polyphonic), and *E-Mn* 288, 289 and 19421 (from Norman Sicily). Many of the same songs and others like them are also found in sources of the special festal liturgies of the Christmas season associated with the 'Feast of Fools' on New Year's Day, the Feast of the Circumcision. These are the New Year's Day Office of Sens (*F-SEm* 46; ed. Villetard, O1907), the New Year's Day Office of Beauvais (*GB-Lbl* Egerton 2615; ed. Arlt, O1970), the Epiphany Office of Laon (*F-LA* 263), and the St James Office of Santiago de Compostela (*E-SC*, ed. Wagner, O1931; many polyphonic songs). The picture that emerges is one where the songs are used as substitutes for traditional chants, especially for the versicle *Benedicamus Domino: Deo gratias*, and for accompanying liturgical actions (entrances and exits, the procession of the reader to the lectern, etc.). Such songs subsequently take their place in an extensive literature of rhymed prayers and devotional verse poetry cultivated in southern Germany, Switzerland, Austria, Bohemia and Poland from the late 13th century to the 17th. Many of these Latin poems were published by Mone (K1853–5/*R*) and Dreves (AH, D1886–1922/*R*, i, xx, xxi, xxxviii, xlv*b*).

Among the favourite objects of this pious devotion were the Trinity, Corpus Christi, the Holy Cross, patron saints, the angels and, above all, the Virgin Mary. A few of the earlier songs reveal Hussite sympathies, such as the Corpus Christi chant *Jesus Christus nostra salus* (AH, xlv*b*, 1904/*R*, no.105), which contains as an acrostic the

4. Sequence melody 'Romana' and text 'Devoti cordis laude' for Sts Sensius and Theopontus from the troper-proser from Reichenau, 1001 (D-BAs Liturg.5 (Ed.V.9), f.160v)

name I–O–H–A–N–N–E–S, the Latinized first name of Jan Hus (see H. Kaminsky: *A History of the Hussite Revolution*, Berkeley, 1967; and David, S1995). It is often difficult to determine the function of these pieces because the sources provide few helpful titles or rubrics; they may have been sung generally at Vespers, during processions and for private devotions. A clue pointing to some formal use in a service is the frequent inclusion of the terminal abbreviation EVOVAE of the doxology. It is also interesting to note that many of these moderately short poems are in trochaic metre, popular for marches or processions.

The texts of these poems and songs are deeply imbued with stylized symbolism expressed in botanical, astronomical, musical and biblical metaphors. Many are constructed on an acrostic scheme or contain glosses from the Lord's Prayer, *Ave Maria* or *Salve regina*. Among the lengthy metrical Marian psalters, some of which have musical prologues, each of the 150 verses may begin with stock acclamations, such as 'Ave', 'Salve', 'Vale' or 'Eia'. The musical forms are highly variable. Strict poetic forms tend to follow regular patterns such as *aab*, *aabbc* or similar arrangements. Macaronic texts and musical refrains are used, but not to the same extent as in the contemporary English carol. On the other hand, through-composed melodies, which contain at most a few brief internal repeats, are associated with poems lacking end-lines, free poetic metre, or artificial constructions such as the alphabetic acrostic in ex.4.

A CANTIONAL is a collection of these devotional songs and other chants brought together either as a separate section within a gradual, antiphoner or processional, or as an independent book. Most of the music is monophonic with Latin texts, but polyphonic pieces and vernacular translations often appear. The principal manuscript cantionals are *CZ-HK* II.A.6 (olim 43) (16th century); *Pnm* XIII.A.2 (16th century); *Pu* III.D.10 (15th century), V.H.11 (14th century), VI.B.24 (16th century), VI.C.20a (15th or 16th century), X.E.2 (15th or 16th century); *VB* 42 (dated 1410); *D-Bsb* germ.8° 180 (15th century) and 280 (15th or 16th century); *EN* 314 (14th century); *Mbs* Cgm 716 (probably from Tegernsee, *c*1430), Clm 5539 (15th century); *Mu* 2° 156, the Moosburg Gradual (14th century); *TRs* 322 (1994); *PL-WRk* 58 (15th century).

(vi) Rorate chants. Another group of Bohemian liturgical songs with Latin and Czech texts are the RORATE CHANTS, a repertory of Masses and cantiones linked with the introit for the fourth Sunday in Advent, *Rorate coeli*. These votive chants, which were used during the season of Advent, probably originated in Prague in about the mid-14th century and enjoyed wide circulation from the 16th century onwards (see Mráček, M1978).

(vii) Liturgical dramas, laments. There has been much discussion about the time and place of origin of the famous dialogue between the Marys and angel(s) at the tomb of Christ, *Quem queritis in sepulchro*, which is generally seen as marking the beginning of the so-called 'liturgical drama'. The earliest sources are roughly contemporaneous, *F-Pn* lat.1240 from Limoges and *CH-SGs* 484 from St Gallen, both from the 930s, and this suggests a date of composition around the beginning of the century, perhaps earlier. By the end of the 10th century *Quem queritis* was quite widely known, but the centre of diffusion remains unclear. Whatever its original purpose, it came to occupy one of three standard places in the liturgy: (1) as part of the procession before Mass on Easter Day, the procession making a station by a 'sepulchre'; (2) as an introduction to the introit at Mass on Easter Day; (3) at the end of the Night Office on Easter morning, following the final responsory. (For a discussion of origins see Rankin, N1983–4, and Davril, N1995; on liturgical function see McGee, N1976, and Bjork, N1980.)

At its simplest *Quem queritis in sepulchro* is no more than the question of the angel(s), the reply of the Marys

Ex.4 *Antiphona alphabetaria de Beata Virgine* (*D-Mbs* Cgm 716, f.101*v*)

and the assertion of Christ's resurrection by the angel(s), but supplementary verses were usually added. The dialogue was also adapted to the Christmas season, as an exchange between the midwives at the stable and the shepherds seeking the infant Christ, and for Ascension, where angels ask the apostles whom they believe to have risen into heaven. From the 11th century onwards extra scenes from the Easter story were also given a dramatic form. Particularly interesting is the way in which pre-existing Office antiphons and responsories with biblical texts might be drafted in as part of a new ceremony. Sometimes they retained their original liturgical melody, which might cause changes of mode from one item to another; sometimes they received a new setting, with unified musical material (see Rankin, N1981).

Another important development of the 11th century was a revision of the old dialogue *Quem queritis in sepulchro*, with new text and music (the central verses in E mode instead of D). The new version was made in south Germany, although the actual place is not definitely known. The incipits of the central chants are as follows:

Quem queritis in sepulchro (9th–10th century)	*Quem queritis O tremule mulieres* (11th century)
	Quis revolvet nobis ab hostio lapidem
Quem queritis in sepulchro	Quem queritis O tremule mulieres
Iesum Nazarenum ... O celicole	Iesum Nazarenum ... querimus
	Non est hic quem queritis
Non est hic surrexit	Ab monumentum venimus
	Currebant duo simul
	Cernitis O socii

Already further scenes are indicated here, with the participation of Mary Magdalen (*Ad monumentum venimus*). *Currevant duo simul* is a liturgical antiphon, sung by the choir to explain that Peter and John run to the tomb. The sequence *Victime paschali laudes*, which includes elements of dialogue, and the German hymn *Christ ist erstanden*, after the triumphal announcement of Christ's resurrection, were often worked into the ceremony.

From the 12th century, texts in accentual, rhyming verse become increasingly common, sometimes replacing earlier prose chants, more often as part of new scenes or whole new plays. In many cases the connection with the liturgy appears tenuous, and a distinction seems appropriate between the older type of liturgical ceremony with a representational element, and the newer dramatic play, although such a distinction is difficult to define precisely or to apply in individual cases. Some of the earliest representations of the Epiphany story (the Magi seeking Jesus, Herod, the Slaughter of the Innocents) seem to go well beyond reasonable liturgical bounds (see Drumbl, N1981) and suggest non-liturgical origins. Other plays on sacred matter but with no obvious liturgical connection are the *Sponsus* play, about the wise and foolish virgins awaiting the 'sponsus' (bridegroom), in *F-Pn* 1139 (early 12th century, from Limoges) and the verse plays about the miracles of St Nicholas, in *F-O* 201 (early 13th century, known as the 'Fleury Playbook', perhaps from the cathedral school at Orléans). These plays are linked by the use of strophic verse, where the same music may be used for several strophes (in the case of one of the Nicholas plays, for all strophes). By contrast, the *Ludus Danielis* composed by students of the cathedral school of Beauvais (in *GB-Lbl* Egerton 2615, early 13th century) is astoundingly rich and varied in musical material, mixing the occasional reference to liturgical melodies and conductus from the Circumcision repertory with a large number of original compositions. The episode of the Slaughter of the Innocents inspired a number of laments of the mother Rachel. Far more numerous, at least in Italian and German sources, are laments sung by the Virgin Mary beneath the cross. Although both types connect loosely with a large repertory of non-liturgical laments (or *planctus*; see Yearley, N1981), the Marian laments, at least, had a place in the regular liturgy, often being sung after the Reproaches during the Adoration of the Cross on Good Friday. (The many German examples are known in the secondary literature as 'Marienklagen'.)

(viii) The medieval Office. The most ambitious compound musical form that flourished in the central Middle Ages was the Office in honour of local saints. Such Offices frequently contained more than 40 separate chants and a plethora of recited prayers: invitatories, antiphons, responsories, versicles, hymns, canticles, collects, psalms, lessons etc. The three nocturns of the night Office, MATINS (*Ad matutinum*), generally followed one of two main schemes. Among the monastic ('regular') orders, who lived according to the Rule of St Benedict (ed. A. de Vogüé, *La Règle de Saint Benoît*, Paris, 1971–7), the Office adhered to the 'monastic cursus'. Matins was made up of 13 antiphons and psalms, 12 lessons and 12 responsories, the 1st and 2nd nocturns each consisting of 6 antiphons and psalms, 4 lessons and 4 responsories, and the 3rd ('Ad cantica') of 1 antiphon with its canticles, 4 lessons and 4 responsories. At diocesan ('secular') establishments, where the Office was said according to the 'canonical' or 'Roman' cursus, Matins consisted of 9 antiphons and psalms, 9 lessons and 9 responsories, equally distributed among the three nocturns. Not all medieval Offices followed these schemes rigidly, however; Hesbert (CAO, ii, 1965, p.vii) demonstrated that some Offices in the early 11th-century Hartker Antiphoner from St Gallen (PalMus, 2nd ser., i, 1970), display a 'mixed' cursus. Taken together, the antiphon, lesson, and responsory texts in both the canonical and monastic Offices were called the 'historia', a term that can be traced back to the early 9th century (see P.J.G. Lehmann: *Erforschung des Mittelalters*, v, Stuttgart, 1962, pp.1–93). Among the oldest Gregorian Offices the *historiae* texts were derived primarily from the scriptures and the writings of the Church Fathers, but the texts of later patronal Offices were based on hagiographical sources, such as the lives (*vitae*) of the saints, stories of sufferings (*passiones*), stories pertaining to the recovery or the transfer (*translationes*) of relics, and stories of miracles, sermons etc. In these patronal Offices the narrative continuity of the saint's biography was carried on at some length in the lessons, while the normally brief antiphon and responsory texts provided a pious commentary.

The creation of a single liturgical formulary from an older *vita* is shown in the following example. Here, an antiphon from the oldest surviving Office of St Valeria of Limoges (in *F-Pn* lat.1085, ff.79–81*v*) is derived from the *Vita antiquior* of St Martial, the first bishop of Limoges, which dates from before 846 (see Emerson, O1965):

'Mariam' matrem gratie,
Rex regis regni glorie,
Matrem pie 'sanctificans',
'Mariam' sine crimine,
Omni pleni dulcedine,
Virgo matrem semper verans
Matrem Filio 'gubernans' [etc]

At the basilica of St Salvatoris Mundi in Limoges, eight feasts commemorating St Martial were introduced into the local liturgy at various times between 930 and 1550. These included his 'Natalis' (30 June and its Octave, 7 July), the first Translation of his relics to Solignac (10 and 17 October), the second Translation to Mons Gaudii (12 and 19 November), the 'Apparitio Martialis' (16 June) and an Office said on certain Thursdays. For purposes of identification the principal 'Natalis' Office of Martial (30 June) is referred to as the 'Venerandam', a name tag taken from its first distinctive patronal formula, the antiphon *Venerandam beatissimi patroni nostri domni Martialis*. In fact, the 'Venerandam' Office in a truncated form (dating from before 932 in *F-Pn* lat.1240, f.68) served as a 'mother' Office: as these various feasts entered the basilical liturgy over the decades, this prototype Office was reformatted, frequently with new patronal material, to create Offices for the new 'offspring' feasts. The two examples that follow indicate the manner by which patronal Offices were often assembled using the practice of shifting pre-existing liturgical formulae from one source to another.

The first concerns the 'Apparitio' feast of St Martial on 16 June; dating from shortly before 1200, it commemorated the miraculous manifestation of Christ to Martial 15 days before the saint's death (i.e. his 'natalis' or 'birth' into heaven – 30 June – according to the *Vita prolixior*, a lengthy and highly imaginative recension of the *Vita antiquior*). In this particular case, some of the original 'Venerandam' responsories for Matins (first column) were transferred to the later monastic rhymed Office of Martial, *Martialis festum recolens Aquitania plaude* (second column) found in *F-Pn* lat.5240, ff.116*v*–119*v*:

'Domine Fili unigenite, Jesu Christe.
'Spiritus et alme orphanorum Paraclete'
  Ex Patre semper genitus,
  Per flamen dulcis halitus,
  Ut flos novus est editus,
  Virga Jesse fecundata.
Dominie Deus, Agnus Dei, Flilus Patris.
'Primogenitus Marie, virginis matris'
  Agnus Dei pacificus,
  Ysaac risus celitus [etc]

The second example is a feast unique to Notre Dame in Paris (4 December), the canonical Office *In susceptione reliquiarum*, probably composed between 1180 and 1200 (see Wright, O1985; and Baltzer, O1988), commemorating the reception of five relics into the newly built gothic cathedral. Based on *F-Pn* lat.15181, f.361*v*, this was a composite Office, 'cut wholecloth from pre-existing liturgical materials' (see Wright, op. cit., 7); its nine Matins responsories, for example, were borrowed from five different feasts:

[*In primo nocturno*]

1 Missus es Gabriel (Blessed Virgin Mary)
2. Ave Maria gratia plena (Blessed Virgin Mary)
3. Suscipe verbum virgo (Blessed Virgin Mary)

[*In secundo nocturno*]

4. Inter natos (John the Baptist)
5. Vir iste in populo (Andrew)
6. Ecce iam coram (Stephen)

[*In tertio nocturno*]

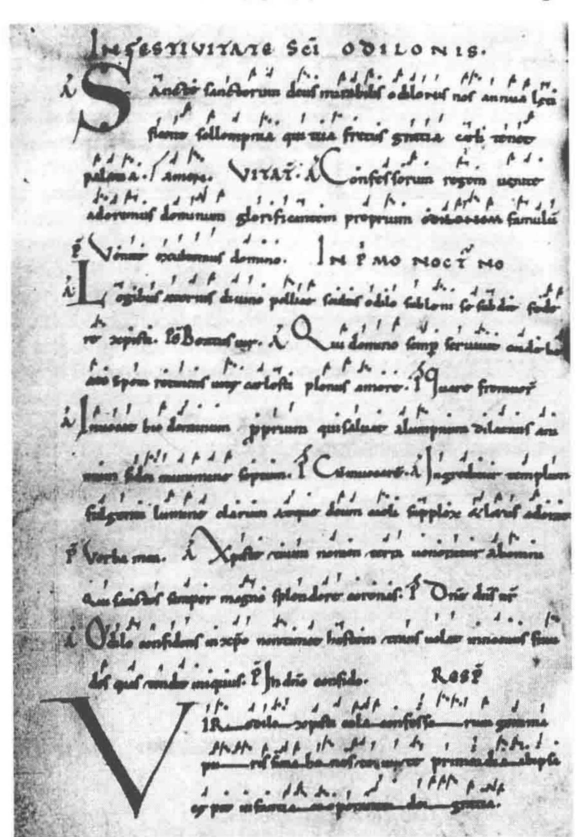
7. In hoc ergo loco (Denis, first bishop of Paris)
8. Per beatum Dyonisium (Denis)
9. Vir inclitus Dyonisium (Denis)

These local saints' Offices were initially composed in the Frankish empire.

The dating of the Compiègne gradual–antiphoner (*F-Pn* lat.17436) to 877 (Huglo, D1993) indicates that the Offices for such northern French saints as Medardus, bishop of Noyon (8 June), Crispinus and Crispinianus, martyrs of Soissons (25 October), Vedastus, bishop of Arras (6 February), Quintinus, martyr of St Quentin (31 October), and Germanus, bishop of Paris (28 May), were in circulation before 877.

As new patronal feast-days entered the liturgy, especially after the 11th century, hundreds of new Offices were composed, frequently with texts in alliterative prose, and, from the 12th century, in accentual, rhymed verse. The tunes of the chants accompanying these texts were frequently arranged in modal order, as found in the first nocturn of the monastic Valeria Office cited above:

In primo Nocturno



Formula	Incipit	Mode no.
Antiphon 1	Beata Christi virgo Valeria	1
Antiphon 2	Erat enim gentilibus	2
Antiphon 3	Hanc discipulis Die	3
Antiphon 4	Sollicita pro salute	4
Antiphon 5	Dux Stephanus furore	5
Antiphon 6	Dum spernit Valeria	6

For basic studies of rhymed and versified Offices, see Hughes, O1983 and O1994–6; *see also* VERSIFIED OFFICE.

7. CHANT IN THE RELIGIOUS ORDERS.

(i) Cluny. From an examination of the extensive literature about Cluny, it is clear that the monastery, exempt from episcopal and lay control since its foundation in 910, was the dominant monastic institution in Western Europe at least until 1175. Under the direction of a remarkable succession of abbots, Berno (910–27), Odo (927–42), Aymard (942–54), Majolus (954–93), Odilo (994–1049) and Hugh (1049–1109), the monastery set patterns of reform that influenced the entire Church. The Rule of St Benedict was followed fervently; there was a marked tendency towards uniformity, since Cluny's many provincial dependencies were administered directly from the monastery; and there was a strong emphasis on contemplative spirituality.

An elaborate liturgy occupied most of the monks' daily life at Cluny, yet there are few substantial modern studies of the Cluniac liturgy (see Rosenwein, Q1971). It has been suggested that Cluny was not creative in its liturgy – 'the monastery borrowed and did not create' (Hunt, Q1967, p.109) – and that there were few unprecedented customs (see Rosenwein, op. cit., 132). Plainchant practice at the monastery is also poorly documented (but see Steiner, Q1984). Liturgical books with musical notation that are known to have been used at Cluny itself are rare (see Hourlier, Q1951, pp.231–2); they were probably destroyed when the monastery was pillaged in the 16th, 17th and 18th centuries. The major 11th-century source *F-Pn* lat.1087 (a gradual, proser, kyriale and sequentiary; *see* SOURCES, MS, §I) may not, in fact, be from the monastery at all, even though it contains the Office of St Odilo, the patron saint of Cluny (fig.5). Research into Cluniac plainchant is of necessity based primarily on documents from the monasteries dependent on Cluny (see Huglo, Q1957, pp.81–2; and Hourlier, Q1959).

5. Office of St Odilo 'Sancte sanctorum Deus' from an 11th-century gradual from ?Cluny (F-Pn lat.1087, f.112v)

During the abbacy of Hugh of Cluny, an obscure monk named Bernard was directed to codify the traditional liturgical and administrative practices of the monastery. The resulting institutionalized customary of Bernard (ed. M. Herrgott, *Vetus disciplina monastica*, Paris, 1726, pp.134–364) was probably compiled between 1078 and 1082 (see Bishko, Q1961, pp.53–4), or compiled about 1075 and revised between 1084 and 1086 (see Hallinger, Q1970, pp.212–13). Less than a decade later (1083–5) Ulrich of Cluny prepared another customary, heavily indebted to Bernard's work, for Wilhelm of Hirsau (*PL*, cxlix, 635–778).

The liturgical usage of Cluny is also reflected in the order of chanted services adopted by houses dependent on Cluny. The basilica of St Salvatoris Mundi at the monastery of St Martial in Limoges is a good example. In September 1062 this monastery was forcibly reformed by a contingent of Cluniac monks and placed under the ecclesiastical province of Bourges; Adémar de Chabannes was installed as abbot, and the basilica remained under Cluniac rule for 472 years, until 1535. Soon after the reform, the Cluniac alleluia cycle (see above, §4) was used in a gradual and two prosers from the basilica (*F-Pn* lat.1132, 1134 and 1137). Later sources from the basilica that date from the 12th to the 16th centuries adhere closely to the Cluniac order of service codified by Bernard; these include *F-Pn* lat.1320 and 1042 (editions of Bernard's *Ordo officii* and *Ordo missae*), lat.741 (a capitulary and collectarium), lat.810 (a lectionary) and *LG* 4 (a breviary copied in 1491).

See also CLUNIAC MONKS, and BENEDICTINE MONKS.

(ii) Other orders. The development of the other major religious orders took place in two stages. Three monastic orders were founded in the 11th and 12th centuries: the Carthusians in 1084, the Cistercians in 1098 and the Premonstratensians in 1120 (*see* CARTHUSIAN MONKS; CISTERCIAN MONKS; PREMONSTRATENSIAN CANONS). The two mendicant orders followed later: the Franciscans in 1209 and Dominicans in 1217 (*see* FRANCISCAN FRIARS and DOMINICAN FRIARS).

Much of this type of monasticism, with a zealous emphasis on poverty, simplicity, solitude and a return to strict conformity to the Rule of St Benedict, had its roots in such 11th-century centres as Camaldoli, Fonte Avellana and Vallombrosa. Even though the formal establishment of the Augustinians took place in 1256 with the 'Great Union', a loose federation of canons already existed in Italy and southern France as early as 1039 (*see* AUGUSTINIAN CANONS). Monastic reforms of a localized nature occurred about 1100 at Savigny, Fontévrault, and Grandmont, near Limoges.

Several studies of plainchant in the various monastic orders have appeared, including those by Lambres (Q1970) and Becker (Q1971) on Carthusian chant, Marosszéki (Q1952) on Cistercian, Lefèvre (Q1957) and Weyns (Q1973) on Premonstratensian, Hüschen ('Franziskaner', *MGG1*) on Franciscan, and Delalande (Q1949) on Dominican, but for a number of reasons no adequate overview of this music has so far been possible. Firstly, there has been a tendency to neglect the monastic repertory because it is thought to represent the beginnings of a 'decadent' or 'debased' chant, one that deteriorated progressively until the restoration reforms of the late 19th century. Secondly, research in this field has often lacked objectivity and breadth of perspective because it has been carried out by ardent apologists for particular religious orders. Thirdly, and more seriously, there are no substantial studies of Cluniac chant, the precursor of all these monastic chant repertories; undue emphasis is placed on the Cistercian reforms as the 'crest of a wave', the implication being that the liturgy of Cluny was simply a ponderous forerunner of a more enlightened use that evolved at Cîteaux.

(a) Carthusians. Over 40 years separate the foundation of the Carthusian order in 1084 by St Bruno and the first *Consuetudines cartusiae* (*PL*, cliii, 635–760) in 1127 by Guigo, fifth prior of the Grande Chartreuse. No music manuscripts have been identified from this formative period, but it is now generally conceded that the early Carthusians, despite their severe ascetic and solitary life, did use plainchant. Later investigations have concentrated on two underlying problems: the nature of the primitive liturgy and the origins of Carthusian chant.

Becker's work (Q1971) seems to confirm what had long been suspected: that the original Carthusian breviary and antiphoner followed the Roman (secular) cursus, with nine lessons and nine responsories prescribed for Matins; and that by the time of Guigo, the Carthusian Office had become 'monasticized', with 12 antiphons, 12 lessons and 12 responsories as the norm. Concerning the origins of this chant, Becker postulated that the prototype of the Carthusian antiphoner was compiled during the abbacy of Landuin, prior from 1090 to 1100, but it is not known who prepared this redaction or precisely when it was undertaken.

The first Carthusian books may well have drawn on the practice of such religious establishments as Reims, St Ruf, Sèche-Fontaine, Vienne, Grenoble and Lyons, which were associated with St Bruno and his companions. The categorical statement that the 'predominant and exclusive influence in the formation of the Carthusian liturgy was the rite of the primatial See of Lyons' (*New Catholic Encyclopedia*, iii, New York, 1967, p.167) is not acceptable. Lambres (Q1970) pointed out that the Carthusian series of graduals and alleluias for the Pentecost season agrees very closely with that of Grenoble. Later, Becker (Q1975, pp.151–2) produced evidence that the canonical liturgy of Grandmont exerted an important influence on the formation of the Carthusian Office.

The prologue to the Carthusian antiphoner, *Institutionis heremitice gravitas*, written before 1132, is usually attributed to Guigo (but see the conflicting views of Becker, Q1971, pp.183–4, and Lambres, Q1973, pp.216–17, concerning its authorship). Though very brief and unspecific, it is unlike Bernard's *Prologus* to the Cistercian antiphoner (*c*1147) in that it sets forth the general principles of Carthusian plainchant reform. Firstly, 'since the gravity of eremitical life does not permit much time to be spent in the study of the chant', the compilers drastically reduced and simplified the entire repertory. This simplification assisted the hermits in memorizing the rules and melodies of plainchant. Secondly, texts that were not authentically biblical, such as those taken from the Apocrypha, those based on lives of the saints, or texts of private poetic inspiration, were suppressed. Thirdly, lengthy melodic melismas were discouraged, ornamental neumes that required special performance, such as the *quilisma*, were abandoned, and vertical bars were added to the melodies to assist the singers (see Lambres, Q1970, pp.23–4). Use or exclusion of the B♭ in Carthusian chant was not uniform (*see* CARTHUSIAN MONKS).

(b) Cistercians. There are understandable reasons for the interest of scholars in 12th-century Cistercian chant reforms. The stylistic changes initiated at Cîteaux are historically important; the modifications to the melodies can be readily observed in the sources; the principles of melodic and modal revision are supported by the evidence of a group of early Cistercian musical treatises; and traditional Cluniac liturgical and musical practice can usefully be studied in the light of Cistercian reforms.

The basic Cistercian treatises (*PL*, clxxxii, 1121–66) have been reviewed by Sweeney (Q1972, pp.48–9). According to the *Exordium parvum* (compiled *c*1111), one of the early documents of Cistercian history, Robert, abbot of Molesme, together with 21 monks broke away from the monastery because of 'hindering circumstances' and founded a community at Cîteaux, near Dijon. For the next 40 years, during the tenures of Alberic (1099–1109) and Stephen Harding (1109–32), practically nothing is known of musical practice, except that the *Carta carita prior* of 1119 called for uniformity in all liturgical books and chanting. After 1140 the picture begins to change. Two unique musical statements – a prologue, *Bernardus humilis Abbas Clarevallis*, and a preface, *Cantum quem Cisterciensis ordinis* (ed. Guentner, Q1974) – were included in the Cistercian antiphoner of about 1147.

The author of the prologue, undoubtedly BERNARD OF CLAIRVAUX (1090–1153), described the origins of Cistercian chant. The founding fathers of the order were dissatisfied with their chant books and dispatched several men (scribes) to Metz to transcribe and bring back a copy of the cathedral's antiphoner, which was considered to be authentically Gregorian. Although the newly acquired books were found to be corrupt, they were used for many years. Eventually a committee of brethren deemed to be well instructed in the practice and theory of chant authorized Bernard to supervise the books' revision. Waddell ('The Origin and Early Evolution of the Cistercian Antiphonary', Q1970) expressed his conviction that this pre-Bernardine Messine chant survives in two 13th-century manuscripts, *F-ME* 83 (from the Benedictine monastery of St Arnould) and *ME* 461 (from Metz Cathedral).

Guy d'Eu, a monk at Clairvaux, is generally regarded as the author of the preface (*see* GUIDO OF EU and TONARY, §6(iv)). This treatise contains the rudiments of Cistercian chant theory. Those responsisble for correcting the antiphoner deliberately pursued a course that they considered 'natural': 'chant melodies should conform with certain natural laws rather than perpetuate corrupt usage'. Chant books from Reims, Beauvais, Amiens, Soissons and Metz were singled out as particularly objectionable. A number of fundamental principles were set out in the preface: the unity of the mode must be maintained and cadence notes should belong to their proper *maneria* (the four modes of D, E, F and G); melodies should be modified so that their normal range would lie within the octave and their outer limits would never exceed a ten-note ambitus; B♭ in the musical notation should be excluded wherever possible; long melismas should be shortened; textual repetitions should be avoided; the scribes (notators) should preserve the integrity of proper neumatic structures and not separate them or join them together at will; and Guy insisted that the *neumae*, the *enēchēmata* (intonation formulae), should be corrected so that the *maneria* of each mode was clearly recognizable. As a result of the implementation of these 'natural' laws, the Cistercian sources contain many transposed and truncated melodies. One of the most easily detected stylistic adjustments made in Cistercian chant is the abbreviated melisma, as occurs, for example, in the alleluia *Dominus dixit ad me* for the first Mass of Christmas Day (ex.5).

Another well-known text commonly found appended to Cistercian chant sources is the *Tonale sancti Bernardi* (*PL*, clxxxii, 1153–4), a musical treatise that also sets out

Ex.5 Comparison of Roman and Cistercian versions of part of the verse *Dominus dixit ad me* from the alleluia for the first Mass of Christmas Day

(♭) (♮)

the reform principles of the Cistercians. Huglo (*Les tonaires*, L1971, pp.357–8) identified three versions, some conforming to the original and others abridged. The complex history of the Cistercian hymnal was reviewed by Kaul (see Q1948: xiii, 1951, p.257), Stäblein edited 86 melodies from *A-HE* 20 (12th- or 13th-century) and other manuscripts (K1956/*R*), and Waddell later edited the Cistercian hymnary anew (Q1984). Most sections of the prototype manuscript used to correct the copies (*correctorium*, *Normalkodex*), a collection of 15 liturgical books compiled in 1179 and 1191 to ensure uniformity of Cistercian liturgical texts and melodies, are now lost (*F-Dm* 114; see Leroquais, D1934, pp.333–4).

8. Chant in northern and central Europe.

(i) General. A significant phase in the history of the Western Church from about 950 to 1350 was the conversion of Scandinavia and central Europe. This expansion of Latin Christianity into Iceland and Norway in the north and to Croatia and Dalmatia in the south began with the decisive defeat of the Magyars and Slavs by Otto I at the Lech river near Augsburg in the summer of 955. Evangelization under the Ottonian emperors followed, leading first to the formation of national kingdoms and then to modern states. The consolidation of Christianity among the Slavs, Bulgar-Turks, Magyars, Uzhs, Pechenegs and Kumans adhered to a general pattern (see Falvy, S1987). At first, influential ruling families were accepted into the Church, then networks of dioceses were formed, among them Magdeburg (955), Poznań (968), Prague (973), Esztergom (1000), Lund (then part of Denmark, 1060) and Zagreb (1094). At the same time Benedictine monasteries were founded and by the 13th century the influx of other monastic and mendicant orders was well under way.

From a musical standpoint this process of Christianization raises several fundamental questions concerning the types of liturgical book that were brought into these lands by missionaries, the types of musical notation they contained, and the types of plainchant that were transmitted to the new dioceses.

As the conversion proceeded, cults of local saints grew up, and by the late 11th century these confessors and martyrs were beginning to be recognized officially in local liturgies; for example, Thorlac of Skálholt in Iceland; Magnus in the Orkney Islands; Olaf II Haraldsson, Hallvard and Sunniva in Norway; Anskar and Canute in Denmark; Eric, Bridget (Birgitta) and Sigfrid in Sweden; Henry in Finland; Stanislas, Adalbert (Wojciech), Hedwig (Jadwiga), Hyacinth (Jacek) and Florian in Poland; Stephen (István), Emeric (Imre) and Ladislas (László) in Hungary; and Ludmilla and Wenceslas (Václav) in Bohemia.

When the construction of monasteries, cathedrals and churches was well under way, scriptoria were set up in ecclesiastical schools. Locally produced liturgical books copied after the late 12th century tended increasingly to conform to newly codified orders of service. Specific diocesan uses became well entrenched from Nidaros (Trondheim) and Linköping to Esztergom and Zagreb. Study of the ordinals and customaries reflecting these uses is valuable for the light they cast on the tradition of the imported liturgies and music, and for the means they provide for determining the nature of later reforms, which, in some cases, lasted well into the 18th century.

A good deal of research has been carried out into Polish, Czech, Hungarian and Croatian plainchant, particularly in the area of manuscript studies; extensive work has also been done on the national sequence collections of Hungary (Rajeczky), Norway (Eggen), Sweden (Moberg) and Poland (Kowalewicz and Pikulik).

(ii) Denmark, Norway, Sweden, Finland. The conversion of the three Scandinavian kingdoms of Denmark, Norway and Sweden can be traced back to the founding of the German archbishopric of Bremen-Hamburg in 864. In Denmark, during the tenure of Bishop Adaldag (937–88), dioceses were set up in Schleswig, Ribe and Århus (all in 948), Odense (956) and Oldenburg (967/8). Although the Christianization of Denmark had been undertaken from Germany, the conversion of Norway during the Viking age came chiefly from England and Ireland in the reigns of King Håkon the Good (935–96) and King Olaf I Tryggvessøn (995–1000). In Sweden missionary efforts during the 9th and 10th centuries were largely unsuccessful; the new faith slowly replaced pagan religions after the baptism of Olof Skötkonung in about 1000 and his sons Anund Jakob (*c*1022–50) and Edmund (*c*1050–60). In Iceland Irish hermits settled as early as the 8th century, but it was not until 1000 that the national parliament, the Althing, accepted Christianity as the national faith. During the 11th century, three northern sees came under the administration of the Bremen-Hamburg archbishopric, then at the peak of its influence: Nidaros in Norway (*c*1029–1103), Skálholt in Iceland (1060) and the Danish province of Skänke (1060).

During this period of conversion and the establishment of bishoprics, the liturgies and music that were introduced into Scandinavia emanated from Germany, France and England. However, the scarcity of manuscript sources resulting from the widespread destruction of medieval liturgical books during the early Reformation in the wake of strong anti-papal sentiment has created special problems for the study of early Scandinavian liturgy and chant. Practically all the surviving original sources are strips of parchment that were used to reinforce the spines of 16th- and 17th-century tax records and books. Danish sources are exceptionally rare; 12 notated manuscripts dating from the 12th to the 16th centuries have been listed by Asketorp (S1984). Over 2300 Norwegian fragments recovered from old tax lists are retained by the Norwegian State Archives (Record Office) in Oslo, and there are many fragments in several Swedish libraries, particularly the University Library in Stockholm. The Icelandic fragments are now chiefly in the Reykjavik National Museum and the Arnamagnaena Collection at the University Library in Copenhagen (see Gjerløw, S1980). In Finland about 10,000 leaves are housed in the Helsinki University Library. While many of the earliest Finnish musical fragments are notated in German or Messine (Lorraine) neumes and appear to have been copied from, or at least based on, models from the diocese of Cologne (Haapanen, S1924), a surprising number of fragments are English or derive from English traditions (Taitto, S1992). Similarly, while the scattered melodies in the 12th-century *Manuale norvegicum* (ed. Faehn, S1962, with musical commentary by Stäblein), a priest's handbook of the Norwegian rite of Nidaros, are essentially Messine forms from north-west Europe (the Low Countries and northern France), Gjerløw has shown that the roots of the Nidaros

liturgy are English (S1961, 1968, 1979; see also Attinger, S1998).

Several studies of early Scandinavian liturgy and chant have therefore been devoted to the earliest printed books containing complete liturgies, including the *Breviarium nidrosiense* (Paris, 1519) and *Missale nidrosiense* (Copenhagen, 1519); the *Missale aboense* (Lübeck, 1488); the *Missale lundense* (Paris, 1514) and *Breviarium lundense* (Paris, 1517); the *Breviarium arosiense* (Basle, 1513); the *Missale upsalense vetus* (Lübeck, 1484), *Missale upsalense novum* (Basle, 1513), *Breviarium upsalense* (Stockholm, 1496) and *Breviarium strengense* (Stockholm, 1496).

A definitive discussion of compositional techniques is difficult until further studies are made, but generally speaking most of the new chants were adaptations. The hymnographers set their new texts to well-known melodies, a representative example being the great, late 12th-century Olaf sequence *Lux illuxit laetabunda*, which honours the major patron and King of Norway, St Olaf II Haraldsson (ex.6). At least seven of its melodic phrases ('timbres') have been identified as direct borrowings from the repertory of Adam of St Victor (*fl* first half of the 12th century). Both Reiss (S1912) and Sandvik (S1941) believed that the anonymous author studied in Paris, but Eggen (S1968, p.221) was probably correct when he concluded 'that the composer ... probably was a Norwegian, well versed in the international style of sequence melodies, [and] that he mainly leaned upon Anglo-French patterns instead of German ones'.

(iii) Poland. The evangelization of Poland began in 966 with the conversion of Duke Mieszko I, founder of the Piast dynasty that ruled the nation until 1386. With the erection of the first bishoprics in Poznań, Wrocław, Kraków, Gniezno and Kołobrzeg between 968 and about 1000, the Latin rite was introduced into Poland, particularly through Bohemia (see Schenk, S1969, 2/1987, pp.145ff).

A wide variety of chant sources survives in Polish libraries (lists of these manuscripts have appeared from time to time in the journal *Musica medii aevi*). Feicht (S1965), in his survey of early Polish music, divided the development of chant into three historical periods: a Benedictine phase (968–1150), a Cistercian phase (1175–1230) and a Franciscan-Roman phase (after 1240). Węcowski (S1968) showed that south-German musical practice strongly influenced the early Benedictine books. German neumatic notation is found in the sacramentary of Tyniec (*PL-Wn* 302) copied in Cologne in about 1060; the *Ordinarius pontificalis antiquus* copied in the archdiocese of Salzburg at about the end of the 11th century (*WRk* 149); the Evangelarium of Płock (*Kz* 1207) of about 1130; and the *Missale plenarium* (*GNd* 149; facs. in Biegański and Woronczak, S1970–72) from Niederaltaich, dating from between 1070 and 1131. Among the oldest known Polish chants are those for St Adalbert (Wojciech), consecrated Bishop of Prague in 982. These include his metrical Office *Benedic regem cunctorum*, the antiphon *Magna vox laude sonora*, and the sequence *Annua recolamus sancti Adalberti gaudia* commemorating the translation of his relics to Rome in 1000. The edition by Kowalewicz, Morawski and Reginek (S1991) of hymns in Polish sources contains 71 breviary hymn tunes set to 159 texts, including the important *Gaude mater Polonia*, dedicated to St Stanislas, bishop of Kraków (inaugurated 1072), martyr, and the first Pole to be canonized (1253).

The first Cistercian monasteries in Poland were founded in about 1149 at Brzeźnica-Jędrzejów, Ląd and Lekno, but their reformed liturgy and chant seems to have had little impact on established diocesan use and remained confined to the order. Several important 13th- and 14th-century music manuscripts (*PL-Pa* 69; *PE* 118–19, 156–204, L 13, L 21, L 35; *WRu* I.F.411–18) survive from the abbeys of Lubiąz (founded 1175), Henryków (1227), Paradyż (1234), Kamieniec Ząbkowicki (1239) and Pelplin (1258). A study by Morawski (*Polska liryka muzyczna*, S1973) of a set of 49 Cistercian sequences, found in seven graduals, indicates that they originated at St Gallen and other Benedictine monasteries in southern Germany.

At Kraków the Franciscans founded a house in 1237; at least six others followed during the next 20 years. The oldest surviving book in Poland used by the friars is the gradual of the Poor Clares covent in Kraków, copied in the period between approximately 1234 and 1260 (*PL-Kklar* 205). A companion manuscript is the Franciscan gradual of Płock dating from about 1280 (*PLd* VI.3.5). Other significant noted manuscripts are in libraries in Stary Sącz, Gniezno and Kraków.

The pervasive influence of German and French elements in medieval Polish liturgy and music has been demonstrated by Pikulik in his general survey of 475 sequences

from 26 diocesan and 23 monastic manuscripts (S1973). In addition to the Cistercian group, the Imbramowice and Kraków Premonstratensian sequences and the Franciscan repertory were formed in Bavaria and Switzerland. But among the Premonstratensian graduals from Wrocław and Czerwinsk and the Dominican books, French types dominate, especially those of Adam of St Victor. The writing of native sequences occurred mainly at the Jagellonian University in Kraków, founded in 1364. Most of the new metrical texts were set to well-known foreign melodies.

Active composition of patronal liturgies in Poland continued into the 17th century. In addition to the Office of St Adalbert, several *historiae* were composed commemorating the major patrons of Poland. The Office of St Stanislas, *Dies adest celebres* (AH, v, 1889/*R*, p.223), was written by a Dominican friar, Wincenty of Kielce (*c*1253–5); the Office of St Hedwig (Jadwiga), *Fulget in orbe dies* (AH, xxvi, 1897/*R*, p.86), dates from the end of the 13th century; and the Office of St Hyacinth (Jacek), *Adest dies celebres* (AH, xlv*a*, 1904/*R*, p.115), was written by three Dominicans, Ezjasz of Lipnica (*d* 1609) and the friars Adam and Andrzej.

(iv) Bohemia and Moravia. The evangelization of Moravia began in 863, by SS Cyril and Methodius of the Byzantine Church, but the destruction caused by the Magyar invasions halted the progress of this Christianization. It was rather from Bavaria that Roman Christianity with its liturgy and music became established, the bishopric of Prague in Bohemia being created in 973 (archbishopric 1344), that of Olomouc in Moravia in 1063. Important monastic foundations also date back to the 10th century, for example, the Benedictine convent of St George (Jiří) in Prague in 967, followed later by the houses of the Premonstratensians (Strahov, Prague, 1140) and Cistercians (Sedlec, 1143). German chant traditions are, not surprisingly, evident in early sources of chant from Bohemia. German neumatic notation is found as late as the 14th century, although staff notation (Messine) was introduced by Vitus, dean of St Vitus's (Wojtěch's) cathedral, Prague, in the mid-13th century (examples in Hutter, S1930, 1931; Plocek, S1973).

Proper Offices for the national saints Adalbert, Procopius, Wenceslas and Ludmila have survived (Patier, S1970, S1986). Bohemia was strongly involved in the production of new Ordinary of Mass melodies, votive antiphons, and especially cantiones (see §6(v) above; see also Orel, S1922) in the 14th and 15th centuries, although from the surviving sources it is not always clear in some individual cases whether a piece originated in Bohemia or in south Germany or Austria. During the Hussite period large numbers of Latin chants were translated into the national language (surviving in *CZ-Pnm* II.C.7, the Jistebnice Cantional, from the 1420s). Another individual development is associated with the Utraquists from the 1540s, in whose books liturgical melodies are treated on the one hand to revision in syllabic style, on the other also to the addition of new melismas.

(v) Hungary. The Christianization of the Magyars reached a critical stage in 955 with the baptism of Géza (reigned 972–97), prince of the Árpád dynasty, and his son and successor Prince Vajk, later St Stephen (István), king of Hungary (997–1038, canonized 1083). King Stephen founded ten bishoprics at Esztergom (Lat. Strigonium; Ger. Gran), Györ (Raab), Székesfehérvár (Stuhlweissenburg), Veszprém (Wesprim), Kalocsa, Bihar, Pécs (Fünfkirchen), Nyitra (Neutra), Vác (Waitzen) and Csanád. During the same period Benedictine monasteries were founded at Pannonhalma (Martinsberg), Bakonybél, and Pécsvárad (see Dobszay, 'Plainchant in Medieval Hungary', S1990). After tribal revolts in 1047 and 1063, Christianity was firmly established by St Ladislas (László; reigned 1077–95); Croatia and Dalmatia were brought under Hungarian control by his nephew Coloman (Kálmán) I (1095–1116). In an effort to retain a uniform Roman liturgy, the Hungarian bishops in about 1100 prescribed the order of service in Bernold of Constance's *Micrologus de ecclesiasticis officiis*. Until 1630 two diocesan rites dominated the Hungarian liturgy: the primatial use at Esztergom and the archbishopric use at Kalocsa. The origins of these liturgies are believed to go back to about 1094.

The earliest surviving plainchant manuscripts in Hungary are notated in German neumes (see Szendrei, S1983, esp. 56–70, and 'Die Geschichte der Graner Choralnotation, S1988). They include a group of manuscripts copied shortly before 1092 and taken to Zagreb at about the time the diocese was founded in 1094 (see (*vi*) below). The oldest fully notated chant book from Hungary is a secular antiphoner, *A-Gu* 211 (Codex Albensis; facs. edn by Falvy and Mezey, S1963), from Székesfehérvár; dating from the first half of the 12th century, it shows strong south German influences, particularly of the Bavarian regions (Passau and Niederaltaich). The order of service seems to follow the Esztergom use.

Descriptive studies of other Hungarian chant sources have been made by Rajeczky and Radó (S1956, 2/1982), Szigeti (S1963), Radó (S1973), Szendrei (S1981) and Dobszay (S1985). Radó's *Libri liturgici manuscripti bibliothecarum Hungariae* (S1973) includes studies of the Pray Manuscript, a sacramentary dating from 1192–5 in Messine notation (no.2); nine missals from Pozsony (Pressburg, Bratislava) (nos.11–14, 27–9, 45–6); the 13th-century Missal of Hungary (no.6); the Vác Manuscript of 1423 (no.40); the missal of George Pálóczi, 1423–39 (no.41); the *Liber variarum cantionum* of 1516 (no.72); the Esztergom pontifical and antiphoner (nos.145 and 180); the Kaschau gradual (no.173); the graduals of Cardinal Bakócz and King Ladislas II (nos.171–2); and an antiphoner from Györ Cathedral (no.181). Facsimiles of the principal Hungarian chant books have been published: the Esztergom noted missal (ed. Szendrei and Ribarič, D1982) and the Esztergom noted breviary (ed. Szendrei, D1998); and Szendrei has transcribed the Esztergom gradual (D1990–93). The complete Hungarian antiphon repertory has been edited by Dobszay and Szendrei (D1999).

The earliest chants produced in Hungary by local poets and composers include an Office for St Stephen, *Ave beate Stephane*, for 20 August, in the Székesfehérvár Antiphoner (ff.114–114*v*); and three other Offices (ed. Falvy, *Drei Reimoffizien*, S1968): *Confessor Christi Stephane*, for St Stephen; *Laetare, Pannonia*, for Emeric, his son (*d* 1031); and *Fons eternae pietatis*, for St Ladislas (canonized 1192). Two Offices for St Elizabeth of Hungary (canonized 1253), *Gaudeat Hungaria* and *Laetare Germania*, have also been edited (Haggh, O1995), but these did not originate in Hungary.

(vi) Slovenia and Croatia. In medieval Slovenia and Croatia, two Christian liturgies co-existed. The rural

Slavonic rite was written in Greek-derived Glagolitic script dating from the 9th century and used particularly in northern Dalmatia (see Gamber, S1957; and Martinić, S1981). In the metropolitan cities a modern Cyrillic alphabet was frequently used with the Roman rite. The reconstruction of Slavonic chant has been largely based on chant sung today in the dioceses of Krk, Senj, Zadar and Šibenik. (*See also* GLAGOLITIC MASS, GLAGOLITIC CHANT.)

The Roman rite in Croatia, according to Grgić (S1970, pp.125–6), can be separated into two distinct zones each characterized by a distinct palaeographical tradition. Among the monasteries founded in the 11th century along the Adriatic coast, such as Kotor, Zadar, Šibenik, Trogir, Split and Dubrovnik, there is a strong south-Italian tradition emanating from Monte Cassino and Bari. The liturgy, musical notation and script are distinctly Beneventan (*see* BENEVENTAN CHANT). On the other hand, Carolingian minuscule, German neumatic notation and their later Gothic counterparts dominated in Slovenia and other areas controlled by the German empire and Hungarian monarchy.

A considerable number of medieval liturgical manuscripts survive from this region; pioneer work in identifying them was carried out by Morin and Kniewald, but of special importance is the work of Vidaković (S1960), which shows how deeply Latin medieval notation penetrated into south-east Europe. The earliest manuscripts containing German neumatic notation are associated with the 'Zagreb' liturgy. These books were brought to Croatia from Hungary when the diocese of Zagreb was established in 1094, during the period when Ladislas I and Coloman (reigned 1095–1116) placed Croatia and Slovenia under Hungarian rule in 1096–7. The *Agenda pontificalis* of Bishop Hartwick (*HR-Zu* MR 165) originated at Györ in north-west Hungary; Hudovský (S1971) has shown that the musical notation was added at several stages during the 11th, 12th and 13th centuries. A benedictional (*Zu* MR 89) was copied at Esztergom before 1083 (see Hudovský, S1967) and a sacramentary (*Zu* MR 126) was taken to Zagreb from Hungary by Bishop Duh in the late 11th century.

Among the early Beneventan manuscripts, part of the 11th-century *Missale plenum* was copied at Monte Cassino and part in Dalmatia (see Hudovský, S1965). Specimens of Beneventan notation occur among the Exultet chants in three Gospel books: the St Mary's Evangeliary (*GB-Ob* Can lat.61), the Osar ('St Nicholas') Evangeliary (*I-Rvat* Borg.lat.339) and the St Simeon Evangeliary (*D-Bsb* theol.lat. 4° 278).

9. CHANT IN LATIN AMERICA. After the conquest of the ancient Amerindian nations of Peru, Mexico and the south-western part of the North America by the Spanish colonists, networks of administrative jurisdiction were set up by early 16th- and 17th-century missionary fathers. In many respects the ecclesiastical history of New Spain resembles the evangelization of Scandinavia and eastern Europe some five centuries earlier. At first liturgies and sacred music imported from the Old World were used, but these were rapidly supplemented and modified to harmonize with local native languages and customs. Despite the survival of much evidence, both direct and indirect, knowledge of this chant repertory is still superficial, no doubt largely because it has been regarded as one of the 'corrupt' post-Tridentine versions. Nevertheless, when viewed in its own historical and social setting, this chant has an interest of its own.

Plainchant sources used in the New World can be separated into three general categories: liturgical books with musical notation issued by well-known publishing houses in Italy, Germany, France, Spain and Portugal and introduced by the missionaries; chant books printed in the Americas, especially in Mexico; and manuscripts produced locally. About a dozen extant Mexican incunabula with plainchant melodies were printed before 1600, the earliest being the Augustinian ordinary of 1556 (see Spell, T1929; and Stevenson, T1966). In archival surveys of South American libraries, Spiess and Stanford (T1969) and Stevenson (T1970) have recorded no fewer than 350 extant plainchant manuscripts. However, since the primary interest of these scholars has been directed towards polyphonic music, their descriptions of chant books rarely go beyond brief notices. For example, in the Bogotá Cathedral archive there are '32 atlas-size plainchant choirbooks expensively copied on vellum between 1606 and 1608 by the professional music scribe and miniaturist, Francisco de Páramo' (Stevenson, T1970, p.3); and in the cathedral library at Puebla (Mexico) there are about 128 plainchant tomes with illuminations mainly by Lagarto (see Spiess and Stanford, op. cit., 27). Plainchant manuscripts are also found in other Latin American cities, including Mexico City, Quito, and Cuzco (Peru).

Even as late as the early 19th century, manuscript choirbooks were being produced in the Californian missions (see Ray and Engbeck, T1974). From 1769 until 1834, when they were secularized, a chain of 21 Franciscan missions flourished along the central coast of California (see Koegel, T1993). Among these interesting late sources, for example, is a Mass book compiled in 1831 by Padre Narcisco Durán (1776–1846) for the church of St Joseph at the Mission of S José (extract in fig.6). In his solicitous *Prologo* (Eng. trans. in da Silva, T1941, p.29), Durán explained his need to simplify plainchant melodies for the Amerindian neophytes. Graduals and offertories were considered too complicated and were not sung; most introits were derived from the melody of *Gaudeamus omnes*, the introit for the feast of the Assumption; and alleluias and communions were chanted to several melodies of the 6th tone. In order to assist the singers, he laid down the rule that chant was to be accompanied in unison by instruments. With all the practical instincts of a good choir director, Durán recommended that the older, married, trained musicians be provided with 'domestic employment, such as weaving, shoemaking or smithying, in order to have them always on hand when there is singing or playing to be done'.

10. DEVELOPMENTS FROM 1500 TO 1800.

(i) Tridentine reforms. In 1536 a bull of convocation was issued by Pope Paul III (pontificate 1534–49) convening the 19th Ecumenical Council of the Western Church, the Council of Trent (1545–63). The purpose of this Council, held in Trent (at that time Austrian), was to clarify doctrinal beliefs and legislate for disciplinary reforms within the Church as a reaction to the Protestant Reformation, in particular to combat the religious reforms of Luther, Zwingli and Calvin. Over a period of 18 years, 25 sessions were held in three separate sittings. Decrees relating specifically to church music were issued on 17 September 1562. The most important pronouncements appeared in the proceedings of session XXII, chapter IX,

6. *Mass of Our Lady of Guadalupe (12 December) from the Durán Mass Book, compiled 1831 (US-BEm C.C.59, p.40)*

canon IX, which confirmed the sacrificial character of the Mass and Eucharist: *Decretum de observandis et evitandis in celebratione missarum* ('Decree concerning the things to be observed and to be avoided in the celebration of Mass'; see *Concilium tridentinum*, ix: *Actorum*, ed. S. Ehses, Freiburg, 1924, pp.962–3).

The bishops unanimously agreed in the September session: (1) that any simony, irreverence and superstition be banished from Mass; (2) that any unknown priest be forbidden to celebrate Mass; (3) that music be uplifting for the faithful; (4) that spoken words or sung liturgy be clearly intelligible; (5) that all music, whether for the organ or voices, which contained things deemed lascivious or impure ('lascivum aut impurum') be excluded; and (5) that all conversations, walking about, or distracting noise be repudiated during Mass. In Session XXIV (11 November 1563), Canon XII: *Decretum de reformatione lectum* (see *Concilium tridentinum*, ix: *Actorum*, ed. S. Ehses, Freiburg, 1924, p.984), rather vague instructions were issued that provincial synods could establish musical practices according to the local needs and customs of the people. The decrees relating to music that were adopted at the Council of Trent set out broad principles and instructions and were generally couched in negative language; they were not directly implemented by the Council itself, but were put into practice by a series of papal actions during the next 70 years up to 1634.

The initial attempts to introduce a uniform and universal recitation of the Office and Mass in accordance with the mandates of the Council were completed during the pontificates of Pius IV (1559–65) and Pius V (1566–72). In October 1563 a commission was established to reform the breviary and missal. Publication of the reformed Roman breviary was announced on 9 July 1568, and of the corrected Roman missal in a bull dated 14 July 1570. All dioceses were obliged to use the missal. (For a review of the impact of the 1570 missal on south-German dioceses, see Opraem, U1995.)

It is generally accepted that the large repertory of medieval sequences was suppressed from the liturgy at this time. Only four were included in the Faletti-Variscum edition of the 1570 missal: *Victimae Paschali laudes* (written by Wipo, *c*995–*c*1050) for Easter and Easter week; *Veni Sancte Spiritus* (by Innocent III, pontificate 1198–1216) for Pentecost and Pentecost week; *Lauda Sion* (by Thomas Aquinas, *c*1225–74) for Corpus Christi; and *Dies irae* (by Thomas of Celano, *d c*1250) for the Commemoration of the Dead. Given this missal's chaotic publishing history (see A. Ward, *Ephemerides liturgicae*, cxi, 1997, pp.49–54), it is possible that different editions contain the sequence *Stabat mater* (by Jacopone da Todi, *d* 1306). Two important revisions of the 1570 Pian missal were issued: one in 1604 under Clement VIII (1592–1605), and the other in 1634 during the pontificate of Urban VIII (1623–44).

Once the new official liturgical texts had been proclaimed, efforts were begun to adapt standard chant melodies to them. On 25 October 1577 Palestrina and Annibale Zoilo were commissioned by Gregory XIII 'to purge, correct, and reform Gregorian chant', but their work was never completed (see Molitor, U1901–2/*R*, 297). In 1582 Giovanni Guidetti, a student and friend of Palestrina, published in Rome the first complete post-Tridentine chant book, the *Directorium chori ad usum sacrosanctae basilicae vaticanae et aliarum cathedralium et collegiatarum ecclesiarum*. It continued to be republished until 1750 and contained the basic elements for singing the Divine Office: cadence formulae, the principal psalms, hymns, versicles, short responsories, reciting notes for psalms, lessons, Gospels and prayers. A unique feature of the *Directorium* was Guidetti's use of proportional notation: the *semibrevis*, or diamond-shaped note, had the value of a half-*tempus*, the *brevis*, or square note, equalled one *tempus*, and the dotted *brevis cum semicirculo*, or square note surmounted by a pause sign, was equivalent to two *tempi* (fig.7).

These rhythmic notes were frequently explained in later treatises and singing manuals on plainchant, such as G.C. Marinelli's *Via retta della voce corale* (Bologna, 1671/*R*); Lorenzo Penna's *Direttorio del canto fermo* (Modena, 1689); Andrea di Modena's *Canto harmonico* (Modena, 1690/*R*); Giuseppe Frezza dalle Grotte's *Il cantore ecclesiastico* (Padua, 1698); O. Rosa de Cairano's *Regole del canto fermo detto gregoriano* (Naples, 1788); and J.G. Mettenleiter's *Enchiridion chorale* (Regensburg, 1853). (On the instrumental accompaniment of plainchant from the 16th century, see §11 below.)

The most important chant book conforming to the reforms of the Council of Trent was the new Roman gradual. On 31 May 1608 Paul V (pontificate 1605–21) granted G.B. Raimondi printing rights, and six musicians were commissioned as editors – Felice Anerio, Pietro Felini, Ruggiero Giovannelli, Curzio Mancini, Giovanni Maria Nanino and Francesco Soriano. By 1611 the membership had dwindled to two members, Anerio and Soriano, both of whom, like Guidetti, had been closely associated with Palestrina. When Raimondi died on 13 February 1614 publication was transferred to the Medici

7. *Proportional notation in G.D. Guidetti's 'Directorium chori' (Rome, 1582), p.5*

Press in Rome; the *Graduale … iuxta ritum sacrosanctae romanae ecclesiae cum cantu, Pauli V. pontificis maximi iussu reformatio … ex typographica Medicaea* appeared in two volumes, in 1614 (the *Temporale*) and 1615 (the *Sanctorale*).

The Anerio-Soriano Medicean edition of the gradual strongly reflected 16th-and 17th-century humanist interest in the relationship between text and melody. The liturgical texts were revised to 'improve' the quality and character of the Latin, cadential patterns were reshaped, certain stereotyped melodic figures were associated with certain words, melodic clichés were introduced to 'explain' words, melodies were made more tonal by the introduction of the B♭, melismas were abbreviated, and accentual declamation was introduced to improve the intelligibility of the chanted text. For example, some typical melodic and tonal variants may be observed in the Medicean version of the first responsory for Easter Matins (ex.7).

During the interim period between the papal commission to Palestrina and the appearance of the Medicean gradual, various 'reformed' graduals were brought out by Venetian publishers, the first, by Gardano, in 1591, followed by a new version, by Giunta, in 1596. The latter became the basis of a Venetian chant tradition that continued into the late 18th century through successive editions by Giunta, Cieras, Baba, Baglioni and Pezzana. The texts were the standard ones of earlier centuries, although some were slightly revised in accordance with the new missal. By 1618 an independent 'reformed' gradual was issued in Ingolstadt, and a further one appeared in 1620 in Antwerp. By 1627 the first of a series of editions constituting a Parisian tradition had been published. Minor similarities are evident between certain traditions, but borrowings on a wider scale are generally rare. The importance of the Medicean gradual derived from Rome's position as an ecclesiastical centre, but its readings had little if any influence elsewhere. Various religious orders also created their own versions, in some cases much earlier than the date the reworkings were first documented. The different readings existed side by side with more traditional ones almost wholly rooted in 15th- and 16th-century chant practice.

In general, Giunta and his Venetian successors pruned the medieval melodies most heavily, while greater floridity is evident in the sources from further north. Despite the appearance of many chant treatises describing a range of rhythmic values, only a few values are used in the practical manuals. The most frequent, apart from the standard square shape, is the diamond-shaped *semibrevis*; representing half the normal value, it was associated with weak syllables following accented antepenultimate or even earlier syllables.

The modern Roman breviary in use before the Second Vatican Council is substantially the *Pianum* of 1568 with the revisions it underwent under Clement VIII (1602) and Urban VIII (1631). The latter reform is particularly important in the history of plainchant, because it introduced significant recasting of the traditional Office hymns. Under the direction of four classically trained Jesuits, Famiano Strada, Tarquinio Galuzzi, Girolamo Petrucci and Matthias Sarbiewski, 952 corrections were made to the 98 hymns included in the breviary (see Lenti, U1993, p.31). In their zeal to restore classical metre and prose to the Latin texts, the revisers recast some hymns and in so doing created almost unrecognizable substitutes. These changes in the hymn texts were sanctioned by the Congregation of Rites on 29 March 1629, and the newly revised *Breviarium romanum* was approved by Urban VIII (1623–44) on 25 January 1631 (see Lenti, op.cit.,

Ex.7 Comparison of Roman (Solesmes) and Medicean versions of an Easter responsory

32). The following example shows a single hymn in its original and revised versions (from Daniel, M1841–56/*R*, i, 239).

Original	*Reformed*
Urbs beata Hierusalem	Coelestic urbs Ierusalem
Dicta pacis visio	Beata pacis visio
Quae construitur in coelis	Quae celsa de viventibus
Vivis ex lapidibus	Saxis ad astra tolleris
Et angelis coronata	Sponsaeque ritu cingeris
Ut sponsata comite	Mille angelorum millibus
Nova veniens e coelo	O sorte nupta prospera
Nuptiali thalamo	Dotata patris gloria
Praeparata ut sponsata	Respersa sponsi gratia
Copulatur Domino	Regina formosissima
Plateae et muri ejus	Christo iugata principi
Ex auro purissimo	Coelo coruscas civitas
Portae nitent margaritis	Hic margaritis emicant
Adytis patentibus	Patentque cunctis ostia
Et virtute meritorum	Virtute namque praevia
Illuc introducitur	Mortalis illuc ducitur
Omnis, qui pro Christi nomine	Amore Christi percitus
Hic in mundo premitur	Tormenta quiquis sustinet
Tunsionibus, pressuris	Scalpri salubris ictibus
Expoiliti lapides	Et tunsione plurima
Suis coaptantur locis	Fabri polita malleo
Per manum artificis	Hanc saxa molem construunt
Disponuntur permansuri	Aptisque juncta nexibus
Sacris aedificiis.	Locantur in fastigio.

In defence of these revised Jesuit hymns, now often considered 'decadent', Pocknee (U1954, p.2) observed that 'the later hymns have a rugged sincerity, a biblical tone, and a clear presentment of the facts of belief which more than atoned for the change of literary style'. Although the revised hymns were made obligatory for the Church at large, most of the monastic orders – the Dominicans, Benedictines, Cistercians, Carthusians and the Papal Chapel itself – rejected Urban's revised hymnal and maintained the earlier forms.

The process of standardization that began at Trent has, unfortunately, often been misunderstood. The Council was, in fact, a truly conservative movement. No new liturgy was set forth (the terms 'Tridentine Mass' and 'Tridentine Office' are misleading); religious establishments throughout Europe were required to follow prescribed customs and normative usage as well as to use 'corrected' liturgical books. Furthermore, the intended musical reforms were not realized, for despite the official imprimatur affixed to most chant books – *Ex decreto Sacrosancti Concilii Tridentini restituti* – a bewildering variety of chant melodies continued to flourish for another 300 years.

(ii) Neo-Gallican reforms. The French nationalistic tradition of relative independence from Rome in both political and ecclesiastical affairs has its roots in the early Middle Ages. During the 17th and 18th centuries a particularly strong surge of anti-papal feeling caused a widespread theological schism within the ranks of the French national church. The *Declaratio cleri gallicani* (19 March 1682), known as the 'Four Gallican Articles', was issued by the dissenting bishop Jacques Bossuet (1627–1704) and resulted in major changes in the liturgy and church music. In the diocese of Paris under Archbishop François de Harlay de Champvallon (1625–95), a revised 'neo-Gallican' breviary was published in 1680, followed by the antiphoner in 1681, the missal in 1684 and the gradual in 1689 (see Launay, U1993, p.292). In these books many of the standard liturgical formularies were suppressed and replaced with substitutes.

Even more radical editions appeared under Charles de Vintimille du Lac (archbishop of Paris, 1729–46), and these were adopted by more than 50 French dioceses. In the Vintimille edition only 21 original hymns were retained, although new hymns by contemporary hymnographers abounded: 85 by Jean-Baptiste de Santeüil (*d* 1697), nearly 100 by Charles Coffin (*d* 1742; fig.8) and 97 by lesser-known French authors.

Closely associated with these neo-Gallican reforms was the introduction of a distinctive type of music known as the 'chant figuré', sung in a measured and ornamented style. The most important treatises explaining the performance of this measured chant were written by Guillaume-Gabriel Nivers, Léonard Poisson, Jean Lebeuf and François de La Feillée. In his *Méthode nouvelle pour apprendre parfaitement les règles du plain-chant et de la psalmodie, avec des messes et autres ouvrages en plain-chant figuré et musical* (Poitiers, 3/1775, pp.96–116), La

PROPRE
DU TEMS.

LE SAMEDI
Avant la Septuagésime,

A VESPRES, Ps. & Ant. du Pseautier.

[*A la fin de la cinquiéme Ant. des Vêpres, si elles sont du Samedi ; ou à la fin de l'Ant. à* Magnificat. *si elles sont d'une Fête Double ou au dessus, on dit* Alleluia. *& on ne le dit plus jusqu'à Pâque.*]

Nos, sanctitate perditâ,
Pœnalis expectat labor :
Hymnos-ne dulces patriæ
Mœsti canamus exules ?
Qui te piis placabilem
Spondes futurum fletibus,
Lugere da longi, Pater,
Delicta, causas exilî.
Verum salubrem temperet

Spe nixa mœrorem fides ;
Tu mox quieti nos tuæ,
Lætisque reddes canticis.
Sit summa Patri gloria,
Ejusque soli Filio ;
Sancto simul cum Spiritu,
Nunc, & per omne seculum. Amen.

℣. Priusquam montes fierent, aut formaretur terra & orbis, ℟. A seculo & usque in seculum tu es Deus.

Tom. II. *F

8. *Hymn 'Te laeta, mundi Conditor' by Charles Coffin from the 'Antiphonaire parisien suivant le nouveau breviare' (pt 11, 1737), p.101*

Feillée provided a detailed explanation of the types of notes and principles of performance. In addition to elision, tremolo, accidentals and prolongation signs, the basic note values were as follows: the *quarrées ordinaires à queue* (large square notes with a descending stem to the right); the *quarrées sans queues* (large square notes); the *demi-quarrées à queue* (small square notes with a descending stem to the left); the *demi-quarrées sans queue* (small square notes); the *grandes brèves* (large diamond-shaped notes); and the *petites brèves* (small diamond-shaped notes) (see Launay, op. cit., esp. 413–31, and pls.45–7).

Despite the outward simplicity of this metrical system, performance of *chant figuré* required sophisticated improvisatory skills, including tremolo, vibrato, portamento and ornaments. In order to maintain measure, the choirs were frequently accompanied in unison by a bass instrument, such as a serpent, ophicleide, bassoon, trombone, double bass etc. (see Lebeuf, U1741/*R*, p.177; and C. Burney: *The Present State of Music in France and Italy*, London, 1771, 2/1773/*R*, 10ff). Performance of this chant was highly expressive. Verses in the *Messe musicale* of La Feillée, which were sung by a soloist and a choir in alternation, indicate frequent shifts in tempo from *lent*, *lentement* or *gravement* to *gai* or *gracieusement* (fig.9).

Another type of metrical plainchant was commonly practised in the neo-Gallican liturgy, 'l'art du fleuretis ou Chant sur le livre' (Lebeuf, U1741, p.110). *Chant sur le livre* (also termed 'contrapunctum', 'descant' or 'fleuretis') was counterpoint improvised at sight by trained singers to the melodies of the regular service books (see Prim, U1961). Responsories, antiphons and introits in particular were subject to this type of accompaniment. The plainchant melody was usually sung in strict measured cantus firmus style by strong bass voices accompanied in unison by a bassoon or serpent, while the florid descant melodies were improvised above it. Harmonic and metrical rules were set out in at least ten treatises, especially by Etienne Loulié, Sébastien de Brossard, René Ouvrard and Pierre-Louis Pollio (see Montagnier, 'Les sources manuscrites', U1995).

The Gallican plainchant practised between the mid-17th century to the second Restoration of the monarchy in France (1815–30) has been dismissed with hostility and ridicule, especially by 19th- and 20th-century Roman Catholic clerics and writers. Gallican hymnody, *chant figuré*, *chant sur le livre* and the reformation of the liturgy by humanists during the *ancien régime* have generally been epitomized as insipid, decadent and barbarous – 'un chant étriqué, mesquin, pauvre, horriblement mutilé, une sorte d'habit d'arlequin composé de pièces décousues' (N. Cloet: *Mémoire sur le choix des livres de chant liturgique*, Paris, 1856). In reality neo-Gallican plainchant is a large, self-contained corpus of music with its own historical and liturgical setting, deserving further detailed research.

See also Neo-gallican chant and Plain-chant musical.

11. Restoration and reform in the 19th century.

(i) Early reform in France. With the Concordat of 7 October 1801 between Napoleon I and Pius VII (pontificate 1800–23) and later concordats of reconciliation (see Gaudemet and others, U1987, 17–29), the forces of

9. *'Messe musicale' from François de La Feillée's 'Méthode nouvelle pour apprendre parfaitement les règles du plain-chant' (3/1775), pp.214–15*

separatism and secularism and the confiscation of Church property, onslaughts to which the Roman Church had been subjected during the Enlightenment, gradually subsided. The decline of such political and religious theories as Febronianism, Gallicanism, Josephinism, Jansenism and monarchical absolutism led to spiritual renewal and a golden epoch of ecclesiology during the 19th century. The 40 years between the publication of Félix Danjou's *De l'état et de l'avenir du chant ecclésiastique en France* (Paris, 1844) and the *Liber gradualis* (Tournai, 1883) prepared by Dom Joseph Pothier marked a significant period of chant reform. With the success of the Ultramontane movement in France (see Moulinet, U1997), by the 1840s it was generally recognized that the Harlay and Vintimille chant books were unsuitable and needed to be replaced by books that once again conformed to the Roman liturgy. This need had been expressed three decades earlier by Choron in his *Considérations sur la nécessité de rétablir le chant de l'église de Rome dans toutes les églises de l'Empire français* (Paris, 1811). Despite repeated calls for unity, return to the old Tridentine use proceeded very slowly, diocese by diocese (see especially E.-G. Jouve: *Du mouvement liturgique en France durant le XIXe siècle*, Paris, 1860). Ecclesiastical officials and music scholars were sharply divided as to which chant melodies should be used. Many favoured a return to the early Medicean chant books; others considered that the chants in these books were debased in comparison with the ones in 11th-, 12th- and 13th-century sources in Guidonian notation. A third group defended the authenticity of the early neumatic manuscripts even though the latter were practically indecipherable at the time. Scholars and dilettantes of widely differing persuasions entered the debate, including Pietro Alfieri, Adrien de La Fage, Félix Danjou, Théodore Nisard (né Normand), Nicholas Cloet, Félix Clément, Nicholas Janssen, C.C. Bogaerts, Edmond Duval, Jules Tardif, Louis Lambillotte, Anselm Schubiger, Padre J. Dufour, Stephen Morelot, Augustin Gontier, Louis Vitet, Charles Vervoitte and Alexandre Vincent.

In 1847 Danjou discovered the important 11th-century tonary of St Bénigne de Dijon, *F-MOf* H 159 (facs. in PalMus, 1st ser., vii–viii, 1901–5/*R*; fig.10), a manuscript with unique, doubly notated melodies in French neumatic and alphabetical notations. A hand-copied transcription of the manuscript by Nisard (completed 1851; *F-Pn* lat.8881, formerly suppl. lat.1307) was used as the basis of the Reims-Cambrai *Graduale romanum complectens missas* (Paris, 1851), which represents the first serious attempt to restore medieval chant to modern books. The editors, P.C.C. Bogaerts and E. Duval, defended their work in *Etudes sur les livres choraux qui ont servi de base dans la publication des livres de chant grégorien édités à Malines* (Mechelen, 1855), but reactions to the Reims-Cambrai editions were frequently sour. La Fage's *De la reproduction des livres du plain-chant romain* (Paris, 1853) is a thinly disguised polemic against the Reims-Cambrai gradual. Louis Vitet (*Journal des savants*, 1854, p.92) was astonished that a group of four notes in the Paris gradual of 1826 had been replaced in the Reims-Cambrai edition by a melisma of 48 notes. And Nisard ('Du rythme dans le plain-chant', U1856), defending his own conservative, post-Tridentine-style *Gradual et vesperal romains* (Rennes, 1855), considered impossible the 'radical and revolutionary' attempt to replace current chant melodies by a literal return to the 'chants of St Gregory', as the Reims-Cambrai edition proposed.

During the middle decades of the 19th century two terms, already in favour, were widely adopted by liturgical commentators: 'decadent', to describe any form, style or era of plainchant that ran counter to self-established theories of what constituted 'authentic' chant melodies and/or chant performance; and 'restoration' (Fr. 'restauration'), used to characterize efforts to restore plainchant to its proper place in the Roman liturgy, as for example, Michel Couturier in his *Décadence et restauration de la musique religieuse* (Paris, 1862), or Anselm Schubiger in *Die Restauration des Kirchengesangs und der Kirchenmusik durch das künftige allgemeine Concilium* (Zürich, 1869).

Another effort to restore Gregorian chant resulted in the publication by Louis Lambillotte of a facsimile of the late 9th-century cantatorium of St Gallen, *CH-SGs* 359. Although it was claimed that the engraved plates were authentic reproductions of the original neumes, they soon proved to be completely unreliable, and Lambillotte's posthumous *Graduale romanum* (Paris, 1857), ostensibly based on this manuscript, contained truncated melodies. As regards the printing of plainchant, it was a monk of the Cistercian abbey of Notre-Dame de Réconfort, Geoffroy de Marnef, who, according to La Fage (*Plain-chant*, ii, 1861, p.80), was the first French printer to make a special font of plainchant musical characters.

Three other pioneering works appeared in the mid-19th century: Coussemaker's *Histoire de l'harmonie au Moyen-Age* (Paris, 1852/*R*), the first comprehensive review of medieval notations based on modern critical methods, which set a standard for subsequent serious palaeographical investigations of chant neumes and rhythm; Joseph d'Ortigue's *Dictionnaire liturgique, historique et théorique de plain-chant* (Paris, 1853/*R*), the first major dictionary of terms relating to plainchant, containing lengthy excerpts from the works of a wide variety of contemporary scholars, among them Nisard, Lebeuf, Fétis, Rousseau, Coussemaker, Jumilhac, Danjou, Baini, Poisson, Forkel, Lambillotte, Brossard, Du Cange and Kiesewetter; and La Fage's *Cours complet de plain-chant* (Paris, 1855–6), containing the first substantial bibliography of plainchant sources – 282 items are classified according to printed liturgical books, music treatises and practical performance manuals.

An article in D'Ortigue's dictionary on the instrumental accompaniment of plainchant is particularly illuminating and holds a special place in the extensive literature on the subject (see Söhner, U1931; and Wagener, U1964). This practice was well known even at the time of Adriano Banchieri's *L'organo suonarino* (Venice, 1605, 2/1611, 3/1638/*R*) and assumed a major role in the performance of plainchant after the development of the thoroughbass in *stile nuovo* church music. A veritable deluge of practical manuals were published from the 17th century instructing the organist on the problems of rhythm, the choice and placement of chords, the use of homophonic and contrapuntal accompaniments, the rules for harmonizing each mode, the roles of intonation and cadential formulae, the use of embellishments and how to transpose (ex.8).

In May 1860 over 50 people interested in plainchant reform attended a congress held at Erard's in Paris concerned with the restoration of plainchant and religious music (see *De la musique religieuse: Paris 1860* and

10. *Offertory 'Laetentur caeli', notated in French neumatic and alphabetical notations, in the 11th-century tonary of St Bénigne de Dijon (F-MOf H 159, f.112v); from PalMus, 1st ser., viii, 1901–5/R, p.218.*

Mechelen 1863 and *1864*, ed. T.J. de Vroye, Paris, 1866). 80 different chant books and manuals published mostly between 1854 to 1860 were presented for consideration, and topics under discussion included the true character of church music, plainchant accompaniment, the place of choral societies, the performance of church music in certain dioceses and the proper performance of liturgical chant.

Ex.8 Accompanied version of the introit *Requiem aeternam* from the Requiem Mass, from E. Duval: *L'organiste grégorien, ou Accompagnement d'orgue* (Mechelen, 1845), p.34, based on the rules of accompaniment in N.A. Janssen: *Les vrais principes du chant grégorien* (Mechelen, 1845)

In France the performance methods promoted by Louis Niedermeyer at his Institut de Musique d'Eglise (founded 1835) were printed in *La maîtrise: journal de musique religieuse* (1857–61) and in his *Traité théorique et pratique de l'accompagnement du plain-chant* (Paris, 1857, 2/1878; Eng. trans., 1905). These publications exerted considerable influence for over a century (see M. Galerne: *L'Ecole Niedermeyer*, Paris, 1928). Among the better-known 19th-century chant treatises are those by Bogler (1808), Schiedermayer (1828), Stehlin (U1842), Toepler (1848), Benz (1850), Stein (1853), Clément (1854), Nisard (1854, 1860), Gevaert (1856), Miné (1863), Labat (1864) and Hermesdorff (1865–7).

(ii) Germany and the Cecilian movement. During much of the 19th century the emphasis on church music in Germany was confined largely to the development of church choirs and the revival of Renaissance and Baroque polyphonic music; it was at this time that the Palestrina cult began to flourish under such advocates as A.F.J. Thibaut, Giuseppe Baini and Carl von Winterfeld (see Comes, W1974–5; and W. Kirsch and others, eds.: *Palestrina und die Kirchenmusik im 19. Jahrhundert*, Regensburg, 1989). With the appointment in 1830 of Karl Proske as a canon of the Alte Kapelle in Regensburg, that city soon became the centre of this revival activity in

Germany. Important editions of the polyphonic masters appeared in Proske's Musica Divina (Regensburg, 1853–76/*R*) and Selectus Novus Missarum (Regensburg, 1855–61/*R*), and in Franz Commer's Collectio Operum Musicorum Batavorum Saeculi XVI (Berlin, 1844–58), Musica Sacra (Berlin, 1839–42, continuing as Selectio Modorum, 1860–87) and Cantica Sacra (Berlin, 1870).

Further reforms took place in the last third of the century with the rise of the CECILIAN MOVEMENT, which had its roots in the scholarship of Proske and Commer (see W. Kirsch: 'Caecilianismus', *MGG2*). In 1868 the Bavarian priest F.X. Witt founded the Allgemeine Cäcilien-Verein für Katholische Kirchenmusik; based initially in the German cathedral town of Regensburg, this organization, dedicated to the improvement of church music not only in Germany but throughout Europe and the Americas, advocated the performance of 16th-century polyphony, the Palestrina vocal style, and the reform of plainchant and organ playing. Witt propagated his theories in two music periodicals, the *Fliegende Blätter für katholische Kirchenmusik* (1866–) and *Musica sacra* (1868–), both of which he founded (see Lickleder, U1988). Cecilian societies were also founded in America, of which the most important centre was that in Milwaukee, Wisconsin, influenced by John Martin Henni (1805–81), first archbishop of Milwaukee, and John Baptist Singenberger (1848–1924), editor of *Caecilia: Vereinsorgan des Amerikanischen Caecilien-Vereins* (founded in 1874). (For a review of the Cecilian movement in Italy, see Moneta Caglio, U1983.)

Reform of the German plainchant books was carried out in publications by the firm of Friedrich Pustet in Regensburg, which had been granted a privilege (1 October 1868) by the Sacred Congregation of Rites in Rome to publish all the official chant books of the Church according to the Medicean edition. Accordingly, the new Regensburg gradual of 1871, edited by F.X. Haberl, was largely a reprint of the Medicean edition of 1614–15; the Pustet antiphoner of 1878 was based on two editions (Venice, 1585, and Antwerp, 1611). On 4 August 1871 Pius IX officially sanctioned the Pustet editions as the authentic form of Gregorian chant, a decree that was reaffirmed in papal letters (30 May 1873, 15 November 1878) and by decrees of the Sacred Congregation of Rites (26 April 1883, 7 July 1894).

(iii) England and Ireland. The revival of plainchant in England had begun during the 18th century with the Roman Catholic scribe and publisher John Francis Wade (1711/12–86). His manuscripts and printed books circulated widely throughout the London embassy chapels and among many aristocratic Catholic families. Wade's earliest works consist of hand-copied manuscripts and books with pre-printed staves and text onto and above which plainchant was notated by hand. Manuscripts dating from 1737 to the 1770s cover most liturgical functions. Wade's first printed books without plainchant were English–Latin vesperals. Other plainchant scribes and publishers were active during Wade's lifetime, but those manuscripts that have survived from private aristocratic and embassy chapels are generally considered of inferior quality to Wade's. Printed sources include *The Art of Singing* (London, 1748) published by Thomas Meighan and *The True Method to Learn the Church Plain-Song* (London, 1748) published by James Marmaduke. James Coghlan introduced movable Gregorian type (previous publications were engraved) with *An Essay on the Church Plain Chant* (London, 1782), a work indebted to Wade and perhaps wrongly attributed to Samuel Webbe the elder.

In the 19th century the revival continued unabated with the works of the Catholic publisher Vincent Novello, the earliest of which, *A Collection of Sacred Music* (London, 1811), included Gregorian arrangements of Samuel Wesley's texts. An abortive Wesley-Novello project to publish comprehensive Gregorian books is evidenced in letters, which also prove that Novello's arrangements were based partly on Wade. Novello's publications were superseded in the late 1840s by those of John Lambert.

In the Anglican Church, the plainchant revival was spawned by the Oxford Movement and the Cambridge Ecclesiological Society. The first significant publication was Alexander Reinagle's *A Collection of Psalm & Hymn Tunes* (London, 1839). Richard Redhead's *Laudes diurnae* (London, 1843) enjoyed brief popularity but was criticized for retaining Latin prosody at the expense of English accentuation. William Dyce's version of Merbecke's *The Book of Common Prayer Noted*, which was published in London in 1843, provides rules for good English prosody, although these are not always easy to apply in *The Psalter* (London, 1849), where notes are provided for each syllable of text only for examples of each tone, not for the complete Psalter.

The 19th-century English plainchant revival produced many aesthetic controversies. Anglican plainchant apologetics surfaced in music magazines such as *The Choir and Musical Record*, *The Musical Times*, *The Musical World* and *The Quarterly Musical Magazine*, and in religious periodicals such as *The British Critic*, *The Christian Remembrancer*, *The Ecclesiologist* and *The Parish Choir*. Concerns included English versus Latin rules of prosody, the nature of accompaniment, the social/moral role of Gregorian chant, and the use of English versus Roman sources. Catholic apologetics are found in *The Tablet* and *The Dublin Review* and receive a Christological context in the writings of Henry Formby.

The late 19th century saw an expansion of the English plainchant revival. In 1888 moves were made to found an English branch of the Cecilians out of the old Catholic Gregorian Association, and in the same year the Plainsong and Mediaeval Music Society met for the first time. In 1929 the Society of St Gregory was also founded to address issues relating to the Catholic liturgy. Owing in part to problems of applicability, 20th-century Anglican publications are varied in their reliance on Solesmes and other Continental scholarship. Catholic publications of the same period, unlike many of their 19th-century antecedents, derive from sources formally approved by Rome.

In Ireland, the Irish Society of St Cecilia was founded by Nicholas Donnelly in 1878. His ideas on reform, as well as those of Witt, were circulated by means of his periodical *Lyra ecclesiastica* (1878–93) (see Daly, U1993). Early plainchant books published in Ireland included an *Officium defunctorum cum suo cantu* by Patrick Wogan (Dublin, 1793) and *A Plain and Concise Method of Learning the Gregorian Note: also a Collection of Church Music, Selected from the Roman Antiphonary and Gradual* by Patrick Hoey (Dublin, 1800). Patrick Wogan also published *High Mass and Sunday Vespers as Sung in Most of the Different Roman Catholic Chapels throughout*

the United Kingdom (1818) (see Zon, U1996; and also White and Lawrence, U1993).

(iv) The reformed editions of Solesmes. The major editions of chant books issued in the second half of the 19th century, the Reims-Cambrai gradual and antiphoner (1851 and 1852), the Nisard gradual (1857), the two editions of the gradual edited by Michael Hermesdorff (Trier, 1863 and 1876) and Haberl's Regensburg gradual and antiphoner (1871 and 1878), represent scholarly, 'Romantic' attempts to restore the pre-eminence of plainchant in the Roman liturgy. These books were, however, outflanked by a vigorous campaign to restore the melodies of the earliest chant manuscripts, a far more radical restoration than that so far attempted, and rejecting the outright revival of the Medicean gradual by Haberl. The restoration culminated in the editions issued by the Benedictine monks of SOLESMES between 1883 and the end of World War I. From the time of the monastery's reconstitution in 1833 by Dom Prosper Guéranger (see Johnson, U1984), the monastic and liturgical renewal there reflected Ultramontane ideas – the centralization of Church government in Rome, the independence of the Church from secular authority and the infallibility of the Pope even in administrative decisions. Guéranger rejected neo-Gallicanism, and his views on 17th- and 18th-century liturgy and music, expressed in particularly negative terms in the *Institutions liturgiques* (Paris, 1840–51, 2/1878–85), formed the theoretical and philosophical basis of all subsequent chant reform by the Solesmes Benedictines.

Rousseau (U1945) and Combe (U1969), two historians of Solesmes, traced the beginnings of serious chant studies at the abbey to about 1856, when Dom Paul Jausions began transcribing the Rollington Processional, a 13th- or 14th-century English manuscript. This was nearly 20 years after the re-establishment of the monastery, at a time when the Reims-Cambrai editions were already in use. In 1860 Jausions was joined by Dom Joseph Pothier, destined to become the most respected figure in the restoration movement, and they began a laborious 20-year project of preparing completely new chant books for the Solesmes Congregation based on early neumatic sources.

Like the other chant book editors (Bogaerts, Clément, Nivers, Hermesdorff and Haberl), Pothier published his own treatise (*Les mélodies grégoriennes d'après la tradition*, Tournai, 1880/*R*), in which he defined his general editorial policies and theories of restoration, explained the rudiments of neumatic and staff notation, and at the same time put forward an oratorical interpretation of rhythm. Gregorian notation had no fixed and absolute note values; therefore the chant was sung in a natural, non-metrical style. Organization of the melody was controlled by two oratorical determinants: the tonic accent of the Latin text and the natural divisions of the text into words and phrases. Pothier's ideas were influenced by the *Méthode raisonnée de plainchant: le plainchant considéré dans son rythme, sa tonalité et ses modes* of Abbé Augustin Gontier (Paris, 1859).

A striking feature of Pothier's *Liber gradualis* of 1883, apart from its typically romantic preface referring to Pope Gregory the Great as author of the Roman gradual, is its distinctive musical notation. Under Pothier's direction new musical type was engraved by Desclée, Lefebvre & Cie in Tournai, Belgium. The hybrid design of these typographical neume characters was modelled on the notation of 13th- and 14th-century French manuscripts. Special ornamental signs representing the *quilisma*, *cephalicus* and *epiphonus* were adapted from pre-13th-century Guidonian practice (see Schmidt, U1895–6). An explanation of how to perform these neumes has been frequently included in introductions to the Solesmes chant books, such as the modern *Liber usualis*. The Pothier-Desclée-Solesmes font, which is noted for its diversity of type characters and its ability to depict liquescent neumes (fig.11), is still used by some scholars for contemporary transcriptions of early plainchant notations. But there is also a tendency to move away from the Solesmes font to the use of isolated black note heads without stems (see Hiley, C1993).

The modern era of plainchant palaeography began in 1889 with another Solesmes enterprise, the series Paléographie Musicale: les Principaux Manuscrits de Chant … Publiés en Fac-Similés Phototypiques (PalMus; *see* Solesmes, §4). This was the first significant attempt to adapt the new technology of photography to the study of plainchant notation. The manuscripts were not always reproduced in their entirety; paraliturgical sections, for example, were omitted.

A century before the Paléographie Musicale began to appear, engraved specimens of neumes were used as illustrations, some on polychromatic plates, by Gerbert, Jumilhac, Martini, Hawkins, Forkel, Burney and others; like the unusable Lambillotte 'facsimile' of *CH-SGs* 359, however, these hand-made imitations could not match the accuracy of the later photographic reproductions.

11. *Mass of St Benedict from J. Pothier's 'Liber gradualis' (1883), p.185*

The final decree by the Sacred Congregation of Rites supporting Haberl's Regensburg edition of the chant books, the *Quod sanctus Augustinus*, appeared on 7 July 1894, and by 1901 Pustet's privilege to publish the official chant books had been withdrawn. Among the last Pustet publications was the Regensburg-New York-Cincinnati missal of 1889 whose title publicized the earlier reforms of the Council of Trent and those made under Pius V (pontificate 1566–72), Clement VIII (1592–1605), Urban VIII (1623–44) and Leo XIII (1877–1903). The revocation came at the culmination of a complex and often bitter struggle between factions supporting the Allgemeine Cäcilien-Verein on the one side and the Benedictines of Solesmes on the other. The dispute seen from the Solesmes position was chronicled in detail by Combe (U1969), and Haberl's lengthy first-hand account (U1902) remains an invaluable source for understanding the other point of view.

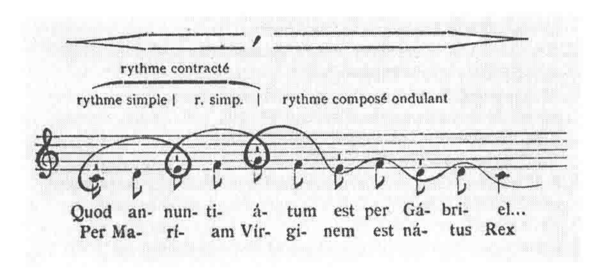
12. 20TH-CENTURY DEVELOPMENTS. Leo XIII had long maintained a benevolent attitude towards Haberl and Pustet, but even before the pope's death in 1903 there was a move to replace the Pustet chant books with those of Solesmes, and his successor Pius X (pontificate 1903–14), almost immediately after being elected, took decisive action. In his famous *motu proprio* of 22 November 1903, *Tra le sollecitudini*, Pius X defined the nature and kinds of sacred music, the role of singers, the use of instruments in worship and the length and performance of church music. The highest type of sacred music was the ancient chant of the liturgical manuscripts 'which the most recent studies [i.e. those of Solesmes] have so happily restored to their integrity and purity'. He also encouraged the use of classical polyphony and permitted 'figured music' and *falsobordoni* on certain occasions.

Within two months of the appearance of the *motu proprio*, on 8 January 1904, the Congregation urged that the traditional chant be introduced as quickly as possible; the Vatican edition was officially announced during a general congress held between 4 and 9 April 1904. A second *motu proprio* of implementation was issued on 25 April 1904 stating that publishing rights for the new books would remain with the Vatican; that the restored melodies should conform to the ancient codices; that a special commission of ten members (with Pothier as president) and ten consultants should be appointed to supervise the new editions; and that the monks of Solesmes were to be entrusted with the editing of the music. Despite repeated clashes within the commission over editorial policies and the loss of editorship by Solesmes, three major Vatican chant books were published: the *Kyriale seu ordinarium missae* (1905), the *Graduale sacrosanctae romanae ecclesiae* (1908) and the *Antiphonale sacrosanctae romanae ecclesiae* (1912).

Once the kyriale had been published (see Grospellier, U1905–06), the differences of opinion that divided the commission reached public notice. Dispute centered largely on the antiquity of the manuscripts used to prepare the editions. The 'archaeological school' (Solesmes) insisted that the readings be taken from the oldest accessible sources, whereas the 'traditionalists' (such as Pothier, Gastoué and Peter Wagner), considered it important that the choral tradition of the late Middle Ages also be represented. Since the criteria adopted by the commission favoured the traditionalist position and inclined more to practical wisdom than to abstract theory, manuscripts representing various national practices were used, some dating from as late as the 14th and 15th centuries. The diversity allowed in the Vatican edition exposed the commission to criticism on the most fundamental aesthetic level.

Besides the problems of determining the authenticity of the restored melodies, there was the difficulty of the restoration of the melodies' original rhythmic structure. By the mid-19th century many scholars, including Fétis, Coussemaker, Danjou, Nisard, Vitet, La Fage, Cloet, Lambillotte, Vincent, Jumilhac and Baini, had faced this problem. And even at this time opinion was divided as to whether chant should be performed in a free oratorical manner without measured note values, or according to some metrical scheme. Between 1895 and 1914, just as the Vatican editions were being prepared, argument among scholars on this matter was at its most intense.

The early mensuralists, among whom were Hugo Riemann, Antoine Dechevrens, Ludwig Bonvin, Georges Houdard, Oskar Fleischer, Eduard Bernoulli and Peter Wagner, conjectured that chant was sung to notes of unequal value that usually bore a proportional 2:1 relationship. The results of their rhythmic interpretations, however, were widely divergent. In the editions of Dechevrens a large number of notes are reduced to the status of rapid ornaments (U1902/*R*). Many of the rhythmic interpretations rely to a greater or lesser extent on the sophisticated detail in the notation of the early manuscripts from St Gallen (*CH-SGs* 359, 339), Einsiedeln (*E* 121) and Laon (*F-LA* 239), which indicate rhythmic, dynamic or agogic aspects of performance. This was also one of the principal sources of disagreement between Pothier and Mocquereau, Pothier regarding the notation as a local, passing phenomenon, Mocquereau arguing that it was an essential element of the earliest recoverable state of Gregorian chant. In accordance with Pothier's views, the Sacred Congregation of Rites authorized the use of one uniform musical notation in the Vatican editions (11 and 14 August 1905, 14 February 1906, 7 August 1907, 8 April 1908); the addition of certain rhythmic signs was tolerated only under exceptional circumstances.



In 1905, the same year that the Vatican kyriale appeared, the firm of Desclée published a *Kyriale seu ordinarium missae cum cantu gregoriano ad exemplar editionis vaticanae concinnatum et rhythmicis signis a solesmensibus monachis diligenter ornatum*, which reflected the rhythmic theories of Dom André Mocquereau. The basis of the 'méthode bénédictine' advocated by Solesmes, which stood in direct opposition to mensuralist theories, was set out by Mocquereau in *Le nombre musical grégorien* (1908–27). While retaining Pothier's basic ideas of free rhythm, Mocquereau developed an intricate theory of rhythmic motion deriving from the free binary and ternary metres of Greek and Latin rhetoric, although he was careful to point out that Gregorian rhythm was specifically musical and independent of speech rhythm. He denied a distinction between the *punctum* or *virga*, either in terms of their duration or their intensity: the *punctum* represented a low-pitched sound, not a quaver, and the *virga* was a higher-pitched note, not equivalent to a crotchet. Two types of pulse, basic and composite, comprising one, two or three notes, were the constituent members of the melodic phrase. In the Solesmes editions these pulses were indicated by special

notational signs – the vertical and horizontal strokes and bars, the rhythmic point (*punctum mora*), and the comma (a short breath mark). The rhythmic movement of these pulses was affected by dynamic modifications, the contrasts of 'élan' and 'repos', which can be compared roughly to upbeat (*arsis*) and downbeat (*thesis*). As a practical aid, Mocquereau devised cheironomic gestures in the form of undulating lines that were sometimes superimposed on the melodies to depict the ebb and flow of the *arsis* and *thesis* movement (fig.12).

Although much labour and 'Romantic' scholarship went into the preparation of the Pothier, Vatican and Solesmes chant books, the latter cannot be considered critical editions in any sense, because they lack commentaries and do not specify the manuscript sources of each melody. Special collections, such as the Solesmes *Variae preces* (1896) and Carl Ott's *Offertoriale* (1935) (see Steiner, K1966, p.164), provide some clues to the sources. However, the modern chant books are by and large functional compilations. To the inexperienced student, these books can easily seem to possess an absolute authority, both musically and liturgically, and can stand as formidable barriers to a true understanding and appreciation of the immense diversity of medieval chant. Such an understanding may be further impeded by the widespread use of textbooks based almost entirely on these publications (for example, Apel's *Gregorian Chant*, C1958).

In the later decades of the 20th century an offshoot of the Solesmes school emerged whose adherents associated themselves with the palaeographic theories of the Solesmes Benedictine monk Dom Eugène Cardine (1905–88). This is the field of Gregorian semiology ('Sémiologie grégorienne'), which extends and modifies the earlier work at Solesmes on the rhythmic detail of the early neumed manuscripts. The principal features of this detail reside in the use of supplementary strokes (*episemata*) attached to the St Gallen neumes, letters ('significative' or 'Romanus' letters) complementing the neumes, the modification of normal neume shapes to indicate peculiarities of delivery, and the way in which notes are grouped (reflected in the 'coupure neumatique', or 'neumatic break'). The wealth of detail is indeed impressive. For example, Smits van Waesberghe (J.i 1936–42, ii, p.250) reported that over 32,300 rhythmic letters occur in *CH-E* 121 (facs. in PalMus, 1st ser., iv, 1894/*R*), over 4100 in *SGs* 359 (PalMus, 2nd ser., ii, 1924/*R*) and over 12,900 in *SGs* 390 and 391 (PalMus, 2nd ser., i, 1900/*R*).

The new investigation of these rhythmic signs is important in two respects: firstly, it has stimulated considerable interest in close reading of primary sources; second, and perhaps more fundamentally, it may contribute to a better historical and musicological understanding of early chant. Semiotics has gained widespread popularity in other fields of music (see J.-J. Nattiez: 'Reflections on the Development of Semiology in Music', *MAn*, viii, 1989, pp.21–75; and J.M. Joncas: 'Musical Semiotics and Liturgical Musicology: Theoretical Foundations and Analytic Techniques', *Ecclesia orans*, viii, 1991–2, pp.181–206); but despite the extraordinary claims made for Gregorian semiology, not least by Cardine himself – 'semiology is the entrance necessary for all knowledge of Gregorian chant' – it is probably still too early to assess its practical implications. Most semiological chant research is published in *Etudes grégoriennes*, *Rivista internazionale di musica sacra*, *Beiträge zur Gregorianik* and *Studi gregoriani*.

12. *Cheironomic notation from A. Mocquereau's 'Le nombre musical grégorien, ii (1927), p.710*

A development of great importance in the history of Western plainchant began on 4 December 1963 when the Second Vatican Council (11 October 1962 to 8 December 1965) promulgated its first official document 'The Constitution on the Sacred Liturgy' (*Acta apostolicae sedis*, lvi, 1964, pp.128–9). Outwardly, the article in chapter 5, 'Of Sacred Music', seems very similar to earlier 20th-century legislation on church music, such as Pius X's *Tra le sollecitudini* of 22 November 1903 (*Acta sanctae sedis*, xxxvi, 1903–04, pp.329–39); the *Divini cultus sanctitatem* of 20 December 1928 (*Acta apostolicae sedis*, xxi, 1929, pp.33–41); the *Mediator Dei et hominum* of 20 November 1947 (ibid., xxxix, 1947, pp.588–91); the *Musica sacra disciplina* of 25 December 1955 (ibid., xlviii, 1956, pp.5–25); and the *Instructio de musica sacra et sacra liturgia* of 3 December 1958 (ibid., l, 1958, pp.630–63). Gregorian chant is extolled in fashionable 19th-century jargon, and acknowledgment is given in the manner expected to sacred polyphony, the typical editions, the use of the organ and the role of the modern composer (Articles 113, 116, 117, 120, 121).

Nevertheless, the true intent of liturgical renewal expressed elsewhere in the Constitution is scarcely traditional. Faced with an increasingly secularized society, the Council sought to retain the allegiance of the faithful by endorsing a new pastoral theology of 'active participation' ('actuosa participatio'; see Articles 14, 21, 30 etc.). Unlike the reforms brought about by the Council of Trent, which were conservative in that they sought to standardize and retain existing liturgical practice throughout Europe, the reforms of the Second Council have been regarded by many as essentially contrary to any form of liturgical development known in the past. Fundamental changes have taken place that have profoundly affected the nature and function of traditional Gregorian chant: vernacular languages have largely replaced Latin (Articles 36, 54), completely new liturgical formularies have been introduced, and the structures of the Mass, Office and the liturgical year have been revised (Articles 50, 107 etc.). (*See also* LITURGY OF THE HOURS, and ORDO CANTUS MISSAE.)

Despite the *Instructio de musica in sacra liturgia* (*Acta apostolicae sedis*, lix, 1967, pp.300–20) issued by the Sacred Congregation of Rites on 5 March 1967 to implement the articles of chapter 6, a widespread debate over the democratization of church music continues. Some regard the juridical documents on sacred music published since 1900, the Vatican and Solesmes chant books and later liturgical publications (such as the Roman gradual of 1974, the *Graduale triplex* of 1979 and the *Psalterium, cum cantu gregoriano* of 1981) as out of touch with the

realities of the post-Conciliar period. Others regard the widespread promotion of the type of 'liturgical' music exemplified by songs in popular idiom, often with a strong socio-political message, slender theological content and variable musical and literary merit, as utterly alien to the Church's heritage; in terms of its melodic and harmonic style, its circumstances of performance (generally young, untrained voices against an accompaniment of guitars, percussion, electronic keyboards etc.) and its secular ethos, much of this music is barely distinguishable from certain genres of pop music.

Given the periodic nature of liturgical reform – approximately every 60 years since the Council of Trent – one might predict that in about the year 2025 another Council will have to be called to deal with, among other things, the liturgical and musical chaos resulting from too liberal an interpretation of 'actuosa participatio' and from the virtual abandonment by the Church of its traditional musical patrimony. At that time it might be well to return some semblance of orthodoxy to the celebration of the liturgy and to restore *cantus planus* to its central place within the Roman rite.

K The Proper and Ordinary chants of Mass and Office, hymnody, processional chants: studies of history and style. L Theory. M Paraliturgical categories: tropes, sequences, conductus, *versus*, cantiones. N Liturgical dramas, *planctus*, *Marienklagen*. O Studies of specific medieval masses, Offices, feasts, hagiography. P Performance. Q Plainchant and liturgy in the religious orders. R Chant dialects, regional variants, institutions, personalities. S Scandinavia and Central Europe. T Latin America. U. From the Council of Trent to the present.

A: MODERN EDITIONS AND RELATED LITERATURE

(i) Plainchant books (selective list)

D = no. in lists of Société de St Jean l'Evangéliste, Desclée & Cie, Tournai, printers to the Holy See and the Sacred Congregation of Rites.

Antiphonale missarum juxta ritum sanctae ecclesiae mediolanensis, ed. G.M. Suñol (Rome, 1935), D 816 [Ambrosian]

Antiphonale monasticum pro diurnis horis (Tournai, 1934), D 818 [AM]

Antiphonale romanum-seraphicum pro horis diurnis (Paris, 1928), D 834 [Franciscan]

Antiphonale sacrosanctae romanae ecclesiae (Rome, 1912), D 820 [AR]

Antiphonarii cisterciensis ... auctoritate Gabrielis Sortais editi (Westmalle, 1954–5)

Antiphonarium cisterciense auctoritate Dominici Rogues editum (Westmalle, 1947)

Compendium gradualis et antiphonalis romani pro dominicis et festis (Paris, 1924), D 790c

Delectus missarum e graduali romano: a Selection of Masses from the Roman Gradual, Vatican Version. Modern Notation with Rhythmical Signs, Fischer edition, 4370 (New York, 1919) [chants notated in quavers and crotchets]

Dominicale romanum cantus ad missam, vesperas, completorium et benedictionem SS. Sacramenti in dominicis et festis praecipuis (Tournai, 1949), D 865

Graduale cisterciense auctoritate R.D. Hermanni Josephi Smets (Westmalle, 1934)

Graduale juxta ritum sacri Ordinis Praedicatorum auctoritate ... Emmanuelis Suarez (Rome, 1950) [Dominican]

Graduale juxta ritum sacri Ordinis Praedicatorum auctoritate Hyacinthi M. Cormier (Rome, 1923) [Dominican]

Graduale romanum ... editio Schwann P (Düsseldorf, 1953)

Graduale romanum ... restitutum et editum Pauli VI (Solesmes, 1974) [follows liturgical reforms of Vatican II]

Graduale sacrosanctae romanae ecclesiae (Rome, 1908), D 696 [GR]

Graduale sacrosanctae romanae ecclesiae (Burnham, 1930) [Plainsong and Mediaeval Music Society pubn]

Graduale triplex, seu Graduale romanum Pauli PP. VI cura recognitum & rhythmicis signis a Solesmensibus monachis ornatum, neumis laudunensibus (cod. 239) et sangallensibus (codicum San Gallensis 359 et Einsidlensis 121) nunc auctum (Solesmes, 1979)

Hymnarium cisterciense auctoritate Gabrielis Sortais editum (Westmalle, 1952)

Hymni de tempore et de sanctis in textu antiquo et novo cum tonis usitatis in congregatione gallica O.S.B. (Solesmes, 1885)

Liber hymnarius cum invitatoriis & aliquibus responsoriis (Solesmes, 1982))

Liber responsorialis pro festis I. classis et communi sanctorum juxta ritum monasticum (Solesmes, 1894), D 831

Liber usualis missae et officii pro dominicis et festis I vel II. classis (Rome, 1921), D 780

The Liber Usualis with Introduction and Rubrics in English Edited by the Benedictines of Solesmes (Tournai, 1934), D 801 [LU]

Liber vesperalis juxta ritum sanctae ecclesiae mediolanensis, ed. G. M. Suñol (Rome, 1939), D 811 [Ambrosian]

Mass and Vespers with Gregorian Chant for Sundays and Holy Days: Latin and English Text Edited by the Benedictines of the Solesmes Congregation (Tournai, 1957), D 805

Missale romanum auctoritate Pauli PP. VI promulgatum: Ordo missae in cantu (Solesmes, 1975)

Offertoriale, sive Versus offertoriorum cantus gregoriani (Paris, 1935), D 837

Praefationes in cantu missale romanum auctoritate Pauli P. VI promulgatum (Solesmes, 1972)

Processionale monasticum ad usum congregationis gallicae Ordinis Sancti Benedicti (Solesmes, 1893), D 830

Processionarium juxta ritum sacri Ordinis Praedicatorum auctoritate ... Emmanuelis Suarez (Rome, 1949) [Dominican]

Processionarium juxta ritum s. Ordinis Praedicatorum auctoritate ... Hyacinthe Marie Cormier (Rome, 1913) [Dominican]

Proprium de tempore pro partibus Gradualis romani ... cantum gregorianum harmonice modulavit ad normam editionis rhythmicae a Solesmensibus monachis exaratae, ed. J. Baas (Paris, 1925), D 761H [org accomp. to part of the 1908 Solesmes GR]

Psalterium monasticum (Solesmes, 1981)

Variae preces ex liturgia, tum hodierna tum antiqua (Solesmes, 1896), D 808

Vesperale romanum, cum cantu gregoriano (Tournai, 1924), D 840

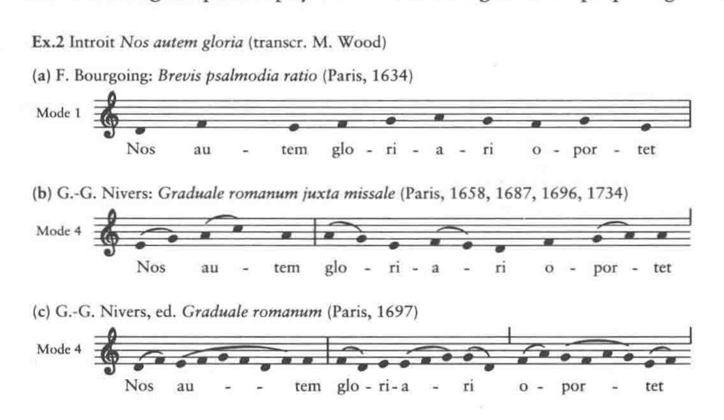
Ex.1 Introit *Salve sancta parens* (transcr. M. Wood)



Plain-chant musical (Fr.). The reformed or newly composed chant of the 17th to 19th centuries in France, related to the Italian *canto fratto*. The decisive impetus came in the early 1630s from the Oratorians of the rue St Honoré, whose church was designated the royal chapel of the Louvre by Louis XIII, and whose superior conceived the idea of attracting the courtiers by introducing a new kind of chant combining features of the ecclesiastical and modern styles. This initiative resulted in the first collection of such chants – the *Brevis psalmodiae ratio* (Paris, 1634) by François Bourgoing, a member of the Oratory congregation. It was published with an approbation by Mersenne and contains new chants and simplified versions of known melodies; with rare exceptions, all the chants are syllabic. Resembling this work in its simplicity is Nivers' *Graduale romanum juxta missale*, the most extensive collection of *plain-chant musical*, published by Ballard in 1658. Originally intended for use by Benedictine nuns, it was subsequently reprinted several times for Benedictine and Augustinian nuns. Both the gradual and the alleluia for any given liturgical day are composed in the same mode, probably to ease the transition between these two consecutive chants and to impose a general sense of modal and tonal order on the Mass Propers. In 1665 Ballard published a set of *Leçons de Ténèbres en plein-chant musical composé dans le goût de M. Nivers* (Nivers may have coined the term). Four years later, Henry Du Mont brought out *Cinq messes en plain-chant* (Paris, 1669), of which the *Messe royale* kept its popularity throughout France well into the 20th century.

The first theoretical formulations appeared in *L'antiphonaire de Paris* (1681) and in Nivers' *Dissertation sur le chant grégorien* (Paris, 1683), although Nivers' work is more useful for understanding his philosophy of editing traditional melodies (*Graduale romanum*, 1697) than for divining his style of chant composition. Superfluous neumes and note-shapes were eliminated and durations assigned to the remaining ones, false intervals and abuses of prosody, such as neumes on short syllables, were corrected, melismas eliminated, accidentals (including the sharp) introduced, and rules for ornamentation and tempo established; in short, everything possible was done to bring what were understood to be corrupt melodies into conformity with the rules of quantity, pronunciation, expression and good taste. New melodies were freely invented in the same vein. Nivers justified his changes by detailed criticism of traditional melodies, and his attitude was reflected over half a century later in the title of a *Traité critique du plain-chant contenant les principes qui en montrent les défauts et qui peuvent conduire à le rendre meilleur* (Paris, 1749) by Cousin de Contamine.

The opening phrases of two introits, *Salve sancta parens* and *Nos autem*, illustrate some of the more intriguing aspects of *plain-chant musical*. Ex.1*a* is a simplified version, stripped of all but structural notes, of the more elaborate 'Gregorian' melody in ex.1*c*; Nivers' version in ex.1*b* retains much of the Gregorian melody, but a leading note has been added on the second syllable of 'sancta' and there are half the number of notes on the first syllable of 'parens'. In ex.2*a* occasional structural notes are borrowed from the Gregorian melody in ex.2*c*, but the complete introit ends on *d'*, thus transforming it into a mode 1 chant; Nivers' version in ex.2*b* confines itself to mode 4, but it bears little resemblance to the Gregorian melody, and its continuation is replete with raised leading notes and melodic ornaments. Many of Nivers' chants, in fact, are unlike any other known versions. Innovations were to continue into the 18th century, and in later neo-Gallican graduals, for example, both melody and text were abandoned.

The chant was accompanied by the organ in harmony (examples of such accompaniments survive in *F-Pc* Rés.476, *c*1690, printed in *Livre d'orgue attribué à J.N. Geoffroy*, ed. J. Bonfils, Paris, 1974; and *F-V* 1055 (60), compiled by Luc Marchand in 1772) or doubled by the serpent; it served as the melodic basis for organ versets with which it alternated (e.g. *La messe de 2. classe* in *Livre d'orgue de Marguerite Thiery*, ed. J. Bonfils, L'organiste liturgique, xxv, Paris, 1956, based on an original mass by Nivers). Chants were adapted and composed for the principal religious congregations, the tunes varying among places and dioceses. Nivers himself was charged with preparing Office collections for the

Ex.2 Introit *Nos autem gloria* (transcr. M. Wood)

Augustinians, Benedictines, and priests of the communities of St Sulpice and St Cyr. The French chants spread to dioceses in the southern Netherlands and Germany. As its popularity grew in the 18th century, the quality of *plain-chant musical* declined; by 1750 Léonard Poisson was complaining of 'un plain-chant baroque', and even Rousseau (*Dictionnaire*) preferred the traditional kind, in which he detected vestiges of the music of the Greeks. Nevertheless, the *Méthode nouvelle pour apprendre parfaitement les règles du plain-chant* (Poitiers, 1748) by F. de La Feillée went through edition after edition well into the 19th century, inspiring hostile polemics like that of D'Ortigue in his *Dictionnaire* (1853). The circle was closed when the new reformers, the Benedictines of Solesmes, with the zeal of a Viollet-le-Duc, 'gregorianized' original 17th-century chants by undoing the rhythm, removing accidentals and adding melismas.

Plainsong. *See* PLAINCHANT.

Plainsong and Mediaeval Music Society. English musical society. Its foundation in November 1888 (reported in the *Musical Times*, March 1889) marked an important stage in the revival in England of plainsong as music for use in the Anglican Church. Its declared aims were to form a centre for the dissemination of information, to publish facsimiles and translations of foreign works, and to form a catalogue of all plainsong and measured music in England dating from before the Reformation. H.B. Briggs was honorary secretary until 1901; Anselm Hughes became secretary in 1926, and was until his death in 1974 a leading figure in the society. More recently, the chair has been held by Derek Turner, Frank Llewelyn Harrison, John Stevens, Christopher Page and John Harper.

The society maintained a choir for several decades, but has laid chief stress on the scientific study of plainsong and medieval music. Its numerous publications have been its chief claim to importance. By 1959, when a list was published in Anselm Hughes's book of reminiscences, *Septuagesima*, nearly 70 had appeared. About half were either didactic essays on plainsong, including a translation of the first part of Peter Wagner's *Einführung in die gregorianischen Melodien*, or editions of plainsong with English text for modern use. Facsimiles were notably represented in W.H. Frere's *Graduale Sarisburiense* (1892–4), *Antiphonale Sarisburiense* (1901–24; with an important introduction) and the catalogue *Bibliotheca Musico-Liturgica* (1894–1901). Other early and important publications were *Early English Harmony* by H. Wooldridge and Anselm Hughes, an edition of the Old Hall Manuscript, Hughes's *Worcester Mediaeval Harmony* and Van den Borren's *Polyphonia Sacra*. A scholarly journal has been published annually since 1978, the *Journal of the Plainsong & Mediaeval Music Society*, since 1992 entitled *Plainsong and Medieval Music*.

DAVID HILEY

Plaint (Fr.). *See* PLANCTUS.

Plainte [plaint] (Fr.: 'moan', 'groan', 'complaint'). (1) A term used mainly in French music of the 17th and 18th centuries, or in music of that period in the French style, for a slow, expressive piece of lamenting character; unlike the TOMBEAU, however, it was not necessarily associated with death. The most celebrated example is perhaps Froberger's *Plainte faite à Londres pour passer la melancholi* for harpsichord (*c*1662), which is marked to be played *lentement avec discretion*, i.e. with a sensitive and expressive rubato such as was also appropriate in the *tombeau*. Plaintes occur in J.C.F. Fischer's *Journal du printems* (1695) and *Pièces de clavessin* (1696), both of which are markedly French in style. The plainte in the former (in DDT, x, 1902/*R*) occurs in the second suite and makes a feature of passages for three solo instruments alternating with full five-part orchestral writing: this almost gives the impression of an operatic scene in which the chorus intensifies the grief expressed by a group of soloists. François Couperin's *Dixième concert* (1724) contains a 'Plainte pour les violes ou autres instrumens' marked *lentement et douloureusement*: its effect is achieved largely through slowly reiterated pedal notes in the bass coupled with a languid melody. Pieces with the title *Les tendres plaintes* occur in Rameau (a rondeau for harpsichord in *Pièces de clavecin*, 1724) and his contemporary J.-B. Dupuits (for hurdy-gurdy and bass). That by Rameau was used again in his *Zoroastre* (1749), where it is intended to convey not the gentle pathos which this and other plaintes perhaps now suggest but something much more positive – the mood of Amélite 'overwhelmed with sadness'. The plaint in Purcell's *The Fairy Queen* (1692), 'O let me ever, ever weep', is introduced by Oberon's words

> Sing me the Plaint that did so Nobly move,
> When *Laura* Mourn'd for her departed Love.

In its use of a chromatic ground bass it borrows a common feature of the Italian lament. These examples show that the term 'plainte' is associated not with any specific form

but rather with pieces employing particular techniques expressing sadness.

(2) Term used to denote particular ornaments; *see* ORNAMENTS, §7.

MICHAEL TILMOUTH (1)

Plaja, Alonso de (*fl* 1500). Spanish composer. Only a single composition, *Regina coeli* (*E-Bo* 5; reproduced in H. Anglès: *La música española desde la edad media hasta nuestros dias*, Barcelona, 1941, facs.21), is known. Its style and its appearance in a manuscript containing works by Isaac and Peñalosa, among others, suggest that Plaja was their contemporary. Each phrase opens with imitation; strongly marked rhythmic motifs with syncopations give the piece a popular air. The Kyrie and Gloria on the preceding folios attributed to 'Alonso' may also be by Plaja.

ISABEL POPE

Plakidis, Pēteris (*b* Riga, 4 March 1947). Latvian composer. He graduated from Valentins Utkins's composition class (1970) at the Latvian State Conservatory and worked as music director for the Latvian National Theatre (1969–74). Since 1974 he has taught composition and theory at the Latvian State Conservatory, where from 1991 he has been a professor. His favourite genre is the concerto for orchestra with solo group, and he has made free use of modernized forms of Baroque music such as the concerto grosso and other forms of instrumental dialogue. Purely musical ideas predominate over extra-musical ones, lending his work a neo-Classical and, in his early period, anti-Romantic disposition. Plakidis's stylistic base expanded in the 1980s, and the logic of Classically rational forms in his works conveniently balances the presentation of diverse musical ideas, Romantic ones included. His solo songs have gained attention for respecting the structure of modern Latvian poetry.

ARNOLDS KLOTIŅŠ

Plamenac, Dragan (*b* Zagreb, 8 Feb 1895; *d* Ede, the Netherlands, 15 March 1983). American musicologist of Yugoslav origin. He developed an interest in music at an early age but took a degree in law at Zagreb before studying composition with Schreker in Vienna (1912) and Vitězslav Novák in Prague (1919), and musicology with Pirro at the Sorbonne and Adler in Vienna, where he took the doctorate in 1925 with a dissertation on Ockeghem's motets and chansons. At first he worked as a répétiteur and assistant conductor at the Städtische Oper in Berlin (1926–7); he then taught musicology at the University of Zagreb (1928), and became a corresponding member of the Yugoslav Academy of Sciences (1936). In 1939 he went to the USA as the Yugoslav representative to the IMS Congress in New York, and remained there after the outbreak of war. He became an American citizen in 1946. He was professor of music at the University of Illinois (1954–63) and visiting professor of music at the University of Pittsburgh (1964–5) and the University of California, Santa Barbara (1967). He was awarded fellowships by the Guggenheim Foundation and the National Endowment for the Humanities, and also held several offices in the American Musicological Society. He received the honorary doctorate of music from the University of Illinois in 1976.

Plamenac's research and publications centred on music of the 14th to 16th centuries and that of the Adriatic coastal areas in the Renaissance and the early Baroque period. His edition of the works of Ockeghem made possible for the first time a serious evaluation of this composer's position in the development of musical style in the second half of the 15th century; the thoroughness that characterized his work is shown by his continual revisions and enlargements of this edition.

Plamenac's research in the Burgundian chanson repertory is marked by an understanding both of the sources and of the music itself: in particular his important manuscript studies in this field helped to clarify problems about late 15th-century sources. The articles on and the edition of the Faenza Codex provided important insights into the practice of early 15th-century instrumental music.

TOM R. WARD/R

Planck, Stephan (*b* Passau, *c*1457; *d* Rome, 17 Feb 1501). German printer, active in Italy. He apparently worked with Ulrich Han in Rome; he came into possession of Han's business in 1478, issuing the first of 325 books in 1479 from 'the house of the former Udalricus'. Between 1482 and 1497 he used the earliest Roman plainchant type (that in Han's 1476 *Missale*) for eight music books – five missals (1482, 1488, 1492, 1494, 1496), two pontificals (1485, 1497) and a baptismal (1494). In addition he introduced 12 text types, some as early as 1479; he retained only the music type of his predecessor, adding a few characters of his own. Planck's ability as type designer and cutter, and his skill in setting the type for complicated melismatic chant, suggests he participated in creating the first music type in Italy.

M.K. DUGGAN

Plancken, Corneille Vander (*b* Brussels, 25 Oct 1772; *d* Brussels, 9 Feb 1849). Belgian violinist, clarinettist and composer. He studied the violin with Eugène Godecharles and Jean Pauwels and was admired as a virtuoso by Viotti, who also became his close friend. From 1797 until about 1817 he was solo violinist of the orchestra at the Grand Théâtre de la Monnaie in Brussels, and in 1820 the king, Willem I of Orange, appointed him first solo violin of the royal chapel, a position he held until the Revolution of 1830. He was also the conductor of the Société du Grand Concerts and the Société Philharmonique, as well as an excellent clarinettist. Known as the founder of the violin school made famous in the 19th century by De Beriot and Vieuxtemps, his pupils included L.-J. Meerts, André Robberechts and J.F. Snel. He composed several violin concertos and a clarinet concerto, none of which has survived.

Planckenmüller, Georg. *See* BLANCKENMÜLLER, GEORG.

Plançon, Jean [Jehan]. *See* **PLANSON, JEAN.**

Plançon, Pol [Paul-Henri] (*b* Fumay, Ardennes, 12 June 1851; *d* Paris, 11 Aug 1914). French bass. A pupil of Duprez and Sbriglia, he made his début at Lyons in 1877. He first sang at the Paris Opéra in 1883 as Gounod's Méphistophélès, and remained there for ten seasons, taking part in the premières of Massenet's *Le Cid* (Count of Gormas) and Saint-Saëns's for 14 consecutive seasons (1891–1904), singing, besides his French and Italian roles, occasionally in German and even in English (as Friar Francis in the première of Stanford's *Much Ado About Nothing*). In 1893 he appeared for the first time at the Metropolitan Opera, returning as leading bass for 12 of the subsequent seasons there until his farewell to the house in 1908.

Judging by the recordings that survive, Plançon was the most polished singer of his time. His beautiful *basse chantante* had been admirably schooled, and his style was extremely elegant; his many recordings (1902–8) embody standards otherwise outside the experience of a present-day listener. Not only his flawless trills and rapid scales but his cantabile and pure legato, as in 'Voici des roses' (*Faust*) and 'Vi ravviso' (*La sonnambula*), are exemplary.

DESMOND SHAWE-TAYLOR/R

Planctus (Fr. *plaint*, *complainte*; Ger. *Klage*; It. *pianto*, *lamento*; Provençal *planh*). A song of lamentation. As a literary and musical genre it was widespread in the Middle Ages, both in Latin and in the vernaculars. There is evidence of the following types of planctus from the 9th century (classification from Dronke, 1970): (*a*) vernacular

Pol Plançon as Méphistophélès in Gounod's 'Faust'

planctus to be sung by women; (*b*) dirges for the dead, especially for royal and heroic personages; (*c*) 'Germanic complaints of exile and voyaging'; (*d*) fictional, as distinct from real-life, planctus on classical or biblical themes. From the 12th century onwards, (*e*) dramatic or semi-dramatic laments of the Virgin Mary and (*f*) *complaintes d'amour* are common.

The earliest planctus for which music survives are in the manuscripts associated with the abbey of ST MARTIAL at Limoges: they include *A solis ortu usque ad occidua* (type *b*) on the death of Charlemagne in 814, written in staffless neumes without mensural indications (*F-Pn* lat.1154; 10th century); and in *F-Pn* lat.1139 (11th–12th centuries) there is a 'Lamentatio Rachelis' (see Coussemaker), which is a dramatic trope to the liturgical responsory *Sub altare Dei* (type *d*).

Pre-eminent among the 12th-century planctus are six by PETER ABELARD: the principal manuscript for them, *I-Rvat* Reg.lat.288, contains staffless neumes; his poetic subjects are laments of type *d*. Formally his planctus are related to the sequence (*see* SEQUENCE (i)), two to the 'classical', four to the 'archaic' type. There is a close relation between the earlier planctus and sequences; indeed sequence melodies are sometimes named for planctus. From this relation arises another, between the planctus and the north French LAI of the 12th and 13th centuries: whichever came first, the 'Lai des pucelles' is sung to the same melody as Abelard's 'Planctus virginum Israel'; and the 13th-century (?)English *Samson, dux fortissime*, a dramatic lament with singing roles for Delilah and for a chorus (*GB-Lbl* Harl.978), is both formally and in melodic idiom related to the lai. (For more details of the planctus–sequence–lai complex, see Spanke, 1931 etc., and Stäblein, 1962.)

The principle of contrafactum, or writing words to a pre-existing melody, extends also to the Provençal planh: the planh is, then, a variety of the sirventes, with topical subject and with borrowed form and melody. The most famous troubadour planh, Gaucelm Faidit's lament on the death of Richard the Lionheart (*d* 1199), is, however, thought to have an original melody. Literary texts in this genre are assembled and classified in Springer (1895); surviving music is available in the standard editions and anthologies (*see* TROUBADOURS, TROUVÈRES).

The most important type of planctus in the 12th and 13th centuries is the *planctus Beatae Virginis Mariae*; it appears in all European countries (Wechssler, 1893, contains examples in Latin and seven vernaculars, not including English, for which see Taylor, 1906–7). The texts most commonly found are *Planctus ante nescia* and *Flete, fideles animae* (see Young, 1933, i, 496ff). The genre is non-liturgical; but planctus were certainly sung in church. At Palma (Mallorca), perhaps in the 13th century, laments were sung 'by three good singers ('a tribus bonis cantoribus'); later, in about 1440, at least six people took part, and their laments were sung 'before the crucifix set up in the middle of the church' (Donovan, 1958). Whether these ceremonies constituted a 'play' is not certain; but the importance of the planctus in liturgical drama is demonstrated by the centrality of the 'complaints' of the three Marys in plays of the Resurrection (*see* VISITATIO SEPULCHRI), of the Virgin Mary in the rarer Passion plays, of Rachel in plays of the Holy Innocents, and of Daniel in the Daniel plays. Earlier scholars (Chambers, Young) were inclined to see the origins of the Passion play in the *planctus Mariae*. This view is now questioned; the discovery of the extensive Monte Cassino Passion play from the 12th century with only the briefest planctus (Sticca, 1970) has increased doubt. *See also* MEDIEVAL DRAMA, §§III, 2(i); III, 3(iv).

The Waldensians, a Protestant minority originally from France, developed their own practice of singing *complaintes*, that were narrative songs on Biblical themes (*see* REFORMED AND PRESBYTERIAN CHURCH MUSIC, §1, 4(i).

The music of the dramatic or quasi-dramatic planctus was not taken directly from, or composed in imitation of, Gregorian chant. Its emotionalism often contrasts with the restraint of the chant and may derive rather from the *Totenklage* (dirge for the dead) tradition.

The term 'planctus' has also been applied to the emotional utterances typical of domestic laments, where they are often used as choral refrains. *See* LAMENT.

JOHN STEVENS

Plánický [Planitzky, Planiczky, Planiciczky], **Josef Antonín** [Joseph Anton] (*b* Manětín, Bohemia, 27 Nov 1691, or Pilsen, *c*1690; *d* Freising, Bavaria, 17 Sept 1732). Czech composer. He may be identified with the son Jiří Josef born to Jaroslav Plánický, teacher and organist in Manětín, on 27 November 1691; but in a later document from Countess Maria Gabriela Lažanska (15 October 1720) he is called 'königlicher Kreys-Stadt Pilssen im Königreich Böhmen Patritius'. Countess Lažanska employed him as private tutor for her children and at her small court he met the composers Mauritius Vogt and Gunther Jacob. Probably he was a pupil of Vogt, who was a theorist. With high recommendations from the countess, Plánický travelled in October 1720 in Bohemia, Moravia and Austria. The presence of one of his compositions (a movement from a motet) in Göttweig Abbey suggests that he proceeded from Vienna to Germany, where in 1722 he seems to have been in Freising (now married; he arrived with his brother-in-law, the court musician Ferdinand Notrupp, from Nuremberg). In the same year he applied for a post as tenor in the duke-bishop's musical establishment, and was engaged as both singer and instrumentalist, with the duty of teaching the boys in the seminary. His capabilities must have been considerable as in 1724 he was commissioned to write the opera celebrating a 1000th anniversary (although the establishment included the prominent composer J.J. Pez). The opera, *Zelus divi corbiniani ecclesiae frisingensis fundamentum*, performed on 7 October 1724, is now lost. Apart from documents regarding Plánický's finances nothing further is known of him except the date of his death, and most of his works were lost when the church archive was auctioned in 1803. In his only surviving work, a collection of 12 solo motets, *Opella ecclesiastica seu Ariae duodecim nova idea exornatae* (Augsburg, 1723; ed. in MAB, ii/3 (1968, 2/1988)), he emerges as a composer of considerable dramatic gifts skilled in writing for the voice.

CAMILLO SCHOENBAUM

Planquette, (Jean) Robert (*b* Paris, 31 July 1848; *d* Paris, 28 Jan 1903). French composer. He studied briefly at the Paris Conservatoire, gaining a *premier prix* for solfège in 1867 and a *second prix* for piano in 1868; he studied harmony under Duprato. His early works include piano reductions of operas and some songs, among them a set of 12 military songs, *Refrains du régiment*. Planquette sold these outright and thus failed to benefit financially when an instrumental arrangement by François Rauski of one of them, *Le régiment de Sambre-et-Meuse*, became one of France's most popular military marches. For the most part Planquette was forced to make such living as he could from playing the piano and composing songs for *cafés-concerts*. He had great success with a musical monologue, *On demande une femme de chambre*, sung by a leading entertainer of the day, Anna Judic.

His first one-act operettas were performed at the Eldorado music hall and the Délassements-Comiques, and it was while working as a *café-concert* pianist that he had the opportunity to write the operetta that was to bring him fame. *Les cloches de Corneville*, whose book was originally offered to Hervé, had over 400 consecutive performances after being produced at the Folies-Dramatiques in 1877 and reached 1000 performances within a decade. Its 'Legend of the Bells' was especially popular, and its success was repeated abroad, notably in London, bringing Planquette into considerable demand. He was commissioned to write the one-act *Le chevalier Gaston* for the opening of the Monte Carlo Opera House in 1879; while for London he composed *Rip van Winkle* (1882), based on Washington Irving's novel. It has remained his second most popular work and is considered by some to be superior to *Les cloches*, though lacking its melodic quality. For London, too, he wrote *Nell Gwynne* (1884), and adapted *Les voltigeurs de la 32ème* (1880) and *Surcouf* (1887) into *The Old Guard* (1887) and *Paul Jones* (1889) respectively.

The most notable of his later operettas was *Mam'zelle Quat'sous* (1897), but in France his new works after *Les cloches* were less well received and failed to rival the successes of Audran. Planquette was less prolific than other operetta composers of his time, but a more conscientious craftsman. This occasionally results in a lack of spontaneity and a tendency towards stereotyped patterns, but at his best Planquette had an attractive gift for rhythmic élan and melodic refinement. Far from finding the success of *Les cloches* oppressive, he was very fond of Normandy, where it was set. He had a villa, which he called 'Les cloches', built on the Normandy coast at Merville near Cabourg, where he became a municipal councillor. He was also a Chevalier de la Légion d'Honneur.

WORKS
(*selective list*)

STAGE

operettas unless otherwise stated; first produced, and vocal scores published, in Paris unless otherwise stated

Méfie-toi de Pharaon (1, J. Villemer and L. Delormel), Eldorado, 12 Oct 1872 (n.d.)
Paille d'avoine (1, A. Jaime, J. Rozale and A. Lemonnier), Délassements-Comiques, 12 March 1874 (?1895)
Le serment de Mme Grégoire (1, L.J. Péricaud and Delormel), Eldorado, 12 Oct 1874 (n.d.)
Le Zénith (1, A. Perreau), Eldorado, 24 April 1875
Le valet de coeur (saynète, 1, Péricaud and Delormel), Alcazar d'Eté, 1 Aug 1875 (n.d.)
Le péage (E. André), Théâtre de la Porte Saint Martin, 21 Oct 1876
Les cloches de Corneville (oc, 3, Clairville and C. Gabet), Folies-Dramatiques, 19 April 1877 (1877)
Le chevalier Gaston (1, P. Véron), Monte Carlo, Opéra, 3 March 1879 (1880)
Les voltigeurs de la 32ème (3, E. Gondinet and G. Duval), Renaissance, 7 Jan 1880 (1880); rev. as The Old Guard (H.B. Farnie), London, Avenue, 26 Oct 1887 (London, 1887)
La cantinière (3, P. Burani and F. Rybère), Nouveautés, 1880 (1881)
Les chevaux légers (1, Péricaud and Delormel), Eldorado, 15 Dec 1881 (1882)
Rip van Winkle (3, Farnie, after W. Irving), London, Comedy, 14 Oct 1882 (London, 1882); rev. as Rip! (H. Meilhac and P. Gille), Folies-Dramatiques, 11 Nov 1884 (1884)
Nell Gwynne (3, Farnie), London, Avenue, 7 Feb 1884 (London, 1884); rev. as La princesse Colombine (M. Ordonneau and André), Nouveautés, 7 Dec 1886 (1887)
La crémaillère (3, Burani and A. Brasseur), Nouveautés, 28 Nov 1885 (? only 2 songs pubd, 1886)
Surcouf (prol., 3, H. Chivot and A. Duru), Folies-Dramatiques, 6 Oct 1887 (1887); rev. as Paul Jones (Farnie), London, Prince of Wales, 12 Jan 1889 (London, 1889)
Captain Thérèse (3, G. a'Beckett, A. Bisson and F.C. Burnand), London, Prince of Wales, 25 Aug 1890 (London, 1891); Gaîté, 1 April 1901 (1901)
La cocarde tricolore (3, Ordonneau, after Cogniard brothers), Folies-Dramatiques, 12 Feb 1892 (1892)
Le talisman (3, A.P. d'Ennery and Burani), Gaîté, 20 Jan 1893 (1893)
Les vingt-huit jours de Champignolette (Burani), République, 17 Sept 1895
Panurge (3, Meilhac and A. de Saint-Albin), Gaîté, 22 Nov 1895 (Paris, 1895)
Mam'zelle Quat'sous (4, A. Mars and M. Desvallières), Gaîté, 5 Nov 1897 (1897)
Le fiancé de Margot (1, Bisson) (1900)
Le paradis de Mahomet (3, H. Blondeau), Variétés, 15 May 1906 (1906), completed by L. Ganne

OTHER WORKS

Some dramatic monologues, incl. On demande une femme de chambre (Véron) and La confession de Rosette: both 1876 (Paris, 1878)
Songs, incl. Refrains du régiment (Paris, *c*1870); dances
Several vocal scores of operas by various composers

ANDREW LAMB

Planson [Plançon], **Jean** [Jehan] (*b* ?Paris, *c*1559; *d* after 1611). French composer and organist. On 8 July 1575 he was appointed organist at the collegiate church of St Germain-l'Auxerrois, Paris; although Jean Lesecq is known to have replaced him in the following December, he was recorded as still holding the post when he won the harp prize for his five-voice motet *Aspice Domine* and the *triomphe* prize for his seven-voice setting of the sonnet *Ha, Dieu que de filetz* in the St Cecilia competition at Evreux in 1578. From 1586 to 1588 he was organist at St Sauveur, Paris. In 1612 a 'Jehan Pinson' was described as 'marchant bourgeois de Paris et musicien' and about 53 years old.

Planson's prize-winning motet and sonnet were published in his *Quatrains du Sieur de Pybrac, ensemble quelques sonetz et motetz* (Paris, 1583) for three, four, five and seven voices; the collection is devoted mainly to 19 settings of Pibrac's moralistic *quatrains*, but also includes eight sonnets (five to texts by Belleau) and six motets. Four years later his four-voice *Airs mis en musique par Jean Planson parisien tant de son invention que d'autres musitiens* (Paris, 1587; ed. H. Expert and A. Verchaly, Paris, 1966) appeared; the collection proved so popular that further editions appeared in 1588, 1593 and 1595. In his dedication to the amateur musician Jean Louvet, for his 'relaxation and pleasure during these troubled times', Planson promised a sequel of settings of more serious texts. Both his collections reflect the influence of the musicians of the Académie de Poésie et de Musique, Joachim Thibault de Courville, Beaulieu, Fabrice Marin Caietain and Le Jeune, but he preferred poems in a pastoral, folklike vein (such as those by Belleau, La Roque and Jean Bertaut, who is the only poet named in the *Airs*) to the *vers mesurés* of Baïf and his followers. The texts of 32 of the 37 *airs* were published without music at Paris in 1597, and were reprinted several times in the early 17th century. Although the *airs* were printed in the conventional four partbooks the settings are strictly syllabic and homophonic, with the melodies (sometimes borrowed and often folklike) in the top voice. The musical phrases are short and well-defined, with each line of text marked off by a bar-line; the poetic metres are often dance-like (a number have typical branle structure) but of irregular lengths. Three of the *airs* were set for voice and lute in Emanuel Adriaenssen's *Novum pratum musicum* (RISM 1592[22]) and another for lute solo in Jean-Baptiste Besard's *Thesaurus harmonicus* (RISM 1603[15]); a sacred contrafactum of *Puis que le ciel* appeared in *La pieuse alouette* (RISM 1619[9]). Planson also contributed two, more old-fashioned, four-voice chansons, *En m'oyant chanter quelquefois* and *Soyons joyeulx*, to one of Le Roy & Ballard's anthologies (RISM 1583[9]); both were inspired by settings of the same texts by Lassus. He is reported to have harmonized seven dance melodies (by the violinist Michel Henry) for a feast of the Confrérie de St Julien in Paris in 1587 (see F. Lesure: 'Le recueil des ballets de Michel Henry (vers 1620)', *Les fêtes de la Renaissance [I]: Royaumont 1955*, pp.205–19, esp. 206–7). (For further discussion see *MGG1*, F. Lesure; Y. de Brossard: *Musiciens de Paris, 1535–1792* (Paris, 1965); and A. Verchaly: Introduction to *Jehan Planson: Airs mis en musique à quatre parties (1587)*, Paris, 1966.)

FRANK DOBBINS

Plantade, Charles-Henri (*b* Pontoise, 14/19 Oct 1764; *d* Paris, 18/19 Dec 1839). French composer, cellist and teacher. As a youth he studied the cello, probably with J.-L. Duport; after his arrival in Paris he studied singing and composition with Langlé, the piano with Hüllmandel and the harp with Petrini. His first published works were

sonatas for harp and collections of romances. These gained him recognition, and by 1797 he was music master at the Institut de St Denis. From 1799 to 1807 (and later, 1815–16 and 1818–28) he taught singing at the Paris Conservatoire; his most celebrated pupil there was Laure Cinti-Damoreau. Having become music master to Hortense de Beauharnais, who later became Queen of the Kingdom of Holland through her marriage to Louis Napoleon, Plantade was appointed *maître de chapelle* at the Dutch court from 1806 to 1810. The apparent overlap between his activities at the Conservatoire and at court has been accounted for by a leave of absence from either the Conservatoire (Pierre) or from the court (Favre). Plantade was both singing master and stage director at the Paris Opéra from 1812 to 1815.

Until 1815 Plantade composed mostly stage works, but in 1816 he succeeded Persuis as music master to the royal chapel, a position he held throughout the reign of Charles X. In this capacity he wrote a number of religious works. With Cherubini and Lesueur, he supervised the musical events at the coronation of Charles X in 1825; these included performances of his *Te Deum* and *Regina coeli*, both of which were composed for the occasion. Plantade's music is consistent with French style at the turn of the 19th century. His formal background as a singing teacher is reflected both in the preponderance of vocal works in his output and the sympathetic quality of his melodies, which are pleasant, if undistinguished. Plantade's orchestral writing employs woodwind and brass with imagination. His instrumental passage-work is generally simple and scalar, but his overtures and arias often contain unexpected modulations. Although he favoured four-square phrasing, only occasionally writing an irregular melodic phrase, he handled metre changes with skill.

Plantade's son Charles-François Plantade (*b* Paris, 14 April 1787; *d* Paris, 26 May 1870) studied at the Paris Conservatoire and became a civil servant in the Ministry of Fine Arts. He was involved with the founding of the Société des Concerts du Conservatoire in 1828, and later with that of the Société des Auteurs, Compositeurs et Editeurs de Musique. His compositions include romances, chansons and chansonnettes.

WORKS

STAGE

first performed in Paris

PFE – *Théâtre Feydeau*

Les deux soeurs (oc, 1, [?P.G.] Pariseau), PFE, 22 May 1792
Les souliers mordorés (oc, 2, A. de Ferrières), PFE, 18 May 1793

LAURIE SHULMAN

Planté, Francis [François] (*b* Orthez, Basses-Pyrénées, 2 March 1839; *d* Saint-Avit, nr Mont-de-Marsan, Landes, 19 Dec 1934). French pianist. He made his début at the age of seven and won a *premier prix* in A.-F. Marmontel's class at the Paris Conservatoire in 1850. Several years later he returned there to study harmony with Bazin, winning a *second prix* in 1855. For a time he was an active performer in Parisian salons as a protégé of Liszt and Rossini and in chamber music concerts with Alard and Franchomme. After playing Beethoven's Concerto no.5 at the Société des Concerts du Conservatoire in 1861, he retired to the Pyrénées for ten years. He resumed his career in 1872, appearing regularly throughout Europe and Russia as soloist, concerto performer and chamber musician. From then on he was recognized as one of the greatest French pianists of the century. In 1886 he played Liszt's Concerto no.2 in A and Hungarian Rhapsody no.2 in Paris in the presence of the composer, who complimented him highly. His concerts could last from three to six hours, and he would sometimes discuss the music with members of the audience seated nearest to him. His only recordings, made in 1928, include seven Chopin études and works by Mendelssohn and Schumann. Despite his advanced age, they reveal an assured and spontaneous style, as well as the 'floating tone' for which he was famous.

CHARLES TIMBRELL

Plantin [Plantijn], **Christoffel** [Christofle, Christoph, Christophle] [Platinus, Christophorus] (*b* ?nr Tours, *c*1520; *d* Antwerp, 1 July 1589). Flemish printer of French birth. By 1549 he was in Antwerp, becoming a citizen and a member of the Guild of St Luke the following year. At first he worked as a bookbinder, but after an accident he became a printer in 1555. His combination of scholarship with business acumen made him the most prolific and important publisher of Antwerp during the 16th century. He published learned books of all kinds, including ones in specialized fields such as linguistics and science; many of the latter were illustrated with fine copper-plate engravings. At one time he employed 160 men and had 22 presses in operation. He sent books all over Europe and visited the Frankfurt fairs regularly.

In 1564 Plantin printed a French psalter with music, for which he had a royal privilege, but this book was later placed on the Index of prohibited books, as the religious

Three sizes of music type cut by Hendrik van den Keere and offered by Christopher Plantin in his type specimen of c1579 (68% of actual size)

troubles in the Low Countries intensified. As official printer to King Philip II of Spain, Plantin acquired a monopoly in printing missals and breviaries for Philip's dominions. During the years 1570–76 he printed more than 50,000 service books, the majority of which were sent to Spain. Although he was outwardly a fervent Catholic, and on good terms with the authorities, there is evidence that Plantin secretly belonged to heretical sects of Anabaptists, and printed for them also. From 1576, the year of the 'Spanish Fury', Plantin experienced severe trading and financial difficulties, and in 1583 he moved to Leiden, leaving the Antwerp business in the hands of his two eldest sons-in-law and returning to Antwerp only when the city's siege was lifted in 1585. He died there four years later.

Apart from the liturgical books, printed with plainsong music types, Plantin originally had no plans to print music, which he considered a risky business. However, when Philip withheld the promised subsidy for a sumptuous antiphoner (planned as a companion volume to the polyglot Bible he had, printed between 1568 and 1573), Plantin began to print music to use the 1800 reams of royal format paper ordered specially for the project. The first volume that he printed, *Octo missae* by George de La Hèle (1578), also uses the large woodcut initials designed for the antiphoner and was sold at 18 florins, a high price for the time. Plantin guarded himself against financial loss by requiring composers whose music he printed to pay for some copies themselves – sometimes for as many as 100 or 150 copies. It is noteworthy that the composers whose music Plantin published were musicians of high standing either in Antwerp or in Philip's chapel in Spain.

At Leiden, Plantin had acquired the title of university printer, and when he returned to Antwerp in 1585, this title passed to his second son-in-law, Frans Raphelengius (*b* Lille, 17 February 1539; *d* Leiden, July 1597), who took over the Leiden office. He printed no music, but as professor of Hebrew established Leiden as a centre of oriental printing. After his death, his two sons Christophe (*d* 1600) and Frans (*d* 1643) took over the business, though the title of university printer lapsed after 1600. The elder Frans and Christophe had become Calvinists, but the younger Frans remained a Catholic, journeyed to Italy, and after his brother's death published several books of madrigals by Cornelius Schuyt, town organist of Leiden (who had also travelled to Italy), and lent music type for an anthology of Italian madrigals (87 pieces by 37 composers) published in 1605 by H.L. de Haestens. Its final music publication was a volume of songs by Sweenlinck (1612) and the Leiden office closed in 1619. The Plantin types were also used in Haarlem for Sweelinck's last book of psalms, printed by H. Kranepoel in 1621, for Valerius's *Nederlandtsche gedenck-clanck* (1626) and for Padbrué's *Nederlandse madrigalen* (1631).

At Antwerp, Plantin's eldest son-in-law Joannes Moretus (Jan Moerentorf) (*b* Antwerp, 22 May 1543; *d* Antwerp, 26 September 1610) inherited the business. He completed the printing of Andreas Pevernage's chansons in four books, Plantin having died while the first was in the press. He printed some books of scholarship and a number of devotional books, and also published two volumes of music by Duarte Lobo. Moretus's sons, Balthasar (1574–1641) and Joannes (1576–1618), who succeeded him, published two books of masses by Lobo. In 1644 Balthasar Moretus the younger (1615–74), son

of Joannes the younger, published Palestrina's *Hymni sacri*, a large folio choirbook dedicated to Pope Urban VIII.

Although the music output of Plantin and his successors was small in relation to their other printing, their careful documentation of all their business affairs, including music publication, is of great historical importance. The records at Plantin's house (now the Museum Plantin-Moretus, Antwerp) include lists of books and music he took to the Frankfurt fairs, records of all books bought and sold, founts of type commissioned by him and all his business correspondence. Although his music books were expensive compared with those of his Antwerp contemporary Phalèse, the records show that his publications sold regularly into the 17th century. The high quality of paper, ink and presswork which characterize all Plantin publications ensured his high reputation throughout Europe.

Throughout his life Plantin was a keen collector of typefaces, including music type. In his inventories, music type is listed from 1575 (when he had seven sorts), and on his folio type specimen from about 1579 three music types by H. Van den Keere of Ghent are illustrated: 'grande, moyenne et petite musicque' (see illustration). Plantin also owned three founts of music type cut by ROBERT GRANJON, including one with round notes which, however, he appears not to have used. In 1565, he bought Susato's printing materials, including 'notte petitte & notte grosse' and he also received some type from the firm of Phalèse in settlement of debt. There are 28 sets of matrices for music type in the museum. These comprise 12 double-impression plainsong types (including eight cut by Van den Keere and one by Granjon) and 16 single-impression types, of which two are plainsong, two cut by Granjon, three cut by Van den Keere, and nine others.

PUBLICATIONS OF PLANTIN AND HIS SUCCESSORS
excluding liturgical books

ANTWERP

Les pseaumes de David (1564); G. de La Hèle: Octo missae, 5–7vv (1578); P. de Monte: Missa ... 'Benedicta es', 6vv (1579); J. de Brouck: Cantiones, 5, 6, 8vv (1579); C. de Navières: Les cantiques saints (1579); A. du Gaucquier: Quatuor missae, 5, 6, 8vv (1581); S. Cornet: Cantiones musicae, 5–8vv (1581); S. Cornet: Madrigali, 5–8vv (1581); S. Cornet: Chansons françoyses, 5, 6, 8vv (1581); A. de Pape: De consonantiis (1581); J. de Kerle: Quatuor missae, 5vv (1582); C. Le Jeune: Livre de mélanges (1585); P. de Monte: Liber I missarum (1587); D. Petri: Missa (1589), ?lost, listed in Plantin archive; A. Pevernage: Chansons, livre I [–IV] (1589–91); D. Lobo: Opuscula natalitiae noctis (1602); D. Lobo: Magnificat, 4vv (1605); D. Lobo: Liber missarum, 4, 5, 6, 8vv (1621); A. Chyliński: Canones XVI (1634); D. Lobo: Liber II missarum, 4–6vv (1639); G.P. da Palestrina: Hymni sacri (1644)

2 motets, 1 anon. (1595), 1 by C. Verdonck (1602), in historical works by J. Bochius

LEIDEN

A.M.S. Boethius: Vande vertroosting der wysheyd (1585); C. Schuyt: Il primo libro di madrigali, 5vv (1600); C. Schuyt: Hollandsche madrigalen (1603); C. Schuyt: Hymeneo, 6vv (1611); C. Schuyt: Dodici padovane (1611); J.P. Sweelinck: Rimes françoises et italiennes (1612)

Nervi d'Orfeo (1605[9]), printed by H.L. de Haestens 'con gli caratteri Plantiniani de Raphelengii'

SUSAN BAIN

Plantinga, Leon B(rooks) (*b* Ann Arbor, 25 March 1935). American musicologist. He took an MMus, with a major in piano, at Michigan State University. Continuing his graduate education at Yale University, he studied under Palisca and received the PhD in 1964. In 1963 he was appointed to the faculty at Yale, where he became professor of music (1974) and director of the humanities division (1994); he was a Fellow of University College, Oxford (1971–2). He is primarily concerned with musical style, genre and music criticism in the late 18th and early 19th centuries. His book *Schumann as Critic* is a careful study of this aspect of the composer; in it he describes the founding and goals of the *Neue Zeitschrift für Musik*, discusses Schumann's knowledge of music history and aesthetics and elucidates the critical outlook of his reviews. His study of Clementi (1977) quickly became a standard work on that composer and his book *Romantic Music* (1984), with accompanying music anthology, has come to be used as a customary teaching text.

PAULA MORGAN

Planxty. Irish folk-rock group. In 1970 the Irish singer-songwriter Christy Moore assembled a group of Irish musicians for his album *Prosperous*, including Donal Lunny (bazouki), Andy Irvine (mandolin) and the uillean piper Liam O'Flynn. Under the name Planxty (an expression of goodwill), the group revived traditional Irish songs, many of which had previously been performed unaccompanied, often with delicate and exquisite arrangements. Despite their serious intent, there was a contagious sense of good-humour and enjoyment in their performances which invited audience participation. They had a distinctive sound through their instrumental line-up, the witty and enthusiastic Moore, and an adventurous repertory that moved between folksongs and instrumental dance tunes. They found almost immediate commercial success with their single *Cliffs of Doneen*, which preceded their first album *Planxty* (Pol., 1972). Lunny left after the release of *The Well Below the Valley* (Pol., 1972), another album of traditional songs, his place taken by Johnny Moynihan. Moore left after the next album, *Cold Blow and Rainy Night* (Pol., 1974); he was replaced by Paul Brady, but this group made no recordings.

Planxty played mostly traditional music, but their repertory did include the angry political ballad *Only Our Rivers Run Free*, a forerunner of the songs Moore later performed both as a soloist and in the political folk-rock band Moving Hearts. A revival album in 1982 by the band's original members included songs by Bob Dylan, Moore, Irvine and Lunny.

ROBIN DENSELOW

Planyavsky, Alfred (*b* Vienna, 22 Jan 1924). Austrian double bass player and writer on music. He was a member of the Vienna Boys' Choir, 1933–8, and studied, as a tenor and as a double bass player, at the Akademie für Musik in Vienna, 1946–53. He joined the Vienna SO in 1954, and the next year the Vienna Staatsoper Orchestra and the Vienna PO. In 1967 he became a member of the Vienna Hofmusikkapelle. He has written many articles, especially for the *Österreichische Musikzeitschrift* and *Das Orchester* (for which he has been music critic), on his instrument and on Viennese musical traditions. His most important contribution is his book *Geschichte des Kontrabasses* (Tutzing, 1970, enlarged 2/1984).

His son, Peter Felix Planyavsky (*b* Vienna, 9 May 1947), is an organist and composer; he studied at the Akademie in Vienna (with Heiller, Uhl and others), and was appointed organist of the Stephansdom in 1969. He has recorded the complete organ works of Mendelssohn and is also known as a composer of sacred music.

RODNEY SLATFORD

Plaschke, Friedrich [Plaške, Bedřich] (*b* Jaroměř, 7 Jan 1875; *d* Prague, 4 Feb 1952). Czech bass-baritone. He studied in Prague, and in Dresden with Karl Scheidemantel. He made his début at the Dresden Hofoper in 1900 as the Herald in *Lohengrin* and remained a member of that company until 1937, creating Pöschel (*Feuersnot*), the First Nazarene (*Salome*), Arcesius (d'Albert's *Die toten Augen*), Altair (*Die ägyptische Helena*), Count Waldner (*Arabella*) and Morosus (*Die schweigsame Frau*); he was also the first Dresden Barak, Gérard (*Andrea Chénier*) and Amfortas. He sang Pogner at Bayreuth in 1911 and Kurwenal, Hans Sachs and Amfortas at Covent Garden in 1914. Plaschke toured the USA with the German Opera Company, 1922–4. In Germany he was considered one of the best singing actors of his day. He left a few acoustic recordings, most notably extracts from his Hans Sachs. He was married to the soprano Eva von der Osten.

HAROLD ROSENTHAL/ALAN BLYTH

Plasson, Michel (*b* Paris, 2 Oct 1933). French conductor. He studied at the Paris Conservatoire and in the USA with Leinsdorf, Monteux and Stokowski, winning the Besançon International Competition in 1962. An appointment as music director at Metz, 1966–8, was followed by a long association at Toulouse, where he was director of the Théâtre du Capitole from 1968 to 1983; in 1983 he was appointed music director of the Toulouse Capitole Orchestra. He gave the Théâtre du Capitole a high reputation, conducting a wide repertory that included the première of Landowski's *Montségur* (1985). He has also conducted operas at the Metropolitan, Chicago and San Francisco, and made his Covent Garden début in 1979 with *Werther*; he returned to Covent Garden in 1990–91 for *Guillaume Tell* and *Tosca*. Plasson was appointed principal guest conductor of the Zürich Tonhalle Orchestra in 1987 and music director of the Dresden PO in 1994. A sensitive and elegant conductor, his recordings include operas by Bizet, Gounod, Massenet and Offenbach, much French orchestral music, Magnard's symphonies and *Guercoeur*, and Roussel's *Padmâvati*.

Platagē (Gk.). *See* SISTRUM. *See also* CYBELE.

Platania, Pietro (*b* Catania, 5 April 1828; *d* Naples, 26 April 1907). Italian composer and teacher. He studied in Catania and then at the Palermo Conservatory with the great contrapuntist Pietro Raimondi, whose favourite pupil he became. In 1852 his opera *Matilde Bentivoglio* was given in Palermo, so successfully that the city government awarded him 300 ducats. Later that year, when Raimondi resigned as director and counterpoint teacher at the conservatory, he suggested Platania as his successor. The nomination was made, but was unsuccessful because of bureaucratic rivalries. In 1863, under the new government, he won the still-vacant post by competition. In 1882 he became *maestro di cappella* at Milan Cathedral and from 1885 to 1902 was director of the Naples Conservatory. Recognized as the greatest Italian contrapuntist of his day, Platania was admired by Rossini and by Verdi, who invited him to contribute to the abortive Rossini requiem. He was the last illustrious practitioner of the old strict tradition of Italian church music, carrying on its occasional tendency to the colossal, as in his setting of Psalm lxvii, *Exurgat Deus*, for six four-part choruses and orchestra. He also continued to write operas, most notably *Spartaco* (1891), and was one of the first Italian composers of the period to devote himself significantly to instrumental music, particularly to orchestral pieces of an occasional or festive character, like those in memory of Meyerbeer, Pacini and Rossini and the choral symphony for the ceremonial coronation tour of Umberto I (1878). In 1889 he was among the supporters

of Mascagni's *Cavalleria rusticana* in Sonzogno's second competition for a new opera.

WORKS

OPERAS

Matilde Bentivoglio (tragedia lirica, 3, G. Bonfiglio), Palermo, Carolino, March 1852, *I-Mr**; vs (Milan, ?1855)

ANDREA LANZA

Platel, Nicolas-Joseph (*b* Versailles, 1777; *d* Brussels, 25 Aug 1835). French cellist, teacher and composer. The son of a musician at the French court, he was among the *pages de la musique* to Louis XVI. His first teachers were Louis Richer (singing) and Jean-Louis Duport (cello); later he studied the cello with J.M. de La Marre. He began his career as a cellist at the Théâtre Feydeau, Paris, in 1796. From 1797 to 1801 he lived in Lyons, but he returned to the capital in 1801 and soon made his name as a cello virtuoso. In 1805 he embarked on an extensive tour through France, but on reaching Quimper, in Brittany, he stayed for two years. Next he went to Brest, Nantes and finally to the southern Netherlands, intending to visit the Netherlands and Germany. However, he stayed for several years in Ghent and then in Antwerp (from 1813), where he was principal cellist at the theatre. He was in Brussels from 1820, and in 1824 he became principal cellist at the Théâtre de la Monnaie. When the Royal School of Music in Brussels was founded in 1826, Platel's name was put forward for the post of cello professor. At first it was feared that his cantankerous nature might be prejudicial to his teaching, but the administrative board, while acknowledging that Platel was 'not the pleasantest of men', pointed out that his talent was so superior to that of any other cellist in Brussels that the post could not be offered to anyone else 'without doing him a real injustice'. He was therefore appointed professor by royal decree on 16 January 1827. There is every reason to believe that Platel's conduct was irreproachable, since he was reappointed when the Royal School of Music became a conservatory in 1832. He had a high reputation as a teacher; his many pupils included A.F. Servais, Alexandre Batta and François de Munck. He composed cello solos, concertos, sonatas, other chamber pieces and *romances*, which were published in Paris and Brussels.

PAUL RASPÉ/PHILIPPE VENDRIX

Platerspiel (Ger.). *See* BLADDER PIPE.

Plath, Wolfgang (*b* Riga, Latvia, 27 Dec 1930; *d* Augsburg, 18 March 1995). German musicologist. From 1949 to 1951 he studied musicology with Gerstenberg at the Free University, Berlin, and continued with him at Tübingen University, taking the doctorate in 1958 with a dissertation on Bach's *Klavierbüchlein*. After a year (1959–60) as E.F. Schmid's assistant, Plath was appointed by the Internationale Stiftung Mozarteum in Salzburg to become, with Rehm, co-editor of the new collected edition of Mozart's works. He is a member of the Zentralinstitut für Mozartforschung. His research on Mozart's autographs has had far-reaching results on chronology and authenticity.

HANS HEINRICH EGGEBRECHT/KONRAD KISTER

Platillos (Sp.). *See* CYMBALS.

Plato [Platōn] (*b* Athens, *c*429 BCE; *d* Athens, 347 BCE). Greek philosopher. His comments on music are of unusual interest, not only because his works provide much varied evidence but also because he was a transitional figure. During his lifetime the traditional PAIDEIA (meaning both 'education' and 'culture'), built upon unquestioned aristocratic standards of behaviour, had already fallen into decay; the conservative Aristophanes had lamented its neglect. Plato was no less conservative in his different way and was disquieted by the signs of things to come. The meeting of past and future in his writings lends his remarks on music a special interest, even when he was manifestly out of touch with his own times.

1. Attitude to musical instruments. 2. Number theory, ethos, *harmonia*. 3. *Harmonia* and rhythm. 4. Music and legislation. 5. *Paideia*. 6. Melodic mimesis. 7. Characteristics of Platonic thought. 8. Influence on his successors.

1. ATTITUDE TO MUSICAL INSTRUMENTS. Among musical instruments, only the aulos and kithara commanded Plato's serious attention. As the *Crito* (54d2–5) shows, he was aware that auletes could fill the consciousness of listeners with their playing. The passage refers indirectly to the buzzing sound of auloi and is probably Plato's nearest approach to a concern with tonal characteristics. Such questions, however, had little importance for him; it was because of its tonal flexibility, not its sound, that he banned the aulos from his ideal city-states projected in the *Republic* and the *Laws*. He credited it with the most extensive compass of any instrument and asserted that other 'polychordic' and 'panharmonic' instruments – those affording a wide variety of notes and *harmoniai* – only imitate it (*Republic*, iii, 399d4–5).

Plato's concern was not with the technical capacities of the instrument: he wished, rather, to eradicate what he considered an alien element in Greek religion. The aulos, said Socrates, is associated with the satyr MARSYAS; we must follow the MUSES in preferring kithara and lyra, the instruments of APOLLO (*Republic*, iii, 399e1–3). Their acceptance represents a further part of the plan, evident in the *Republic* and especially in the *Laws*, to make music serve the state religion. As an exception herdsmen will be allowed to retain their traditional SYRINX (*see* GREECE §I, 5(ii)(b)).

2. NUMBER THEORY, ETHOS, HARMONIA. Plato did not claim familiarity with technical theory, but in the *Philebus* he nevertheless referred to discordant elements being made 'commensurable and harmonious by introducing the principle of number' (25d11–e2), a notably Pythagorean sentiment. The same idea is put, negatively, later in the same work: without number and measurement, any art is at the mercy of guesswork and of an empirical reliance upon the senses (55e1–56a3). Here, as often, he was attacking the empirical harmonicists; yet his position was ambivalent, for he could also criticize the Pythagoreans (*Republic*, vii, 531a–b), whom he admired on many counts, for their exclusive interest in the numerical properties of musical consonances (*see* GREECE, §I, 6).

According to Alcibiades in the *Symposium*, the aulos melodies attributed to Marsyas are incomparably powerful. Whether the performer is skilful or inept, they grip the soul and show 'the need of gods and mysteries' (215c1–6). The passage illustrates the exciting and orgiastic effect so often associated with the aulos. In an ideal community, where worship must above all be decorous, such an instrument can have no place. As might be expected, Socrates considered the power of music from a distinctly different approach. The qualities of rhythm and harmony, he explained, sink deep into the soul and remain there. The result is grace of body and mind, attainable in practice solely through the traditional system of literary and musical education known as *mousikē* (*Republic*, iii, 412a). Thus a man's habits become his nature and are manifested as ETHOS.

In the *Timaeus*, a dialogue concerned centrally with the motion of the soul, Plato proposed that *harmonia* has a comparable motion and helps to restore order and concord to the soul; similarly, that rhythm remedies our unmodulated condition (47c7–e2). (*Harmonia*, it must be remembered, is a broad philosophical term that has nothing to do with the modern concept of chord relationships.) *Mousikē* and *philosophia* 'provide the soul with motion'; when this motion has been properly regularized, it blends high and low sounds into a unity that provides intellectual delight as an 'imitation of the divine harmony revealed in mortal motions' (80b4–8). In the *Laws* (vii, 802c6–d6) Plato held that pleasure is nevertheless irrelevant in itself: a man enjoys the music to which he is accustomed; while sober and ordered music makes men better, the vulgar and cloying sort makes them worse. Although the doctrines of the *Timaeus* seem to be related to Pythagorean

theories of harmonic number, Plato never showed clearly how the soul could be affected by external patterns of motion related to it through *harmonia*. Indeed, this difficulty is part of a larger problem in Platonic philosophy: how the eternal and non-material can participate in the temporal and material realm.

3. HARMONIA AND RHYTHM. Plato credited rhythm, metre and *harmonia* with a great inherent power to charm (*Republic*, x, 601a–b). Convinced that his ideal of education could be realized through their use, Plato nevertheless warned that they must remain subordinate to the text (*Republic*, iii, 398d). He saw the various rhythmic patterns as developments of impulses expressed through bodily movements; the *harmoniai* are analysed simply and briefly as 'systems' (*Philebus*, 17c11–d6). His own musical and literary training occurred at a period when he can hardly have gained any strong impression of earlier individual, unsystematized *harmoniai*. Moreover, the scale sequences presented in the treatise *On Music* (i.9) of ARISTIDES QUINTILIANUS as 'called to mind' by Plato in the *Republic* bear some resemblance to the 'complete systems' found in Greco-Roman handbooks (*see* GREECE, §I, 6(iii)(e)).

Plato seldom named individual *harmoniai*, except in a noteworthy passage where he rejected all of them except the Dorian and Phrygian. The former serves to imitate the 'tones and accents' of a brave man under stress, the latter to portray moderate behaviour in prosperity, evidently through the same kind of MIMESIS (*Republic*, iii, 399a–c). His choice had a reasoned basis in the religious observances of his own times and the severe limitations to be imposed upon music and poetry in the ideal city-state of his *Republic*. The Phrygian *harmonia* was strongly associated with Dionysiac worship, with the choral hymn to Dionysus known as the DITHYRAMB and also with the AULOS. In Plato's own time, Dionysus was worshipped with sombre decorum.

In the *Laws*, a work of the writer's old age, Plato treated the *harmoniai* less harshly than he did in the *Republic*; several passages seem to suggest that a variety would be permitted. (See notably *Laws* 670a–71a.) Still, he failed to give any satisfactory full account of the relation between the *harmoniai* and morals. Thus, in a well-known passage (*Laws*, ii, 669b–70b), Plato warned that a wrong handling of music could make the hearer liable to fall into evil habits. He further objected to the lack of taste and the meaningless virtuosity of solo instrumental performances, which seemed to him to have hardly any meaning or mimetic worth. Here the view of music as fostering evil is extreme, even for Plato. Elsewhere in the *Laws* (ii, 654b–d) he suggested that technical finish has secondary importance, a view far more in keeping with his general approach; yet even here his approach is as ambiguous as ever. His attitudes and theories, as expressed in isolated passages, still fail to combine satisfactorily into a philosophical system, however valuable they may be in isolation.

In these circumstances even the views of the musical expert DAMON may well fail to provide a means of unifying Plato's thought; in a significant number of respects Plato showed a critical and independent spirit where music was concerned.

4. MUSIC AND LEGISLATION. As might be expected, the connection between music and legislation is established almost entirely in the *Laws*, although it is occasionally anticipated in earlier works. When he wrote the *Republic* Plato did not trust the power of written laws to maintain a wholesome culture. In the *Republic*, the musical topic of special interest had been paideutic ethos; it is now *paideia* itself, and, in particular, the place that music should have within it. Egypt, Crete, Sparta and the Athens of earlier days provided Plato with precedents for legislative controls over music. Probably the most striking result is his seemingly paradoxical claim that 'our songs are our laws' (*Laws*, vii, 799e). Earlier, Socrates had observed (*Republic*, iv, 424b–c) that 'the modes [*tropoi*] of music are never moved without movement of the greatest constitutional laws'. The interpretation of these passages has been a matter of controversy, and there is certainly a play on the word *nomos*, which has both a general meaning of 'law', 'custom' or 'convention', as well as a specific musical meaning (*see* NOMOS). Nevertheless, it is reasonable to suppose Plato regarded the influence of music on behaviour (for whatever reason) as so profound as to be a virtual 'law'. Thus, in a literal sense, 'song' and 'law' were inseparable.

'Rightness' (*orthotēs*) has many aspects in the *Laws* and is perhaps the most important single concept bearing upon music in that vast work. Poets, Plato said, are in themselves unable adequately to recognize good and evil. They have unwittingly created the impression that rightness is not even a characteristic of music, let alone the true criterion; and that the true criterion is pleasure (*Laws*, iii, 700d–e).

In the ideal city of the *Laws*, no such debased standard could exist. Free choice of rhythms and melodies would be forbidden, and Plato would allow only those appropriate to texts equating virtue with the good (*Laws*, ii, 661c). None but the civic poet may express himself freely. He must be elderly and also distinguished for his noble deeds, but he need not be talented in poetry or music (*Laws*, viii, 829c–d). Power must be in the hands of the state. Musical contests will be judged by mature citizens (*Laws*, vi, 764d–e), and aged choristers must know *harmoniai* and rhythms in order to distinguish the rightness of a melody (*Laws*, ii, 670a–b). Evidently they will have to be more technically competent than the civic poet, and this fact serves as a reminder of Plato's indecisiveness in choosing criteria. Elsewhere he seems to have been attempting to combine both kinds of prerequisites for music, for he conceded that music may indeed be judged by the pleasure it gives, providing it appeals to a listener of outstandingly noble character and *paideia*. This sort of man, he continued, must judge public performances (*Laws*, ii, 658e–59a). In this passage, as often elsewhere when he approached a musical topic in varying ways, his inconsistency has no final resolution.

5. PAIDEIA. In the *Laws* Plato proposed that musical and literary training should ensure that 'the whole community may come to voice always one and the same sentiment in song, story and speech' (*Laws*, ii, 664a). Plato pursued such uniformity relentlessly, and it is easy to ignore the admirable earnestness and idealism of his views concerning *paideia*. Education which is not uplifting is not education; men must constantly be exposed to an ethical code higher than their own (*Laws*, ii, 659c). In this process music has a vital role. From the civic point of view, for example, *paideia* is said to be a man's training as a singer and dancer in the public chorus (*Laws*, ii,

654a). But Plato extended the meaning of *paideia* beyond mere dexterity: in the same context he claimed that true *paideia* is loving good and hating evil, and that technique matters little (*Laws*, ii, 654b–d). In the education of young children, as yet incapable of dealing maturely with moral issues, ideals of excellence will be conveyed through terms that can be understood, those of play and song (*Laws*, ii, 659d–e).

The comment is remarkable for the conscious grasp that it shows of the connection between *paideia* and play (*paidia*). Once again, much later in the *Laws*, Plato connected play with song and with dance as well. Man is 'the plaything [*paignion*] of God', he declared; this is the best thing about him, and he should therefore spend his life in 'the noblest kinds of play', sacrificing, singing and dancing (*Laws*, vii, 803c–04b). The central idea of *orthotēs* reappears here: these activities are cited to show rightness in practice. The religious emphasis is noteworthy and typical of Plato, as is the omission of any reference to solo instrumental music. (A musical accompaniment was taken for granted.)

The older, 5th-century education was designed primarily to produce seemly behaviour during the early years of schooling, according to the Platonic Protagoras (*Protagoras*, 325d–e; cf 326a–b for the actual system). In the *Laws* Plato himself made careful provision for elementary schooling; although he always considered *paideia* as a lifelong activity, he was aware that in this instance the beginning was indeed 'half of all'.

Besides his general remarks on education, he dealt with lyre lessons in a remarkable passage (*Laws*, vii, 812d–e): the lyre must sound clearly and in unison with the voice, he declared; heterophony and ornamentation are forbidden, as are various types of exaggerated contrast. These comments are incomparably more technical than any others in the entire range of the dialogues. Plato excluded any kind of variation, rhythmic or melodic, in the accompaniment and any use of countermelody because he believed these interfere with the young pupils' ability to grasp 'within three years the useful elements of music' (*en trisin etesi to tēs mousikēs chrēsimon*).

6. Melodic mimesis. Although Plato never developed an explicit theory of melodic mimesis, some of its constituent elements can be seen in his work. In his doctrine of habituation he taught that mimetic practices, if begun early in life, grow eventually into habits and become second nature (*Republic*, iii, 395d). He related this to music through his reference in the *Laws* (ii, 655a–b) to the separate melodies that characterize the brave man and the coward; and the two principles are combined in his description of rhythm and of music generally as 'imitations of the characters of better and worse men' (*Laws*, vii, 798d). Since music is thus mimetic, we must judge it not by the degree to which it pleases, but by its rightness, the essential quality of successful mimesis (*Laws*, ii, 668a–b). Rhythms as well as *harmoniai* express these mimetic qualities, and in good music they take their pattern from the natural rhythm of a good man's life (*Republic*, iii, 399a–e).

One might have expected the parallel statement that in such music the *harmonia* expresses the inner *harmonia* of a good man, but he never stated this. The two acceptable *harmoniai*, Dorian and Phrygian, imitate (in a manner never explained) the 'notes and songs' (*phthongous te kai prosōdias*) of brave and moderate men; there is no analogy with any inner *harmonia*. He seems to have reasoned that *harmonia* must resemble rhythm in imitating certain human activities.

7. Characteristics of Platonic thought. It was natural for Plato to associate music with spoken language, for he always championed the pre-eminence of the word; yet this combination involved him in a contradiction. He suggested that education is achieved, first by the two main musical elements, *harmonia* and rhythm, which impart a rhythmic and harmonious nature through habituation, and, secondly by the literary content, which produces traits of character closely related to the habits implanted by *harmonia* and rhythm but differing from them (*Republic*, vii, 522a). The contradiction lies in the fact that such character traits are ethical, whereas moral value is irrelevant to *harmonia* and rhythm. Plato generally recognized this, but he linked by association the ethical and non-ethical factors and even used ethical terms to describe the *harmoniai*.

In the dialogues Plato took a narrow view of the pleasure-giving function of music, for example, and his general understanding of musical developments was distinctly old-fashioned. On points of detail his presentation is often vague or incomplete; at times he contradicted himself. Yet he combined a singularly noble vision of the moral function of music with concern for its practical aspects. The ambivalence of his position between the old music and the new itself enabled him to draw upon the heritage of Pythagorean, Sophistic and Damonian thought and also to contribute profoundly, through his own remarkable powers, to the thought of the future. Severe but majestic, he was the last mourner of the traditional Hellenic musical ideals.

8. Influence on his successors. The passing of these ideals was also deplored by later critics, including Aristotle's brilliant pupil Aristoxenus. Like Plato, he saw the music of his own time as proof of an ethical decline; yet even here Aristoxenus's view is not that of the zealous reformer, and elsewhere there are manifest differences. One of these concerns the Aristoxenian doctrine of rhythm. It certainly involves formal principles that essentially resemble Plato's ideal paradigms; the dialogues nevertheless treat rhythm either as a divine gift or as a mimetic refining of the impulse towards decisive movement.

Hellenistic and Greco-Roman authors were increasingly concerned with cosmic number-relationships, derived from Pythagoras, rather than the aspects of Plato's approach to *mousikē* derived from the observation of society or the physical nature of man. Plato's doctrines of mimesis and ethos were preserved and reinterpreted by Neoplatonic theorists such as Aristides Quintilianus. Plotinus's pupil Porphyry followed Neoplatonic tradition in insisting that the motion of the soul is vitally important for music; the soul itself he held to be a composite tuned to diatonic intervals, a view derived from the *Timaeus* and *Phaedo*.

The Church Fathers' attitudes to music were principally based on Neoplatonic views; they sought persistently to press music into ecclesiastical service as an aid to individual salvation or a way of praising God. They nevertheless credited it with a power for evil and rejected secular music on moral grounds. Likewise, Philo conceptualized Jewish religious traditions in terms of Platonic

philosophy, especially in his account of the formation of the world, while Islamic scholars attempted to harmonize their own theology with both Neoplatonism and Aristotelianism. In the hands of Western commentators such as MACROBIUS AMBROSIUS THEODOSIUS and CALCIDIUS and authors such as BOETHIUS, CASSIODORUS and ISIDORE OF SEVILLE, fragments of Platonic theory were passed on to the Middle Ages, where they continued to exert an influence, especially on *musica speculativa*.

WARREN ANDERSON/THOMAS J. MATHIESEN

Platt, Sir **Peter** (*b* Sheffield, 6 July 1924; *d* Sydney, 3 Aug 2000). English and Australian musicologist and teacher. He studied at the RCM in 1941–2 and again in 1946 after war service, and at Oxford (1946–52), where he took the BLitt with a thesis on the life and music of Richard Dering. His teachers included R.O. Morris, H.K. Andrews, Donald Peart and J.A. Westrup. His professional career was spent in Australia and New Zealand; he was lecturer and senior lecturer in music at the University of Sydney (1952–7), then professor and chair of the music department at the University of Otago, Dunedin; in 1975 he was appointed chair of the music department at the University of Sydney. He also lectured in Europe, the USA and Hong Kong, and in 1990 he was awarded the honorary MMus at the University of Sydney, having become professor emeritus in 1989. From 1990 to 1994 he was editor of *Musicology Australia*, and he was a member of the contemporary music ensemble The Seymour Group.

Platt's concern for the integration of musical educational disciplines had an important effect in Australia and New Zealand and stemmed from his conviction that this region, with its European-based musical culture alongside living indigenous traditions and immigrant music, offers special insights into the nature of music and opportunities for the confluence of Western musicology and ethnomusicology. Under the influence of Donald Peart, Platt became convinced that all music studies – compositional, practical, historical, analytical or sociological – flow from a central definition of music as 'what may be done by humankind with pitches, rhythms and timbres'. Through composition exercises based on classical harmony and the techniques of Debussy and Stravinsky the student may compare the musical traditions of diverse cultures (Indian, Western medieval or Australian Aboriginal) to create an awareness of the rich complex of relationships whose central reference point remains the sounding phenomenon of music. Platt was made member of the Order of Australia a few months before his death.

J.M. THOMSON

Platter, Felix (*b* Basle, Oct 1536; *d* Basle, 1614). Swiss doctor, professor of medicine and musician. He was the son of the Basle printer and school master Thomas Platter. In 1551 he matriculated at Basle University under the rectorship of Bonifacius Amerbach. He was awarded the baccalaureate of medicine from Montpellier University on 28 May 1556. In 1557 he joined the medical faculty at Basle and in 1571 was promoted to professor of practical medicine.

Platter's abilities as a physician brought him wealth and fame. Yet it was his lifelong interest in music that apparently brought him daily enjoyment. According to his own testimony, he began taking lute lessons at the age of eight from Peter Dorn and Johannes von Scahallen. He also learnt to play the clavichord and harp. As a student in Montpellier he composed and intabulated his own lute pieces, and by 1557 he was performing lute duets with the well-known lutentist Hans Jacob Wecker. He apparently also played with the Strasbourg lutenist Wolff Heckel. Platter bequeathed to his brother an extraordinary collection of musical instruments including ten keyboard instruments, seven viols and six lutes. While none of the music books mentioned in Platter's will have survived, a collection of song text manuscripts copied by Platter is extant (*CH-Bu* AG V 30). These song text sheets consist of about 60 German translations and contrafacta of chansons, madrigals and motets and enable German-texted versions of vocal music by Sermisy, Arcadelt and Lassus to be reconstructed for the first time.

JOHN KMETZ

Platters, the. American male popular vocal group. Its principal members were Tony Williams (lead tenor; *b* New Rochelle, NJ, 15 April 1928; *d* New York, 14 Aug 1992), David Lynch (second tenor; *b* St Louis, 1929; *d* 2 Jan 1981), Zola Taylor (soprano; *b* Los Angeles, 1934), Herb Reed (bass; *b* Kansas City, MO, 1931) and Paul Robi (baritone; *b* New Orleans, 1931; *d* 2 Jan 1989). During the second half of the 1950s they applied vocal harmonies derived from the black doo-wop genre to mainstream popular ballads with considerable commercial success. The purity and precision of Williams's singing were the principal features of the Platters' recordings of *Only You* (1955) and *The Great Pretender* (1956), both composed by the group's manager Buck Ram. Other hit records in the USA and abroad included versions of Jimmy Kennedy's *My Prayer* (1956), Kern's *Smoke gets in your eyes* (1959) and Ram's *Twilight Time* (1958). Williams left the group in 1960, later forming his own Platters group. His replacement was Sonny Turner, but by 1970 a series of personnel changes had led to a proliferation of units calling themselves the Platters; Ram, a trained lawyer, expended much money and energy on suing these groups for trademark infringement.

DAVE LAING

Platti, Giovanni Benedetto (*b* Padua or Venice, ?before 1692; *d* Würzburg, 11 Jan 1763). Italian composer. His death certificate gives his age as 64, which would indicate that he was born in about 1698, but information in a letter of 7 October 1764 from Domenico Palafuti to G.B. Martini suggests that the real date of birth could be 9 July 1697; however, Michael Talbot's discovery in Venice (*I-Vas* Milizia da Mar, Bosta 626, Sonardori) of a document mentioning Platti as belonging to the *arte dei sonadori* at the beginning of 1711 means that he cannot have been born later than 1692. Little is known about him before 1722, but in Venice his teachers might have included Francesco Gasparini, Albinoni, Vivaldi, Lotti, Alessandro Marcello or Benedetto Marcello. His father Carlo (*b* *c*1661; *d* after 1727), a violetta player in the orchestra of the basilica of S Marco, may also have taught him. According to Palafuti in his letter to Martini, Platti travelled to Siena before 1722 and encountered Cristofori's recent invention, the 'cembalo a martelletti', but this is not backed up by any other evidence. It would, however, explain the harmony, style and technique of some of his harpsichord sonatas. In 1722 he went to Würzburg with a group of musicians under the direction of Fortunato Chelleri. There he entered the service of the court of the Prince-Archbishop of Bamberg and Würzburg, Johann Philipp Franz von Schönborn. On 4 February 1723 he married Maria Theresia Lambrucker, a soprano serving at the court. They had eight children, some of whom were musicians, but no music attributable to them has survived. Platti's position at the Würzburg court was as a kind of factotum: he was a singer, he played various instruments, including the violin, the cello, the oboe, the flute and the harpsichord, he performed and he composed. Three letters, only one of which is in Platti's hand, have survived at Würzburg, but they add nothing to our knowledge of his time in Germany. He met the artist Giambattista Tiepolo, who was in Würzburg between 12 December 1750 and 8 November 1753 to decorate the Residenz with frescoes, one of which includes the only known portrait of Platti. Platti continued to work at the Würzburg court until his death.

His surviving output is not very substantial in comparison with that of his contemporaries. It displays two constant characteristics: an exceptional sense of structure and, even in the least inventive pieces, a lively, elegant manner. He made use of both Baroque and pre-Classical forms, almost completely bypassing the *galant* style. Some of his pieces, including the op.1 harpsichord sonatas and the masses, employ the Baroque *fortspinnung* technique, while others, for example the *Miserere*, are more Classical

in outlook, with a richer harmonic content. Some of his cello concertos, which can stand beside the best by Boccherini, are also in a more Classical vein, as is the Requiem, which was probably written on the death of one of the Schönborn prince-archbishops (possibly in 1754) and can be considered a masterpiece. The handling of vocal and instrumental resources is remarkable, and Platti's sensitivity is evident in the melodic writing, for example at the beginning of the *Lacrimosa* and in the soprano solo of the *Benedictus*. Some of his harpsichord sonatas and concertos not only constitute contributions to the developing sonata form but also convey a richness and inspiration that looks forward to the pre-Romantic age; rhythmically restless, the music races towards the final chord through ever-changing modulations. Platti seems to have been aware of the possibilities offered by the nascent pianoforte, for some of his pieces include passages in which the range of the keyboard is extended, and some of his adagio movements appear to have been conceived for an instrument that can vary its dynamics or that responds to a sensitive touch. The harpsichord concertos mark the transition from the Baroque to the Classical concerto. In nos.3, 4 and 5 the harpsichord plays a concertante role, and the structure of the Allegro is tutti–solo–tutti–solo–tutti. Nos.6 to 9, however, abandon this form: the strings move from a sustaining role to one where they are in dialogue with the harpsichord, which now has a genuine solo role, taking up and developing the themes announced by the orchestra.

Platti's placement among minor composers such as Vento, G.M. Rutini and Domenico Alberti deserves to be reviewed. Analysis of much of his music has revealed a composer who can be placed among the more important figures of his time.

WORKS

VOCAL

2 masses, 4vv, *D-WD*
Mass, 4vv a cappella, *WD*
Requiem, 4vv, ed. L. Bettarini (Rome, 1985)

ALBERTO IESUÈ

Plattner, Augustin (*fl* 1613–24). German composer and organist. The earliest surviving record is that of Plattner's marriage in the church of St Jakob, Innsbruck, on 17 June 1613. According to the foreword to his *Missae octo vocum cum duplici basso ad organum applicato* (Nuremberg, 1623/4; ed. in Denkmäler der Musik in Baden-Würtemberg, iii, Munich, 1995), Plattner's musical education was financed by Deutscher Orden. From 1621 he worked as organist to the Deutschherrn-Orden in Mergentheim (now Bad Mergentheim in Baden-Würtemberg), where he may have succeeded Andreas Lames. His masses are written for double choir, in the Venetian tradition. Of the eight masses one is a *Missa sexti toni*, one a *Missa pro defunctis* and the other six are parody masses, in which madrigals called *Lieto godea* and *De fortuna*, two motets *Ad te, Domine, levavi* and *Isti sunt triumphatores*, and the German melodies *Christ ist erstanden* and *Joseph, lieber Joseph mein* are used as material.

AUGUST SCHARNAGL/DIETER HABERL

Platz, Robert H(ugo) P(hillip) (*b* Baden-Baden, 16 Aug 1951). German composer and conductor. He studied composition first with Fortner at the Freiburg Conservatory (from 1971), and later with Stockhausen at the Staatliche Hochschule für Musik in Cologne (from 1973), returning to Freiburg to graduate in conducting with Francis Travis in 1977. After studies in the USA, he went back to Cologne in 1980, and in 1983 he founded the Ensemble Köln, which became a leading new music chamber ensemble responsible for many important premières.

Platz is one of the few significant composers of his generation to have been untouched by the neo-Romantic movement that swept through Germany in the late 1970s. Technically, his music is a fastidious, personal continuation of the serial, structuralist path pioneered by Stockhausen; emotionally, however, it often inhabits a hyper-tense, post-Expressionist world more reminiscent of Zimmermann.

Platz's first major work, *Schwelle* (1973–8), a planned 6-part orchestral cycle of which only two parts were completed, already contains significant aspects of his later work: a four-part formal conception related to the seasons and the four elements (perhaps influenced by Stockhausen's *Sirius*), and a clear distinction between 'static' and 'processual' formal components. In *CHLEBNIKOV* (1979) Platz took the first decisive steps towards the 'formal polyphony' (a polyphony not just of parts, but of ensembles and ultimately of independent pieces) that has been a lasting preoccupation of his work; though exactly notated, the piece is conceived in terms of different simultaneous 'musics' (ranging from solos to nonets), regulated at a higher formal level by five different 'levels' of relationship. *Maro & STILLE* (1980) takes the separation of strata further; there are three main components: a song for high soprano and piano, a violin solo (performable separately), and an initially static music for wind instruments and choir. The combination of solo violin and piano with a small wind ensemble foreshadows much of Platz's work from the 1990s.

Chamber works from the 1980s continue to investigate new dimensions of musical form, notably the *Flötenstücke* (1982) and the remarkable *from fear of thunder, dreams. . .* (1987). The latter introduces a static, claustrophobic intensity which also typifies two stage works from the late 1980s, the fragment *VERKOMMENES UFER* and *DUNKLES HAUS*. From the early 1990s, beginning with *SCHREYAHN*, Platz extended 'formal polyphony' to spatial separation of the instrumental forces involved in the various temporally overlapping movements – not only in different parts of the main auditorium, but also outside it. Subsequently, *tôku/NAH* (1994) was composed to overlap with the end of *SCHREYAHN*, and from the mid-1990s on, all of Platz's major works have been conceived as part of an endless chain of interlocking pieces which can also be played independently. However, his intention is not to create an epic cycle of works in the manner of Stockhausen's *LICHT*; any segment of the formal chain is an adequate representation of the underlying idea. At the 1996 Donaueschingener Musiktagen, for example, *ANDERE RÄUME*, *nerv ii* and *Turm/Weiter* were presented as an interlocking sequence, with *Echo II* as an epilogue.

WORKS
(*selective list*)

Ops: VERKOMMENES UFER (scenic composition, 2, H. Müller), 1983–6, unfinished; DUNKLES HAUS (music theatre, 11 stages, C. Litterscheid), 1989–90, Munich, Marstall, 6 June 1991

Orch: Schwelle I and III, orch, tape, 1973–8; tôku/NAH, wind, 1994; Turm/Weiter, 1996

RICHARD TOOP

Plautus, Titus Maccius (*b* Sarsina, Umbria, *c*254 BCE; *d* *c*184 BCE). Roman comic playwright. 20 of his comedies and a portion of another have survived, all *fabulae palliatae* (i.e. plays with Greek settings and costumes). They are free adaptations of Greek originals by MENANDER and other leading authors of the Athenian New Comedy (*c*330–270 BCE), although none of Plautus's prototypes survives.

The abbreviations DV and C in the manuscripts of Plautus indicate the division of scenes into the two main categories of *diverbium*, spoken dialogue, and *canticum*, lines accompanied by a tibia player (*tibicen*). On average, nearly two-thirds of the play is occupied by *canticum*. There were apparently two varieties of *canticum*: the first was recitative, written in iambic, trochaic or anapaestic septenarii or octonarii (seven- or eight-feet lines); the second was lyric song in more intricate and variable metres, chiefly cretics, bacchics and ionics. Although a *canticum* was usually a solo aria, there were sometimes two, three or even four singers, as in the *Mostellaria*, and sometimes the singer danced as well. Like its Greek prototype, Roman comedy dispensed with the chorus as an integral part of the play. Sometimes the tibia player would provide a musical interlude as in the *Pseudolus* (573a).

According to the prefatory remarks, *didascalia*, to Plautus's *Stichus*, a slave musician named Marcipor composed the accompaniment and used *tibiae sarranae*

throughout. This is the only direct reference to Plautus's use of the double pipes, although there is some information about his contemporary TERENCE (see Wille, 1977, pp.86–7). However, the diversity and brilliance of his lyric metres show how important was the musical element; his virtuosity, which translations can hardly begin to suggest, rivals that of Aristophanes. In six of his plays lyrics take up about a quarter of the total text, and the entire corpus has slightly more recitative than regular spoken dialogue. The *cantica* of Plautus are often highpoints; in several of his plays they are combined with dancing to provide a joyful concluding scene. The tibia accompaniment must have had extraordinary rhythmic variety, if, as is probable, it corresponded to the intricate variety of the lyric metres. Nothing definite is known about the melodic nature of these settings and the difference between speech and song in performance has itself been questioned (Beare, 1950, pp.219ff), although such scepticism is a minority view. Cicero's remark (*Academica priora*, ii.7.20; cf ii.27.86) that connoisseurs of theatre music could tell from the first notes (*primo inflatu*) of the tibia prelude what work was to be performed might be evidence for fixed musical settings, but this would seem to be inconsistent with what is otherwise known about secular music in antiquity. Possibly the *tibicen* regularly stated and then improvised on a familiar theme.

Within the imagined world of the plays, supposedly Greek but reflecting many Roman characteristics, the female musician, *tibicina* or *fidicina* (from *fides*, 'lyre'), lacks any status, being regularly bought and sold and a butt of jesting. Plautus seldom made technical allusions to music. In *Pseudolus* (1275), he refers to *ionica*, a kind of lascivious dance (cf Aristophanes, *Frogs*, 130) and in *Stichus* (760), to *cantionem ... cinaedicam* (from *cinaedus*, 'sodomite').

WARREN ANDERSON/THOMAS J. MATHIESEN

Plautzius [Plautius, Plautz, Blautz, Plavec], **Gabriel** (*b* Carniola; *d* Mainz, 11 Jan 1641). Slovene composer active in Germany. His signature 'Carniolus' implies that he originated from Carniola (Kranjska), today a province of Slovenia. On 10 April 1612 he was appointed Kapellmeister at the electoral court at Mainz of prince elector Johann Schweikardt von Kronberg. Together with his employer, he took part in the imperial coronations, providing 'exquisita et rara musica'. His most important surviving music is the collection of 26 songs *Flosculus vernalis sacras cantiones, missas aliasque laudes B. Mariae conteniens* (Aschaffenburg, 1620–21; ed. T. Faganel, Ljubljana, 1997) for three to eight voices with continuo. It includes three masses, two introits, a communion motet, eight Marian songs and 12 songs on psalmodic and sequence texts. These last are in mostly *stile antiquo* motet style, with frequent use of *proportio tripla*. Some of the pieces also show an early Baroque construction, with solo concertante passages and a tripartite ritornello. There are also three pieces in RISM 1627² and four pieces edited in Cvetko (1963).

A letter survives from Plautzius to the abbot of the Benedictine monastery in Munster-Schwarzach (23 April 1622), to whom Plautzius donated a collection of music. After 1626 sources also mention Daniel Bollius in the role of organist and Kapellmeister at Mainz, and from 1631 Bollius appears to have been helping 'the court composer of Mainz in poor health' with his duties. An entry in an obituary book in Mainz (12 January 1641) comments that Plautzius was 'most exquisite in musical instruments and without peer in the art of composition with ten or 12 voices'.

Player organ. An organ, other than a BARREL ORGAN, which may be played either by a keyboard or by perforated paper rolls; it is similar in this respect to a PLAYER PIANO. The earliest player organs were reed instruments and were developed from the small portable automatic REED ORGAN (*see also* ORGANETTE). The first was the Symphony, made by Wilcox & White of Meriden, Connecticut, in 1888. This was little more than an American organ with a paper-roll-playing mechanism. The makers of the VOCALION reed organ produced a small 46-note organette called the Syreno. This became the basis of the first AEOLIAN player organ, built into a piano-type case and working on suction. The compass was extended to 58 notes and the instrument was named the Aeolian Grand (first produced in 1895). The Aeolian Company's most successful player organ was a pressure-operated instrument, the Orchestrelle. A wide range of Orchestrelles was made between 1890 and 1918, all featuring a rich variety of Vocalion-patented ranks of orchestrally voiced reeds.

Although generally retaining a single keyboard, two-manual Orchestrelles were made which used 112-note music rolls arranged to control two separate divisions of stops: these were particularly fine instruments. Manufacture was mostly in America but many were assembled for the British market by Aeolian's piano factory at Hayes, Middlesex. Despite their relatively high cost, Orchestrelles enjoyed great popularity, having a large and varied repertory of music. In Europe the best makers of player reed organs were Schiedmayer in Stuttgart (the Scheola) and Mustel in Paris (the Concertal).

Player organ technology was soon applied to the pipe organ and Aeolian built a number of costly domestic instruments including some which used the Duo-Art system that was developed for the REPRODUCING PIANO. These pipe organs controlled their own stops and swell shutters from the music roll. Some of the finest player pipe organs were built by Estey and by Skinner in America, and by Welte in Germany. These generally were 88-note actions which would play piano rolls, but alternatively 58-note actions could be fitted to play the rich library of Aeolian music rolls.

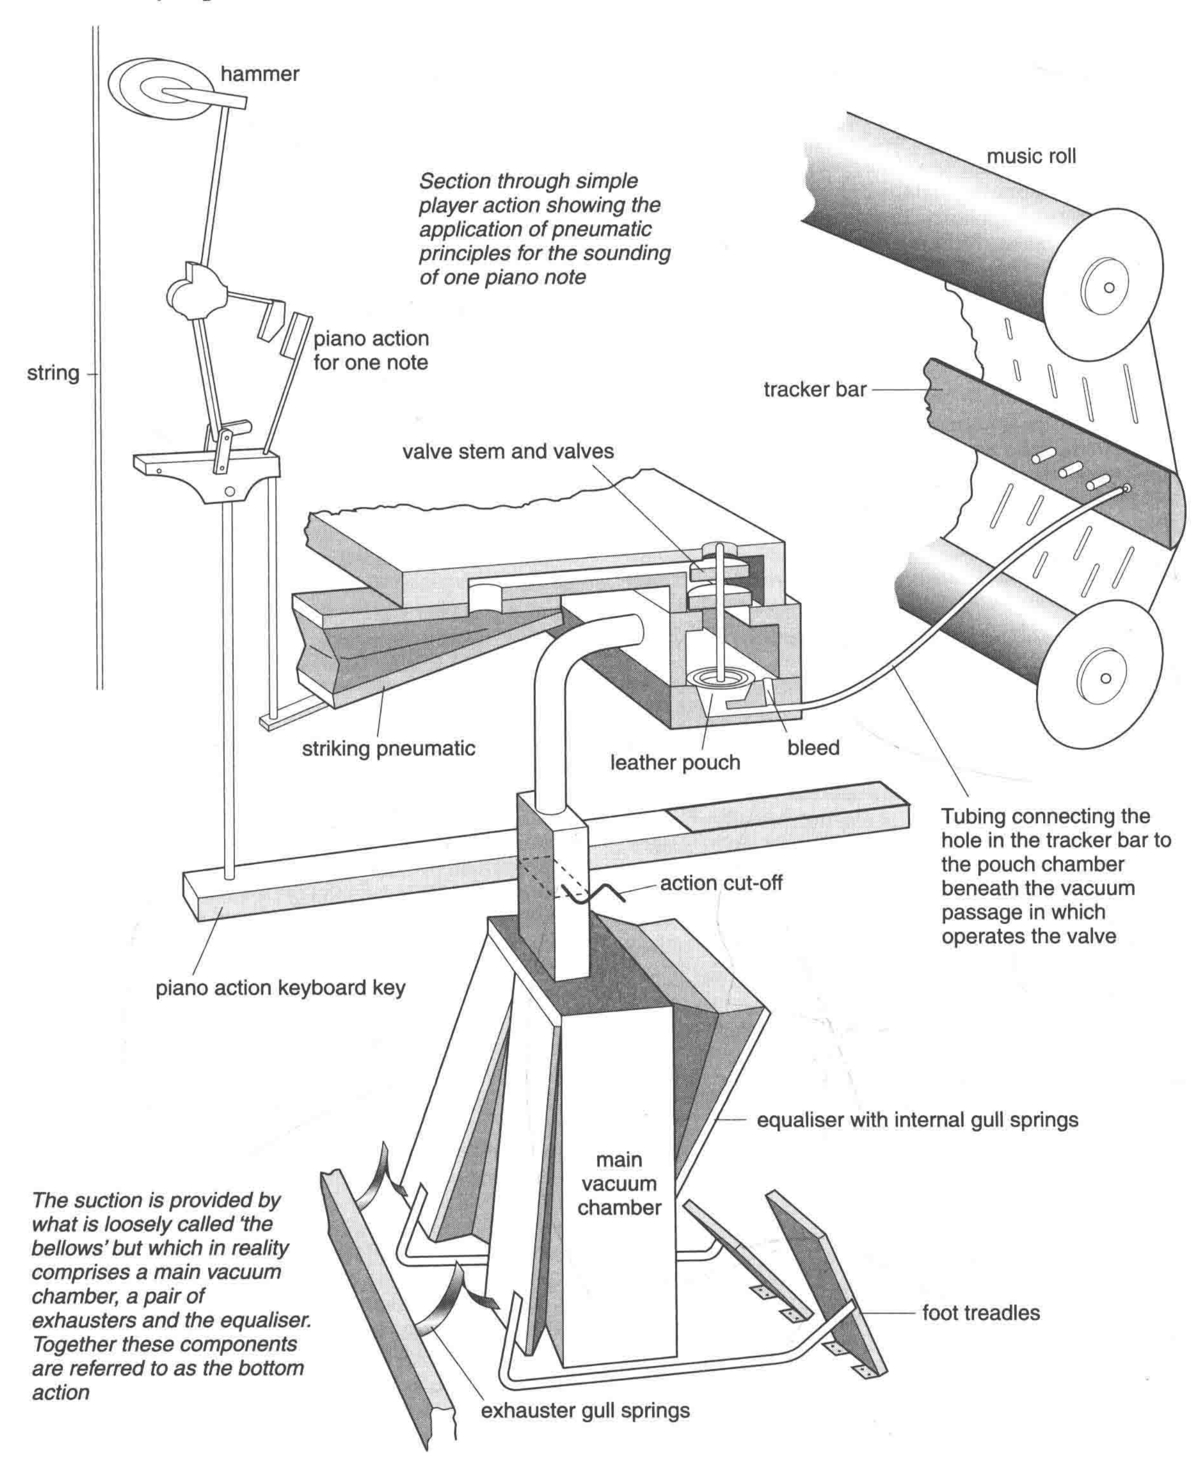
ARTHUR W.J.G. ORD-HUME

Player piano. A piano fitted with a self-playing mechanism, normally pneumatic, capable of playing from a perforated paper music roll (piano roll). The first automatic piano-playing mechanism was the BARREL PIANO, developed at the end of the 18th century. Later developments dispensed with the cumbersome barrel; for example, A.-F. Debain's Antiphonel (1846) operated the piano through a system of wooden boards or planchettes studded with metal pins to represent the music to be played. Napoleon Fourneaux's barrel-operated Pianista (1863) was the first pneumatic piano-playing machine. These were the prototypes of the piano player (also called a cabinet player or push-up player), the forerunner of the player piano. The piano player consisted of a cabinet containing the pneumatic mechanism. When pushed in front of an ordinary piano, a row of felt-covered wooden fingers at the back rested on the keyboard to play it. Inside the cabinet a music roll or note-sheet would pass over a 'tracker bar', usually of brass, with some 65 (later 88) slots or ports, one for each note. When a perforation in the moving note-sheet uncovered a port in the tracker bar, suction (generated by foot treadles) would draw air through the port to operate a pneumatic striking action, forcing the wooden finger down. This principle is generally known as the 'paper-as-a-valve' system. Levers in the front of the cabinet controlled tempo, the relative loudness of treble and bass, and the operation of the sustaining pedal of the piano; in many cabinets the latter could also be controlled automatically from the music roll. In France, towards the end of the 19th century, some mechanical piano players were still made which played perforated cardboard discs, rolls of heavy waxed paper, or zigzag folded music books.

The player piano was the outcome of a whole series of pioneering piano-playing systems, some of the earliest being mechanical and a few being electrically operated. It signalled a radical improvement on previous player methods, the mechanism being built into the piano itself. The control levers were placed in a panel underneath the keyboard. The pneumatic action, fundamental to the player piano, had been developed and refined first in the small portable automatic reed organ called the ORGANETTE.



Robert W. Pain built a 39-note, mechanically operated player piano for Needham & Sons in 1880, following it with a 65-note electrically operated one in 1888. Wilcox & White of Meriden, Connecticut, successfully combined a piano and reed organ with a roll-playing inner player in 1892. Considerable experimental work was taking place simultaneously in America and Germany: in 1895 Edwin Scott Votey invented the first 'Pianola' piano player (and applied for a patent in 1897), the mechanism of which was later adapted to form his company's first 'inner player', and Hupfeld of Leipzig produced a similar instrument at about the same time. However, the first piano to have a practical pneumatic player mechanism built into it was that patented by Theodore P. Brown of Worcester, Massachusetts, in 1897. Melville Clark built his first 'inner-player' player piano in 1901, and in 1904 he was the first person to fit a player mechanism to a grand piano.

By careful pedalling and judicious use of expression controls, damper pedal control and tempo regulator, musically pleasing effects could be obtained on a player piano. Some music rolls included printed instructions suggesting the dynamics etc., to be used by the person operating the instrument. Since many people to whom the player piano appealed were musically unskilled, however, player piano manufacturers soon attempted to make the expressive effects automatic by incorporating them into the functions that could be controlled automatically from the music roll. This was then played on an 'expression' piano equipped with pneumatic functions to 'interpret' the supplementary perforations controlling pedalling and regulating the force applied to the hammers. For further discussion of the expression system, and of subsequent, more sophisticated forms of fully automatic, self-playing pianos, *see* REPRODUCING PIANO.

The 'key-top' player was a much smaller and with simpler mechanism made to fit on top of the keyboard. A hand-cranked pneumatic model was introduced by 1899, and several electrically-pumped models were introduced in the USA after World War II, but the variety had insufficient suction power to be able to replicate expressive piano performance due to the small size of its air reservoir.

The success of the early player piano brought many manufacturers into the business, each with its own version. The compass of the piano keyboard that could be played by the player system was somewhat abbreviated due to the physical bulk of the early actions. In the beginning, instruments which played on 58 of the keyboard's notes were common. Other models were produced which worked on 61, 65, 70, 73, 82 and 88 notes. The lack of standardization was a major problem to the manufacturers of music rolls, and in 1910, at a convention of player manufacturers held at Buffalo, New York, it was agreed to standardize on two compasses of 65 and 88 notes.

Between 1900 and 1930, 2·5 million instruments were sold in the USA. In London, a 1922 trade directory listed no fewer than 52 makers. In 1900 171,000 'ordinary' pianos were made and 6000 player pianos; by 1925, at the peak of the player piano's vogue, the totals were

1. Reproducing mechanism diagram

136,000 ordinary pianos and 169,000 player pianos. Important manufacturers included, in the USA, the Aeolian Co., American Piano Co., Auto-Pneumatic Action Co., Melville Clark Piano Co., Standard Player Action Co., and Wilcox & White Co.; in Germany, Hupfeld and Kastner-Autopiano; and in England, Marshall and Sons and the Aeolian Co. Ltd (a branch of the American firm, also known as the Orchestrelle Co.). Many other piano manufacturers purchased player mechanisms for installation in their own pianos. In addition to player pianos for the home, coin-operated machines were produced for use in cafés, restaurants, hotels and other public places. The success of Aeolian's 'Pianola' inspired others to capitalize on sound-alike names: Triumphola, Odeola,

Let the Pianola Piano bring you happiness in 1914.

Do not merely hope for increased happiness in the year that is before you—ensure it by purchasing a Pianola Piano. There is no other investment you can make which will so surely bring pleasure to you and every member of your household, for by its means everyone can play the music they love. Day in, day out, through many a year, the influence of the world's sweetest music will brighten and cheer you through the dull routine of life.

The Pianola Piano is the genuine Pianola combined with the STEINWAY, WEBER, STECK, or STROUD Piano. You are invited to play at Æolian Hall, or to write for Illustrated Catalogue "T."

THE ORCHESTRELLE COMPANY, ÆOLIAN HALL,
135-6-7, New Bond Street, LONDON, W.

3. *'The Pianola with the London Symphony Orchestra'. Advert from 'The Sphere'.*

Monola, Pedola, Humanola and so on, while even the controls were given fanciful names such as Phrasiola, Tempola, Automelle and Transposa. The trade mark 'Pianola' itself became synonymous with the player piano, and was commonly adopted as a generic term for any self-playing piano. This form of marketing could not detract from the true value of the instrument, for there is little doubt that the player piano helped to popularize a great deal of music which might otherwise never have been widely known. It was acclaimed as an instrument of musical education by several well-known pianists of the time, who were handsomely paid to write testimonials. Many lending libraries of music rolls were established, and every piano retailer sold players and their rolls.

During the 1929–31 Depression, the market collapsed and sales of player pianos dwindled to almost nothing. In spite of concerted attempts to revive the player-piano market in London, the industry was finished long before the outbreak of World War II. Basic player pianos are still produced in small numbers in America; digitally controlled reproducing pianos have gained a certain popularity for use in public places.

ARTHUR W.J.G. ORD-HUME

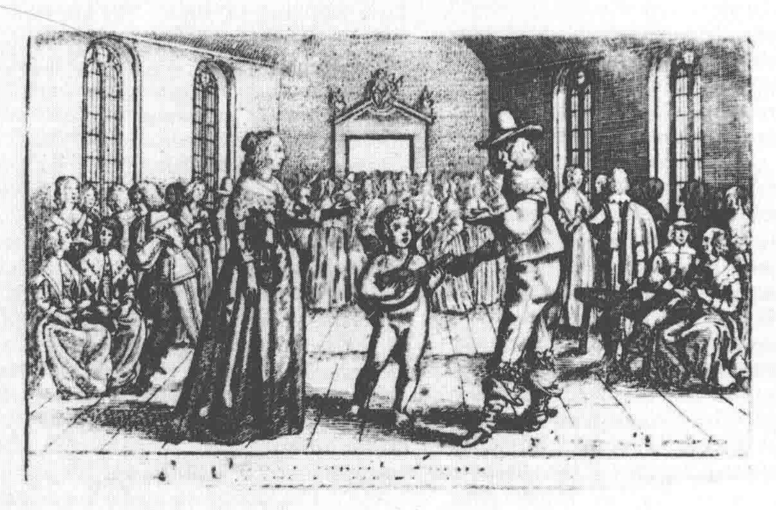
Playford. English family of music publishers and booksellers.

(1) **John Playford (i)** (*b* Norwich, 1623; *d* London, between 24 Dec 1686 and 7 Feb 1687). Publisher, bookseller, and vicar-choral of St Paul's Cathedral. During the period 1651–84 he dominated the music publishing trade (then virtually confined to London) in a business to which his son (2) Henry Playford succeeded. For the printing of his books he engaged the services of Thomas Harper (successor to Thomas Snodham, who had inherited the business of Thomas East), William Godbid (successor to Harper) and his own nephew (3) John Playford the younger, who, apprenticed to Godbid, entered into business in 1679 with the latter's widow Anne. The format, style and printing of Playford's books, together with evidence from the stationers' registers, suggest with some certainty that they were printed with East's types, although for title-pages, other than those engraved, a less florid style than the earlier borders was preferred. In many instances Playford adopted East's device and its surrounding motto, 'Laetificat cor musica' (fig.1).

1. *Device adopted by Playford's printer, Thomas Harper, from Thomas East*

1. Life. 2. Publications.

1. Life. A monument at St Michael-at-Plea, Norwich, to his father John, a mercer, and local records show that he was one of a large family many of whom were scriveners or stationers. Since there is no record of his entry at the grammar school his brother Matthew attended, he was probably educated at the almonry or choir school attached to the cathedral, where he acquired a knowledge of music and the 'love of Divine Service' to which he later referred. Shortly after the death of his father (22 March 1639) he was apprenticed to John Benson, a London publisher of St Dunstan's Churchyard, Fleet Street (23 March 1639/40), for seven years, achieving his freedom on 5 April 1647, when he became a member of the Yeomanry of the Stationers' Company. This entitled him to trade as a publisher.



He lost no time in securing the tenancy of the shop in the porch of the Temple Church from which all his publications were issued until his retirement. It was one of the addresses of Henry Playford until 1690, when the stock was auctioned. Royalist by family and by personal inclination, Playford began publishing political tracts culminating in *The Perfect Narrative of the Tryal of the King* and others relating to the executions of royalist nobility (reprinted in 1660 as *England's Black Tribunal*). In November 1649 a warrant was issued for the arrest of Playford and his associates. Nothing more is known of him until a year later, when on 7 November 1650 he entered in the stationers' registers 'A booke entituled The English Dancing Master'. Although registration before publishing was theoretically obligatory he entered so few of his music books that it is impossible to tell if this, subsequently published in 1651 (fig.2), was his first.

In 1653 he was admitted clerk to the Temple Church, an office he held with some distinction to the end of his life, devoting himself to the repair and maintenance of the building and to promoting the seemly ordering of the

Printed by *Thomas Harper*, and are to be fold by *John Playford*, at his Shop in the Inner Temple neere the Church doore. 1651.

2. *Title-page of 'The English Dancing Master' (London, 1651), printed by Thomas Harper and published by John Playford*

services. At about this time he married. When his wife Hannah inherited from her father, Benjamin Allen, publisher of Cornhill, the Playfords moved (1655) from the neighbourhood of the Temple to Islington, where she established a boarding-school for girls, which she maintained until her death in 1679. Playford then moved back to London, taking a house in Arundel Street, Strand, which later passed to his son.

The court books of the Stationers' Company show that Playford was called to the Livery in 1661. In 1681 a letter from the king to the master and wardens required that he and others named be admitted to the court of assistants. Soon afterwards he was allotted a share in the English Stock which managed the company's lucrative monopoly in psalms, primers and almanacks. In the successive purges of the court in 1684 and 1685 he survived unscathed, no doubt through royal protection. In 1684 he retired from active business in favour of his son Henry and another young man, Robert Carr. A number of books, however, retained his imprint until 1686. In his will of that year, which names Henry Purcell and John Blow as beneficiaries, he desired to be buried in the Temple Church, or in St Faith's, the stationers' chapel in the undercroft of St Paul's, but no record of the burial is known in either place. Playford was also deeply involved with the Company of Parish Clerks of London; he presented them with several copies of his 1671 *Psalms and Hymns*, which had psalm tunes arranged for four male voices. He was credited with the invention of a stringed instrument called the 'psalmody' for accompanying metrical psalms (*see* PSALTERER).

Though unloved in the competitive world of publishers, Playford was highly esteemed by poets and musicians. Nahum Tate, the poet laureate, wrote a 'Pastoral Elegy' on his death which was movingly set to music by Henry Purcell. The dedications and prefaces to his publications reflect his commercial acumen, his xenophobia, and his devotion to the monarchy and to the divine service decently ordered.

3. John Playford in 1663 (the two musical phrases indicate his membership of the Catch Club): engraving by Richard Gaywood

2. PUBLICATIONS. Playford's publications, apart from the political tracts and miscellaneous non-musical works, fall into three categories: theory of music and lesson books for various instruments, which usually contain brief instructions followed by 'lessons' or short pieces derived from popular airs; collections of songs and instrumental pieces; and psalms, psalm paraphrases and hymns. He began to publish music in 1651; new books succeeded one another rapidly in the early years, becoming more sparse later. Examination of the contents, however, shows that often a 'new edition' differs little from its predecessor although new 'lessons' may have been added and some others subtracted, and the later songbooks may be selections or rearrangements of earlier titles under new names. It is generally assumed that *The English Dancing Master*, addressed to the 'Gentlemen of the Innes of Court', came first, but *A Musicall Banquet* (also 1651) bears, as well as Playford's imprint, that of John Benson, his former master. *The English Dancing Master*, with many enlarged editions (some entitled *The Dancing Master*) until 1728, is probably Playford's best-known work, because of the modern revival of the country dance and because of its status as the largest single source of ballad airs. *A Musicall Banquet* contains the genesis of later books: *Musick's Recreation* (1652), *Catch that Catch Can* (1652; variously entitled *The Musical Companion* and *The Pleasant Musical Companion* in some later editions), *A Breefe Introduction to the Skill of Musick* (1654; later *An Introduction to the Skill of Musick*) and *Court Ayres* (1655). All but the first continued in new and enlarged editions. The *Introduction* was immensely influential for 100 years or more; its theoretical sections were copied or cited in numerous later treatises and in the didactic introductions to psalmody books. *Apollo's Banquet for the Treble Violin* (1669) reflects a new fashion for this 'brisk and airy' instrument that was to last for the next 30 years, but the lessons for the cittern and the virginals, which did not last much beyond the mid-17th century, are evidence of declining sympathy with Playford's nostalgia for these instruments.

The same is true of the hymns, songs and instrumental pieces addressed to the proficient performer. As examples of the creative genius of Henry Purcell, Matthew Locke, William and Henry Lawes, Christopher Simpson and Richard Dering, they afford interest to the scholar, but are without those qualities which enabled the vocal music of the Tudor period eventually to outlast them. The latter had been the property of Thomas East. In 1653 Playford offered them as part of his bookseller's stock in his *Catalogue of All the Musick Bookes Printed in England*. In 1690, when the stock of his shop by the Temple Church was to be sold by auction, they were again catalogued for the benefit of 'those remote from London' and offered to buyers for a few pence.

Playford's numerous editions of the metrical psalm tunes, for one voice (*The Whole Book of Psalmes*, 1661), two voices (*Introduction*, 1658), three voices (*The Whole Book of Psalms*, 1677), four voices (*Psalms and Hymns*, 1671), keyboard (*The Tunes of Psalms*, *c*1669), and cittern and gittern (*A Booke of New Lessons*, 1652), supplemented his practical work at the Temple Church and the Company of Parish Clerks. They represent an ambitious attempt, quite separate from his books of devotional hymns for domestic use, to raise the standards of music in worship by means of a well-instructed parish clerk and male choir. His aim was to restore the old tunes in correctly harmonized versions rather than to introduce new ones. Success came only after his death, with the burgeoning of voluntary parish choirs in the 1690s; many of his tune harmonizations were used throughout the 18th century in England, Scotland and North America.

PUBLICATIONS
(*selective list*)

all published in London; Playford's printers and partners not cited

A Musicall Banquet in 3 Choice Varieties: The First ... New Lessons for the Lira Viol: the Second, Musica Harmonia, New Allmans ... for Tr and B Viol, by W. Lawes and other Authors: the Third ... New Catches and Rounds: to which is added Rules ... for such as learne to Sing or to Play on the Viol (1651[6]) [each part was later expanded into a book]; The English Dancing Master: or, Plaine and Easie Rules for the Dancing of Country Dances, with the Tune to Each Dance (1651/*R*; numerous rev. edns to 1728) [entitled The Dancing Master in some later edns]; A Booke of New Lessons for Cithern and Gittern (1652; enlarged 3/1666); Musick's Recreation on the Lyra Viol (1652[7], 4/1682[9]); Select Musicall Ayres and Dialogues (1652[8]; enlarged 2/1653[7]; selections 3/1659[5]) [1659 edn entitled Select Ayres and Dialogues]; J. Hilton, ed.: Catch that Catch Can (1652[10]; enlarged 7/1686[4]; other edns to *c*1720) [entitled The Musical Companion, The Pleasant Musical Companion in some later edns]

A Catalogue of All the Musick Bookes ... Printed in England (1653); H. Lawes: Ayres and Dialogues ... the First Booke (1653); J. Playford: A Breefe Introduction to the Skill of Musick (1654; other edns to 1730 incl. 1655 [having as pt ii T. Campion's Art of Composing with addns by C. Simpson]; 1657 [omitting Campion, but incl. Directions for Playing the Viol de Gambo and Tr Vn]; 1658 [adding The Tunes of the Psalms as they are Commonly Sung in Parish-Churches]; 1660 [having as bk 3 Campion's Art of Descant with addns by C. Simpson]; 1674 [incl. Order for Performing Divine Service in Cathedrals], [some edns entitled An Introduction to the Skill of Music]; H. Lawes: The Second Book of Ayres and Dialogues (1655); Court Ayres ... of 2 Parts, Tr, B, for viols/vns (1655[5]; rev. 2/1662[8] as Courtly Masquing Ayres) [enlarged from Musica Harmonia in A Musicall Banquet]

W. Child: Choise Musick to the Psalmes of David (1656) [variant repr. of First Set of Psalms, 1639, advertised in A Musicall Banquet, but no earlier exemplar known]; M. Locke: His Little Consort (1656); H. Lawes: Ayres and Dialogues ... the Third Book (1658); M. Locke and C. Gibbons: Cupid and Death ... reprinted with Scenes and Music (1659) [orig. pubd without music, 1653]; J. Playford, ed.: The Whole Book of Psalmes Collected into English Meeter (1661) [orig. pubd 1562; 6 edns to 1687]; R. Dering: Cantica sacra, 2, 3vv, bc (org) (1662) [ded. by Playford to Queen Henrietta Maria]; Musick's Hand-Maide Presenting New and Pleasant Lessons for Virginals or Harpsycon (1663[7])

Musick's Delight on the Cithren, Restored and Refined (1666[4]); The Treasury of Musick (1669[5]) [incl. the 1659 selection of Ayres and Dialogues, bks 2, 1655, and 3, 1658, of Lawes's Ayres and Dialogues]; The Tunes of Psalms to the Virginal or Organ (*c*1669) [sheet inserted in some copies of Musick's Hand-Maide]; Apollo's Banquet for the Tr Vn (1669; other edns to 1701); J. Playford: Psalms and Hymns in Solemn Musick, 4vv, on the Common Tunes ... ; also 6 Hymns, lv, org (1671) [ded. to the Dean of St Paul's]; T. Greeting: The Pleasant Companion ... for the Flageolet (1672, 4/1682); London Triumphant (1672) [Lord Mayor's Show]; Choice Songs and Ayres, 1v, theorbo/b viol: being Most of the Newest Songs sung at Court and at the Publick Theatres (1673[3]; enlarged 3/1676); M. Locke: The Present Practice of Musick Defended and Vindicated against the Exceptions ... laterly published by Thomas Salmon ... together with a Letter from John Playford (1673)

T. Jordon: The Goldsmith's Jubilee or London's Triumphs (1674) [Lord Mayor's Show]; Cantica sacra containing Hymns and Anthems, 2vv, org, both Latine and English ... the Second Sett (1674[2]) [ded. to the king]; The Triumphs of London (1675) [Lord Mayor's Show]; G. Sandys and H. Lawes, rev. J. Playford: A Paraphrase upon the Psalms (1676) [orig. pubd 1638]; J. Playford, ed.: The Whole Book of Psalmes (1677; 20 edns to 1757) [not identical with the 1661 pubn]; Musick's Hand-Maid: New Lessons and Instructions for the Virginals (1678[6]); Short Rules and Directions for the Tr Vn (1679) [lost]; Choice Ayres and Songs ... the Second [–Fifth] Book (1679[7], 1681[4], 1683[5], 1684[3]); T. Jordon: London's Glory (1680) [Lord Mayor's Show]; H. Purcell: Sonnata's of III Parts (1681); G. Dieseneer: Instrumental Ayres in 3 and 4 Parts ... in 3 Books (1682); The Triumphs of London (1683) [Lord Mayor's Show]

(2) Henry Playford (*b* ?Islington, 5 May 1657; *d* London, May–Dec 1709). Publisher, bookseller and dealer, son of (1) John Playford (i). He continued his father's business but was unable, owing to competition from the publishers of engraved music and to his conservatism and training in the old methods of bookselling, to maintain the same dominance of the music publishing trade. Nevertheless, during the late 1680s and early 1690s he was probably London's best-known music publisher.

Apprenticed to his father in 1674 and freed in 1681, he initially published in conjunction with John Playford (i), who shortly before his death handed over part of his business to his son and to Robert Carr, son of the music publisher John Carr. Henry worked from the same addresses as his father, a shop in the Temple and a house in Arundel Street. After three publications he parted company with Robert Carr, and thereafter published largely on his own account, occasionally in partnership with other publishers. His early works mainly followed the examples set by his father or were new editions of his father's titles. From 1687 he began to publish large numbers of non-musical works, which were to remain important in his output. He married Anne Baker in 1686; records of one daughter have been located. From 1690 until 1693 Playford was active in promoting sales and auctions of art works and antiquarian music books; from 1692 he was responsible for the publication of most of Purcell's music in association with that composer and later his widow Frances.

Around 1695 Playford found that competition from publishers of engraved music (notably John Walsh, John Hare and Thomas Cross) greatly affected his sales, and so he took action to regain his share of the market. He tried issuing a series of engraved songsheets in 1697 but soon reverted to the older, more familiar methods of printing from type. In 1699 he purchased equal shares in William Pearson's improved music type fount, the 'new London character'. To attract a wider audience he initiated new forms of publication, including the music periodical *Mercurius musicus* (1699–1702) and the cheap collections of popular songs entitled *Wit and Mirth: or, Pills to Purge Melancholy*. Further, he attempted to establish a network of music clubs to promote his publications. These innovations were finally to no avail, as Playford's old-fashioned methods were quickly superseded by those of the new publishers of engraved music.

Playford never reached his father's seniority in the Stationers' Company. He was called to the livery in 1686, and awarded a half-yeomanry share in the English Stock

in 1696. Records document five apprentices. His stock was sold by John Cullen from 1706, and also by John Young who probably sold them on Pearson's behalf. After his death, his saleable type-printed works were issued by John and Benjamin Sprint and William Pearson, and the engraved ones by John Walsh and John Hare. In his will he left his estate to his wife Anne.

Henry continued to reissue many of his father's titles, after updating them to suit modern tastes, until his death. The influential treatise *An Introduction to the Skill of Musick* (five editions) was reissued in 1694 with a new section on 'The art of Descant' by Purcell. Among Henry's works modelled on those of his father were the song collections *The Theater of Music* (1685–7), *The Banquet of Music* (1688–92) and *Deliciae musicae* (1695–6).

Playford's most significant publication was perhaps *The Divine Companion* (1701), for which he commissioned eight leading professional composers, including Blow, Jeremiah Clarke (i) and Croft, to provide psalm tunes, hymns and anthems in a simple but up-to-date style. The anthems, as he pointed out in his preface, were the first printed for parish churches, and they would be reprinted, revised and imitated in dozens of books of parochial psalmody during the following century. One of Clarke's best-known hymn tunes, 'Uffingham', originated here (as 'Evening Hymn') while his 'St Magnus' appeared in the expanded second edition (1707).

all published in London; Playford's printers and partners not cited

Works first pubd by (1) John Playford (i): The Dancing Master (8/1690), 12/1703; other edns to 1728); The Second Book of the Pleasant Musical Companion (2/1694, 5/1707/*R*); An Introduction to the Skill of Musick (11/1687; 15/1703; other edns to 1730); Apollo's Banquet (5/1687[7], 6/1690[4], bk 2, 1691[5]; other edns to 1701); The Second Part of Musick's Hand-Maid (1689[7]); T. Greeting: The Pleasant Companion ... for the Flageolet (5/1683)

Works pubd by Henry Playford: The Theater of Music (1685[5], 1685[6], 1686[3], 1687[5]); Harmonia sacra, or Divine Hymns and Dialogues (1688[1], 1693[1]); The Banquet of Music (1688[6], 1688[7], 1689[5], 1690[5], 1691[6], 1692[8]); Thesaurus musicus ... the Second Book (1694[7]) [the 1st pubd 1693 by J. Hudgebut]; Deliciae musicae (1695[7], 1695[8], 1696[5], 1696[6], 1696[7]); The A'Lamode Musician ... ingraved from the Originalls (1698[2]) [the 'Originalls' were pubd separately, early examples of sheet music]; H. Hunt: A Collection of Some Verses out of the Psalms ... Composed in Two Parts (2/1698); The Tunes of the Psalms (1698); Wit and Mirth (1699[6], 1700[4]); A Book of Directions to Play the Psalmody, an Instrument Invented by John Playford (1699); Mercurius musicus (1699[4]–1702); S.S. and J.H.: Tunes to the Psalms (1700); The Divine Companion (1701; 2/1707; other edns to 1722); H. Purcell: Orpheus Britannicus ... the Second Book (1702); The Diverting Post (1706) [house journal]

(3) John Playford (ii) (*b* Stanmore Magna, *c*1655; *d* ?20 April 1685). Printer, nephew of (1) John Playford (i). He has been confused with other members of the family also named John, and with one, believed to be a bookseller, who spelt his name Playfere, but there is now no doubt that he was the son of the Rev. Matthew Playford (brother or half-brother of John Playford (i)), vicar of Stanmore Magna, who forfeited both livelihood and property because of his royalist sympathies.

At some time, probably in the 1670s, William Godbid, a printer of scientific books and music, took young John Playford as apprentice; at Godbid's death in 1679, his widow, Anne, took John into the partnership and advertised in *The Art of Descant* (refashioned from Campion's *Art of Composing* published by 'Snodham alias Este') that 'the only Printing-house in England for Variety of Musick and Workmen that understand it, is still kept in Little Britain by A. Godbid and J. Playford Junior'. In 1682 Playford seems to have acquired the ownership of the business and in the same year his name appears in the livery list of the Stationers' Company; in 1683 he attended the company's Court of Assistants. He died between 20 April 1685, when he signed his will, and 29 April when the will was proved, bequeathing the business to his sister Eleanor.

Playlist. A selection of popular songs guaranteed air time on a given radio station. It first originated in the 1940s and 50s in American radio broadcasting. The Top 40 playlist included those songs currently in the higher reaches of the chart, a selection of those records climbing the chart but still outside the Top 40 ('bubbling under'), a number of new releases, mostly from major records labels and which were predicted to become hits, and a few older songs considered classics. Some of these records, for example the current number one, were played several times a day ('heavy rotation'), while other playlisted items were guaranteed to be heard only a few times each week. The format was open to corruption as record labels

attempted to buy their records air-time ('payola'). In the British Isles the pirate radio stations, independent radio stations and BBC Radio 1 have had playlist policies, particularly during daytime hours. In the 1990s Radio 1 developed the concept of the A, B and C lists, adopting a sliding scale of plays with the most popular songs installed on the A list. However, many big-selling artists from punk, hardcore, metal and new wave in the 1970s to rap, hip hop and jungle artists in the 80s and 90s have been excluded from the playlists altogether, despite their commercial appeal. In 1991, for example, Iron Maiden's *Bring your daughter to the slaughter* was not playlisted by Radio 1 despite being at number one in the UK charts.

DAVID BUCKLEY

Plaza(-Alfonzo), Juan Bautista (*b* Caracas, 19 July 1898; *d* Caracas, 1 Jan 1965). Venezuelan composer and musicologist. He began music studies at the age of 15 with Jesús María Suárez; within a year he was asked to lead the choir and to teach music to his fellow pupils in the Caracas French School. Thereafter he studied law and medicine at the university while continuing to act as choirmaster at the French School, where he produced his first large work, the zarzuela *Zapatero a tus zapatos*. In 1920 a scholarship took him to the Scuola Superiore di Musica Sacra in Rome; there he was taught by Casimiri, Manari, Ferretti and Dagnino, taking the degree of Master of Sacred Composition (1923). Returning to Caracas in that year, he was appointed choirmaster of the cathedral (1923–47) and professor of harmony at the Escuela Nacional de Música (1924–8), where he later instituted and taught courses in music history (1931–62) and aesthetics (1948–62). From 1936 to 1944 he undertook the study and cataloguing of a large quantity of colonial music that had been discovered in 1935; this work led to the publication of the 12-volume collection *Archivo de Música Colonial Venezolana* (Montevideo, 1943). While serving as director of culture in the Ministry of Education (1944–6) he established the Escuela Preparatoria de Música, which, under his direction (1948–62), became one of the most vital music schools in the country. Throughout these years he also appeared as an organist and as conductor of the Venezuela SO. After retiring in 1962 he gave his attention to further researches in the colonial music archive and to the cataloguing of his own work.

The most productive period of Plaza's life coincided with his tenure as cathedral choirmaster. After 1947 he wrote less, and the later works show an increasing abandonment of traditional tonality and a tendency towards introspection. Most of his compositions are vocal pieces, written for the church or for the choruses at the schools in which he taught; notable within this group are the Requiem (1933) and *Las horas* (1930). The principal influences on his early music were those of Puccini and Perosi; later pieces show his interests in Impressionism and in Stravinsky's music. Throughout his career he was active as a writer and lecturer, giving hundreds of radio talks and writing copiously in daily newspapers and scholarly journals on the subject of music, largely to educate lay readers. In 1990 the Fundación Juan Bautista Plaza was established to preserve and catalogue not only his musical works but the large mass of writings that have yet to be systematically studied. Most of the archive of the Fundación is now in the Biblioteca Nacional de Venezuela, and its catalogue is nearing completion. The publication of his complete works is being considered.

WORKS
(*selective list*)

Masses: Misa breve, e, TB, orch, org, 1924; Misa en honor de S Inés, unison vv, org, 1925; Misa en honor de Santiago Apóstol, STB, orch, 1926, arr. TTB, org, 1944; Requiem, unison vv, org, 1926; Requiem, TTBB, orch, 1933; Mass, TTB, 1936; Missa 'Popule meus', TTB, orch, 1937; Misa en honor de S Juan de la Cruz, 2vv, org, 1944; Misa litúrgica de la esperanza, TB, org, 1962

Motets, psalms, offertories

Secular vocal: Las horas (F. Paz Castillo), SATB, orch, 1930; Zapatero a tus zapatos (zar); many unacc. choruses

Orch: Elegía, eng hn, str, 1923; El picacho abrupto, sym. poem, 1926; Vigilia, sym. poem, 1928; Campanas de pascua, sym. poem, 1930; Fuga criolla, str, 1931; Fuga romántica venezolana, str, 1950, Elegía, str, timp, 1953; Marcha nupcial, 1959

Songs, 1v, pf: 7 canciones venezolanas (L. Barrios Cruz), S, pf, 1932; many others

Other: chbr works; many works for pf, org, gui; educational music, official arr. of Venezuelan national anthem

Principal publishers: Associated, G. Schirmer, Fundación Vicente Emilio Sojo, Casimiri

ALEJANDRO ENRIQUE PLANCHART

Plaza (y Manrique), Ramón de la (*b* Caracas, 1831; *d* Caracas, 15 Dec 1886). Venezuelan music historian. He spent two years (*c*1853–5) in north-eastern USA, where he broadened his musical knowledge. A year after his marriage (on 12 March 1869) to the wealthy Mercedes Ponce Valdés he became a deputy to the Venezuelan Congress. In recognition of his services as head of a legislative commission concerned with religious matters he was made a general. By presidential decree he became first director of the newly created Instituto Nacional de Bellas Artes on 3 April 1877. He was an amateur cellist and composer whose sensitivity, practical musicianship, wide reading, extensive American and European travels and informed patriotism made him the ideal interpreter of his nation's artistic past. Although his creative ability is often downplayed, works such as the *Barcarola* in D minor (1872) show him to be a salon composer of charming talent. His luxuriously printed *Ensayos sobre el arte en Venezuela* (Caracas, 1883/*R*), published to commemorate Bolívar's birth, was not the first Latin American music history – Juan Agustín Guerrero's *La música ecuatoriana desde su origen hasta 1875* (Quito, 1876) preceded it – but it is still one of the best; it has been drawn upon extensively in later writings on the

subject, particularly those of L. Cortijo Alahija. It combines extensive analysis of aboriginal music with a precise and extremely valuable history of European music in Venezuela from the founding of Caracas to Plaza's time; it includes a 56-page musical appendix. He also published *El drama lírico y la lengua castellana como elemento musical* (Caracas, 1884), a study of Spanish as a vehicle for opera.

ROBERT STEVENSON

Pleasants, Henry (*b* Wayne, PA, 12 May 1910; *d* London, 4 Jan 2000). American author and critic. He trained as a singer and pianist at the Philadelphia Musical Academy and Curtis Institute of Music, with subsequent private studies in singing, piano and composition. In 1930 he became music critic for the *Philadelphia Evening Bulletin*, and music editor from 1934. After army service (1942–50), mostly in North Africa and Europe, he joined the US Foreign Service and was based successively in Munich, Berne and Bonn (1950–64). During this time (1945–55) he was also central European music correspondent for the *New York Times*. He settled in London and was London music critic for the *International Herald Tribune* (1967–97) and an editor for *Stereo Review*, as well as a frequent contributor to the musical press in Britain and the USA. The Curtis Institute awarded him an honorary doctorate in 1977. He is married to the harpsichordist and fortepianist Virginia Pleasants.

Pleasants's writings extend and elaborate a critical principle which accords serious attention to the popular musical vernacular of the 20th century (jazz, theatre music, rock and pop), in the belief that these styles have gained a dominant position in world music not only as commercial entertainment, but also as art. His study of great singers is related to this in suggesting that the art of singing reached its zenith in the Baroque period; since then it has been in conflict with the demands of emotional expression and compositional techniques and cannot survive if lyrical grace is not the chief element of its style.

NOËL GOODWIN

Plectrum [pick, flat-pick] (Fr. *médiator*, *plectre*; Ger. *Dorn*, *Kiel*, *Plektrum*, *Schlagfeder*; It. *plettro*). A general term for a piece of material with which the strings of an instrument are plucked. Tinctoris called the plectrum of antiquity 'pecten' and that of the Middle Ages 'penna' (quill). Ancient Greek sources used the terms 'plectron' and 'pecten'. Plucked instruments with stopped strings and more specifically lute-type instruments – such as the *biwa* of Japan and the Western lute itself up to the late 15th century – have often been played with a plectrum, in some instances a rather large one (*see* JAPAN, fig.17), in others a more delicate type (*see* LUTE, fig.7).

Sources since the Middle Ages describe plectra made from eagles' talons as well as ones of wood, metal (*see* SITĀR, fig.1C), ivory, bone, tortoiseshell, parchment and quill. The use of synthetic material, such as nylon or plastic, for plectra is now almost universal. Medieval Arabic writings describe the use of plectra on the lute. In muslim Spain the musician ZIRYĀB (*d* 852) was accredited with replacing the traditional wooden plectrum with one made from an eagle's talon. This material was said to be successful because of its subtle tip, its purity, and its flexibility between the fingers; the strings also lasted longer. Eagle's talon or tortoiseshell plectra are still somtimes used by 'ūd players, although synthetic materials are now more common.

Iconographical evidence shows the use of a bird's feather quill by European lute players, but that the transition to thumb-and-index-finger technique took place between about 1460 and 1500, although the two techniques must have co-existed over a long period. The duets in various 16th-century publications of lute music (e.g. F. Spinacino: *Intabulatura de lauto*, Venice, 1507/*R*), while specifying the use of thumb-and-finger technique, preserve a style of single-note lines and chordal playing that in many cases could be played with a plectrum, and is clearly descended from the extemporary playing technique of the previous century. This style is evident in some of the pieces in the 'Pesaro Manuscript' (*c*1500, *I-PESo* 1144).

The initial sound of a string set into vibration by a plectrum is naturally more akin to that of a string plucked by a fingernail than by the flesh of the finger. A plectrum facilitates tremolando effects (as on the mandolin) and vigorous strumming, but does not favour the kind of polyphonic texture that was cultivated on the high-Renaissance lute and vihuela. Psaltery-type instruments, such as the zither and the Middle Eastern *qānūn*, are likely to be played with a plectrum (*see* QĀNŪN), but harps virtually never are, as the player often has a relatively unclear view of the strings and so tends to rely on the sense of touch to help distinguish them. The term also refers to the small tongue which plucks the string of a harpsichord (it may be of leather or plastic instead of quill). A modern technique of virtuoso melodic playing with a 'pick' or 'flat-pick' (plectrum) on a (normally steel-strung) guitar is often referred to as 'flat-picking'.

VLADIMIR IVANOFF

Pleeth, William (*b* London, 12 Jan 1916; *d* London, 6 April 1999). English cellist. He studied at the London Academy of Music (1924–8), with Herbert Walenn at the London School of Violoncello (1928–9) and with Julius Klengel at the Leipzig Conservatory (1930–32). He made his début in Leipzig in 1931 and in London in 1933. As a soloist he gave the premières of several works dedicated to him including Rubbra's *Soliloquy* (1943) and Franz Reizenstein's Cello Concerto (1948). As a chamber music player he appeared with the Blech Quartet (1936–41), the Allegri Quartet (1952–67), the Rubbra-Brainin-Pleeth Trio (1946) and in many quintet performances with the Amadeus String Quartet. He also played sonatas with his wife, the pianist Margaret Good (*b* 27 April 1906; *d* 25 July 2000), with whom he made some notable recordings. His playing was distinguished by an exuberant, extrovert style, combined with a passionate conviction which was embodied in the full and colourful tone he produced from his 1732 Stradivari. He was professor of cello and chamber music at the GSMD (1948–78) and visiting professor at the RCM (1987–95). Among his pupils were his son Anthony and Jacqueline du Pré. He published *Cello* (with Nona Pyron, London, 1982). He was made an OBE in 1988.

WATSON FORBES/MARGARET CAMPBELL

Plein jeu (Fr.: 'full registration'; pl. *pleins jeux*). The most common generic French term for a MIXTURE STOP or the Diapason chorus. Possibly derived from *plain jeu*, 'integrated registration', the phrase seems to have arisen in the 16th century to designate the combination of stops yeilding the tonal result of the heretofore undivided, stopless BLOCKWERK. At Notre Dame, Alençon (1537–40), the term *principal du corps* was still used, corresponding to the Dutch, German and probably English term 'principal', i.e. not a single rank by the Diapason chorus as a whole. At Chartres in 1542, the contract refers to a more extensive *plain jeu*, complete with the eight 32′ pedal pipes and the doubled and tripled 8′ and 4′ ranks. For Mersenne (*Harmonie universelle*, 1636–7), *plain jeu* included a Tierce but not the highest Cymbale mixture. Bédos de Celles (*L'art du facteur d'orgues*, 1766–78) codified a concept which had been perfected decades earlier: the *grand plein jeu* was based on the *Grand Orgue* mixture chorus to which was invariably coupled the higher-pitched *petit plein jeu* of the *Positif*; the latter could be played alone in brisk movement or in alternation with the *grand plein jeu*. (To facilitate tuning, larger *pleins jeux* were usually divided into Fourniture and Cymbale registers with elegantly interlocking breaking schemes.) Thus the *plein jeu* formed one of the systematic registration recipes of the Classical French organ, in contrast, for instance, to the GRAND JEU or the *jeu de tierce*. Evoking divine majesty in its stately radiance, it was commonly featured in the opening versets of mass movements (Kyrie, 'Et in terra pax', Sanctus), and it became particularly associated with a sustained four- or five-voice texture with constant and slowly resolving suspensions. It was rarely used, however, for fugal textures, these rather played on the *grand jeu*.

In the 19th century the Chorus structures of the French Classical organ were progressively broken down as horizontal writing gave way to more operatic, orchestral or pianistic gesture. Consequently, the *plein jeu*, while retaining secondary and residual use in *alternatim* practice, was conceived primarily as a tonally reinforcing element of the GRAND CHOEUR or FULL ORGAN, being included with the reeds rather than with the foundation stops on the divided windchests. The French builders often adopted the concept of the German *Progressivharmonika* (*plein jeu harmonique*) which, by suppressing the high-pitched ranks in the bass and progressively adding ranks in the upper range, favoured homophonic texture and helped strengthen the naturally weaker trebles. In 1913 Alexandre Cellier (in *L'orgue moderne*) could still write that 'nowadays the *pleins jeux* are scarcely ever used except in combination with the combined choruses of reeds and foundation stops'.

After World War I French builders gradually returned to earlier concepts of the Diapason chorus and its functions, subsequently integrating certain German Baroque designs such as the Terzzimbel in order to favour the corresponding repertory. (To be sure, there has never been the same amount of experimentation with mixture compositions in France as there was in the *Orgelbewegung* period in Germany.) To describe the new sounds, words such as 'luminous' and 'scintillating' appeared. Composers have made clever use of the colouristic possibilities thus offered. Ultimately, however, the most far-reaching conceptual change resulted from expecting the *plein jeu* convincingly to render both the massive Classical French texture and the vigorous, transparent fugal writing epitomized by Bach. The validity of this nearly unattainable goal has been questioned and *plein jeu* design at the end of the 20th century tended increasingly to fall back on specific historical models, chosen case by case.

PETER WILLIAMS, KURT LUEDERS

Plena. A song genre of Puerto Rico. It is believed to have originated in the early 20th century, with a binary form consisting of solo or duet melodies followed by choral refrains. Narrative texts, often humorous, contain social commentary. The *plena* is characterized by extensive syncopation, while the use of triplet figures in vocal lines creates rhythmic contrast with the duple metre accompaniment of guitars, *panderetas* (tambourines) and *conga*

drums and, more recently, orchestras with extended percussion sections.

WILLIAM GRADANTE/R

Plenary mass. A setting of both the Ordinary and the Proper of the Roman Catholic Mass. Examples are rare: they include Du Fay's early *Missa Sancti Jacopi* and the mass of Reginaldus Libert, both probably from the 1420s, as well as the mass for St Anthony Abbot ascribed to a certain Piret (*I-TRmp* 89) and perhaps Du Fay's mass for St Anthony of Padua, both evidently from the 1440s. But the prinicple became common only in the requiem (*see* REQUIEM MASS, §2).

□

Pleno (It.; Lat. *plenum*). Full, as in *organo pleno*. *See* FULL ORGAN.

Plessas, Mimis (*b* Athens, 12 Oct 1924). Greek composer and pianist. Performing in live bands and for the radio since his teens, his early musical influences were predominantly Western, mainly jazz and ragtime. In the late 1940s he went to the USA to continue his studies in chemistry, and also to work as a musician. Returning to Greece in 1951, he soon started winning critical acclaim and success as a composer of light songs. During the 1960s he became established as a composer for the cinema, working predominantly with the production company Finos Films and with director Giannis Dalianidis. While his dramatic scores for films like *Iligos* ('Vertigo', 1963) and *To Choma Vaftike Kokino* ('The Earth became Red', 1965) won him prizes and critical acclaim, his songs for such comedies and musicals as *Koritsia gia Filima* ('Girls for Kissing', 1965), *I Thalassies i Chandres* ('The Blue Beads', 1967), *Mia Kyria sta Bouzoukia* ('A Lady at the Bouzouki-Club, 1968) and *Gorgones ke Manges* ('Mermaids and Lads', 1969) significantly increased his popularity.

Until the late 1960s his musical style was predominantly Western, following contemporary trends of light song. Towards the end of the decade his work integrated more elements of traditional popular Greek music (*laiki*), becoming part of a trend of artistic popular music: typical of this is the use of the *bouzouki*. The collection of songs *O Dromos* ('The Road'), with lyrics by Lefteris Papadopoulos, is characteristic of his work during this period. More recently Plessas has composed instrumental pieces for orchestra, and experimented with electronic music. However, his main contribution to Greek music remains tied to his songs which enjoyed renewed popularity among Greek youth in the 1990s.

LYDIA PAPADIMITRIOU

Plessis. *See* DUPLESSIS family.

Plessis, Hubert du. *See* DU PLESSIS, HUBERT.

Pletnev [Pletnyov], **Mikhail (Vasil'yevich)** (*b* Arkhangel'sk, 14 April 1957). Russian pianist and conductor. His father was an accordion teacher, his mother a pianist, accompanist and teacher. When the family moved to Kazan', Pletnev learned to play several instruments, including the piano, which he went on to study at the Central Music School in Moscow from the age of 13 under Yevgeny Timakin, then from 1974 at the Conservatory with Yakov Fliyer, and, after Fliyer's death, with Lev Vlasenko. In 1978 he won first prize in the Tchaikovsky International Piano Competition. His subsequent recording of his own arrangements from Tchaikovsky's *Nutcracker* suite and Shchedrin's *Anna Karenina* created a sensation. Pletnev's pianism is characterized by consummate clarity of fingerwork, self-awareness (sometimes to the point of mannerism) and cool intelligence. His recordings of Rachmaninoff and Scarlatti are outstanding.

In 1990 Pletnev founded the Russian National Orchestra, the first self-financing orchestra in Russia, drawn largely from the best players in former state-subsidised ensembles such as the Bol'shoy Opera. Their recordings, starting with a highly praised Tchaikovsky 'Pathétique' Symphony, reflect Pletnev's own temperament in their highly polished intensity. His interest in the art of transcription has continued with an arrangement of Beethoven's Violin Concerto for clarinet and orchestra (1995). He is also the composer of orchestral works and has worked as choreographer with the Bol'shoy Ballet School.

DAVID FANNING

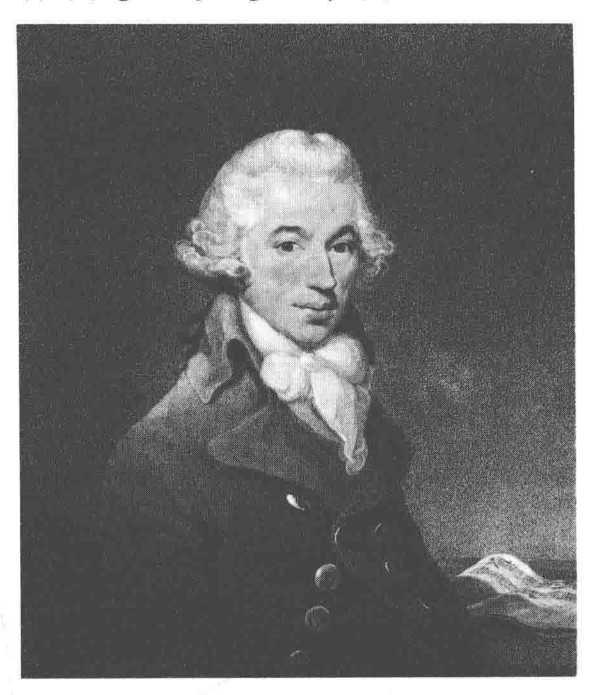
Pleyel (i). Austro-French family of composers, musicians, publishers and piano makers, active in France. (For the firm of piano makers, *see* PLEYEL (ii).)

(1) Ignace Joseph [Ignaz Josef] **Pleyel** (*b* Ruppersthal, 18 June 1757; *d* Paris, 14 Nov 1831). Composer, music publisher and piano maker. He founded a major publishing house and a piano factory and his compositions achieved widespread popularity in Europe and North America.

1. LIFE. Pleyel's baptismal certificate in the parish office names his father Martin, a schoolteacher, and his mother Anna Theresia (Maria Christina Theresa in *MGG1*). He is said to have studied with Vanhal while very young, and in about 1772 he became Haydn's pupil and lodger in Eisenstadt, his annual pension being paid by Count Ladislaus Erdődy, whose family at Pressburg was related to Haydn's patrons, the Esterházys. The count showed his pleasure at the progress of his protégé by offering Haydn a carriage and two horses, for which Prince Esterházy agreed to provide a coachman and fodder.

Little is known of the daily activities of Haydn's several pupils. A few incidents concerning Pleyel's apprenticeship are recounted in Framery's *Notice sur Joseph Haydn*, in which the author claimed that 'these various anecdotes were furnished me by a person who spent his entire youth with him and who guarantees their authenticity'. That person is generally identified as Pleyel, living in Paris when the *Notice* appeared there in 1810. The assumption is strengthened by the manner in which the narrative favours Pleyel, always emphasizing the closeness of his relationship with Haydn and the master's affection and esteem for him.

During this period Pleyel's puppet opera *Die Fee Urgele* was first performed at Eszterháza (November 1776), and at the Vienna Nationaltheater. Haydn's puppet opera *Das abgebrannte Haus*, or *Die Feuersbrunst*, was also first performed in 1776 or 1777, with an overture (or at least



its first two movements) now generally accepted as being by Pleyel.

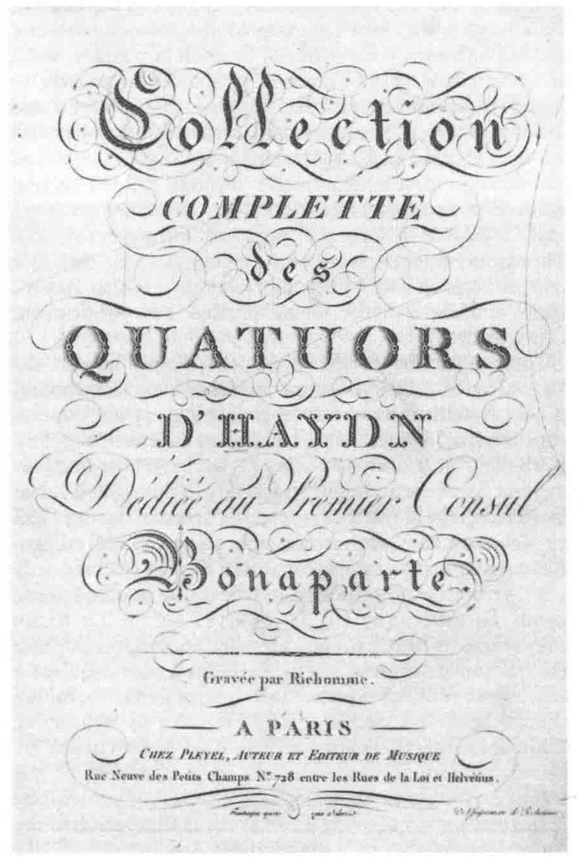
Pleyel's first position seems to have been as Kapellmeister to Count Erdődy, but again that period of his career is undocumented. He and the count were members of the masonic Lodge 'Zum goldenen Hirschen', founded by the count's brother Ludwig, and located from 1778 in the town of Fidisch, near Eberau in Burgenland. The musical importance of the count's chapel is affirmed in the notice published after his death on 13 July 1786: a variety of instruments as well as several hundred symphonies, concertos, quintets, operas, masses and other works were to be sold two years later in Vienna for the benefit of the poor (*Wiener Zeitung*, 9 Aug 1788). Pleyel's String Quartets op.1 (1782–3, B 301–6) are dedicated to Count Erdődy for his 'generosity, paternal solicitude and encouragement'.

During the early 1780s Pleyel travelled in Italy. Through Norbert Hadrava, an ardent music lover and part-time composer attached to the Austrian embassy in Naples, Pleyel was asked to compose lyra (hurdy-gurdy) pieces for performance by Ferdinand IV, the 'Lazzarone' King of Naples; Hadrava had instructed the king in an elaborate version of the instrument, and also procured commissions for Haydn and Sterkel. Two of Pleyel's works for the hurdy-gurdy survive in autographs (B 202 and 202.5). In 1784 Hadrava engineered the commissioning of an opera: Pleyel's *Ifigenia in Aulide* had its première at the S Carlo theatre on the king's nameday, 30 May 1785, and there were 18 further performances that summer.

Meanwhile (probably in 1784) Pleyel had become assistant to F.X. Richter, Kapellmeister of Strasbourg Cathedral, and he succeeded to the post when Richter died in 1789. From 1786 he also conducted and organized a series of public concerts in collaboration with J.P. Schönfeld, Kapellmeister of the Strasbourg Temple Neuf. On 22 January 1788 he married (Franziska) Gabrielle (Ignatia) Lefebvre, daughter of the *tapissier* Stephen Laurence Lefebvre, with whom Pleyel was later involved in a variety of business investments. Four children survived the union, the eldest of whom was (2) Camille Pleyel. The Strasbourg period was Pleyel's most productive musically (fig.1); most of his compositions date from the years 1787–95. His pupils of that time included Ferdinand Fränzl, who dedicated his op.1 to Pleyel, and P.-J. Pfeffinger.

The Revolution having abolished the cathedral's religious functions and the city's secular concerts, Pleyel accepted an invitation to conduct the Professional Concert in London, and stayed there from December 1791 until May 1792 (thus, contrary to some sources, he cannot have composed the *Marseillaise*, which had been written in Strasbourg by Rouget de Lisle in April). There is no evidence for the assertion that Pleyel let himself be used by the entrepreneur Wilhelm Cramer of the Professional Concerto to draw listeners away from Haydn's concurrent series with the impresario Salomon, nor even that he was aware of Haydn's plans when he accepted the invitation. The composers remained unaffected by the rival publicity, expressing mutual affection, dining together, performing each other's music and attending each other's concerts. Haydn generally received more critical and popular acclaim, but Pleyel's concerts were also well attended; and his compositions, especially the *symphonies concertantes* and quartets, were highly praised in the press.

1. Ignace Joseph Pleyel: stipple engraving by William Nutter after Thomas Hardy, 1793



During Pleyel's London stay, George Thomson of Edinburgh asked him to compose the introduction and accompaniments for a series of Scottish airs and to write a set of piano trios. Thomson's remarks in a letter to Kozeluch about having been 'juggled, disappointed and grossly deceived by an eminent musical composer with whom I entered into an agreement some years ago' and his decision to use Kozeluch's settings for the second volume of Scottish songs have been construed to mean that Pleyel had in some way behaved dishonourably. But Thomson evidently retained no animosity, for during a trip to Paris in 1819 he paid a friendly visit to Pleyel's shop and in a letter home praised his publications extravagantly.

After returning to the Continent, Pleyel bought the large Château d'Itenwiller at St Pierre, near Strasbourg, probably with the considerable earnings of his London concerts (the last, on May 14, had been the usual 'benefit'). According to a dramatic story (which remains undocumented despite searches in Strasbourg archives, and varies in each telling) Pleyel was repeatedly arrested during 1793 by Revolutionary authorities who suspected him of pro-Austrian or aristocratic sympathies; he was released only after writing (while under guard) the rather banal patriotic hymn *La révolution du 10 août 1792, ou Le tocsin allégorique* (B 706). This includes references to the popular *Ça ira* and to several works by Grétry, and requires a large ensemble of voices and instruments, including church bells and cannons. The première in Strasbourg Cathedral (on 10 August 1793) used bells chosen by Pleyel from those requisitioned from churches of the region no longer holding services. The last of subsequent performances occurred in 1799 at the inauguration of the concert hall of the city's Réunion des Arts.

Early in 1795 Pleyel settled in Paris, opened a music shop and founded a publishing house, which issued some 4000 works during the 39 years it existed, including many

by Boccherini, Beethoven, Clementi, Cramer, J.L. Dussek, Haydn and other friends of Pleyel and his son. Some of them (e.g. Dizi, Kalkbrenner, Méhul, Rossini) were involved in the firm by financial investment. Pleyel established agents for the sale of his publications all over France, and maintained an active exchange of letters and music with some of the foremost European music publishers (e.g. Artaria of Vienna, Böhme of Hamburg, Breitkopf of Leipzig, Hoffmeister of Vienna, Hummel of Amsterdam and Simrock of Bonn), sometimes arranging for reciprocal engraving of their issues.

The most important achievement of the Maison Pleyel was probably its issue of the first miniature scores, a series entitled Bibliothèque Musicale. It began in 1802 with four of Haydn's symphonies, and continued with ten volumes of his string quartets, followed by chamber works by Beethoven, Hummel and Onslow (the last in 1830). In 1801 Pleyel also issued a *Collection complette des quatuors d'Haydn, dédiée au Premier Consul Bonaparte*, the title-page beautifully engraved by Aubert (fig.2), the separate parts engraved by Richomme and probably edited by the violinist Baillot. The prefatory material includes a handsome portrait of Haydn by J. Guérin and a thematic catalogue 'of all Haydn's quartets, sanctioned by the author and arranged in the order in which they appeared'. This statement and Haydn's earlier relationship with Pleyel have involved the edition in the debate concerning the authenticity and order of certain quartets

2. *Title-page, engraved by Aubert, of Pleyel's 'Collection complette des quatuors d'Haydn, dédiée au Premier Consul Bonaparte' (Paris: Pleyel, 1801)*

generally attributed to Haydn. The edition also includes two pages of subscribers' names, many of them notable musicians (e.g. Cherubini, Dussek, Grétry, Kreutzer, Méhul, Salomon, Viotti) or aristocracy centred on Vienna (e.g. Erdődy, Esterházy, Golitsïn, Harrach, Lobkowitz, Rasumovsky, Swieten, and Thurn and Taxis). The first edition contained 80 quartets, subsequent editions adding two, then one, as Haydn composed them.

In 1805 Pleyel travelled with his son (2) Camille to Vienna, where his string quartets were warmly received. They also paid several visits to the aging Haydn; they heard Beethoven play the piano and were greatly impressed by his brilliant improvisational technique. But one of the primary reasons for the visit, the establishment of a branch publishing office, failed despite the support of local friends. The firm had been plagued since its inception by a series of legal contests that were not exceptional but sapped Pleyel's energy and financial resources. In 1813 he made a determined effort to sell the publishing enterprise, describing his stock in a letter to a prospective buyer as 48,000 plates of pewter (*fin étain*) or copper, printed music he had published or for which he was agent, instruments (violins, violas, double basses, trumpets, trombones, bows, strings etc.), manuscripts not yet engraved and unused paper. 'In the last two years I have published more than 200 new works, of which 29% to 30% have not yet been put on sale … Most of my editions have been engraved by Richault, Lobry, Petit and Marquerie, the best engravers in Paris'.

During the 1820s Pleyel indulged his love of rural life by spending increasing amounts of time on a large farm about 50 km from Paris. During the same period the firm's output became more predominantly popular, as symphonies, sonatas and quartets were replaced by *romances*, *chansonnettes* and similar genres by Bayle, Bizot, Georgeon, Panseron and (especially) Pauline Duchambge, whose songs were always issued with alternative piano and guitar accompaniments. The firm also issued many fantasias, variations, rondos and potpourris of operatic *airs* by Adolphe Adam, Carulli, Duvernoy, Mayseder, Pixis and others. In 1834 the Maison Pleyel ceased its publishing activities entirely, selling its stock of plates and printed works to various Paris publishers, among whom were Lemoine, Prilipp, Delloy, Richault and Schlesinger.

2. Works. The enormous popularity of Pleyel's music during his lifetime is reflected in the testimony of contemporary journals and of early writers like Gerber and Fétis. The small town of Nantucket, Massachusetts, then still a whaling port, formed a Pleyel Society in 1822 'to chasten the taste of auditors', according to a newspaper announcement. The most telling evidence of the appeal of his music lies in the thousands of manuscript copies that filled the shelves of archives, libraries, churches, castles and private homes and in the thousands of editions produced in Europe and North America (fig.3). In quality the works vary greatly, although most show considerable facility and a thorough technical grounding. The earlier works in particular display thematic originality and ingenious developments that make them fresh and attractive. After about 1792 his talent seems to have diminished; his inventiveness waned and he occasionally succumbed to routine procedures.

An insufficiently recognized aspect of Pleyel's production is the extent to which whole works, movements or

3. Title-page of Pleyel's 'Six Grand Lessons for the Harpsichord or Piano-forte' (London: Preston, between 1787 and 1810)

parts of movements were re-used. Some of the borrowing was obviously by the composer, but much was perpetrated by publishers, probably without his knowledge or consent. Most of the songs with keyboard accompaniment, for example, which were highly popular around the turn of the 19th century especially in English-speaking countries, are settings of movements from symphonies or quartets (e.g. *Henry's Cottage Maid*, from B 137; *Time a Favorite Sonnet*, from B 327A; *Fanny's Worth*, from B 350; and the ubiquitous *German Hymn*, from B 349). Nevertheless many of the songs have considerable charm. Certain categories of the instrumental works consist entirely of arrangements: the quartets for keyboard and strings, the four-hand keyboard works and all ensembles that include guitar or harp. Working in an age when music was considered a commodity to be put to the widest possible use, Pleyel did not hesitate to issue a concerto with alternative solo parts for flute, clarinet or cello (B 106), or to transform a set of piano trios (B 465–70) into flute quartets (B 387–92) or string trios (B 410–15) by 'scrambling' the original 18 movements into an almost entirely new juxtaposition of movements in transposed keys. Such procedures reflect Pleyel's total acceptance of the tastes and values of contemporary music lovers, which may explain his widespread popularity. The duets for violins, flutes or other combinations have never lost their appeal as teaching pieces. Many works of other genres merit resuscitation for study and performance.

WORKS

Most printed works appeared in multiple editions and in arrangements for various combinations of instruments. Dates in parentheses indicate the earliest editions. Letters appended toB numbers indicate works in which some movements are different from those in the preceding work. For a complete concordance of prints and thematic catalogue, see R. Benton: *Ignace Pleyel: a Thematic Catalogue of his Compositions* (New York, 1977) [B]

TRIOS

Kbd Trio = Trio [Sonata] for keyboard, flute/violin, cello

428–30 Kbd Trios, C, F, G, 1783–4 (1785); nos.428–9 ed. W. Stockmeier (Munich, 1976);B 430 is by Haydn:H XV:5
401–3 Str Trios, E♭, D, F, vn, va, vc (1787); ed. B. Päuler (Zürich, 1971)
404–9 Str Trios, C, E♭, D, e, B♭, G, 2 vn, vc (1788 or 1789); nos.404–6 ed. W. Thomas-Mifune (Lottstetten, 1987)
431–6 Kbd Trios, C, G, B♭, A, e, D (1788), ded. Queen of Great Britain
437–9 Kbd Trio, F, G, E♭ (1790), ded. Elizabeth Wynne
440–42 Kbd Trio, B♭, C, f (1791), ded. Mme de Marclésy
443–5 Kbd Trios, C, F, D (1793) (Scottish Airs, bk 1)
446–8 Kbd Trios, G, B♭, A (1794) (Scottish Airs, bk 2)
449–51 Kbd Trios, C, G, B♭ (1794) (Scottish Airs, bk 1)
452–4 Kbd Trios, D, B♭, A (1794–5) (Scottish Airs, bk 2)
455–7 Kbd Trios, G, C, B♭ (1795–6) (Scottish Airs, bk 3)
461 Kbd Trio, D (1795–6)
458–60 Kbd Trios, G, D, C (1796–8) (Scottish Airs, bk 4)
462–4 Kbd Trios, F, D, B♭ (1796) (with favourite airs)
465–7 Kbd Trios, F, C, E♭ (1796), ded. Eugénie Beaumarchais
468–70 Kbd Trios, B♭, A, C (1796–7), ded. Mme de Gramont
410–15 Str Trios, D, F, G, B♭, G, A, 2 vn, vc (1797); ed. B. Päuler (Adliswil, 1992)
471–3 Kbd Trios, B♭, D, E♭ (1798), ded. Mme Martilière
474–6 Kbd Trios, F, B♭, E♭ (1803), ded. Empress of Russia
416 Str Trio, B♭, 2 vn, va, *F-Pn**

DUOS

571–2 Duos, B♭, G, kbd, vn (1787)
573 Duo, B♭, kbd, vn (1788)
501–6 Duos, C, D, F, G, A, B♭, vn, vc (1788); ed. A. Pejtsik (Adliswil, 1990)
507–12 Duos, B♭, F, C, G, D, A, 2 vn/fl, or fl, vn (1788)
513–18 Duos, B♭, D, A, F, C, e, 2 vn (1789)
519–24 Duos, C, g, A, B♭, G, d, 2 vn (1789)
525 Duo, C, va, vc (1792)
526–8 Duos, C, F, E♭, vn, va (1795); ed. U. Drüner (Winterthur, 1987)
529–31 Duos, G, B♭, c, vn, va, or 2 vn (1796)
531A Duo, d, 2 fl (1796)
574–9 Duos, C, F, G, B♭, D, E♭, kbd, fl/vn (1796)
575A Duo, F, 2 vn (1796–7)
580–85 Duos, F, D, B♭, e, C, A, kbd, fl/vn (1798)
532–4 Duos, C, g, D, 2 vc (1799/*R*); ed. W. Thomas-Mifune (Lottstetten, 1984)
532–7 Duos, C, g, E♭, G, B♭, D, 2 vn, *F-Ppincherle** (no.536) (1799)
538–43 Duos, C, G, a, F, D, e, 2 vn (1806); ed. G. Maglioni (Milan, 1954)
544–9 Duos, D, E♭, C, B♭, f, G, vn, va (1808–12)

KEYBOARD, HARP SOLOS

601–12 12 German dances, kbd (1792)
613 Rondo, E♭, hp/kbd (1796)
614 Swiss Air with Variations, B♭, kbd/hp (1796)
615 Air with Variations, B♭, pf (1798)
616–17 Pieces, c, B♭, hp/hpd (1798)
618–24 7 Pieces, pf (?1799)
625–7 Sonatas, a, F, G, kbd (1800)
628–63 36 Ecossaises, pf (1803)
664–9 6 Ecossaises, pf (?*c*1810)
670 Sonata, B♭, kbd, *A-Wn*, *B-Bc*, *D-WRl*, *I-OS*

801–27 27 instructional exercises pubd in a pf method (1796), incl. 3 for pf 4 hands, also attrib. Dussek

STAGE, VOCAL

701 Die Fee Urgele (marionette op, 4, K. von Pauersbach, after C.-S. Favart), Eszterháza, Nov 1776, *A-Wn**
702 Overture to J. Haydn: Die Feuersbrunst, H XXIXb:A, ?1775–8, *US-NH*
703 Ifigenia in Aulide (op, 3, ? A. Zeno), Naples, S Carlo, 30 May 1785, *F-Pn** (Act 3), *I-Nc*, *P-La*
704 Deutsche Aria, E♭, v, pf (1790)
705 Hymne à la liberté (Rouget de Lisle), Revolutionary song, v, pf (1791)
706 La révolution du 10 août 1792, ou Le tocsin allégorique, Revolutionary hymn, vv, orch, 1793, *F-Pn*
707–38 32 Scottish songs, arr. 1–2vv, pf, vc, 1792–3, *Pn**, *GB-Lbl** (1793–9)
739 Hymne du temple de la raison, v, pf, ?1792–4
740 Hymne à la nuit (Viscount de Parny), v, pf (1795)
741 Mass, G, 1796–7, *CZ-Pnm*, *D-BAR*, *I-Fc*
742–53 Winter-Unterhaltung (12 songs), v, pf (*c*1798)
754 Requiem, E♭, *F-Pn**
755 Cum Sancto Spiritu, fugue, D, chorus, orch, *A-Wgm**
756 Mass, D, *Wn**, *I-Fc*

(2) (Joseph Stephen) Camille Pleyel (*b* Strasbourg, 18 Dec 1788; *d* Paris, 4 May 1855). Composer, pianist and business associate of his father (1) Ignace Pleyel. He studied with his parents and with Desormery (probably Jean-Baptiste, the son), Dussek and Steibelt. In 1813–14 he toured southern France, giving piano recitals and arranging for the sale of music and pianos, sometimes in exchange for wood, wine or other materials, in Montpellier, Bordeaux and Toulouse. On 1 January 1815 he became a legal partner of the firm, after which it used the trade name 'Ignace Pleyel et fils aîné'. Nevertheless he spent the period from 16 March to 21 July of that year in London, perhaps to avoid the danger of conscription created by Napoleon's return to power for 100 days (the period corresponded almost exactly with his stay abroad).

In London Pleyel was introduced by the elderly Salomon to the Prince Regent, and on the queen's 71st birthday, 19 May, he performed for a company that included the

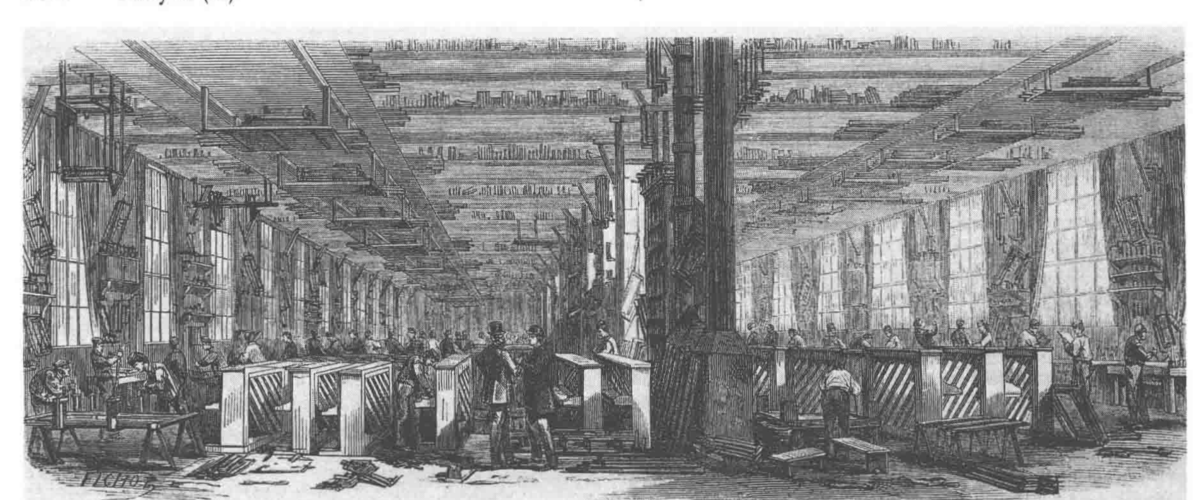
prince, Queen Charlotte and Princess Charlotte. He also gave several public performances, including one at the Philharmonic Society on 1 May and a two-piano recital with Kalkbrenner. In addition he gave piano lessons, examined pianos and reported to his father on their construction, arranged for the purchase and delivery of mahogany, looked without success for an able piano builder to work for the firm and tried to collect various debts due to the firm. His frequent companions were the pianists Cramer, Kalkbrenner and Ries and the piano makers Broadwood and Tomkison.

After his return to Paris Pleyel gradually assumed more responsibility for the running of the firm, especially the piano-building side of its activities. On 5 April 1831 he married the pianist (3) Marie Moke; they separated after four years.

Pleyel was a close friend of Chopin, who made his Paris début on 26 February 1832 (and gave his final Paris concert on 16 February 1848) in the Salle Pleyel, opened by the firm in 1830. After Camille's death the firm was taken over by Auguste Wolff. (For its later history *see* PLEYEL (ii).) In the summer of 1837 Pleyel accompanied Chopin to London in an unsuccessful effort to cheer the pianist, who was suffering from his unrequited love for Marie Wodzińska. According to Legouvé, who admired Pleyel for his generous nature as well as his exceptional capacity for administration, Chopin was often heard to say, 'There is only one man left today who knows how to play Mozart; it is Pleyel, and when he is willing to play a four-hand sonata with me, I take a lesson'.

Before devoting himself entirely to commercial activities, Pleyel wrote a number of compositions for the piano (the last being op.51). They were issued by the Pleyel firm and in London; apart from a few sonatas and trios they are chiefly fantasias, potpourris of opera airs, rondos, nocturnes, airs, caprices and *mélanges*.

(3) (Camille) Marie (Denise) Moke Pleyel (*b* Paris, 4 Sept 1811; *d* St Josse-ten-Noode, nr Brussels, 30 March 1875). French pianist, teacher and composer, wife of (2) Camille Pleyel. At an early age she displayed talent for the piano. She studied successively with Jacques Herz, Ignaz Moscheles and Frédéric Kalkbrenner and at the age of 14 performed Kalkbrenner's first concerto at the Théâtre de la Monnaie, Brussels. By 1830 she was teaching the piano at a girls' school (the Institut Orthopédique in the Marais section of Paris), where her colleagues and admirers included Ferdinand Hiller and Berlioz (who taught the piano and the guitar respectively). She became engaged to Berlioz after her mother's objections to him were weakened by his having finally won the Prix de Rome. Three months after his departure for Rome in December 1830, however, she married (2) Camille Pleyel. She continued her piano teaching, writing to a friend in July of her fond husband, who 'has willingly consented to my continuing to give lessons; you know that I am very attached to my independence'. Chopin dedicated to her his three Nocturnes op.9 in 1833, the same year that Kalkbrenner did the same with his *Fantaisie et variations sur une mazourka de Chopin* op.120.



After legal separation from her husband (1835) Mme Pleyel resumed her performing career, reaping enormous successes in Bonn, Dresden, Leipzig, Vienna, St Petersburg, Paris and London; one of her English performances prompted De Quincey to write of her as 'the celestial pianofortist. Heaven nor earth has yet heard her equal'. In 1842 she requested and received permission to establish her domicile in Belgium. From 1848 until 1872 she was a piano teacher at the Brussels Conservatory, of which the director was F.-J. Fétis. Fétis wrote that she was responsible for the establishment of a true school of piano playing in Belgium; that her playing was notable for astonishing technical facility, but also for strength, tonal modifications, charm and poetry; and that among the many famous pianists heard by him, no other gave the feeling of perfection that her playing created. She was also appreciated by Mendelssohn and Liszt and the latter, a personal friend with whom she performed four-hand works, dedicated to her his *Réminiscences de Norma* (1841) and the *Tarantelle di bravura d'après la Tarantelle de 'La muette de Portici' d'Auber* (1846). Pleyel composed several works for the piano, including a *Rondo parisien pour piano* op.1, a Fantasia on motifs from Weber's *Preciosa* and an Andante.

RITA BENTON

Pleyel (ii). French firm of piano makers. It was founded in 1807 at Paris by the composer Ignace Pleyel (*see* PLEYEL (i)). The firm quickly adopted and improved the best features of English piano making; JEAN HENRI PAPE helped Pleyel from 1811 to 1815 with the building of cottage pianos or 'pianinos', small vertically strung uprights

The manufacturing of upright pianos at the Pleyel factory, France (L'illustration, 2 April 1887)

invented by the English maker Robert Wornum (ii) which were new to France. In 1815 Ignace's son Camille Pleyel joined the firm; 14 years later the pianist Frédéric Kalkbrenner joined too and did much to publicize Pleyel pianos. Chopin became closely associated with the firm; he made his début in Paris (26 February 1832) at the Salle Pleyel and later owned a Pleyel grand of 1839 (no.7267) with a single escapement and a light touch. Chopin said 'when I feel in good form and strong enough to find my own individual sound, then I need a Pleyel piano'. The soundboard introduced by Pleyel in 1830 consisted of mahogany veneer running across pine boards and is thought to have encouraged a bright, silvery sound. Cramer, Moscheles and Steibelt were also friends of the firm. Business increased so much that the firm claimed 250 employees and, probably with exaggeration, an annual production of 1000 pianos in 1834. By the 1870s the annual output had increased to 2500, a level that was maintained for the rest of the century.

In 1855 Camille died and was succeeded by his son-in-law, Auguste Wolff (*b* Paris, 3 May 1821; *d* Paris, 9 Feb 1887), the firm becoming Pleyel, Wolff & Cie. After Wolff's death his son-in-law Gustave Lyon (*b* Paris, 19 Nov 1857; *d* Paris, 12 Jan 1936) assumed control of 'Pleyel, Lyon et Cie'. Lyon developed a *harpe éolienne* (*see* AEOLIAN HARP), but is more famous for his development of the chromatic harp (*see* HARP, §V, 7(ii), esp. fig.34) at the end of the 19th century. It dispensed with pedals, substituting a string for each semitone of the octave. Debussy wrote for it, but it has never achieved the popularity of the double-action harp, as the number of strings is nearly double and it requires a totally different finger technique. Under Lyon the firm also made chromatic timpani, chimes, practice keyboards, the 'Duoclave' (in 1895), which consisted of two grand pianos built into a single case, and the two-manual EMANUEL MOÓR PIANOFORTE with a steel coupler designed by Lyon himself (see Shead). Lyon's action was subsequently used by Bösendorfer in their own double-keyboard instruments. Under the trade name 'Pleyela' the firm brought out a reproducing piano-player mechanism.

At the turn of the century Pleyel began making two-manual harpsichords, with 2 × 8′ and 1 × 4′, six pedals and classical casework (*see* HARPSICHORD, §5(i)). Wanda Landowska suggested a new design in 1912, a modern departure having little in common with the classical instrument, with a heavy case including a cast-iron frame, a special tuning system, seven pedals and a 16′ register (*see* HARPSICHORD, fig.15). About two such instruments were made annually. It was this instrument that Landowska played throughout her career. In 1961 the firm was merged with Gaveau-Erard, but it continued to make pianos under the name of Pleyel. In 1976 the merged firm was bought out by Schimmel of Brunswick, who produced instruments under a licence agreement until 1994, when the French piano firm Rameau took over.

MARGARET CRANMER

Plica (Lat.: 'fold'). In Western chant notations the name used in the 13th and 14th centuries for liquescent neumes. It describes their usual shape: a single stroke doubling back on itself to make a 'U' or inverted 'U', thicker at the curve. The *plica* is a two-note neume, containing the pitch where the *plica* was placed on the staff plus a higher ('U' shape) or lower (inverted 'U') note. The second note was semi-vocalized to provide a passing or anticipatory note before the next pitch. The semi-vocalization was most commonly practised on the consonants '*l*', '*m*', '*n*' and '*r*', before another consonant (2452 out of 3500 cases in the study in PalMus, 1st ser., ii, 1891), sometimes when they were the only consonant between vowels; on the second vowel of diphthongs; on the consonant pair '*gn*'; sometimes on '*d*' and '*t*' at the ends of words (particularly *et*,

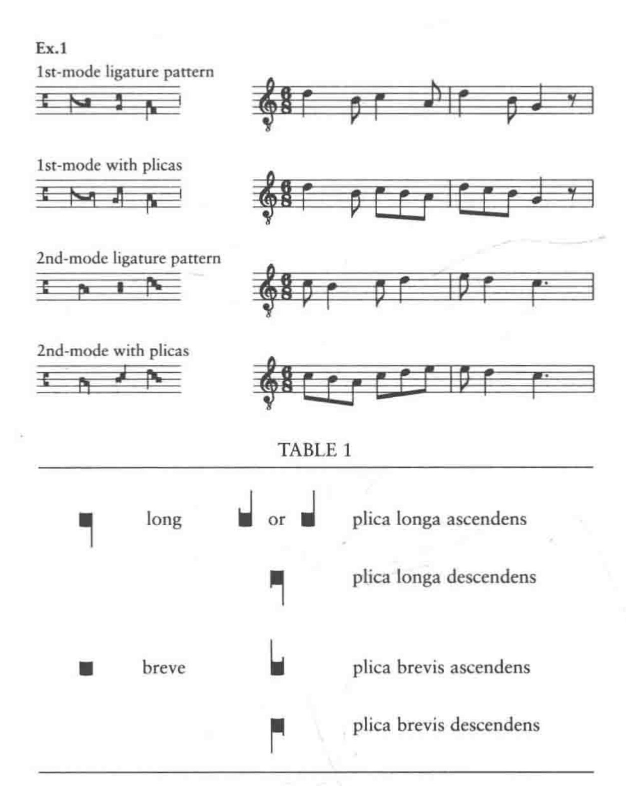

TABLE 1

long	or	plica longa ascendens
		plica longa descendens
breve		plica brevis ascendens
		plica brevis descendens

sed, ut); sometimes on soft '*c*' and soft '*g*' (before '*e*' and '*i*'); sometimes also on '*d*', '*s*', '*t*' and '*x*', before other consonants; and on '*i*' or '*j*' when used as a consonant.

While early writers on neume shapes and names (see Huglo) called the ascending form *epiphonus* and the descending form *cephalicus*, 13th-century theorists used the term 'plica'. Thus Jehan des Murs (*GerbertS*, iii, 202):

> Clives, plicae, virga, quilismata, puncta, podati,
> Nomina sunt harum; sint pressi consociati.

The *plica* retained its basic function of indicating liquescence in all plainchant manuscripts and in most sources containing polyphony and non-mensural secular monophony until the 14th century. The situations in which Mocquereau found liquescent neumes used in 10th- and 11th-century manuscripts (see PalMus, 1st ser., ii, 1891) are distinguished in the same way in later sources (with minor differences resulting from different pronunciation practice, to which, in fact, liquescent neumes are a guide). Of later theorists only Lambertus (Pseudo-Aristotle) attempted a description of the method of voice production involved (*CoussemakerS*, i, 273): 'The plica is sung by narrowing or closing the epiglottis while subtly including a vibration of the throat'; this seems to be a picturesque way of saying that the forethroat is formed as for consonants while the vocal chords are still vibrating.

In Parisian repertories of polyphony of the early 13th century, however, the *plica* was also used in melismatic music, without liquescent function. Five of the rhythmic modes, which were the basis of the method of indicating rhythm in this music, did not provide for a note on at least one beat of a ternary measure (i.e. one quaver out of every three in 3/8 transcription; or two out of six in 6/8 transcription). Ex.1 shows how *plica* strokes added to patterns of 1st- and 2nd-mode ligatures provide these notes (see Apel, pp.228–9, for more complex examples). The *plica* most often implies an added note at the interval of a 2nd. Definite instances of larger intervals are rare, one such being found in the conductus *Deduc Syon uberrimas*: in *E-Mn* 20486 on the syllable '-tas' of 'gravitas' there is a two-note descending ligature *d–G* (f.84*r*, staff 4); in *D-W* 677 there is a *plica* on *d* with a slight thickening at the end of the stroke on *G* (f.160*r* [151*r*], staff 10); while *I-Fl* 29.1 and *D-W* 1206 have a *plica* with stylized square note head and a long descending tail to the right (f.336*v*, staff 4, f.94*r*, staff 6, respectively).

In the second half of the 13th century discrete note shapes were evolved for *plica longa* and *plica brevis*, to complement the standard long and breve shapes; Table 1 gives the commonest forms. The Parisian repertories of the second half of the 13th century are, however, largely of syllabic music (i.e. motets), and the *plica* retained its basic function of denoting liquescence. Walter Odington, who called it 'semitonus et semivocalis' (*CoussemakerS*, i, 236), preferred to use the longer method of writing 6th-mode passages (continuous breves): 'certior est et acceptior' (*CoussemakerS*, i, 245), presumably to avoid confusion between the two functions.

The *plica* was frequently preceded by another note of the same pitch; the reason for this is not always clear. The group can usually be confidently transcribed as equivalent to a long (crotchet or dotted crotchet) rather than a breve (quaver), but this is by no means a universal rule (see Tischler). It was to some extent interchangeable with the simple *plica*, with a two-note ligature or with a three-note group in which the first two notes were of the same pitch. A comparison of the notation of *D-W* 677, 1028, *E-Mn* 20486 and *I-Fl* 29.1 for the tenor parts of the 17 polyphonic conductus they have in common shows 50 or so simple *plicae* found alone above a single syllable, 100 or so 'compound' *plicae*, and 170 or so binaria or single note + binaria, in any one manuscript: 12–15% are found in an alternative form in one or more of the other three manuscripts. *E-Mn* 20486 shows a preference for simple *plicae*, *D-W* 1028 for binaria or single note + binaria; sometimes *D-W* 677 and *E-Mn* 20486 use a binaria with elongated first element where the other manuscripts have a compound *plica* or single note + binaria. More detailed statistics both depend on and help investigation of the layering of the repertory as a whole.

The single note + binaria is the usual form in square staff notation of the *pressus* (descending) and *pes quassus* (ascending) compound neumes. Although these neumes originally entailed a special manner of performance (Jehan des Murs said the *pressus* should be performed evenly and swiftly; *GerbertS*, iii, 202), they have no special shape in, for instance, Parisian 13th-century chant manuscripts, to draw attention to this characteristic. Kuhlmann (p.111) suggested that in Parisian polyphony the note-group denoted a vibrato, being what Jerome of Moravia called *flores* (*CoussemakerS*, i, 91–2). At any rate the compound *plica* was usually used in situations where liquescence was appropriate.

The Fathers of Solesmes (PalMus, 1st ser., ii, 1891) said that not every such situation was matched by a liquescent neume, but did not give figures to show how often. Table 2 gives statistics for the tenor parts of the three- and two-part conductus in *I-Fl* 29.1; it shows the number of times a syllable ending '*l*', '*m*', '*n*' or '*r*' and followed by another consonant (words such as *salve*,

TABLE 2

I-Fl 29.1	∩	╕∩	▙	╕▙	Total
total number of occurrences on liquescent consonant	165 *38.6%*	164 *38.4%*	85 *19.9%*	13 *3%*	427
in conductus also found in other sources	143 *41.7%*	138 *40.2%*	53 *15.5%*	9 *2.6%*	343
in unica	22 *26.2%*	26 *31%*	32 *38.1%*	4 *4.8%*	84

*om*nes, *can*tat, *vir*go) is matched by a simple *plica*, a compound *plica*, a binaria or a single note + binaria (ascending or descending forms). The use of binaria may possibly be a tendency in later pieces or in those that are more certainly Parisian; separate figures are therefore given for pieces that are also found in other sources and for unica, to show approximately how the repertory of the manuscript is divided (for further evidence see Hiley). The polyphonic pieces of the Roman de Fauvel (*F-Pn* fr.146), the last source in mensural music to use plicas to any great extent, still used the plica for liquescence.

DAVID HILEY

Plishka, Paul (*b* Old Forge, PA, 28 Aug 1941). American bass. He studied at Montclair State College, and received his initial stage experience with Paterson Lyric Opera, New Jersey. In 1965 he joined the Metropolitan Opera National Company, singing Mozart's Bartolo and Puccini's Colline. When the touring company was disbanded, he was invited to join the Metropolitan Opera at Lincoln Center, where he made his début in *La Gioconda* (1967). He has remained a member of the company throughout his career, singing leading roles in both the serious and *buffo* repertories, among them Leporello, Oroveso (*Norma*), King Mark, Fiesco (*Simon Boccanegra*), Philip II, Falstaff, Varlaam, Pimen and Boris Godunov. He made his La Scala début in *La damnation de Faust* in 1974, and in 1991 sang Kutuzov (*War and Peace*) at San Francisco. His mellow, voluminous bass can be heard in recordings of *Anna Bolena*, *I puritani*, *Norma*, *Faust*, *Le Cid* and *Falstaff*.

MARTIN BERNHEIMER/R

Pliyeva, Zhanna Vasil'yevna (*b* Tskhinvali, Southern Ossetia, 10 Feb 1949). Ossetian composer and pianist. She graduated from the Rimsky-Korsakov State Conservatory, Leningrad, in 1972 having studied the piano with D. Svetozarov and composition with Orest Yevlakhov and A. Mnatsakanian (with whom she studied as a graduate); in 1979 she worked there for a probationary period as assistant to Sergey Slonimsky. She became a member of the Composers' Union in 1976. She was a prize-winner in the All-Union Composers' Competition in 1977 and in the Tokyo International Composers' Competition, 1993. She is an honoured artist of Republic of Northern Ossetia-Alania, 1993. After having various posts as orchestral musician, teacher and researcher (including director of Tskhinvali School of Music, 1979–85, and president of the Praesidium of the Georgian Music Society, 1989–90), since 1990 she has devoted herself to full-time composition.

Pliyeva's works combine the mythology and musical dialects of the mountain peoples of the northern Caucasus with a contemporary idiom which is notable for its passion of utterance and natural ease of fantasy. This fusion of the latest techniques with the imagery of epic poetry is evident in the First Symphony (soprano, strings and percussion) and in the one-movement Third Symphony. The specific links between Pliyeva's music and Ossetian culture form part of a broader, non-explicit connection with the ancient art of the northern Caucasus. These links are expressed not in the musical language but in the way of thinking and in faithfulness to the spirit of her native culture.

Pliyeva's orchestral writing is notable for the rich contrasts between instrumental groups which result in a kind of new heterophony; other tendencies include powerful dynamic climaxes, structural breaks and textural movement. In the aesthetic plan of the musical wholes, separate component parts are logically reliant on each other. By the 1980s she was employing less conventional forces such as tape and prepared piano.

WORKS

Stage: Deti solntsa [Children of the Sun] (children's op, 2, G. Dzugayev), 1981; Fatima (ballet, 3), 1982–4; Strasti po Ėdamu [The Passion of Adam] (passion play, 2), 1993

Orch: Sym. no.1, S, perc, str; Sym. no.2, 1976; Sym. no.3, 1978; Sym. no.4, 1990–91; Sym. no.5, 1994; Muzïka dlya strunnïkh [Music for Strings], 1996

Choral: O rodine [About my Homeland] (G. Dzugayev), chorus, pf, 1979; Shutochnaya [Comic Song], 1979; Solovey poyot [A Nightingale Sings], female vv, 1979; Sospeso (nyedoskazannoye) [Sospeso (Understated)] female vv, 2 prep pfs; Chenena (trad.), genre scene, 1987; Slïshu . . . Umolklo . . . [I'm Listening . . . It's Gone Quiet . . .] (trad.), 4 choruses for children

ALLA VLADIMIROVNA GRIGOR'YEVA

Plocek, Václav (*b* Prague, 28 Aug 1923). Czech musicologist. He studied composition with Otakar Šín and Miroslav Krejčí at the Prague Conservatory (1942–7), the piano with Jan Heřman (1942–5) and musicology and aesthetics at Prague University (1945–8), where he took the doctorate under Hutter in 1948 with a dissertation containing an analysis of the St Vít troper of 1235. Subsequently he joined the music section of the Prague State Library, taking a diploma in librarianship there in 1950. In 1964 he moved to the Musicology Institute of the Czechoslovak Academy of Sciences, where he devoted himself to the systematic study of Czech medieval music, analysing and editing sources, and Czech musical palaeography. In 1967 he obtained the CSc with a catalogue of music manuscripts in Prague University library. He retired in 1988. Plocek was the leading and almost the only Czech musical medievalist of his generation, maintaining a demanding discipline despite official discouragement in the 1950s and later, and thus providing a valuable link with the achievements of Czech pre-war medieval studies. His lasting achievement is the catalogue of musical manuscripts in the State Library in Prague (1973) and the three-volume edition of music for the Easter liturgical plays (1989).

JOSEF BEK/JOHN TYRRELL

Płocka, Marek z. *See* MAREK Z PŁOCKA.

Plomer [Plourmel], **John.** *See* PLUMMER, JOHN.

Plousiadenos, Joannes [Joseph of Methone] (*b* Crete, ?1429; *d* Methone, 9 Aug 1500). Composer of Byzantine chant, theologian, music theorist, *domestikos* and scribe. He lived for over 20 years in Italy, mostly in Venice (1472–*c*1492, 1497–8), and became bishop of Methone, taking the name of Joseph. He died in Methone during the Turkish massacre and was subsequently recognized as a Christian martyr. His musical achievements have often been overshadowed by his literary and political activities, particularly his involvement with the Union of Florence and his service as a political envoy for the Vatican, which led to accusations of heresy and of being a philocatholic.

Plousiadenos is one of two 15th-century Byzantine musicians (the other is Manuel Gazes) to have composed and notated a Byzantine *koinōnikon* (*GR-AOdo* 315, ff.66*v*–67*r*) in two-part polyphony; his associations with Venice may have opened him to the influence of the Quattrocento practice of *cantus planus binatim*. This communion chant, *Ainete ton Kyrion* ('Praise the Lord'), has been seen as evidence that *cantare super librum diaphonia* was applied to the Byzantine practice of *isokratēma* – the improvised *ison* singing first documented in the 13th century. His many other compositions, notated in Late Byzantine neumes (*see* BYZANTINE CHANT, §3(iii)) though not in polyphony, include settings of the Divine Liturgies, the Cherubic Hymn and *Magnificat*; psalms, including the *polyeleos* (Psalm cxxxiv) and the *amomos* (Psalm cxviii, for funerals); *allēlouïaria* in all eight modes; *theotokia*, *koinōnika* and *katanyktika* (laments for the dead); and *stichēra* for various liturgical feasts (in *ET-MSsc* gr.1234).

Plousiadenos's music treatise *Ermeneia tēs parallagēs* ('Interpretation of the *parallagē*') discusses most of the difficult aspects of Byzantine music theory, including PARALLAGĒ (in this context, the modulation or transition and relationship and interrelationship between the eight modes). The *Ermeneia* is also famous for its illustration, in *GR-AOd* 570, of a geometric figure with a concentric cross and diamond that is derived from the Koukouzelian wheel (a circle depicting the modulation of modes; *see* KOUKOUZELES).

DIANE TOULIATOS

Plovdiv. Town in Bulgaria. It became an important cultural centre soon after the country's liberation from Ottoman domination in 1878. Interest in visiting Italian troupes led to the foundation of a local singers' society in 1896. The earliest attempts to create an opera theatre date from 1910. Ten years later a privately owned Khudozhestvena Opera (Artistic Opera) was organized, and in 1922 the Plovdivska Gradska Opera (Plovdiv City Opera) was formed by Russian immigrants; by 1944 the Plovdivska Oblastna Opera (Plovdiv District Opera) had been established. On 15 November 1953 the Plovdivska Narodna Opera (Plovdiv National Opera) had its official opening in the Naroden Teatar (National Theatre) with *The Bartered Bride*. From the very beginning the company's profile was determined by its ensemble, which included the paired soloists Penka Koyeva and Aleksey Milkovski, Valentina Aleksandrova and Georgi Velchev, and by its varied repertory, from *Die Zauberflöte*, *Les contes d'Hoffmann*, *L'heure espagnole* and *Adriana Lecouvreur* to *Kát'a Kabanová* and Pipkov's *Antigona '43*. The conductors Russlan Raychev, Krasto Marev and Dimitar Manolov have also contributed to the company's success. Opera performances alternate with drama, and are given chiefly on the stage of the Trade Union Culture House; there are three performances weekly, with three to four premières a year. The season lasts from September until July.

MAGDALENA MANOLOVA

Plowright, Rosalind (Anne) (*b* Worksop, 21 May 1949). English soprano. She studied in Manchester and at the London Opera Centre, making her début in 1975 as the Page in *Salome* with the ENO. In 1976–7 she sang Countess Almaviva and Donna Elvira with Glyndebourne Touring Opera. Her later roles with the ENO have included Miss Jessel, Elizabeth I (*Maria Stuarda*), Hélène (*Les vêpres siciliennes*), Elisabeth de Valois and Tosca. Plowright made her Covent Garden début in 1980 as Ortlinde, returning as Donna Anna, Maddalena (*Andrea Chénier*), Leonora (*Il trovatore*), Ariadne, Senta and Desdemona. In 1982 she made her US début at San Diego as Medora (*Il corsaro*), followed by Violetta and Chabrier's Gwendoline. She first sang at La Scala in 1983 as Suor Angelica, returning as Gluck's Alcestis (1987). After singing Cherubini's Medea (in French) at Buxton in 1984, she repeated the role at Covent Garden and (in Italian) at Lausanne. Her repertory has also included Norma, Butterfly, Lady Macbeth, Tatyana and Gioconda.

Among Plowright's recordings are Spontini's *La vestale* and impassioned interpretations of Leonora in both *Il trovatore* and *La forza del destino*. A versatile, highly dramatic artist, she has a full-toned, dark-coloured voice particularly rich in the middle register. She experienced vocal problems at the height of her career, but returned to sing Santuzza at the Berlin Staatsoper in 1996, and Giorgetta (*Il tabarro*) at the ENO in 1997.

ELIZABETH FORBES

Plucked drum. A term used by Hornbostel and Sachs (*see* MEMBRANOPHONE) for a type of instrument, popular in South Asia, in which the vibrations of a plucked string are transmitted to a membrane. The *gopīyantra* and *ānandalaharī* have been classified as plucked drums, but research on their acoustical properties suggests that this category may more properly be regarded as that of a VARIABLE TENSION CHORDOPHONE.

Plucked dulcimer. *See* APPALACHIAN DULCIMER.

Plüddemann, Martin (*b* Kolberg, Pomerania [now Kołobrzeg, Poland], 29 Sept 1854; *d* Berlin, 8 Oct 1897). German composer and singer. As a child, Plüddemann heard chamber and operatic music in his home, which stimulated an early love of music. He studied at the Leipzig Conservatory (1871–6) under Ernst Friedrich Richter. After a brief service as Kapellmeister in St Gallen (1878), Plüddemann left for Munich to study singing with Julius Hey and Friedrich Schmitt. There he also began a writing career with the publication of several polemical articles on music. The loss of his voice in 1880 forced him to give up singing. At first he turned to music criticism in Munich. After years of travel, including a stay in Berlin, he conducted the Singakademie in Ratibor (1887), taught singing at the Steiermärkische Musikschule in Graz, and on his return (1894) to Berlin, where he remained until his death, he wrote music criticism for the *Deutsche Zeitung*.

Plüddemann's lifelong ambition was to rekindle interest in a neglected area of German song: the ballad. He established 'ballad schools', first in Berlin (1886) and later in Graz (1890), where he strove to realize his ideal in collaboration with young singers and composers. Although his efforts prompted numerous ballad-evenings, he laboured on behalf of the declining genre without accomplishing any lasting success.

Plüddemann classified the ballad as a genre distinct from the lied for three general reasons: that delineation of character dominates the ballad, but not the lied; that the lied is characterized by sensuous lyricism, the ballad by a blend of melody that helps in the narration of dramatic action; and that while one mood often pervades an entire lied, mood in the ballad changes with each dramatic action. Taking his revered Loewe as a model, Plüddemann developed a vocal style suitable for narration, which he termed his 'parlando-ballad style'. His ballads achieve unity through the modified recurrence of musical sections and with leitmotifs. Their declamation is lively and faithful to the verses, and the dramatic characterization (influenced by Wagner) is, at its best, vividly etched and gripping. The piano parts are symphonically complex and rich in imagery – some look like piano reductions of orchestral scores. Plüddemann explored the early German Romantic poetry based on sagas, fairy tales and medieval historical subjects to find ballad texts. Outstanding

examples of his settings include *Siegfrieds Schwert* (J.L. Uhland), *Der alte Barbarossa* (F. Rückert) and *Der Taucher* (F. von Schiller), all in volume i of his *Balladen und Gesänge*. He also wrote lieder and arranged folksongs for chorus.

EDWARD F. KRAVITT

Pludermacher, Georges (*b* Guéret, 26 July 1944). French pianist. He started piano lessons at the age of four and at 11 entered the Paris Conservatoire where he studied with Lucette Descaves and Jacques Février and was awarded many honours. He continued his studies with Géza Anda in Lucerne in 1963–4, and won second prize in the Leeds International Pianoforte Competition in 1969 and first prize in the Géza Anda Competition in 1979. Pludermacher has toured widely in France and throughout Europe, both as soloist and in chamber music, becoming particularly well known as an interpreter of contemporary music: he played in the first performance of Boucourechliev's *Archipel 1* at Royan in 1967 and has appeared frequently with the Domaine Musical and with Musique Vivante, directed by Diego Masson. He was appointed professor of piano at the Paris Conservatoire in 1993. His recordings include an outstanding account of Mozart's complete sonatas and evocative renditions of many of Debussy's works, especially the *Estampes* and *Images*.

RONALD KINLOCH ANDERSON/CHARLES TIMBRELL

Plummer [Plomer, Plourmel, Plumere, Polmier, Polumier], **John** (*b* ?*c*1410; *d c*1484). English composer. By 1441 he was a member of Henry VI's Chapel Royal; he is traceable in Windsor in 1442 and from 1444 to 1455 he was the first to hold the title (though not to perform the duties) of Warden or Master of the Chapel Children. By 1449 he had joined the London Gild of Parish Clerks. As late as 1467 he was still nominally a Gentleman of the Chapel Royal under Edward IV; but he settled in Windsor in the early 1450s and by 1454–5, perhaps earlier, he had become verger of the Royal Free Chapel of St George in Windsor Castle, remaining in that position until 1483–4. Until 1967 only four works by Plummer were known, three votive antiphons and a motet. These showed him as a suave but progressively-minded composer who experimented with invertible counterpoint and imitation: *Anna mater*, for three tenors and an optional triplex, is particularly remarkable in the latter respect. His Kyrie and Gloria pair in *GB-Lbl* Add.54324 is evidence that he also wrote large-scale isomelic masses; this in turn suggests that the anonymous mass on ff.107*v*–16 of *I-TRmp* 1376 (olim 89), which resembles *Anna mater* both in its general style and in its very unusual disposition for three equal tenors, may also be by Plummer.

Further to these works, the Mass 'Omnipotens Pater' in the opening 'English fascicle' of *B-Br* 5557 bore an ascription 'Plourmel' until the mid-19th century (Staehelin). This ascription is now replaced by an unacceptable one to 'G. Binchois' in what is clearly a 19th-century hand; the cycle is stylistically compatible with, although tonally more adventurous than, the more securely ascribed works of Plummer (Curtis). The Sanctus and Agnus Dei have also been identified in a fragmentary English source.

WORKS

Edition: *Four Motets by John Plummer*, ed. B. Trowell (Banbury, 1968) [T]

Mass with Kyrie trope 'Omnipotens Pater', 3vv, *B-Br* 5557 (ed. in EECM, xxxiv, 1989)

Kyrie 'Nesciens mater', Gloria 'Nesciens mater', 4vv, *GB-Lbl* Add.54324 (fragmentary, chant in iv; Ky with trope 'Deus creator omnium'; Gl anon., but paired with Ky)

Anna mater matris Christi, 4vv; T 24, ed. in EECM, viii (1968), 34 (text from responds, rhymed office of St Anne)

Descendi in hortum meum, 3vv; T 13 (also in *GB-Olc* Latin 89, *D-Mbs* Mus.Ms.3725; cancelled fragment in *I-TRmp* 1377, olim 90; fragmentary kbd arr. in Buxheim Organbook, ed. in EDM, xxxviii, 1958, p.216)

Tota pulcra es, 3vv; T 16 (also in *CZ-HKm* II A 7; *I-Las* 238, frag.)

Tota pulcra es, 3vv; T 20, ed. in EECM, viii (1968), 28

DOUBTFUL WORKS

Kyrie 'Deus creator omnium', Gl, Cr, San, Ag, 3vv, *I-TRmp* 89 (anon. but scoring and style suggest Plummer's authorship)

Ibo michi ad montem mirre, 3vv, *TRmp* 1377 (olim 90) (anon., attrib. Plummer by Scott and Burstyn, 1972, on stylistic grounds, questioned by Strohm; for edn see Scott)

O pulcherrima mulierum, 3vv (attrib. Frye by Bukofzer, *MGG1*; attrib. Plummer and ed. in *StrohmM*)

Qualis est dilectus tuus, 3vv; ed. in CMM, xlvi/2 (1969), 74 (also attrib. Forest; probably by Forest)

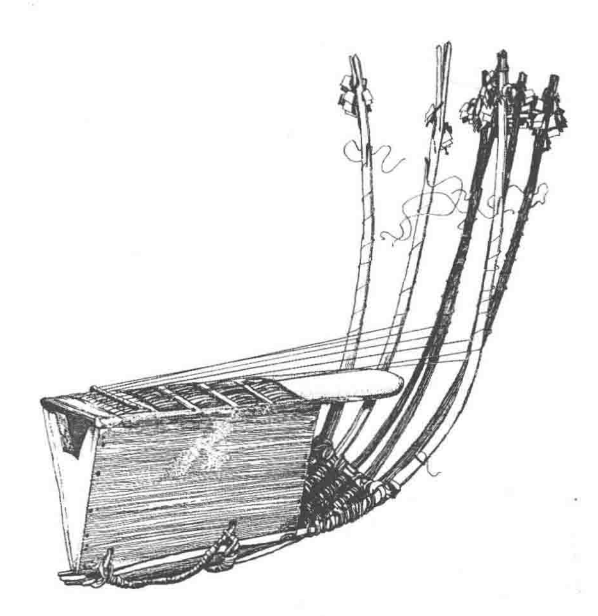
BRIAN TROWELL

Pluriarc. A term coined by George Montandon (1919) and adopted by André Schaeffner (1936) to refer to the Central African instrument also known as a bow lute (Hornbostel and Sachs, 1914; Wegner, 1984) of which there are two types. A pluriarc consists of a hollowed wooden resonator with strings running either parallel or slightly inclined to the soundboard. In contrast to harps and lutes, however, pluriarcs are not held by one string-bearer, but each string has its own flexible carrier. For this purpose, in the first type of pluriarc short arcs are inserted into a series of holes bored into the top wall of the resonator or, in the second type, they are attached to the back of the resonator and/or partly inserted. These differences affect the method of tuning.

The term 'pluriarc' for this class of instruments has been contested, as has the term 'bow lute', mainly due to the fact that both terms suggest an evolutionary sequence from musical bows consisting of 'one arc' to an instrument of 'several arcs'. Jean Sebastien Laurenty was also reluctant but opted for the term 'pluriarc' (1960, p.117). Ulrich Wegner has maintained the term 'bow lute', while acknowledging that the French term 'pluriarc' represents an appropriate description of the instrument's most salient feature (1984, p.82). Any such evolutionary relationships between musical bows in Africa have not been confirmed.



Our earliest sources for pluriarcs include three Benin bronze plaques (Dark and Hill, 1972) and an illustration by Michael Praetorius (1620) of the front and back of a five-string specimen belonging to the second type, probably acquired in Gabon or the Congo from a Teke musician or from an adjacent ethnic group. The earliest source from the historic Kongo kingdom is Girolamo Merolla's 1692 illustration of a *nsambi*. For south-western Angola, the earliest illustration comes from Brazil: a detailed drawing by Alexandre Rodrigues Ferreira who, on his 'philosophical journey' of 1783–92 in northern Brazil, met a slave who played a seven-string pluriarc of the first type called *cihumba* in the related languages of Angola's Huíla province.

The contemporary geographic distribution of pluriarcs is largely confined to three areas that are now distinct:

1. South-western Angola: a representative is the *cihumba*, still popular in Huíla province. This area expands into northern Namibia where somewhat different varieties have been played by Khoisan language-speakers. Among the !Ko of eastern Namibia and Botswana a five-string variety has become an instrument associated with women.

2. West-central Africa from the ancient Kongo and Kuba states across the equatorial zone to the Teke in the Republic of Congo and into Gabon (*see* GABON, fig.5); it is an area dominated by the second type of pluriarc, however, with great internal variety. Laurenty distinguishes no less than ten organological varieties for the area of the Democratic Republic of the Congo alone (1960, p.117). Among the Nkundo in western Congo and among the Ekonda, very large five-string *lokombi* (or Teke: *lukombe*) were used, while the Fang (Faŋ) of Gabon developed types entirely manufactured with materials from the raffia palm.

3. Benin in south-western Nigeria: an area where the tradition has survived since the days of ancient Benin. Music and poetry accompanied by the *akpata* (see illustration) have been documented in great detail by Dan Ben-Amos (1975). The *akpata* is characterized by a specific triangular shape of the cross-cut of its resonator, but the attachment of the arcs follows the system of the second type of pluriarc.

The akpata pluriarc of the Edo-speaking people of Benin, South-western Nigeria (drawing reproduced from Ben-Amos, 1975)

It is not possible to know where and when the African pluriarc was invented. But, since it was well established in all three separate areas outlined above during the earliest periods of European contact, its invention most likely occurred several centuries earlier. Invention in one location and diffusion to other places is the most likely scenario for the pluriarc's remote history. The Benin type shows relatively close organological links to the west-central African cluster, while the south-western Angolan types stand apart. Either the pluriarc was invented in Central Africa and spread with coastal contacts from Gabon or the Republic of Congo to ancient Benin, as well as south into Angola, or it was an invention of the ancestors of Edo (Ẹdo)-speaking peoples of Nigeria and spread the other way.

GERHARD KUBIK

Plutarch of Chaeronea [Ploutarchos Chairōneus] (*fl c*50–*c*120 CE). Greek philosopher and writer. A descendant of an old and respected family in Boeotia, he was one of the most important Greek authors of his time. He wrote more than 200 separate works, of which some 50 biographies, 78 other works comprising the so-called *Moralia*, and a few extant fragments reflect his interests in biography, rhetoric, logic, philosophy and antiquities. He studied with Ammonius and later travelled widely, visiting Athens, Egypt and Rome. For the last three decades of his life he was a priest at Delphi and participated in the revival of the shrine under the emperors Hadrian and Trajan, the latter granting him consular privileges (according to the *Suda*).

The dialogue *On Music* (*Peri mousikēs*) was included among the *Moralia* by tradition, but current scholarship regards it as almost certainly not the work of Plutarch. Nevertheless, it contains a wealth of information on ancient Greek musical life, including important historical material pertaining to Pythagorean music theory, the 'invention' of various musical forms and the development of early musical scales. Some of this material is attributed to works (now lost) by Alexander of Aetolia, ARISTOXENUS, GLAUCUS OF RHEGIUM and Heraclides Ponticus. The dialogue, set in the form of a SYMPOSIUM on the second day of the Saturnalia, is in a sense the earliest 'history' of Greek music. The two primary speakers in the dialogue, Lysias and Soterichus (the precentor, Onesicrates, appears mainly at the beginning and the end), represent respectively the practical and theoretical viewpoints of music and its development. After describing various musico-poetic forms (*see* GREECE, §I, 4) and attributing them to early 'inventors' (including Amphion, Archilochus, Linus, Marsyas, Olympus the Mysian, Orpheus, Phrynis of Mytilene, Pindar, Polymnestus of Colophon, Sacadas of Argos, Stesichorus, Terpander and many others; see individual entries and *see also* NOMOS), Lysias explains the construction of the enharmonic genus, its relationship to the other genera, and a special *spondeion* scale (*see* GREECE, §I, 6(iii)(e)), the precise structure of which remains obscure. As the second speaker, Soterichus begins by observing that the gods themselves, especially APOLLO, must be given credit for the invention of music. He then expands on Lysias's practical presentation, correcting and augmenting his descriptions of the musico-poetic forms and the *spondeion* scale. He subsequently turns his attention to the realm of Pythagorean mathematics and music, especially as preserved in Plato's *Timaeus* (35b–36b), Aristotle's *Physics* (iii.4, 203a4–16) and *Metaphysics* (i.5, 985b23–987a28), Euclid's *Elements* (vii), Nicomachus's *Introduction to Arithmetic* (i.7–10) and Theon of Smyrna's *On Mathematics Useful for the Understanding of Plato*. This material leads Soterichus to conclude that music should be elevating, instructive and useful; as such, it should form an essential part of PAIDEIA. Modern musical innovations, including some of those already mentioned by Lysias, have in his view led music to its present low estate, aptly represented by the famous fragment from the *Cheiron* of PHERECRATES. In order to restore music to its proper place, the ancient style must be copied and the proper use of music must be determined by philosophy. This observation leads Soterichus to review the principles of harmonics and rhythmics, the knowledge of which is insufficient alone for the creation or judgment of musical art. After Soterichus draws his speech to a close with a quotation from the Hymn to Apollo (*Iliad*, i.472–4), the precentor Onesicrates provides the philosophical capstone of the dialogue: as Pythagoras, Plato and Archytas have revealed, music is of value because the revolution of the universe is based on music (*mousikē*) and god has arranged everything to accord with *harmonia* (*kath' harmonian*).

In addition to the pseudepigraphous dialogue *On Music*, a number of authentic treatises within the *Moralia* contain important information on Pythagorean mathematics and music (*On the Generation of the Soul in the Timaeus*; *see* ARISTIDES QUINTILIANUS), the ethical effect and value of music in society (*Table-Talk*), and the history of musical instruments (*Ancient Customs of the Spartans*; *Life of Crassus*; *On Progress in Virtue*; *On the Control of Anger*). Both the *Lives* and the *Moralia* of Plutarch were popular in the Byzantine empire, and the organization and preservation of his writings, including the pseudepigrapha, was largely due to the Byzantine scholar Maximus Planudes. *On Music* is preserved alone in the late 12th-century *I-Vnm* gr.app.cl.VI/10 (RISM, B/XI, 273), one of the most important codices containing texts on ancient Greek music. Two codices of the late 13th or very early 14th century preserve the complete texts of the *Lives* and the *Moralia*: *F-Pn* gr.1671 and 1672 (RISM, B/XI, 66–7). Three others of the same general age preserve the whole of the *Moralia*: *I-Ma* gr.859 (C 126 inf.; RISM, B/XI, 186), presumed to have been copied for Planudes; *Rvat* gr.139 (RISM, B/XI, 207); and *Fl* gr.80.5 (RISM, B/XI, 165), copied from the Vatican codex. The first published translation of the dialogue *On Music*, by Carlo Valgulio (based on *Rvat* gr.186: RISM, B/XI, 210), appeared in 1507, and the treatise had a considerable impact on musical humanism in the Renaissance and on later writers.

THOMAS J. MATHIESEN

Plzeň (Ger. Pilsen). City in the Czech Republic. It is the industrial and cultural centre of West Bohemia and shares with Brno the richest Czech theatre tradition after Prague. The first permanent theatre was constructed in 1832. Operas were staged only sporadically; a permanent Czech opera ensemble, the first outside Prague, started to perform there in 1869, the year that Smetana's *The Bartered Bride* was conducted there by Mořic Anger (1844–1905). Since then there has been a tradition of dressing the characters in that opera in folk costumes of the Plzeň region. A number of Czech premières of foreign works were produced in Plzeň around that time, including *Tannhäuser* in 1888, three years before it was staged in Prague. The Velké Divadlo (Great Theatre) opened in 1902 with Smetana's *Libuše*; it was reconstructed between 1980 and 1987 (550 seats). Since 1955 it has been called Divadlo J.K. Tyla. Small-scale operas were performed between 1945 and 1965 in the Malé Divadlo (Small Theatre), a former German theatre built in 1869. In 1966 the Komorní Divadlo (Chamber Theatre) was opened. Of several notable conductors (including Karel Kovařovic, 1886–7, and Václav Talich, 1912–15), it was Bohumír Liška (1955–67) who presided over the city's most remarkable operatic era, with a repertory of both Czech and foreign operas, especially the modern ones. The most important productions included Hanuš's *Flames* (1956 première), Prokofiev's *The Gambler* (1957), Britten's *Albert Herring* (1958), Nejedlý's *The Weavers* (1961 première), Jeremiáš's *Enšpígl* (1962) and the première of Hurník's *The Lady and the Robbers* (1966). Thanks to the long-term activities of the opera scene and the systematic work of the municipal musical school (founded in 1920) a large body of listeners formed in Plzeň and a number of composers, musicians and theorists lived there.

In 1909 the Sdružení pro Komorní Hudbu (Chamber Music Association) was founded; during its 40 years of existence it organized 249 concerts, featuring 27 orchestras, with guests including Rubinstein, Casals, Ansorge and Ada Sari. The Hudební Odbor Osvětového Svazu (Musical Section of the Educational Association) was formed in 1908; under its aegis Václav Talich founded the first symphony orchestra in Plzeň. In 1934 it became the Plzeňská Filharmonie; from 1984 it was called the Komorní Orchestr (Chamber Orchestra). In 1946 the Plzeňský Rozhlasový Orchestr (Plzeň RO) was formed. The Plzeň conservatory (founded 1961) has its own symphony orchestra.

The mixed choir Hlahol was founded in 1862. It became a centre of the Dvořák cult, performing his *Stabat mater* in 1884; in 1900 it made tours to Paris, Brussels and elsewhere. Part of the Hlahol choir separated to form the Smetana choir in 1901. Other choral groups include the Pěvecké Sdružení Učitelů Plzeňska (Teachers' Choir of the Plzeň Region, 1907–15), Pěvecké Sdružení Západočeských Učitelů (West Bohemian Teachers' Choir, 1929–51), Česká Píseň (Czech Song), Ženský Akademický Sbor (Women's Academic Choir, 1962–92) and children's choirs.

EVA HERRMANNOVÁ

Pneuma (Gk.: 'spirit'; pl. *pneumata*). A category of neume in Byzantine chant. *See* BYZANTINE CHANT, §3(ii); *see also* NEUMA.

Pocci, Franz, Graf von (*b* Munich, 7 March 1807; *d* Munich, 7 May 1876). German composer and writer on music. In childhood he showed talent for drawing, painting and music, and although he studied law at the universities of Landshut and Munich, he continued his artistic activities, composed and performed at the piano. From 1847 to 1863 he was Hofmusikintendant at the Bavarian court. As a composer, Pocci excelled at writing miniatures, and was at his most characteristic in children's songs, for which he showed a special gift. His plays with musical settings for the Munich Marionette Theatre added new vitality to puppet opera; he also designed the scenery for these productions. He was less successful in composing in larger forms. Pocci was extremely versatile not only as a musician but also as a writer; he wrote independent literary works and song texts, in addition to writing on music.

WORKS

most MSS in Pocci family archives, Ammerland am Starnbergersee

ZYGMUNT M. SZWEYKOWSKI

Pockorny, Franz Xaver. *See* POKORNY, FRANZ XAVER.

Poco (It.: 'little', 'somewhat'). A direction that modifies many tempo, expression and dynamic marks in music. In strict Italian, *poco forte* and *poco allegro* would mean the opposite of *forte* and *allegro*; and *Grove5* drew attention to the slovenliness of that usage, pointing out that *un poco forte* and *un poco allegro* were correct. But *poco allegro* is current, for better or worse, and must be considered part of 'musicians' Italian' (*see* TEMPO AND EXPRESSION MARKS, §3). *Pochettino*, the diminutive, and *pochissimo*, the superlative, are also current in musical scores.

□

Podatus (from Gk. *pous*, *podos*: 'foot'). *See* PES (ii).

Podéšť, Ludvík (*b* Dubňany u Hodonína, 19 Dec 1921; *d* Prague, 27 Feb 1968). Czech composer and administrator. In 1941 he changed from language studies in Brno to enter the conservatory of that city, but his musical education was interrupted by World War II. He returned to study composition with Kvapil at the conservatory (1945–8) and musicology with Bohumir Štědroň and Jau Racek at Brno University (1945–9), taking the doctorate for his thesis on socialist realist music, *Hudba v pojetí socialistického realismu*. Podéšť worked for Czech radio (1947–51), was artistic director of the V. Nejedlý Army Arts Ensemble in Prague (1953–6) and then directed music for Czech television from 1958. He contributed to the journal *Hudební rozhledy*, and as an administrator was involved with the Union of Czechoslovak Composers. Towards the end of his life he spent much of his time in Casablanca and concerned himself intensively with theory.

The source of his music's spontaneity may be found in the folk music of Moravian Slovakia, his native region. In his music of the 1940s he followed the post-Janáček tradition. In about 1950 he began to respond to the new policy of socialist realism, writing orchestral works (such as the symphonic poem *Raymonda Dienová*) that were melodically conventional and readily comprehensible in general; during this period he was closely associated with youth and army ensembles. His suites and dances for orchestra were influenced by Czech and Moravian folk music, as were the early operettas, while works from his latter years – cut short by his premature death at the age of 46 – draw on studies he made in Morocco of exotic musical cultures; this is true of *Hamada* for orchestra and particularly the Partita for strings, guitar and percussion, both composed in 1967.

WORKS

JIŘÍ FUKAČ/KAREL STEINMETZ

Podešva, Jaromír (*b* Brno, 8 March 1927). Czech composer. He was born into an artistically talented family; his father, a leading Brno violin maker, took charge of his early musical studies. He studied composition under Kvapil, from 1946 at the Brno Conservatory and then at the Janáček Academy of Music in Brno (1947–51), where he continued as a postgraduate assistant. He served as secretary of the Union of Czechoslovak Composers in Prague (1956–9) and later as chairman of the Brno branch for some years. A UNESCO scholarship took him on an eight months' trip to France, the USA and England (1960–61) to study with Dutilleux and Copland. From 1969 until the late 1980s he taught composition at the Ostrava Conservatory. Towards the end of this appointment he wrote the textbook *Úvod do studia skladby* (Introduction to the Study of Composition), though it has yet to be published.

Podešva's early music was greatly influenced by that of Novák and Janáček. In the 1950s he was involved with the popular music and mass political songs that were being developed, but his concert music was becoming more subjective, more concerned with a personal response to poetry. For example, his Third Symphony (1966) was based on the verse of M. Kundera and B. Hrabal, while the Fifth is a setting of František Halas and Yevgeny Yevtushenko. His music has changed from a free tonality to a simultaneous use of tonality and dodecaphony; the procedures are discussed in his treatise (1973). Podešva has also produced some popular educational works, though his greatest achievement are the symphonic pieces, quartets and quintets.

WORKS
(*selective list*)

STAGE AND VOCAL

Opustíš-li mne [If You Leave Me] (op, Podešva, after Z. Pluhař), 1962–3, rev. 1965–6; Bambini di Praga (ballet-op buffa, after B. Hrabal), 1968

Sonata (F. Halas), S, pf, 1968; Symfonietta přírody [Sinfonietta of Nature] (M. Holub), chorus, 1962; Nevídáno, neslycháno [Unseen, Unheard] (J. Kainar), children's chorus, 1965; Hodiny [Hours] (K. Kapoun), chorus, 1977; Listy A. Dvořáka z Ameriky do vlasti [Dvořák's Letters from America to his Homeland], Bar, orch, 1991

ORCHESTRAL

Syms.: no.2, fl, str, 1961; no.3 'Kulminace-Perla na dně' [Culmination-Pearl Deep Down], after M. Kundera and B. Hrabal, 1966; no.4 'Hudba Soláně' [Solán Music], fl, hpd, str, 1967; no.5 '3 zlomky padesátiletí' [3 Fragments of the Quinquennium] (F. Halas, Ye. Yevtushenko), Bar, orch, 1967; no.6, 1970; no.7 'In memoriam J.P. jun', after K.H. Mácha and L. Stehlík, 1982–3; no.8 'Ostravská', 1986; no.9, 1989; no.10, 1993

JIŘÍ FUKAČ/KAREL STEINMETZ

Podgaits, Yefrem Iosifovich (*b* Vinnitsa, 6 Oct 1949). Russian composer. He began to study the violin at the age of nine at the Children's Music School No. 30 in Moscow where he also received his first composition lessons from Nadezhda Markovna Gol'denberg, a student of Yavorsky. At the Moscow Conservatory he studied composition with Butsko and then with Sidel'nikov; he also studied orchestration with Yury Aleksandrovich Fortunatov. He was employed by and worked as the editor of *Soyuzkontsert* until 1981, when he was appointed accompanist to the children's choir *Vesna* [Spring]. This was a turning point in his career: he started writing extensively for children of various ages and created a new genre – the miniature for children's choir (ages 6–10), writing more than 70 works in this genre. In 1993 and 1994 the *Vesna* children's choir was awarded prizes in Italy and France for their performance of his *Vremena goda* ('The Seasons'). During the 1980s he became interested in musical theatre for children, writing his first opera *Alisa v zazerkal'ye* ('Alice Through the Looking Glass'); from 1989 he has been the music director of the Children's Theatre of Opera and Ballet in Moscow.

Podgaits has a subtle and colourful style of choral writing; the cantata *Kak narisovat' ptitsu* ('How to Draw a Bird') is marked by humour and inventive shading. In his concertos – which are often scored for an unconventional combination of instruments and orchestra – he developed new resources from the baroque concerto model. Although toccata episodes and sharp accentuation of the material provide the main basis for the rhythmic energy, many of his compositions are characterized by their melodic *cantabile*.

WORKS

CHILDREN'S WORKS

Choral: Poėziya zemli [The Poetry of the Earth] (a cappella cant., J. Keats and others), op.34, children's chorus, 1982; Kolïbel'nïye pesni [Lullabies], op.54, children's chorus, org, 1985; Lunnaya svirel' [Lunar Reed-Pipes] (cant., S. Kozlov), op.51, children's chorus, fl, vn, pf, perc, 1985; Vremena goda [The Seasons] (conc., Kozlov), op.63, children's chorus, pf, 1987; Missa veris, op.127, children's chorus, org, 1996; also over 70 choral miniatures for young children

Inst: Detskiy al'bom [An Album for Children], op.19, pf, 1978; Syuita, op.64, vc, pf, 1987; Syuita, op.69, pf, 1987; 12 duėtov, op.133, 2 tpt, 1988; Pf Conc. no.2 'Samarskiy' [The Samara], op.79, 1989; Mozaika, op.81, 2 bn, 1990; Detskiye istorii [Stories of Children], op.100, 2 pf, 1993; 6 p'yes dlya malen'kogo Paganini [6 Pieces for the Little Paganini], op.103, vn, pf, 1993

OTHER WORKS

Stage: Alisa v zazerkal'ye [Alice Through the Looking Glass] (op, V. Oryol, after L. Carroll) op.29, 1981; Chyorniy omut [The Black Slough] (op-cant., after Kozlov), op.62, children's chorus, orch, 1987; Mï bïli vorob'yami [We were Sparrows] (children's op, L. Yakovlev), op.77, 1989; Moydodïr (children's ballet, G. Malkhasyants, after K. Chukovsky), op.95, 1992; O, Barbi (comic op, V. Ryabov and R. Sats, after C. Gozzi: *The Green Bird*), op.97, 1992; Posledniy muzïkant [The Last Musician] (children's fantastic op, V. Pavlova, after N. Nielsen), op.96, 1992; Dyuymovochka [Thumbalina] (op, Ryabov and Sats, after H.C. Andersen), op.122, 1995; Povelitel' mukh [The Lord of the Flies] (rock op, Yakovlev, after W. Golding), op.117, 1995

Orch: Vc Conc., op.9, 1973; Sym. no.1, op.14, 1977; Ironicheskoye pa-de-de [An Ironic Pas de Deux], op.35, 1982, arr. vn, pf, 1990; Hpd Conc., op.42, 1983; Sym. no.2, op.40, 1983; Vn Conc. no.1, op.43, 1983, red. vn, pf, 1988; Sym. no.3 'Budet laskoviy dozhd'' [There Shall be Gentle Rain] (S. Tidsdale), op.48, S, org, strs, perc, 1984; Concertino, op.55, fl, chbr orch, 1986; 2 Vn Conc., op.59, 1986; Adagio, op.74, children's chorus, chbr orch, 1988; Triple Conc., op.75, vn, vc, pf, orch, 1988; Concerto-Lambada, op.82, ob, perc, pf, strs, 1990; Vn Conc. no.2 'Concordanza', op.101, 1993; Sarafan dlya Mishelya [A Sarafan for Michelle] op.112, cl, str, 1994]

Vocal: Iz Uol'ta Uitmena [From W. Whitman] (cant.), op.10, mixed chorus, orch, 1973; Kak narisovat' ptitsu [How to Draw a Bird] (cant., Oryol, after J. Prévert), op.27, S, children's chorus, orch, 1980; Ritm i noch' [Rhythm and the Night] (I. Bunin), op.26, 1v, vib, pf, 1980; Veshchaya pechal' [Prophetic Sorrow] (O. Mandelstam), op.87, 1v, pf, 1990; Psalmï tsarya Davida [The Psalms of King David] (a cappella conc.), op.113, mixed chorus, 1994; Nemotrya ni na chto [Despite Everything] (chbr cant., R. Chernavina), op.116, 1v, a sax, pf, 1995; Ave Maria, op.128, mixed chorus, 1996

Chbr: Sonata no.1, bn, pf, 1966; Sonata, op.17, va, pf, 1978; Qnt, op.24, 2 bn, vn, db, pf, 1980; Sonata, op.33, vn, pf, 1982; Sonata, op.45, vc, pf, 1984; Obrazï Ril'ke [Images of Rilke], op.16b, vn, pf, 1985; Richerkar, op.53, perc ens, 1985; Concerto brevis, op.66, perc, inst ens, 1987; Pieta, op.65, vn, org, 1988; Sonata no.2, op.30, bn, pf, 1989; 7 pesen odinochestva [7 Songs of Loneliness], op.46b, a sax, pf, 1990; Iyul'skoye intermetstso [A July Intermezzo], op.91, fl, cl, vn, vc, hpd, 1991; Ozhidaniye nezhnosti [The Anticipation of Tenderness], op.94, viola d'amore, vib, hpd, 1991; Sonnet, op.93, perc, pf, synth, 1991; Vozvrashcheniye [Home-Coming], sonata, op.109, ob, pf, 1994; Bakhchiyev-kontsert, op.115, 2 pf, 1995; Agnus Dei and Ludus humanis, op.126, sax qt, 1996

Solo inst: Polifonicheskiye ėtyudï [Polyphonic Studies], op.44, pf, 1983; Sonata-Partita, op.57, hpd, 1986; Dialog s Shopenom [A Dialogue with Chopin], op.90, fl, 1991; 6 nastroyeniy [6 Moods] op.104, pf, 1993; 5 inventsiy [5 Inventions], op.106, pf, 1993

INNA BARSOVA

Podgoretsky, Boris Vladimirovich. *See* PIDHORET'SKY, BORYS VOLODYMYROVYCH.

Podio, Francesco. *See* DEL POMO, FRANCESCO.

Podio [Puig], Guillermo de [Despuig, Guillermo] (*fl* late 15th century). Spanish priest and music theorist. Born possibly in Valencia or Tortosa, he is usually identified with the Guillermo de Puig who was curate of S Catalina, Alzira, from 1479 to 1488. A Guillermo Molins de Podio held a benefice at Barcelona Cathedral, and was a chaplain to John II of Aragon in 1474. The relationship between these two clergymen has not been established. The theorist wrote *Ars musicorum* (Valencia, 1495/*R*; ed. A. Seay, Colorado Springs, 1978) and *In enchiridion de principiis musicae* (MS, *I-Bc*; ed. Anglès); the latter, apparently intended for Spanish students at Bologna, may be evidence that Podio visited that city. The first treatise comprises eight books and sets out to be exhaustive; an expanded treatment of part of it appears anonymously in *In enchiridion*. Podio's musical aesthetic was based on the ideas expounded by Boethius; thus, he regarded music as a mathematical and physical science, integrated into the Quadrivium according to the Pythagorean system. He classified musicians as theoretical or practising exponents, the former, as was customary, being regarded as superior. On several important points he opposed Ramis de Pareia's innovations, particularly in his discussion of the sizes of intervals, where he adhered to Pythagorean arithmetic. In the same way, he retained and discussed the use of Guidonian solmization, rather than adopt Ramis's syllabic notation. Podio attributed the growth of Roman chant and its relationship to polyphony to Pope Vitalian. *Ars musicorum*, with its traditional bias, is an important source of information on the mensural notation of the 15th century. In it Podio drew attention to certain 'errors' in Gaffurius, thereby highlighting the differences between contemporary Italian and Spanish notational practice. In many ways Podio was the most influential Spanish theorist of his time. Ramis was barely known or mentioned by Iberian writers, whereas Podio was regularly cited and commended even in the 18th century. In particular, he influenced Gonzalo Martínez de Bizcargui, the other leading Spanish theorist active in the period.

F.J. LEÓN TELLO

Podius, Franciscus. *See* DEL POMO, FRANCESCO.

Podles, Ewa (*b* Warsaw, 26 April 1952). American mezzo-soprano of Polish birth. She studied at Warsaw State Music High School and won prizes at competitions in Moscow, Toulouse, Barcelona and Rio de Janeiro. Engaged at the Wielki Theatre, Warsaw, she sang roles ranging from Cenerentola to Konchakovna (*Prince Igor*). In 1984 she sang Rosina at Aix-en-Provence and made her Metropolitan début as Handel's Rinaldo. Between 1985 and 1989 she sang Cornelia in *Giulio Cesare* in Rome, Malcolm (*La donna del lago*) in Trieste and Adalgisa in Vancouver. She made her Covent Garden début in 1990 as Hedwige (*Guillaume Tell*) and her début at La Scala as Ragonde (*Le comte Ory*) in 1991, the year she also sang Delilah at the Opéra Bastille and Arsace (*Semiramide*) at La Fenice. In 1997 she performed and recorded the title role of Handel's *Ariodante* with Les Musiciens du Louvre. Her flexible, rich-toned voice, very individual in timbre, is ideal for the Rossini coloratura contralto roles, notably Tancredi, which she has sung at

La Scala (1993) and recorded to acclaim. Podles is also admired as a concert singer, in works such as Verdi's Requiem and *Das Lied von der Erde*, and is an accomplished recitalist, as can be heard on a vivid recording of Russian songs.

ELIZABETH FORBES

Podprocký, Jozef (*b* Žakarovce, 10 June 1944). Slovak composer. After attending secondary school in Gelnica he studied the piano and composition at the Košice Conservatory (1961–5). He then continued his composition studies with Cikker and Alexander Moyzes at the Academy of Performing Arts, Bratislava, and after graduating in 1970 returned to Košice, where he was appointed theory and composition lecturer at the conservatory.

Initially, his sources of inspiration were home-grown. This was clear from his adherence to the traditions of the Slovak school and in his attempting to find a new, creative approach to folklore. These beginnings were later transformed, effected by an interest in Bartókian technique and the rational principles of the Second Viennese School. His ideal is homogenous composition based on traditional processes, employing a musical vocabulary that builds upon the achievements of the avant garde of the inter-war period. His work also reflects a developing interest in east Slovakian folklore and the classical music tradition of his region. Among his best works are a series of string quartets inspired by Bartók.

VLADIMÍR GODÁR

Poe, Edgar Allan (*b* Boston, MA, 19 Jan 1809; *d* Baltimore, 7 Oct 1849). American writer. Beyond its bizarre and macabre surface, his work consistently reveals a concern with neurotic states, with frequent hints of interpretation in Freudian terms. This, and his technique of symbol and suggestion, recommended his writings to many composers at the turn of the century. Debussy and Ravel claimed that they were more influenced by Poe than by any music or composer. Debussy, who was fascinated by the tales in Baudelaire's translation, planned a work based on *The Fall of the House of Usher* at least as early as 1890; 18 years later he was projecting this (with *The Devil in the Belfry*) as a double bill for the New York Metropolitan. Poe's influence involves not just vocal settings of texts but a literary philosophy shaping a musical one, something far more intricate and mysterious. His advocacy of technical refinement and unity of atmosphere, as well as uncompromising anti-didacticism, attracted a variety of composers, including Rachmaninoff, Schmitt, Ireland, Milhaud, Messiaen and Rouders. Poe's view of music as 'suggestive and indefinite' – 'sensations which bewilder while they enthral' – bears comparison with that of the symbolists. The sympathy he found between musical sounds and mental states is most fully expounded in *The Bells*, which inspired Rachmaninoff's choral symphony of the same name; a similar link is also found in the linking of the sensitive and troubled Roderick Usher with the vibrating strings of a guitar. The most European of American writers, Poe magnetized first European composers, but in the later 20th century he inspired settings by numerous Americans, including Bernstein, Charles Sanford Skilton, George Crumb, Leonard Slatkin, Philip Glass and Deborah Drattell.

PAUL GRIFFITHS/JACK SULLIVAN

Poelchau, Georg Johann Daniel (*b* Kremon, nr Riga, 23 June 1773; *d* Berlin, 12 Aug 1836). German music collector. He studied at Jena University (1792–6) and from 1798 worked as a solo tenor, concert organizer and singing teacher in Hamburg. After his marriage with Amalie Manicke, the daughter of a rich Hamburg aristocrat (1811), he devoted himself to his music collection. In 1813 he moved to Berlin; from 1814 he was a member of the Sing-Akademie. He travelled extensively to enlarge his collection and corresponded with other collectors, especially Aloys Fuchs and R.G. Kiesewetter, and he was director of the library of the Sing-Akademie from 1833.

Poelchau started a general collection of manuscripts in his youth. Later he concentrated on music, dividing his collection into four sections: books on music from the 15th–17th centuries; printed music from the 16th–17th and the 18th–19th centuries; and music manuscripts. He also collected letters by and portraits of musicians. As the owner of many Bach manuscripts he played an important role in the emerging Bach renaissance; he also possessed autographs by Handel, Haydn, Mozart and Beethoven and many manuscripts of works by Keiser, J.H. Rolle, Telemann and others. A series of editions from his collection was begun in 1811 with Bach's *Magnificat* BWV243*a*. Poelchau offered his collection to the Prussian government in 1823, but it was only in 1841, after his death, that his son Hermann sold it to the Königliche Bibliothek, Berlin (now in *D-Bsb*; some items, including many early prints, in *PL-Kj*).

KONRAD KÜSTER

Poenicke, Johann Peter. *See* PENIGK, JOHANN PETER.

Poggi, Ansaldo (*b* Villa Fontana di Medicina, nr Bologna, 1893; *d* Bologna, 1984). Italian violin maker. He was taught to make instruments by his father, a woodworker and amateur violin maker. During World War I he served in a military band, and afterwards he returned home and resumed making violins and playing. He received a diploma from the Accademia Filarmonica in Bologna in 1920. His work as a maker came to the attention of Giuseppe Fiorini, then living in Zürich, who accepted him as a pupil. Poggi spent a month in Zürich in 1921, after which he returned to Bologna; he made his famous 12 violins for Fiorini in 1921–2. Poggi himself later divided his career into three periods: self-taught to 1921; study and preparation until 1927; and professional maturity after 1927.

Poggi's workmanship was precise and carefully planned. Most of his instruments were based on the Stradivari model, but some followed Guarneri and some were made to his own pattern. The scrolls are very well cut and usually edged with blacking. The varnish, usually orange-yellow to light orange-red, but sometimes golden yellow, is always bright and shiny. After World War II his instruments have slightly different features. While Poggi was clearly a consummate craftsman, the most noteworthy feature of his violins is their unusually responsive and full tone which makes his instruments much sought after. His instruments were awarded first prizes at the 1925, 1927 and 1929 Rome competitions. Poggi also exhibited a quartet as well as several other individual instruments in the Cremona Exhibition of 1937. He retired officially in 1972, but continued to make instruments until his death.

JAAK LIIVOJA-LORIUS, ROBERTO REGAZZI

Poggi, Francesco (*fl* 1586; *d* 1634). Italian harpsichord and virginal maker. Originally from Venice, he worked in Florence. 19 of his known surviving instruments are virginals, many of them unsigned; two harpsichords have also been identified as his work. His early instruments, dating from 1586 to 1603, are polygonal, thin-cased instruments; thereafter he preferred a thick-cased, rectangular design. Poggi's work is of organological interest because of the large number of instruments, which permits a detailed study of instrument making practices. Four of his surviving unsigned virginals have split sharps (*see* ENHARMONIC KEYBOARD), a feature which enjoyed some popularity in the early 17th century in Florence and Rome.

DENZIL WRAIGHT

Poggioli, Antonio (*b* Samarugio, Rome, *c*1580; *d* Rome, 10 March 1673). Italian music publisher and book dealer. Described in documents of the period as a 'cartulario' and 'librarius', he built up his publishing concern from a bookdealer's business that he had probably founded himself. It was situated in central Rome (Parione), and his sign, which appears in his publications, was a hammer. Following his marriage in 1607 he had at least four children of whom one, Giovanni (*b* 17 July 1612; *d* 30 Sept 1675), followed his father's occupation. Both father and son were buried at S Maria in Vallicella (the Chiesa Nuova) in Rome.

Antonio Poggioli published most types of instrumental and sacred and secular vocal music, including reprints of Arcadelt, Lupacchino and Tasso, a complete edition of Cifra's motets and important anthologies of motets. His publications date from 1620 to 1668 and represent the work of seven Roman printers, among them Robletti, Masotti, Grignani and Mascardi. Giovanni Poggioli is known only as the editor of the later of the two, slightly different, editions of the *Scelta di motetti* that appear to have been published within days of each other in 1647. The earlier edition, which is not included in RISM, was dedicated by Antonio on 29 July to a 'senatore' and 'consiliario' of Messina and includes motets by composers associated with that city. These are replaced by Roman motets in the later edition, dedicated by Giovanni on 31 July to Paolo Coccia, 'Signore del Poggio Sommavilla'. The *Scelta* was also published, with further changes, at Antwerp by Phalèse in 1652, as *Delectus sacrarum cantionum* (in *GB-Och*; not in RISM). It provides a representative selection of Roman *concertato* motets for two to five voices from the mid-17th century.

COLIN TIMMS

Pögl, Peregrinus (*b* Sandau, nr Magdeburg, 1 March 1711; *d* Neustadt am Main, 15 Nov 1788). German composer. He entered the Benedictine monastery at Neustadt am Main in 1735. He was a prolific composer of church music, but only two of his many publications appear to have survived. He was regarded by his contemporaries as a leading church composer, but his surviving publications suggest that this reputation was exaggerated. In his *Antiphonale marianum* (1763) the vocal solos are heavily decorated in an instrumental rather than a vocal idiom, and the quality of musical invention is not commensurate with their technical difficulty. The choral writing in this volume is repetitive and dull in texture. In general, Pögl's music lacks rhythmic life and his attempts to use chromatic harmony are rarely successful.

WORKS

Obiectum pinnarum tactilium, op.1 (Neustadt am Main, 1746), 6 trio sonatas
Sacrificium Deo vespertinum, 4vv, 2 vn, org, op.3 (Bamberg, 1747), 4 vespers
Incensum dignum in odorum, 4vv, 2 vn, org, op.5 (Neustadt, 1754), 19 offs
Antiphonale marianum, 4vv, 2 vn, 2 clarinos, org, vc, op.7 (Neustadt, 1763), 32 ants

6 masses: the title-page of the only extant volume in *D-Mbs* is missing; perhaps these form op.2, 4 or 6

ELIZABETH ROCHE

Poglietti, Alessandro [Boglietti, Alexander de] (*b* ?Tuscany, early 17th century; *d* Vienna, July 1683). Austrian composer and organist of Italian birth. He may have received his musical training in either Rome or Bologna. He later settled in Vienna. At the beginning of 1661 he is known to have been organist and Kapellmeister to the Jesuits at the church 'Zu den neun Engelschören'. On 1 July of the same year he was appointed court and chamber organist in the Kapelle of the Emperor Leopold I. He was very highly regarded as a teacher of keyboard playing and composition, and monks came from all over Austria to be taught by him. He formed particularly close ties with the Benedictine abbey at Göttweig, Lower Austria, where he occasionally stayed as a guest, and it was there in 1677 that his only known opera, *Endimione festeggiante*, was performed, on the occasion of a visit by the emperor. He also enjoyed the friendship of Count Anton Franz von Collalto and the Prince-bishop of Olomouc; in 1672 he inherited large estates near their residences at Brtnice and Kroměříž. He was held in such esteem that the emperor raised him to the ranks of the aristocracy, and the pope created him a Knight of the Golden Spur. He lost his life during the siege of Vienna by the Turks.

Poglietti is primarily important for his keyboard music. After Froberger and together with Kerll he represents one of the most vital links between Frescobaldi and composers of the late Baroque era such as J.S. Bach, Handel, Fux and Gottlieb Muffat. His sketchbook (see Riedel, 1968), and his *Compendium oder kurtzer Begriff, und Einführung zur Musica* (1676) offer guidance to students of 17th-century keyboard playing and an introduction to the art of composition. The 12 ricercares, many copies of which have survived, belong to the series of significant contrapuntal compositions that started with Frescobaldi's *Fiori musicali* (1635) and ended with Bach's *Die Kunst der Fuge* and were regarded as models of the strict style. Poglietti was particularly interested in musical imitations. In his *Compendium* he noted down many themes for 'all manner of capriccios, variously imitating on an instrument the songs of birds and other sounds'. They occur in the section in which he is concerned with the imitation of natural sounds (e.g. nightingale, canary, cuckoo, cock and hen) and of the sounds of bells, work and war. Many pieces by him on such themes have survived, for example *Über das Henner-und Hannergeschrei*, *Teutsch Trommel und Franzoik Trommel* and battle music such as the *Toccatina sopra la ribellione di Ungheria* (1671) and the *Toccata fatta sopra l'assedio di Filippsburgo* (1676). *Rossignolo*, a cycle dedicated to the Emperor Leopold I in 1677 on the occasion of his marriage to his third wife, Eleonora, is specially rich in programmatic movements. It is mainly musical instruments that Poglietti imitated here, though he also used elements from the folk music of particular countries and regions, often cleverly stylized, as in *Böhmisch Dudlsack*, *Hollandisch Flagolett*, *Französische Baiselements*, *Pollnischer Sablschertz*, *Soldaten Schwebelpfeif*, *Ungarische Geigen* and *Steyermarckher Horn*. The keyboard writing in these pieces is unusually full and brilliant. By virtue of its overall structure, symbolic content and skilful handling of form and variation technique, *Rossignolo* must rank as one of the most important cycles in the literature of keyboard music.

WORKS

VOCAL

in CZ-KRa, unless otherwise stated

Endimione festeggiante (op, J. Dizent), Göttweig, 12 Jan 1677

FRIEDRICH W. RIEDEL/SUSAN WOLLENBERG

Pogorelich, Ivo (*b* Belgrade, 20 Oct 1958). Croatian pianist. He studied at the Tchaikovsky Conservatory in Moscow (1975–8), where his most influential teacher was Aliza Kezeradze, whom he subsequently married. Pogorelich first came to wide public notice when Martha Argerich resigned from the jury of the 1980 Warsaw International Chopin Competition in protest at his elimination. He gave a notable début recital in New York's Carnegie Hall in 1981 and settled in Britain in 1982. Pogorelich is a virtuoso performer, capable of producing a vast tonal palette, although his interpretations can sometimes be marred by eccentricities of tempo and rubato. His wide repertory ranges from Bach and Scarlatti to Prokofiev, while his many recordings include exceptionally refined and brilliant readings of Ravel's *Gaspard de la nuit* and Prokofiev's Sixth Piano Sonata. Active in fundraising for charitable causes and in creating opportunities for young musicians, he was named an Ambassador of Goodwill at UNESCO in 1988. The same year he inaugurated the Bad Wörishofen Festival in Germany, which offers a platform to talented young performers; two years earlier he had established a Young Musicians' Fellowship in Croatia. In 1993 he founded the Ivo Pogorelich International Solo Piano Competition at Pasadena, California.

JESSICA DUCHEN

Ivo Pogorelich, 1982

Pogues, the. Irish folk-rock band. Their leader Shane MacGowan (*b* Kent, 25 Dec 1957) was first in the punk band the Nipple Erectors; as former Irish folk musicians joined the name was changed to Pogue Mahone, later shortened to the Pogues. In London in the early 1980s they became notorious for their excessive drinking and bad manners; they performed at breakneck speed with lyrics yelled out with the ferocity of a punk band, horrifying the folk scene with their treatment of traditional Irish songs. They toured with the Clash and recorded their first album *Red Roses for Me* (Stiff, 1984) which, along with frantic traditional material, included songs such as the 'Dark Streets of London' by MacGowan, who developed into an unexpectedly remarkable lyricist and songwriter; a collection of his lyrics was later published as *Poguetry* (London, 1989). A second album, *Rum, Sodomy and the Lash* (Stiff, 1985), included a rousing but poignant reworking of Ewan MacColl's 'Dirty Old Town', along with MacGowan's brutal but fetching 'A Pair of Brown Eyes', which became a minor hit.

By 1988 the band included Terry Woods from Steeleye Span. They joined with the producer Steve Lillywhite for *If I Should Fall from Grace with God* (EMI), which included the hit single 'Fairytale of New York' by MacGowan and in which he performed with Kirsty MacColl, the daughter of Ewan and wife of Lillywhite. By now MacGowan's drinking was damaging his work; he was unable to appear with the band when they toured with Bob Dylan, and subsequent albums (*Peace and Love*, WEA, 1989, and *Hell's Ditch*, WEA, 1990) were a disappointment. MacGowan left the Pogues in 1991, his place taken first by Joe Strummer from the Clash, and then by the band member Peter 'Spider' Stacy, who sang on the Pogues' album, *Waiting for Herb* (WEA, 1993). MacGowan continued with a new group, the Popes.

ROBIN DENSELOW

Pohanka, Jaroslav (*b* Olešnice, Moravia, 29 June 1924; *d* Brno, 28 April 1964). Czech musicologist. He studied composition, flute and piano at Brno Conservatory (1940–43, 1946–7) and after teaching music at a gymnasium in Brno (1948–50), he became director of a music school in Šlapanice, near Brno (1951–60), and then a research assistant in the music history department of the Moravian Museum (1960–64). He was able to put to use his interest in early Czech music and his extensive knowledge of its sources both in his transcriptions for the ensemble Collegium Musicum Brunense, of which he was co-founder and artistic director, and in his *Dějiny české hudby v příkladech* (1958). This major Czech compilation is a critical edition of basic Czech sources from the earliest times to the first half of the 19th century. In it, just as in the 13 volumes of Musica Antiqua Bohemica which he prepared for publication, Pohanka was responsible for revealing many new sources and bringing to notice a number of neglected composers of worth, such as J.A. Losy, J.K. Tolar and P.J. Vejvanovský. Pohanka's edition of Vejvanovský was intended to supplement a projected monograph on this composer. In his last years his energy was concentrated principally on amassing and working on material for his book *Loutna a její podíl na vývoji instrmentální hudby v Čechách* [The lute and its part in the development of instrumental music in Bohemia], which he left incomplete at his death.

ALENA NĚMCOVÁ

Pohjannoro, Hannu (Einari) (*b* Savonlinna, 4 July 1963). Finnish composer. He studied composition at the Sibelius Academy in Finland with Rautavaara, Aho and Heininen, graduating in 1996. He supplemented his studies in the winter of 1993–4 in Berlin with Schnebel. He was one of the most promising of young Finnish composers to come before the public in the 1990s. His music has most often a post-serial basis. His output is still small and consists mainly of chamber music and works for tape. His earliest compositions of the 1990s avoid any kind of pomposity, achieving powerful effects by the most delicate means. In particular, the sensitivity of his chamber music – for example in the nonet *eilisen linnut* ('the birds of yesterday', 1994) and *kuvia, heijastuksia* ('images, reflections', 1992) for piano – is as though traced with a silken thread; the influence of Kurtág and Morton Feldman is considerable. Pohjannoro's musical mobility has increased in more recent works, and has become more classical and linear, as in the orchestral work *korkeina aamujen kaaret* ('lofty the arches of morning', 1996). His imagination springs at its most free in the work for bass clarinet and tape *saari, rannaton* ('island, shoreless', 1994).

WORKS

matkalla [travelling], nocturno, fl, 1991; välähdyksiä [glimpses], 7 miniatures, vc, 1992; kuvia, heijastuksia [images, reflections], pf, 1992; röyhkeinä nousevat hiljaisuudesta, varjot jäävät [haughtily they rise from silence, only the shadows remain], tape, 1992, rev. 1994; viides vuodenaika [fifth season], accdn, pf, 1993; Berlin Experiment, any ens, 1993; eilisen linnut [the birds of yesterday], chbr ens, 1993–4; saari, rannaton [island, shoreless], b cl, tape, 1994; valo jäätynyt, kaukana tuuli [frozen the light, far away the wind], fl, vc, pf, 1994–5; korkeina aamujen kaaret [lofty the arches of morning], orch, 1995–6; valon jälkiä äänet [sounds, traces of light], fl, cl, gui, vc, 1996; maan väreiksi taipuu valo [into the colours of earth bends the light], kantele, perc, 1997; Str Qt 'syksyn huoneet' [the rooms of autumn], 1997

OSMO TAPIO RÄIHÄLÄ

Pohjola, Seppo (*b* Espoo, nr Helsinki, 4 May 1965). Finnish composer. He belongs to one of the most celebrated musical families in Finland: his father is the choral conductor Erkki Pohjola, his aunt is the pianist Liisa Pohjola and his cousin the conductor Sakari Oramo. Seppo Pohjola is, however, the family's only composer of any repute. He studied composition at the Sibelius Academy in Helsinki with Heininen and Jokinen. He came before the public at the beginning of the 1990s and quickly gained a foothold in Finnish musical life. Like many of his contemporaries he has concentrated on instrumental and chamber music, moving with each work into various stylistic spheres. His two string quartets, for example, are very different: the first (1991) reveals the influence of Ligeti; the second (1995), with its hammering rhythmic motifs, could be described as an Expressionist work. In his recent compositions, Pohjola has moved away from a post-serial style, aiming at more of a Romantic and Impressionist sound. The text that he wrote to accompany *Game Over* (1996) stresses that there is no question of modernist composition in this chamber work, and that its sound ideal is, rather, one of Mendelssohnian Romanticism. In his largest composition to date, *Vae Victis* (1997) for orchestra, Pohjola consciously draws near to the sound-world of Debussy.

WORKS

3 Pieces for Str Trio, 1987; Str Qt no.1, 1989–91; Splendori, pf, 1991; Pixilated, 1992; Gimla, accdn, pf, 1993; Daimonion, chbr orch, 1994; Balletto per 10, chbr orch, 1994; Str Qt no.2, 1995; Pf Qt, 1996; Game Over, fl/pic, cl/b cl, pf, perc, vn, va, vc, 1996; Vae Victis, orch, 1997; Taika, orch, 1999; Vinha, orch, 1999

OSMO TAPIO RÄIHÄLÄ

Pohl, Carl Ferdinand (*b* Darmstadt, 6 Sept 1819; *d* Vienna, 28 April 1887). German music historian, organist and composer. He came from a musical family, his grandfather having been a maker of glass harmonicas, his father (*d* 1869) chamber musician to the Duke of Hesse-Darmstadt, and his mother a daughter of the composer Bečvařovský. He was trained as an engraver, but in 1841 he settled in Vienna and after studying under Sechter became in 1849 organist of the new Protestant church in the Gumpendorf suburb. His compositions, of which at least 14 collections of songs and keyboard pieces were printed, date mostly from these years. In 1855 he resigned his post for reasons of health and devoted himself thereafter to teaching and writing.

In 1862 he published a pamphlet on the history of the glass harmonica. From 1863 to 1866 he lived in London, occupied in research at the British Museum on Haydn and Mozart; the result was *Mozart und Haydn in London*, a work whose accurate detail makes it still very useful. In 1866, through the influence of Jahn, Köchel and others, Pohl was appointed archivist and librarian to the Gesellschaft der Musikfreunde in Vienna. As custodian of the society's large collections he produced monographs describing their history and extent, and collaborated with Haberl and A. Lagerberg in Eitner's *Bibliographie der Musik-Sammelwerke* (1877). Pohl was also an active

music critic and opposed many of Hanslick's views. By far his most important work was the biography of Haydn, which he undertook at the instigation of Jahn, and whose final volume was completed after his death. Although it contains errors and omissions, Pohl's work has nevertheless remained the basis for all serious Haydn biographies since its publication.

FRANZ GEHRING/BRUCE CARR

Pohl, David. *See* POHLE, DAVID.

Pohl, Richard (*b* Leipzig, 12 Sept 1826; *d* Baden-Baden, 17 Dec 1896). German critic and translator. He studied philosophy, chemistry and physics in Karlsruhe, Göttingen and Leipzig, and was given basic musical training by E.F. Wenzel in Leipzig. There he made friends with Schumann; he later planned an oratorio on Luther with Schumann, wrote for him the linking text for the concert version of *Manfred* and helped with other texts. In 1852 he moved to Dresden, where he worked as a private teacher and wrote for Brendel's *Neue Zeitschrift für Musik* under the pseudonym 'Hoplit' (a reference to the heavily armed infantry of ancient Greece). Already a committed Wagnerian (he prided himself in being called 'der älteste Wagnerianer' by Wagner himself), he became the declared voice of Wagner, Liszt, Berlioz and other progressive musicians of the New German School; all three composers were his friends. During his years in Weimar (1854–63), Pohl helped Brendel edit the *Neue Zeitschrift für Musik* and the *Angregungen für Kunst, Leben und Wissenschaft* (1856–61). Pohl actually came to Weimar as a result of the appointment to the court orchestra of his first wife, the harp virtuoso Johanna Eyth (*b* Karlsruhe, 19 March 1824; *d* Baden-Baden, 25 Nov 1870). Liszt later expressed his gratitude for Pohl's 'faithful and noble devotion ... to the Weimar Progressive Period in the years 1849–58' (letter of 12 September 1884). Wagner was appreciative of Pohl's championship; later, however, coolness arose over Pohl's published view that Wagner had derived his chromatic harmony in *Tristan* from Liszt. Though not a particularly insightful critic (he was accused of being a 'scribbler'), Pohl worked hard and proved himself to be a reliable partisan, doing much to arouse interest in his chosen composers. Particularly valuable were his German translations of Berlioz's prose writings and some of Liszt's articles from the 1850s. He also wrote some poetry, a novel (*Richard Wiegand*) based on Wagner, some songs and instrumental pieces. In 1864 he retired to Baden-Baden.

WRITINGS

Akustische Briefe (Leipzig, 1853)
Das Karlsruher Musikfest (Leipzig, 1853)
Die Tonkünstler-Versammlung zu Leipzig (Leipzig, 1859)

JOHN WARRACK/JAMES DEAVILLE

Pohle [Pohl, Pohlen, Pole, Pol, Bohle], **David** (*b* Marienberg, nr Chemnitz, 1624; *d* Merseburg, 20 Dec 1695). German composer and instrumentalist. He received his musical training from Schütz at Dresden. He worked for short periods at the courts at Dresden, Merseburg (as an instrumentalist between 1648 and 1649), Kassel (about 1650), Weissenfels, Zeitz and Merseburg again (all during the 1650s) before settling at Halle, where he became Kapellmeister in 1660. At Halle he composed and directed many large masses and sacred concertos at the cathedral and wrote at least seven Singspiels, most of them to texts by the court secretary, David Elias Heidenreich. Between 1674 and 1677 he also worked at the related courts at Weissenfels and Zeitz. He was Kapellmeister at Zeitz from 1678, and when the Halle court was transferred to Weissenfels in 1680 he was replaced as its Kapellmeister by J.P. Krieger, who in 1678 had been appointed his assistant. He remained at Zeitz until 1682, when he moved to a similar position at Merseburg; he remained there until his death. He published none of his music, and much of it is lost. The earliest surviving pieces are the arias to strophic poems by Paul Fleming composed at Kassel in 1650. Most of his other extant vocal music is sacred; it shows his strong preference for Latin texts, both biblical and non-biblical, which he set as concertos for few voices. Between 1663 and 1664 he composed cantatas for the entire church year, each consisting of a concerto

based on a biblical verse combined with an aria to a strophic ode by Heidenreich. The one extant work from this cycle, *Siehe, es hat überwunden der Löwe*, offers an early example – although not the first – of a concerto-aria cantata (see Frandsen). Pohle's sonatas are distinguished by cantabile melody, rich harmony and a dark sound resulting from scoring that favours the middle and lower instruments.

WORKS

SACRED LATIN VOCAL

Amo te Deus, 3vv, 3 insts, bc, *D-Dl*, *S-Uu*
Benedicam Dominum (2 versions), 2vv, 3 insts, bc, *Uu*
Bonum est, 3vv, bc, *Uu*
Diligam te Domine, 1v, 2 insts, bc, *D-Kl*
Domine ostende, 5vv, 5 insts, bc, *S-Uu*; ed. B. Grusnick (Neuhausen-Stuttgart, 1976)
Domine quis, 4vv, 5 insts, bc, *Uu*
In te Domine speravi, 3vv, 3 insts, bc, *Uu*
Jesus auctor, 3vv, 2 insts, bc, *Uu*
Jesu care, 1v, 2 insts, bc, *Uu*
Miserere mei Deus, 5vv, 5 insts, bc, *D-Kl*
Nascitur Immanuel, 5vv, 5 insts, bc, *Dl*
Oculi mei, 3vv, 2 insts, bc, *S-Uu*
Paratum cor, 1v, 2 insts, bc, *Uu*
Te sanctum, 5vv, 7 insts, bc, *Uu*
Tulerunt Dominum, dialogue, 6vv, 6 insts, bc, *Uu*
Verbum caro factum est, 3vv, 2 insts, bc, *Uu* (anon.)
Vox Domini, 1v, 2 insts, bc, *Uu*

SACRED GERMAN VOCAL

Der Engel des Herrn, 4vv, 4 insts, bc, *Uu*
Es wird ein Stern aus Jacob aufgehen, 4vv, 3 insts, bc, *D-Bsb*
Herr, wenn ich nur dich habe, 1v, 5 insts, bc, *Bsb*
Herr, wenn ich nur dich habe, 3vv, 3 insts, bc, *S-Uu*; ed. H.J. Moser (Stuttgart, 1964)
Ihr Völker bringet her, 3vv, 3 insts, bc, *D-Bsb*
Jesu, meine Freude, 4vv, 3 insts, bc, *Bsb*, *Kll*
Nur in meines Jesu Wunden, 6vv, 6 insts, bc, *S-Uu*
Siehe, es hat überwunden der Löwe, 5vv, 7 insts, bc, *D-Bsb*, *Kll*
Wie der Hirsch schreiet, 1v, 3 insts, bc, *S-Uu*; ed. U. Herrmann (Neuhausen-Stuttgart, 1982)

For lost works see Serauky

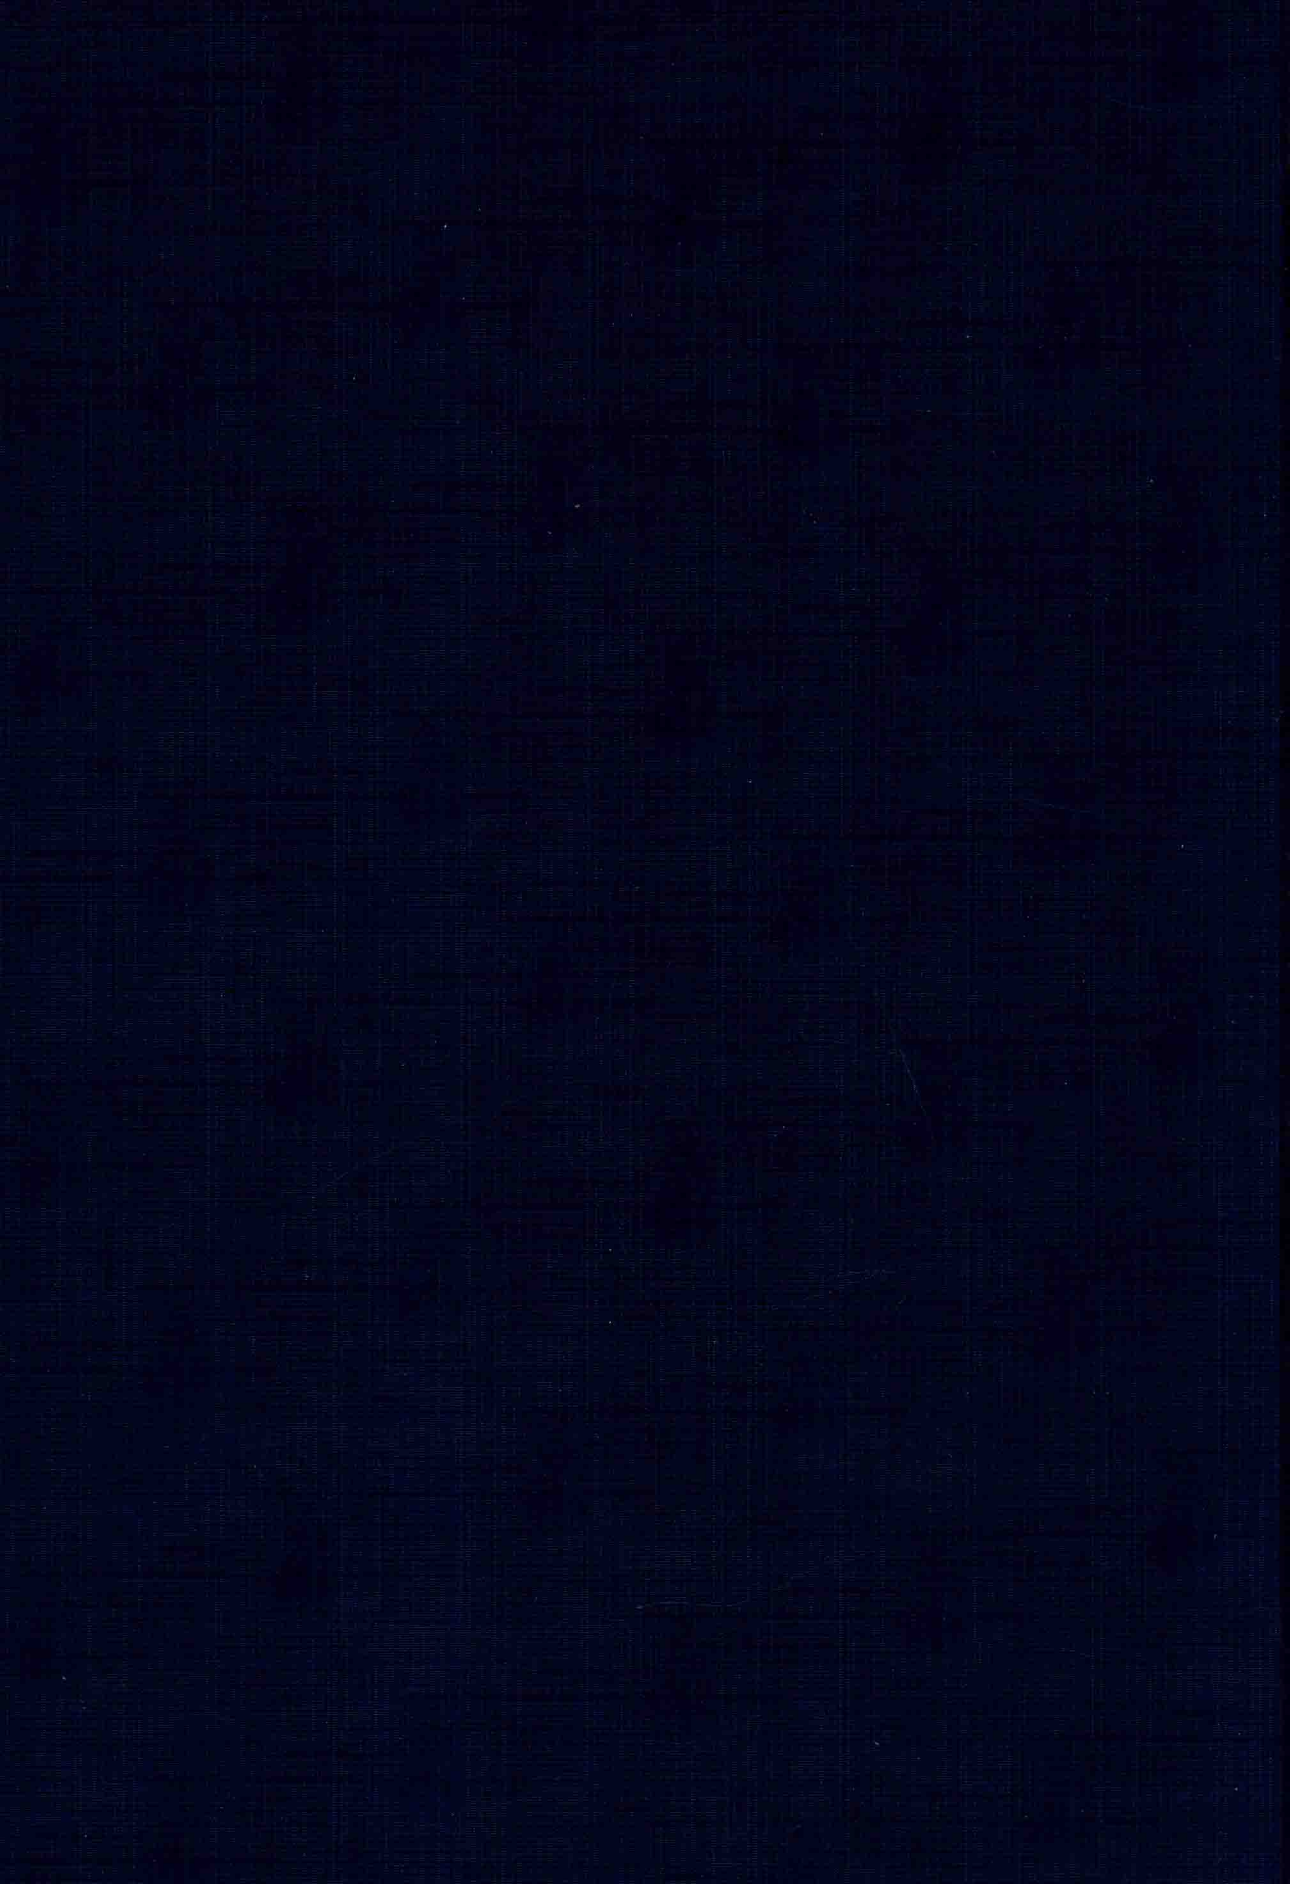
SECULAR VOCAL

13 arias (P. Fleming), 2vv, 2 vn, bc, 1650, *D-Kl*; 12 ed. W. Gurlitt, *David Pohle: Zwölf Liebesgesänge nach Paul Flemming* (Kassel, 1938)
Kein Augenblick vergeht, madrigal, 3vv, bc, *S-Uu*
Marindchen, du siehst hold und schöne, aria, 2vv, 5 insts, bc, *Uu*
Weiss und Schwarz, 2vv, 2 insts, bc, *Uu*

SINGSPIELS

all lost; most librettos by D.E. Heidenreich

Liebe krönt Eintracht, 1669; Der singende Hof-Mann Daniel, 1671; Aspasia, 1672; Der glückselige Liebes-Fehl Prinz Walrams aus Sachsen, 1673; Der verliebte Mörder Herodes, 1673; Die verwechselte Braut, 1675; Das ungereimte Paar Venus und Vulcanus, 1679



INSTRUMENTAL

25 sonatas, a 4–8, bc, *D-Kl*, *S-Uu*; Sonata a 8, C, ed. H. Winter (Hamburg, 1965); Sonata a 6, F, ed. H. Winter (Hamburg, 1968)
2 suites, a 4, *D-Kl*; 1 ed. J. Ecorcheville, *Vingt suites d'orchestre du dix-septième siècle français* (Paris and Berlin, 1906/*R*)
Ballet, *PL-GD* (lute tablature)
